PREFACE

This Handbook is intended for constant reference by all who have in any way to do with the finances of a business. Its particular purpose is to provide readily and in sufficient detail serviceable information on all questions which are likely to arise in the financial management of business organizations whether large or small. It is designed not only for the financial manager or treasurer but also for executives in charge of other departments who have their own particular financial problems to cope with, as well as for all who come into financial relationship with the business. In short, it deals with the manifold financial aspects and relationships, both internal and external, that go to make up the general financial management, presenting both policies and working details.

There would be little need for such a financial handbook if all business executives had ready access to a complete library of business books and knew where to investigate specific subjects. Unfortunately, the average executive is unwilling to risk the time which is involved in searching through many volumes in order to find the answers to the scores of questions bearing on financial problems which constantly arise.

It occurred to me that if it were suggested to business executives and those who hope to be such that a business library of a very few books would be sufficient to answer 99 out of 100 questions in business and finance, there would be a willingness on their part to experiment. The risk is small. I suggest that each executive pick out two or three books dealing with his specialty. Most executives these days are specialists. One additional book should be a handbook containing in highly condensed form trustworthy information regarding the finances of the business as a whole as well as the financial aspect of its various departments.

The books dealing with specialized subjects are numerous and most of them are good. In this general book we have proceeded on the theory that a vast volume of principles, practices, customs, statistics, laws, rules, and almost every kind of financial material may be made available for quick use when needed. One of our most successful manufacturers was talking with the president of a large jobbing concern. The latter with pride said that their credit losses were only $1/5$th of 1 per cent of their sales. There was no approbation on the face of the manufacturer. "Don't you think that is very good?" he asked. "I do not," replied the manufacturer,

"it is not high enough." The president had been too close to his own concern, and too busy to read any discussion of credit risk. He had never stopped to think that his credit manager might be turning down good business in order to maintain an unnecessarily low loss ratio. In this Handbook executives will find enough information about the financial aspect of other people's specialties to enable them to check them up when it may be desirable or necessary.

The insurance broker may be disappointed in the section on insurance, but that section was not written for him; the works manager may be disappointed in the section on inventories, but that section was not written for him. Nevertheless, every insurance broker is vitally interested in the accuracy of inventories, and that section will tell him everything he can wish to know. A reading of it will enable him to ask more intelligent questions than would otherwise be the case. And the works manager should know more about the financial aspect of insurance than he does. He will find many suggestive helps in that section.

The busy banker may wish to suggest to a customer that he combine his business with that of a competitor. He knows a little about the Clayton Act, but is afraid to act without more knowledge. The Handbook instantly answers this as well as a thousand other questions.

The Handbook is the result of two years' work on the part of my associates and myself. We know that perfection has not been obtained in this first attempt. Much material has been rejected; some because of its apparent unsuitability; some because there had to be a limit to the size of the book. It is quite possible that some suitable subjects have been overlooked. One will be wiser when those who examine the contents have been heard from. Any criticism for the improvement of the volume will, therefore, be welcomed.

FUNDAMENTALS OF BUSINESS ECONOMICS

Economic Organization from Viewpoint of Business Executive

THE ECONOMIC SYSTEM.—Business men, engrossed in the administration of individual industrial and business units, not infrequently lose sight of the broader outlines of the organization of which they are parts. Yet the functioning of this organization as a whole affects their individual activities so vitally, its smooth operation is so necessary to the economic well-being of the individual units, that an understanding of it is essential to efficient industrial leadership.

The economic system may be viewed as a vast machine—a machine for turning out goods and services, for providing the nation with the shelter, clothes, shoes, fuel, food, transportation and amusements which constitute the necessities and the amenities of existence. Into the hopper flow the raw materials of production, human effort and natural resources, and out at the other end flow goods and services in consumable form. The **real income** of a nation in a given year consists of the total volume of goods and services which flow out—the automobiles, beefsteaks, tons of coal and bushels of wheat which satisfy our wants. The smooth co-ordination of all the parts of this great machine—coal mines, iron mines, wheat fields, steel mills, railroads, banks—is essential to the maintenance of the volume of production. The individual unit must be efficient, of course, but without co-ordination and co-operation between units, economic chaos will result.

The history of economic development has been a history of the increasing complexity of this machine, with a constant increase in the number of parts and a constantly greater interdependence of parts. Local self-sufficiency has been sacrificed. A thousand isolated economic units have been welded into one, as the village community of medieval times has given way to the nation of today. The economic organization which supplies the material wants of man is today an all-embracing system, in which individual workers and individual business units are but cogs. These changes have brought a tremendous increase in productivity, but at a price. Complexity has brought greater delicacy, greater danger of breakdown, greater dependence of every part on the efficiency of every other. In this complexity and in the interdependence of economic units are found the essential characteristics of the existing economic order.

FUNDAMENTAL FACTORS.—Of fundamental industrial importance are the factors upon which the wealth and economic well-being of a country depend. For the primary economic process is that of **production.** At a later point in this discussion the **distribution** of the national product among the factors of production will be dealt with, but this problem of appor-

tionment is of subordinate importance to that which is concerned with the amount of the national product, with the volume of goods available for trade and consumption. The method by which a pie is divided is important, but the size of the pie in the first place may have a more immediate bearing upon the sizes of the various pieces. A consideration of the factors upon which the amount of the national real income depends will at the same time serve to introduce other problems relating to the structure of the economic system.

NATURAL RESOURCES.—The natural resources of a country are obviously of first importance. Large areas of fertile soil, rich mines, well stocked fisheries, broad timber lands, navigable rivers and easily developed routes of land transportation, a climate which encourages toil and invigorates workers, these are **basic factors** of a country's wealth. Farms, factories, fleets and work-shops must be built upon such natural wealth. It is true that human effort may make up for some natural deficiencies and that interchange of commodities may atone for the absence of other resources, but in the last analysis nature controls. A scant subsistence may be wrung from deserts or steppes, but that surplus above bare physical needs which permits the development of the arts of civilization and the attainment of a reasonable degree of well-being can only be secured when natural conditions are propitious. The **effect of depletion** of natural resources—exhaustion of the soil, deforestation, draining of oil deposits and the using up of raw materials—need only be suggested. It has been held by some that Rome fell because the soil of Italy became sterile.

NATURE OF CAPITAL, AND ITS PART IN PRODUCTION.—The tools, machinery and equipment of all sorts used in the exploitation of natural resources—in other words, the **economic capital** of a given industrial group—constitute a second factor affecting the size of the national income. We may, under favorable conditions, pick the fruits of nature with our bare hands, and thrive. But modern man is not blessed with such idyllic conditions. To grow wheat, to mine coal, to build houses, to make clothes, **tools** are needed. Tools, of course, are never ends in themselves. A hammer or a combined harvester will not satisfy our wants as a house or a loaf of bread will. But with the hammer and the harvester the things we want ultimately are secured in far greater quantities, or with less labor, than if they were produced without the aid of these instruments. It is the function of these tools to make human labor more productive by enabling labor to be more effectively applied. A plough is superior to a pointed stick, or to bare hands, as a means of cultivating the soil. Such tools are economic capital. We commonly mislead ourselves by thinking of economic capital in abstract terms. The capital of society consists primarily of the concrete equipment which man has produced for the purpose of increasing the effectiveness of his labor—the ploughs and harrows, railroads and canals, steamships and motor trucks, steel mills and textile factories—together with the surplus of consumable goods which permits such equipment to be produced.

The original inhabitants of this continent possessed even richer natural resources than we now do, but the consumable wealth we extract in a day is greater than that which the American Indians could extract in many years. A difference in wants and a difference in the size of the population are of course partly responsible for this, but the most important factor is the tremendous difference in technical equipment. It is chiefly because of our superior equipment that the Indian's scant fields of maize are replaced by the vast stretches

of the corn belt, his humble tepee by the homes, apartments and skyscrapers which culminate in the Woolworth Building, his trails by hundreds of thousands of miles of paved roads and steel tracks, his horse by Mogul engines and touring cars. The size of the pie which is to be divided has been increased a thousand-fold by this equipment, and the safe-guarding of this equipment is a prime essential to the maintenance of the present size of the pie.

MAINTENANCE OF ECONOMIC CAPITAL.—The character and volume of the capital equipment of a given economic area depend upon two factors. The first of these is the **technical knowledge and inventive genius** of the inhabitants. The great inventions of the industrial revolution were the products of mechanically creative minds possessing scientific knowledge of the properties of matter and of the forces of nature. Such knowledge and such a creative bent are essential to technical improvements in industry. But they are not alone sufficient to insure the adoption and full use of such improvements. For this, the existence of a **surplus of goods** is essential, a surplus which will permit labor to be transferred from the direct production of consumable goods to the production of capital equipment which will serve the same end, that of swelling the final product of consumable goods.

The tremendous importance of such a surplus, and of the saving which permits this surplus to be accumulated, cannot be overemphasized. If in any one year we should consume the full amount of the national product, laying nothing aside to support laborers engaged in the manufacture and repair of capital equipment, the productive capacities of the country would be immeasurably impaired. Railroads would break down, factories would close, widespread unemployment would follow, and the wages of labor, together with the income of all the other factors of production, would suffer great reductions. The maintenance of the volume of saving, therefore, is fundamentally important in maintaining the volume of production.

ECONOMIC USE OF CAPITAL.—The proper use of the surplus thus saved is no less important than the process of saving. The existence of such a surplus enables some members of the productive population to engage in activities other than the direct production of consumable goods. Such a surplus is fruitful if these members engage in essential indirect activities, such as the production of capital goods. But if the surplus is used to build navies, support armies, to manufacture ammunition, to produce luxuries in excessive quantities, to enable some members of the population to live in idleness, the surplus may serve a vicious instead of a useful purpose. This is not to deny that navies and armies may be necessary at times. But they are always economically wasteful, and can be justified only when they serve other valid social ends.

POPULATION AND PRODUCTION.—The **third factor** upon which the total volume of production and hence the rewards of the factors of production depend is the **character of the labor supply,** in other words, the character of the population. The problem here is somewhat different from that faced in the two previous cases, for labor is a **consumer as well as a producer of wealth,** and certain conditions which may be to its advantage in one connection may not be so in another. In general, of course, an increase in the total population will increase the total product, but will at the same time increase the number of consumers and thus tend to decrease the share of each.

Up to a certain point the former tendency will more than offset the latter, so that a clear individual gain results from an increase of population. This is so because natural resources may be more fully exploited and because advantage may be taken of all the economies of division of labor with a larger popu-

lation. But there is a point in population growth at which the law of decreasing returns comes into play. When full advantage has been taken of **division of labor,** and the resources of the country are being exploited to the limit of efficiency, as set by existing methods and equipment, additional hands will add relatively less to the national product, and the general standard of living may be impaired by a further growth of population.

It is true that the opening of new resources and improvements in industrial technology may offer new possibilities of population growth. The discovery of the new world and the inventions of the industrial revolution thus served to remove old barriers to population increase in the European stocks, opening eras of unprecedented growth. But, given the constant tendency of population to increase, the point of decreasing returns is sooner or later reached again, and there is pressure toward the point at which the means of subsistence will be barely adequate. India and parts of China are thus teeming with life; the welfare of all has been impaired by the mere increase in numbers. The total product of industry and the share of each of the factors of production in that product are thus directly affected by the total population of an economic area.

EFFECT OF CHARACTER OF POPULATION ON PRODUCTION.—The character of the population of a given area, quite apart from its size, has an important bearing upon the volume of the industrial product. **Natural aptitude** for sustained endeavor of the type required in modern industrial civilization is not, apparently, an attribute of every racial type. In the absence of such aptitude that surplus beyond immediate needs which is essential to economic development cannot be accumulated. The productivity of labor depends, also, upon the native intelligence and education of the individual workers. These are not alone necessary for the efficient performance of daily tasks, but they are even more essential if there is to be ready adaptation to changing industrial technique. If we are sure of one thing with regard to the future it is that present methods will change, that the change will be rapid, universal and constant, affecting every industrial process. Adaptation to change requires intelligence and trained minds. The worker trained for a single task and unable to adapt himself to new methods becomes a useless impediment, a source of economic waste. Economic productivity depends no less upon the intelligence and training of the individual cogs in the industrial machine than upon any of the other factors mentioned.

ORGANIZING ABILITY AND PRODUCTION.—As factors affecting the total volume of production, and hence the rewards and well-being of every member of the population, we have mentioned natural resources, capital equipment and the surplus which makes such equipment possible, the size of the population devoted to industrial production, and the aptitude, intelligence and training of the members of this population. There is one additional factor of outstanding importance. This is the amount and character of the organizing ability at the disposal of any economic group. With the increased complexity which division of labor in all its phases has introduced into the economic system, **the functions of the organizer and administrator** have become more and more significant and essential. A community blessed with rich resources, adequate capital, a numerous and intelligent working force would yet be economically poor, if there were not present in the population those elements of initiative, judgment and administrative ability which are essential to the launching and directing of an enterprise.

As a stimulus to the exercise of such ability society has in the past offered

rich rewards to the successful business leader, and such rewards are still held out. These rewards have undoubtedly been excessive at times, unearned and undeserved. Yet this ability plays such a vital part in the functioning of the economic system as we know it that even apparently excessive rewards have been permitted in the belief that the system as a whole is sound. We are witnessing today some limitations to these rewards, and the future may well witness further limitations. But whether such organizing ability be called forth by the lure of profits or in other ways, it is essential to the functioning of the industrial system. The size of the share of labor itself in the joint product of industry is contingent upon the presence and exercise of such ability.

CONSTITUTION OF THE INDIVIDUAL BUSINESS UNIT.—The factors upon which the productive capacity of a country depends have been discussed above in general terms, as these four agents appear in the large in the functioning of the economic system. But in the actual working of this system these factors are brought together in a multitude of small units, which constitute the **elements of the national economic structure.** The various individual establishments which are links in the chains of production and distribution are themselves composites of these four factors, and some of the major economic questions of the day center about the problem of securing harmonious co-operation among these agents.

BUSINESS ENTERPRISE.—The task of combining these diverse elements, as has been noted, falls to the organizing and directing factor in industry, which is called business enterprise. This task is not merely the bringing together of land, labor and capital. It means in a specific case the securing of proper land and suitable materials, qualified labor and appropriate capital equipment, and the welding of these factors into a **productive unit** in the proper proportions for the given purpose. How much capital may be profitably employed? What kind and what amount of labor should be secured? How much land is needed? How may labor, land and capital be made to work harmoniously together? What system of organization shall be employed? How shall the problem of mass management be met?

These are problems which in the past have not been solved generally either by investors of capital, laborers, or owners of land, as such. For their solution there has been called forth the separate organizing factor, business enterprise, which **buys or rents land, purchases raw materials, hires labor and borrows capital, and combines them effectively into a producing unit.** This factor may take any one of a number of forms, of which the individual enterprise, the partnership and the corporation are most common.

In the organization of the business unit there is not always the clear-cut distinction between elements which has been assumed in the above description. Actually, certain of the factors shade into each other in many cases, and there may exist no sharp line of demarcation between the shares received by the different agents for their part in production. Thus the single business man may own his own capital and may perform a great deal of the labor necessary to operate his business. It is often impossible to separate business profits from the wages of management, or economic rent from interest on capital. But the outline given, simplified as it is, may serve to make clear the structure of a productive unit in industry and to indicate the nature of the problem that arises in dividing the social product.

TIES BETWEEN ECONOMIC UNITS.—The characteristics of the modern economic system are revealed in part in the structure of the individual business unit, as described above. But for an understanding of the **economic**

order as a system it is necessary to comprehend the nature of the ties which bind these individual units together, making of them an immense, complex and finely articulated whole. These ties, in their number and diversity, are the most distinctive features of our present industrial system, rendering it more efficient and at the same time more sensitive to disturbances than any other economic order the world has ever known.

The **connections between units in the economic system** are not all direct, visible and obvious. A trader or manufacturer is conscious of only a limited number of contacts with the business world in which he functions, yet he is tied to it by a complex variety of bonds, of many of which he is quite unaware. And these ties are all-important. The existing order, in its peculiar susceptibility to crises, to business booms and depressions, in its characteristic reactions to disturbances in every part of the economic system, bears witness daily to the variety of these channels of communication and to the extent to which they permeate the system as a whole.

The **modern price system** is perhaps the most important factor in this tying together in a complex whole of the various parts which may be so widely separated geographically or functionally. The nature of these price connections will be the subject of later discussion. Certain other direct and important relations may be indicated.

ROUTE FROM PRODUCER TO CONSUMER.—The industrial system may be viewed as consisting of a number of parallel channels, down which the products of industry flow. There are numerous inter-connecting canals, but the broad channels down which the main streams flow are of primary importance and trace out the most significant economic relations. Such a channel has its source in a given extractive industry—in wheat fields, iron mines, lumber camps, cattle ranges or cotton plantations—where the raw materials are obtained from the earth. Thence the materials flow downward to their ultimate destination, the final consumer, passing through the hands of middlemen of various degrees and kinds, transportation agencies and manufacturing concerns.

Storage elevators, warehouses and various contributory services, such as banks, insurance companies and exchanges, may intervene to complicate the process. Each route is characterized by a close inter-relation of parts, and by numerous and intimate points of contact with routes in other industries. The channel may be direct and simple, or devious and complicated. In general, the development of modern methods, with increased division of labor, has increased the complexity of the course which goods follow, though the movement toward integration, or vertical combination in industry, constitutes a tendency toward simplification. The industrial system is simply an organization of many such channels along which goods of diverse types move, to be belched forth at last as finished products.

COMPETITIVE CONTACTS.—Such a view of the economic system indicates the character of some of the **inter-relations between units,** but it does not suggest all the ties which connect the individual business unit to the other parts of the system. Apart from the ties resulting from direct buying and selling relations, the force of competition sets up bonds which act as connecting links between the various parts of the economic structure. It is through such links as these that influences originally affecting one part of the economic system are transmitted to other parts, making the business cycle, for example, a phenomenon which touches all elements of the business world.

Competitive ties of four general types may be distinguished. Perhaps the

most obvious relations are those which center about the **selling market** of a given concern. Here there are direct and unavoidable contacts with all concerns producing the same or similar articles or selling the same or similar services. In **buying** its **raw materials and equipment** it comes again into competition with numerous industrial units. In **hiring labor** and in seeking to retain its own working force it is constantly in competition with other units. And finally in tapping the funds of **capital and credit** which play such an important part in modern industry, a business or industrial unit comes again into active competition with other units. Thus on all sides a given enterprise is tied to others; isolation is unthinkable. It is an integral part of a system.

SPECIALIZATION IN THE ECONOMIC SYSTEM.—The development of this system of closely correlated parts has resembled in many ways the growth of specialization within the single unit. **Technical specialization,** minute division of function, has uncovered hitherto undreamed of productive capacities, and has made possible the astonishing advances of the nineteenth and twentieth centuries. No less fruitful has been the similar process of **industrial and geographical division of labor** which has brought about the existence of these numerous parts in the economic system. But, just as technical division of labor within a manufacturing establishment intensifies the difficulties of administration, and makes the smoothest co-operation vital to efficient production, so the industrial division of labor has made the task of co-ordinating the economic processes of society perhaps the most difficult economic problem of today, as it is the most vital to economic well-being. That fine adjustment of parts which is essential to the operation of a delicately constructed machine must be secured for the efficient functioning of the economic system. The degree of co-ordination which is actually attained is remarkable, in view of the diversity of interests pursued by the millions of individual workers included in the system, but the co-ordination is still imperfect. To secure more perfect co-ordination and to learn to control more effectively the machine as a whole—these problems remain for the present generation to solve.

BASIC CONSIDERATIONS RELATING TO DISTRIBUTION.—"Distribution" is the term used by economists to designate the process of **dividing the joint product** of the factors of production among the several factors. (This meaning of distribution is not to be confused with that current usage in which it is synonymous with "marketing.") Before discussing the process of distribution in detail, certain considerations of paramount importance in connection with this problem should be noted. Many different principles upon which the joint product of industry might be divided, principles which may be based upon conditions varying all the way from chattel slavery to communism, may be conceived, but unless three primary requirements are met, no economic system can be expected to endure.

Welfare of Producers.—First and most important is the welfare of those who produce, by physical and mental effort. Material comforts in the way of food, clothing and shelter, together with educational opportunities for the great mass of workers of a nation, constitute a prior lien upon the product of industry.

Development of Capital Equipment.—A second fundamental requirement is that the product of industry be so disposed and labor so directed that the capital equipment—the tools, machines, railroads, factories, surplus food supplies—be fully maintained, and increased and improved as population needs and the march of invention warrants. It needs no argument to demonstrate that modern populations cannot survive unless the material equipment of

industry be kept up. In order that this be done it is essential that a certain proportion of the labor of society be devoted to the production of the equipment which serves society by facilitating the production of consumable goods. This necessitates the production of a surplus of consumable goods by other workers, the consumption of less than they produce. Using the counters with which men calculate under the price system, it means that part of the money income of the mass of income recipients must be saved and invested. The **process of investment** is one by which control of the goods which this surplus money income represents is handed over to the borrower, the railroad, steel mill or textile factory, the goods being used by this borrower to support labor employed in replacing or adding to its material equipment, its capital, in the true sense of that word. The principle upon which the process of distribution is based must be one which permits and encourages the saving which eventuates as capital equipment.

Maintenance of Economic Productivity.—The third requirement is that the division of the product of industry be performed in such a way that the productivity of the economic system is not impaired. This involves the two considerations first mentioned, but includes other factors which need not be detailed here. If a nation's economic product is so apportioned that incentive to labor and to leadership is lacking, that initiative is lost, or that the productive efficiency of the system is adversely affected in any other way, the process of division is based upon faulty principles. Industrial productivity is by no means the sole requirement of our economic system, nor the most important when human values are in question, but the attainment of other ends and the satisfaction of other requirements are conditioned by the degree of productive efficiency attained.

FACTORS AFFECTING REMUNERATION FOR ECONOMIC ACTIVITIES.—With these considerations in mind, the factors which affect the remuneration of labor and of the other agents of production may be briefly outlined. These factors are of **two general types**—those which affect the amount to be divided and those which affect the process of division itself. The first class includes all factors which affect the total volume of production, for the real rewards of labor, in terms of material goods, depend in the last analysis upon the amount of consumable wealth produced. The Patagonian and the Eskimo live upon lower economic planes than the average American primarily because of differences in the volume of goods produced, not because of differences in social structure, legal systems, or method of dividing the product. The well-being of the mass of a nation's citizens depends, of course, upon the way in which the national product is divided, but it depends more immediately upon the total volume of goods available for division.

The factors which influence the volume of production have been outlined above. Therein the dependence of production upon the efficient use of natural resources, upon the character and training of the population, upon adequate capital equipment and upon efficient industrial leadership was pointed out. It may appear that these factors have but a remote and uncertain bearing upon the central problem now under consideration, that of the division of the national product. Yet the factors named are of major and immediate importance. For these determine the size of the pie to be divided—the number of bushels of wheat, potatoes and corn, tons of coal and pounds of beef, yards of cloth and gallons of gasolene, which make up the annual real income of an economic group.

Bearing in mind the importance of those factors which affect the size

of the total product which is to be divided, the forces which affect the process of division itself may be briefly considered. Many general theories purporting to explain the process of distribution have been advanced, but it may be questioned whether any one general explanation is of universal validity. The process by which the material goods produced by society are divided among all who have co-operated directly or indirectly in their production is a highly involved one, complicated by the fact that the return any one individual receives may consist of several different shares (as a farmer may in his own person receive wages, interest, profits and rent), and doubly complicated by the fact that it is carried on behind the screen of prices, behind monetary returns. While no one theory may describe the process, an explanation of certain of the forces at work may at least clarify the problem.

RÔLE OF BUSINESS ENTERPRISE IN DISTRIBUTION.—It is the business leader, the organizing factor in production, through whose hands the actual process of distribution takes place. When the division of function in production is simple and perfectly clear-cut we have the organizer renting land, borrowing capital (strictly, he borrows the money which gives command over capital goods), hiring manual labor, a clerical force and his executive officers, paying these various agencies out of his proceeds and keeping the balance for himself. To the land-owner he pays **rent,** for the use of capital he pays **interest**, for the services of labor he pays **wages** (including salaries), while his own share constitutes **profits.** (If the enterpriser is not an individual but a corporation the profits, when apportioned, appear as **dividends.**) The question: "What determines the relative size of these shares?" is equivalent to: "What determines how much the enterpriser shall pay these various agents and how much he shall keep for himself?"

To the business man himself this is merely a problem in buying and selling. He pays for the use of land an amount fixed by the competition of the market, with regard to the quality and location of the given site. He borrows capital at the market rate of interest, and hires labor at prevailing wage rates. He may shade the market rates a little by astute bargaining, but essentially the market guides him. Any explanation, therefore, must go back of the market to the forces determining the market rates for these various agents. A detailed account of the forces at work in a given case is not possible here, even if knowledge of all such details were to be had. The present discussion must be confined to the factors which are peculiar and unique in affecting the play of competition in the case of each agent.

CONDITIONS DETERMINING RENT.—The amount secured by the owner of any particular piece of land depends upon the relative advantage, for a given purpose, which the utilization of that property conveys. In the case of land it is a **differential advantage** for which a price is paid, an advantage which one site possesses over others. This differential advantage may be due to a favorable location, as in the case of a retail trading site, fertility, in the case of agricultural land, or richness, in the case of a mine. It is because a given amount of labor will produce more on one site than on others that rent will be paid for its use. It follows that rents shade off by degrees, as the degrees of advantage diminish, until **"no-rent" land** is reached, land for the use of which nothing will be paid.

Rent, then, represents a share in distribution paid for the use of property in the form of natural resources, and its amount, in the case of a given site, depends upon the relative advantage resulting from the use of that site. Through competition the amount actually received for its use tends to approach the

full value of this differential advantage, though the money rental may frequently be less than the full **economic rent** which might be exacted. As population increases and the available land is more fully occupied rents rise, and the no-rent limit is pushed farther and farther out.

RATE OF INTEREST.—Interest, like rent, represents a payment for the use of property, but in this case the property is that which has been produced by man. The actual **rate of interest** prevailing at a given time is determined by the play of competition between borrowers and lenders of capital, the bids of the former being influenced by the amount they can gain from the use of additional increments of capital for specific purposes. As the **productivity of capital** thus lies back of the demand for it, so the fact that the accumulation of capital involves **abstinence,** at least for some savers, limits the amount accumulated. This limitation is obviously an important factor, from the side of supply, in determining the market rate of interest. New inventions, increasing the productivity of capital, tend to raise the rate of interest, while the constant accumulation of new capital tends to lower it. The net result has been a steady but slow decline in the interest rate, a decline which was interrupted by the destruction of capital during the World War.

NON-COMPETING GROUPS IN RELATION TO WAGES.—The share of labor in the total annual production of economic goods is again determined by general market forces similar to those described above, but here again a number of conditions affecting only this particular problem are met with. A distinct and peculiar characteristic of labor is found in the existence of **non-competing groups.** The capital available for investment, which is represented by funds in liquid form, may be looked upon as homogeneous. The investor may buy a railroad bond or a steel bond, may lend to a telephone company or to a textile mill. All are competing for his funds, and in the market a uniform rate will be fixed for investments of the same general strength. Not so in the labor market. Bank clerks do not compete with bricklayers, bookkeepers with carpenters, engineers with coal heavers. The forces of competition play in determining wage rates, but they play within circumscribed regions, determining many rates, not one common rate with minor variations. The peculiarities of the labor market cannot be understood without a recognition of the existence of these more or less distinct compartments.

CLASSIFICATION OF NON-COMPETING GROUPS.—No final classification of these non-competing groups is possible, for no clear-cut and definite lines of cleavage may be drawn. The following division, representing very real lines of economic difference, has been suggested. More detailed groups might well be set up within each class, if minor wage differences were of interest. The five fundamental groups, set off from each other by differences of education and training, other environmental differences and, to some extent, by differences of inborn gifts, are the following:

1. Unskilled manual laborers
2. Semi-skilled manual workers
3. Skilled manual workers
4. Clerical workers
5. Salaried business managers

This list is not designed to include professional men nor independent business organizers, who draw their main rewards from profits.

TENDENCY TO EQUALITY OF WAGES WITHIN GROUPS.—Within each of these groups wages, in the broad meaning of that term, tend to a rough equality. In certain of the higher groups there may be very marked differences but these do not destroy the significance of the general classification.

Differences within a group tend to disappear as superior rewards attract men from other occupations in the same class, or change the direction in which rising generations are led. The adjustment is slow, and never perfect, but it is much more marked within each group than between groups. The differences between groups tend to be fixed and constant, though particular individuals may cross the economic boundaries between groups.

DETERMINATION OF WAGES.—The immediate problem is: What determines the wage received by an individual within any one of these groups? The answer in general terms is as follows: The **common wage within any group** is fixed by the play of competition between two limits. **The lower limit** is set by the standard of living, a standard which may correspond to that of bare physical subsistence for certain groups at certain times. If wages fall below this limit men and women will not marry, the group will not be perpetuated, and obviously the wage level will not be a permanent one. The standard which is accepted as permitting marriage and the raising of a family is, of course, much higher for some groups than for others. The lower limit, then, is set by what the workers in a given group will accept and which will permit the perpetuation of the group. **The upper limit** is determined by the degree of indispensability of labor in a given group, to use an awkward but suggestive term.

If the services of an individual in any group are relatively indispensable, because of high productive capacity, limited number of equally capable workers, or intensity of demand for the given product, that individual, in common with all the other members of the given group of equal capacity, is in a position to demand a high wage. He may demand as much as the employer would lose if a single individual in that group were to leave. If a wage were to exceed this amount, an employer would reduce his working force and the resulting competition of labor would reduce wages. But he will not pay up to this limit, the limit fixed by the full contribution of a single laborer in his force, unless forced to. The actual rate of wages is fixed between these two limits, the minimum the employee will accept and the maximum the employer will pay under the given conditions, by the relative bargaining power of employer and employees. Bargaining power is affected by such a multiplicity of factors—business conditions, amount of unemployment, degree of organization of workers and employers, etc.—that no discussion of this subject can be attempted.

RENT ELEMENT IN WAGES.—In the preceding discussion equality of ability within each group has been assumed, for the purpose of simplifying the argument. Such an assumption is not erroneous, in so far as the determination of a basic wage rate for each group is concerned. In practice, however, there are many **variations from the basic rate,** variations due to individual differences. These differences are quite analogous to those differences between plots of land which give rise to rent, and hence there exists what is called a "rent element" in wages. The man of exceptional ability will command a return above the standard, just as a particularly favorable site will yield an exceptional return. Such differences of ability, however, do not by themselves explain how wages are determined; the effects of such differences are merely superimposed upon the effects of the forces described above which determine the basic rate of wages in a given group.

This account of the factors affecting wages necessarily lacks the definite and exact appearance which the so-called "scientific" wage systems possess, but in that respect is truer to life than they. There is no one theoretically just and correct wage. What we actually have under the present system is a

struggle for the product of industry. The share each factor gets depends upon its strategic position, in a bargaining sense, and its reward varies consequently from time to time and from place to place as the conditions affecting this strategic power vary. This is notably true in the case of labor. In the determination of wages, however, this struggle is conditioned by the existence of fairly definite upper and lower limits to the fluctuations of wages.

COMPETITIVE AND MONOPOLY PROFITS.—The factors determining the amounts which the business organizer must pay for the services of the other agents of production have been briefly outlined. These payments having been made, the remainder, if there is any, constitutes profits. Profits are thus **a residual share** and may be expected to vary much more widely than the other shares. Under very favorable conditions they may be exceptionally large, and they may fall below zero when the conditions are adverse. The factors affecting profits are numerous—the degree of risk undertaken, exceptional individual efficiency, monopolistic advantages, or temporarily favorable conditions which may be due to any one of a number of causes.

COMPETITIVE PROFITS.—The distinction between profits which rest upon permanent or semi-permanent conditions of a monopolistic nature, such as the control of a secret process or of a patent, and those which arise from advantages which are only of a temporary nature, is an important one. The latter are termed "competitive profits," and their characteristic feature is a tendency to disappear under the pressure of competition. If ever a thoroughly **static economic condition** were attained, there would be no profits of this type. Business managers would secure a reward for their labor only, and nothing in addition. But in a system characterized by **constant change**—new inventions, new industrial processes, new business methods—opportunities for competitive profits are always open. Such profits possess a Protean elusiveness; they are ever tending to disappear, but ever present in new forms. Profits derived from monopolistic advantages, on the other hand, are not subject to the encroachments of competition. As long as the advantage remains, the profits are certain.

Economic Organization and the Price System

THE FUNCTIONS OF MONEY.—In the preceding pages the factors of production have been described and the nature of the chief economic processes indicated, with primary reference to the production and distribution of goods. Actual economic goods are, of course, of fundamental importance in economic life, for in the last analysis the efficiency of our economic system depends upon the quantity of goods produced and the degree of equality attained in the distribution of these goods, with due regard to the maintenance of necessary capital equipment. But to facilitate the production and distribution of goods, man has found it necessary to employ a medium which of itself may satisfy no economic need nor serve any final purpose. This medium is money.

The **direct economic functions** of money are familiar and require no detailed explanation. Money's primary service is performed as a **standard of value** and as a **medium of exchange.** Money is a yardstick for measuring the value in exchange of economic goods of all sorts, and a universally desired medium for the possession of which men will part with their products in order that they may secure others. In a ruder and simpler economic system these services might be viewed as of minor importance, subordinate to the main economic processes concerned with the production and consumption of goods.

But with the growing complexity of the economic system—the ever-increasing division of labor and specialization of function, the constantly greater importance of exchange and the resulting interdependence of individuals and economic units—this medium has come to play a commanding rôle in economic life. Instead of occupying a merely incidental place it has become a factor affecting vitally, both for good and ill, every economic process. Economic activities have come to be carried on almost universally within an all-encompassing system of prices, which has almost the characteristics of an organic entity, so finely articulated are the parts, so intimate the correlations within the structure of prices. It will assist in an understanding of economic processes if the nature of this system of prices and the part it plays in the functioning of the economic system are briefly outlined.

PRICE MARGINS AND THE MOVEMENT OF ECONOMIC GOODS.—Economic goods move from original producer to ultimate consumer down a number of parallel and connected channels, passing from the extractive stage through the hands of middle men of various degrees and kinds and along various routes of transportation to reach the hands of the consumer at last. But movement results only when an impetus is given, when some force is in operation. What is the force which thus carries a bushel of potatoes, a ton of coal, a pound of cotton along this channel? The stimulus is the **desire for profit,** and the means of satisfying this desire are afforded at every step in the process of production and marketing by a suitable margin between the buying price (or cost of production) and the selling price.

The satisfactory adjustment and maintenance of such **price margins** is essential to the functioning of the whole economic system. Goods move uninterruptedly along the channels which have been dug for them only when appropriate price differentials are maintained all along the route. Original producer, manufacturer, transportation agency, middleman, all must operate on suitable price margins if they are to perform their services. This movement of goods depends upon a satisfactory relation between prices, upon suitable conditions in the environing system of prices. Temporarily, goods may move without a satisfactory differential—the farmer may let his wheat go below cost; the miller may sell at a loss. But no permanent flow is possible under these conditions.

NECESSITY OF PROPER ADJUSTMENT OF MARGINS BETWEEN BUYING AND SELLING PRICES.—The mere existence of a margin between buying and selling prices is not enough; the margin must be properly adjusted. If it is too narrow at any stage, goods will accumulate and something akin to a log jam will result—a situation not uncommon during certain stages of the business cycle. Too wide a margin, on the other hand, may reduce consumer buying or may interfere with the marketing process by inviting price-cutting on the part of certain distributors. The smooth, normal flow of the great rivers of economic goods produced annually is therefore dependent upon the existence of proper conditions within the price system, upon suitable relations between the parts of that system.

We have described above one set of the ties which bind prices together. The price of bread is related to the price of flour, the price of flour to the price of wheat. And it has been pointed out that, apart from the mere fact of relationship, the size of the differential prevailing at each stage is a matter of importance. We may view the whole **field of commodity prices** as consisting of series of relationships of this sort, running forward from raw material to final product. But in addition to these vertical ties, as one may view them, there are innumerable other ties connecting commodity prices and other ele-

ments in the price system, ties which link together separate sets of prices and establish homogeneous groups within the broad system.

PRICES OF RAW MATERIAL GROUPS.—Considering first commodity prices alone, various divisions have been set up. On the basis of organic character several classes of raw materials may be distinguished, the chief classifications being mineral products, forest products, animal products, and farm crops. There are certain characteristic peculiarities of the prices of commodities in each of these groups. Wesley C. Mitchell has made detailed comparisons of these groups for the period 1890–1913. The **prices of mineral products,** he found, fluctuate in accordance with business conditions, rising sharply during periods of prosperity, breaking in times of crisis, and moving sluggishly at relatively low levels during periods of depression. The reason for this correspondence lies partly in the conditions of mineral production—production may be easily and promptly speeded up or reduced in accordance with demand conditions—and partly in the fact that the demand for mineral products comes from construction and manufacturing industries which are most directly affected by prosperity and depression. The **prices of forest products** during this period showed a steady upward movement more pronounced than for any other class of raw materials, a result of continuously depleted natural resources and increasing costs of production. Price fluctuations in this group in general coincided with changes in business conditions, though not so closely as in the case of mineral products. The **fluctuations of farm crop prices** were violent, and showed no direct relation to business conditions. Weather conditions are the immediately important factor in the movement of crop prices and, as a result, these prices are often rising when general prices are falling, and the reverse. The **prices of animal products** are to some extent affected by the weather, but fluctuate with external business conditions much more closely than do farm crops.

PRICES OF CONSUMERS' GOODS AND PRODUCERS' GOODS.—Similar significant differences are found when manufactured goods are divided into two classes, consumers' goods (goods ready for immediate family consumption) and producers' goods (goods to be used in further production). The latter fluctuate more widely in price, and follow business conditions more closely than do the former.

OTHER CLASSIFICATIONS OF PRICES.—The system of prices may be broken up into further groups. **Manufactured goods** behave, with respect to price, in ways quite different from those of raw materials. **Retail prices** and **wholesale prices** have fundamental differences. Goods or services sold under regulation will obviously differ, in the matter of price movements, from goods and services sold under competitive and unregulated conditions. The prices of goods produced under monopolistic or semi-monopolistic conditions are generally steadier than those of goods subject to competition. Other elements than commodities enter into the price system, forming part of the complex net which surrounds business enterprise. The prices of human services, of land, of capital and credit, the prices of business enterprises themselves, have characteristic features and fluctuations. But enough has been said at present to indicate how numerous are the parts which make up the organism of prices, and to show how this organism has been, in part, analyzed.

PRICE MARGINS AND PROFITS.—The existence of appropriate price relations is important in even a wider sense than that suggested above. The primary motive to business activity under modern conditions is, as has been noted, profit. The business man buys and sells, organizes and administers,

because thereby he hopes to make profits, pecuniary profits. The importance of the rôle played by business enterprise has been indicated in the preceding pages. It is the active, organizing, directing, initiating factor in economic life today. The economic system as we know it would not function without suitable profit margins which will induce such activity.

This is not to say that some other system might not work; other arrangements, perhaps more equitable and more in accord with ethical standards, are conceivable. But our present economic system functions efficiently only under the **stimulus of profits.** When price relations permit suitable profits to be reaped, goods flow, houses are built, employment is steady. Abnormally large differentials may impair the functioning of the system, just as too narrow margins may check business enterprise and cause stagnation. The conduct of the whole system and the proper functioning of every part of the immense structure which has been built up for meeting economic needs, depend upon the existence of suitable profit margins, and these depend upon price relations. The production and movement of goods, the employment of labor and capital, the full use of natural resources—all are conditioned by price relations.

PRICE MOVEMENTS OF VITAL IMPORTANCE.—So all-pervasive and vital is the influence of prices that it is idle to attempt to study the working of the economic system by considering the movement of goods alone. The wide extent of **the price influence** has by no means been fully revealed in what has been said above. The industrial and geographical division of labor which has been so important in the development of the present economic system has been feasible, in the refined form to which it has been carried, only because of the existence of a fully developed price system. It is inconceivable under other conditions. In the division of the product of industry among the factors of production, the price system plays a central part. Land owner, capitalist, laborer and business man all receive their shares in the form of **money incomes.** Their services or the services of their property are bought, much as commodities are bought, and their co-operation thus facilitated. It is difficult to conceive of efficient co-operation under other conditions.

PRICE SYSTEM AND THE CO-ORDINATION OF ECONOMIC ACTIVITIES.—The final significant service which the price system performs, a service not distinct from those already mentioned but including them all, is that which has just been suggested, that of serving as a medium through which **order and co-operation** are introduced into the economic system. The nature of this service requires some explanation.

Minute division of labor in a manufacturing or mercantile establishment increases the difficulties of administration. It becomes harder to secure the proper co-ordination of the specialized activities of the different workers which is essential to productive efficiency. So in an economic system characterized by the high degree of industrial and geographical division of labor which is so marked a feature of the existing order, the perfection of co-ordination is vital. Consider the situation of New York City, an agglomeration of 6,000,000 persons, engaged in highly specialized activities. It is essential to the very existence of this mass of people that supplies of meat, milk, grain, vegetables, fruits and coal be brought to the city in the proper quantities at the proper times. There is no one human brain which directs and apportions the flow of goods into the city.

Similarly, over the whole globe goods are moving back and forth in mighty volume between the specialized centers of human activity, and if the flow is jammed, or if there is an imperfect adjustment in time or in quantity, unem-

ployment, suffering, perhaps starvation, result. Seldom do such maladjustments occur. The precision and timeliness with which these diverse movements are adjusted is a marvelous thing, when one considers that there is no directing hand to follow the multitude of trains and ships and to adjust their movements to the needs of the peoples of the world.

COMPETITION AND THE PRICE SYSTEM.—The **regulating factor** is, of course, competition, working through the medium of prices. The price mechanism reacts immediately to a shortage or surplus of goods anywhere on the occupied globe; exceptionally high or low prices stimulate or retard the flow of goods, correcting at once the conditions which gave rise to abnormal prices. Not only is the flow of goods so regulated, but an efficient distribution of economic labor is secured in the same way, through the reactions of the price system to maladjustments of supply or changes in demand. It is the **system of prices,** encompassing the structure of organized and specialized industry, through which this regulating agent, competition, functions.

Yet, effective as this regulating agent is, it is by no means perfect in its operation. A few generations ago economists were wont to deify unrestricted competition and the freedom of enterprise which went with it, bu a fuller experience with competition under modern conditions has demonstrated that there are serious dangers attached to its unrestricted operation. Moreover, the price system through which modern competition functions, and which serves as the regulating medium in economic life, is itself subject to disturbances which may seriously impair its usefulness. When the price system is out of joint, it no longer transmits in ungarbled form messages which reflect the economic needs of the people everywhere, and as a result delicate economic relations are disturbed and the free flow of goods and services is prevented.

The **disturbances** which thus affect the price system are by no means simple or easily explained. Some of the effects of these changes have been indicated. These may be summarized and certain general causes suggested.

CHANGES IN PRICE DIFFERENTIALS.—In a profit-seeking world price differentials furnish the incentive to the activities which keep goods moving from producer to consumer. It is by no means desirable that these margins be fixed, of course. An increase in demand for a particular type of goods stimulates the flow by increasing the margin, and a falling off in demand has the reverse effect through effecting a decline in the margin. Flexibility is essential to the functioning of an economic system which meets the needs of a growing and changing society, and flexibility would be impossible with constant price relations. Such changes as we have in mind here are localized, marking a transfer of demand from one article to another. A prompt reaction of prices to these changes is highly desirable. But when price differentials are increased or decreased generally, or for large commodity groups, without corresponding changes elsewhere in the economic system, that is, when the underlying reason is not a transfer of consumer demand, serious trouble may result. Increased differentials may speed up production and distribution beyond consumers' needs, and decreased margins may have the reverse effect, impeding the proper flow of goods. Either result may cause economic trouble.

EFFECT OF GENERAL PRICE CHANGES.—Similarly, general price changes may unduly expand or abnormally contract the profit margins which play such an important part in the functioning of every part of the economic system. **Large margins** tend to cause the feverish activity and unhealthy expansion which bring about a crisis, and **insufficient profit margins** constitute a brake to necessary business activity.

Again, general price changes seriously disturb the process by which the joint product of the agents of production is apportioned among these factors. Rising prices may swell the share of the business leader at the expense of labor or of the lender of capital, and falling prices may reverse the process, for changes in the monetary rewards secured by certain of the factors of production always lag behind commodity price changes, and thus the real income, in terms of bushels of potatoes and suits of clothes, which a given money income represents may be seriously altered by a price change.

EFFECT OF IRREGULARITY OF PRICE CHANGES.—The irregularity of price changes may also work hardships on specialized classes of producers or specific industries. When a general rise or a general fall of prices is under way, the movement is seldom uniform in all lines. Thus laborers, business leaders, capitalists and land owners whose interests lie in certain industrial fields may suffer alike, while other industries are reaping the rewards of a propitious price turn. Where such inequalities represent fundamental economic alterations, as the dying out of an old industry, such suffering is unavoidable, but when it is due to the irregularities of a price revolution it is economically wasteful.

GENERAL RELATION OF THE INDUSTRIAL SYSTEM AND PRICE SYSTEM.—This outline will have served its purpose if it has shown how intimate and vital is the connection between the industrial system, which is primarily concerned with goods, and the environing price system. The former is controlled and regulated at every turn through the latter; the disturbances which affect the latter react immediately upon the former. A sound and well controlled price system is essential to the healthy functioning of the industrial system, and such a price system has not yet been secured.

There is no general agreement among economists as to precisely how the general price changes are brought about. But there are certain general relations which are important in connection with these changes.

FACTORS AFFECTING THE PRICE LEVEL.—A general change in prices is to be distinguished from changes in the prices of a number of individual commodities. **Individual commodity prices** are constantly changing as conditions of supply and demand in specific lines are altered. Such movements are essential to the normal functioning of a dynamic economic system. When the price level is constant such individual changes are counter-balanced by contrary movements in the prices of other commodities. But a change in the **general level of prices** takes place when the movements of individual prices in one direction exceed the movements in the other direction. Thus 60% of all price transactions in one month may be at higher levels than the corresponding transactions during the preceding month while 40% may be at lower prices. The general level of all prices would be higher in the second month. The price level is, therefore, to be conceived of as an **average.** Prices are moving in diverse directions at any time. When upward and downward movements cancel each other, the price level is stationary. When out of the multitude of price changes more are in one direction than in the other, the price level is rising or falling. What conditions attend such a rise or fall in the level of general prices?

PRICE EQUATION.—Since a price is merely a statement of the value of any goods in terms of money, it is obvious that any single price depends upon the quantitative relation between goods offered for sale and money offered for goods. There are conditions lying back of these two factors which must be taken account of in any study of a given problem of price determination, but

in the actual settlement of a market price the complex of forces affecting demand and supply express themselves in money offered for goods and goods offered for money. In the same way the relation between the total goods offered for sale over a given period and the total of money (in any form) offered for goods must determine the ratio at which goods and money change hands. When total goods and total money are in the balance, the ratio is an average of prices or what is termed the **price level.**

The price level, then, depends upon the relation between quantity of goods and quantity of money. (The term "money" in this sense must be understood to include purchasing power in the form of commercial or bank credit, as well as the ordinary forms of metallic and paper money.) When the situation over a period of time is taken into account, as it must be in studying changes in the price level, it will be recognized that the amount of money offered for goods depends not alone on the absolute amount in existence, but on the rapidity of its circulation. The efficacy for trade purposes of a given sum of money over a period of 12 months would be doubled if its velocity of circulation were doubled. If we let M represent quantity of money, V the velocity of circulation of money, M' quantity of credit, V' velocity of circulation of credit, T the volume of goods and services entering into exchange (the trade factor) and P the average price at which these goods and services change hands (the price level), the relations outlined are described by the following equation:

$$MV + M'V' = PT$$

A study of the relations between the factors represented in this equation will make clear the conditions which enter into a price movement. An increase in any of the factors on the left-hand side of the equation will serve to raise prices, provided the volume of trade remains constant, while a decrease will have the reverse effect. The thorough-going believer in the so-called **quantity theory** of money (strictly, a quantity theory of prices) explains all price movements as the results of changes in some one of the other five factors in this equation. Prices are looked upon as the passive element, following movements in the other factors. Thus the tremendous rise in prices here and abroad during the war is looked upon as the result of increases in the volume of money and credit. The floods of irredeemable paper money abroad, the tremendous expansion of credit attendant upon the development of the Federal Reserve System, facilitated by the great increase in gold holdings in this country—these are held to be the direct and active factors in the price revolution. Opponents of the theory contend that prices themselves may play an active part, that a rise in prices due perhaps to a sharp increase in demand will call more purchasing power into existence. Thus a merchant may be handling a given volume of trade with an average bank credit of $10,000. If prices double he may need a credit of $20,000 in order to handle the same physical volume of trade. The rise in prices called new deposit credits into being.

The elements in the equation are so difficult of actual measurement that the controversy has not been settled. That there is a close relationship between quantity of money and quantity of goods is obvious, however. Whether an increase in the money factor causes or merely facilitates a rise in prices need not concern us here. It is sufficient for our present purpose to recognize the connection between these two factors. A key to the problem of price changes is furnished and methods of controlling the general level of prices are indicated by this theory.

CONTROL OF PRICE MOVEMENTS.—The violent price changes of the last 10 years have so dislocated internal and foreign trade relations, and have

at times so upset that equilibrium which is essential to business stability, that the problem of preventing such violent fluctuations has come to the fore in economic discussion. Those with the most definite views as to method are the out-and-out quantity theorists, notably Prof. Irving Fisher. The **essence of Fisher's plan** lies in the proposal for a compensated dollar which is designed to replace the present dollar, of fixed gold content and varying purchasing power, with a dollar of varying gold content and, it is hoped, a constant purchasing power. These changes in the gold content of the monetary unit are to offset the effect of price fluctuations upon purchasing power, and are expected to check any but minor changes in the general level of prices. Other plans to the same end have been proposed. Of some current interest is the suggestion that the Federal Reserve Board so manipulate the credit resources of the country as to prevent marked price changes. The Federal Reserve Board itself has refused to use its power to any such end.

While none of these proposals may ever be carried out in practice, they are significant as attempts to extend man's control to a field which has largely been undirected and unregulated in the past. The individual industrial unit has been studied in detail and comprehensive programs looking toward more scientific administration have been carried out. But the system of prices which binds these units together, which furnishes the medium through which economic forces act, has come to occupy its dominating position almost without man being conscious of its development. This system, with all its virtues, is not perfect. The movement toward intelligent control of the price system reflects a growing appreciation of the part that this system plays in business and of the fact that man need not necessarily be a passive sufferer from its ills.

ADJUSTING BUSINESS TO PRICE MOVEMENTS.—While these major swings of prices are not yet subject to control it is possible to frame business policies with due regard to **current price movements.** The **importance** of these fluctuations **to the individual business man** need not be emphasized. The memories of what happened to high priced inventories in 1920 are still fresh in the minds of business men, to recall merely one example of how price movements strike to the heart of the individual business. These movements are not mere economic abstractions, of only academic interest, but facts of vital concern to all who buy and sell. The highest degree of internal efficiency will not guarantee business success, unless business policies be framed with the closest regard to external developments, particularly price movements.

INDEX NUMBERS OF PRICES.—To enable these movements to be followed, index numbers of prices are currently compiled and published by various agencies, and some familiarity with these index numbers is essential to effective business administration.

A completely accurate measure of price movements would include all price transactions during a given period, all sales at wholesale and retail, all wage payments and payments for other services, all transactions in which the monetary factor appears. Such a measure, of course, cannot be compiled. Here, as in many other fields, we must be content with the study of a sample, and all index numbers of prices are thus based upon samples.

PRINCIPAL AMERICAN INDEX NUMBERS.—The three chief American index numbers of wholesale prices, those of the United States Bureau of Labor Statistics, Bradstreet's and Dun's, are alike in certain respects, though there are rather important differences.

Bradstreet's, the simplest in construction, is merely the aggregate of the prices per pound of 96 commodities. Since many of these articles are not

quoted on the "per pound" base, this involves a reduction of the original quotations to this base. A change in the price level is thus indicated by a change in the total cost of these 96 articles. These totals may be reduced to percentages, using any desired month or year as the base of these calculations.

Dun's index is of the same sort, an aggregate of actual prices, except that more commodities are included in the sample (about 300) and that the prices of these commodities are weighted in proportion to their relative importance. The logic of this weighting process is obvious, for a given change in the price of wheat, for example, is much more important than an equal change in the price of peanuts.

The index of the Bureau of Labor Statistics is more comprehensive than either of the other two, being based upon 404 price quotations, and the commodities included are more representative of the general field of commodities exchanged at wholesale than in the case of the other index numbers. This index is constructed by securing a weighted aggregate of actual prices, the aggregate for any date being expressed as a percentage of the 1913 total.

DIFFERENCES BETWEEN THE THREE INDEX NUMBERS.—This very brief account does not permit a detailed discussion of certain important differences between these three index numbers. In comparing them, or in using any one of these as an index of price changes, these differences must be held in mind. The most important are due to differences in the commodities included. Thus **Bradstreet's is heavily weighted with raw materials,** in particular with textiles, and its movements are affected to a greater extent than the other index numbers by raw material and textile price movements. Since raw material prices are more sensitive to business changes than the prices of manufactured goods, Bradstreet's index is a fairly sensitive barometer of business conditions. **Dun's index gives greater relative weight to foods.** Food prices are affected by weather and crop conditions as well as by business conditions and this index number may at times reflect changes of the former rather than of the latter type. **The index of the Bureau of Labor Statistics is based upon prices at wholesale of a great variety of commodities,** the various types being more adequately represented here than in the construction of either of the other index numbers discussed above. Manufactured goods bulk large in the commodities included, and since the prices of these goods are generally more stable than those of raw materials the index is less sensitive than is Bradstreet's, reflecting only the major movements of prices in general. It is without doubt the best general index of wholesale prices, though for certain specific purposes Bradstreet's or Dun's may be preferred.

INDEX NUMBERS OF COST OF LIVING.—Index numbers of retail prices and of the cost of living are also currently published and serve as useful guides to movements in these two fields. The difficulties attendant upon the collection of data are so numerous and there are so many technical problems connected with the weighting and averaging of the data when collected, that the degree of confidence attaching to measures of wholesale price movements cannot attach to index numbers of retail prices and of living costs.

SUMMARY.—The economic system functions through the instrumentality of prices, and its behavior cannot be understood unless the important part played by price relations in the flow of goods and in the apportionment of the product of industry be appreciated. The price system, however, does not function perfectly. Wide price fluctuations occur, and these throw the economic system out of gear, feverishly accelerate or choke the flow of goods from producer to consumer, impoverish some producers while pouring unearned gain

into the laps of others, and work hardship by altering the shares in distribution. The study of these price movements has shown that there is a fundamental relation between price changes and changes in the volume of money and this discovery has led to many proposals for the regulation of prices. While such price regulation is not probable in the immediate future, it is yet possible to avoid the worst effects of price fluctuations by studying the movements of index numbers of prices and by framing business policies in the light of the knowledge thus obtained.

Business Cycles

CRISES AND PANICS AS PHASES OF THE BUSINESS CYCLE.—Financial panics and business crises have been characteristic features of American industry for the past hundred years. Recurring with a fair degree of regularity, the breakdowns of business which have accompanied these crises have brought wide-spread distress to large classes. The most recent major crisis was that of 1920, which is still fresh in the memories of business men and of employees. But back of 1920 stretches a long succession of similar periods of painful liquidation—1914, 1907, 1903, 1893, within the lives of the present generation of business men. Still farther back, the years 1873, 1857 and 1837 spelled disaster for the men of those days.

These crises, with the panics which almost invariably accompanied them, stood out as dramatic and perplexing economic events, and many theories in explanation of them were put forward. As long as each crisis was looked upon as a single isolated event, to be explained in terms of its own peculiar causes, little progress was made in the attempt to account for such catastrophic interruptions to the usual course of industry. Some outstanding political event or the failure of some leading concern was held to be responsible for the industrial break, with the result that nothing was learned which might be of aid in the future conduct of business, in preventing the recurrence of similar disasters.

This view of panics and crises as detached events, attributable to special causes, has gradually been supplanted in the minds of business men and of economists by the conception of a **constantly operating cycle,** a constant succession of changes in a dynamic industrial order, of which the business crisis is but **one phase.** With this change in viewpoint the attempt to explain each panic as a separate phenomenon has been given up. Men seek today to ascertain the general sequence within the round of events which is termed the "business cycle," to explain how and why one phase of the cycle leads into another, and to determine the character of the forces which drive the business system on the unceasing round of depression, revival, prosperity and crisis. These problems have by no means been completely solved. The business cycle remains in part an unexplained phenomenon, in so far as ultimate causes are concerned. But much has been learned as to the nature of the events occurring during the business cycle and this knowledge is lessening the violence of the cyclical swings of business and is mitigating the evil effects of these swings upon business and society.

CHARACTERISTICS OF BUSINESS FLUCTUATIONS.—A study of the chart in Fig. 1 reveals clearly the characteristics of these business fluctuations. This chart is based upon an index of general business activity, constructed by the Statistical Division of the American Telephone & Telegraph Co., covering the period from 1877 to 1924 by months. (The method of construction is discussed at a later point.) The heavy black horizontal line in the center represents a normal state of business activity, the fluctuations in the curve

FIG. 1. Composite Index of General Activity Showing Cyclical Fluctuations in American Business from 1877 to 1924

indicating deviations above or below normal. The cycles, while fairly regular in their recurrence, are not constant in length nor in amplitude, and many sharp and irregular minor movements are superimposed upon the cyclical fluctuations.

The detailed discussion of the cycle and of the methods by which business men may adapt their enterprises to its phases may best be preceded by a brief statement of the effects of the cycle upon business men and other classes in the community. The **economic and social losses** due to the cycle should be appreciated if full advantage is to be taken of the methods which are open for avoiding the worst of these losses.

LOSSES OF BUSINESS MEN DUE TO THE BUSINESS CYCLE.—In indicating the nature of certain of the losses suffered by the business community as a result of the cyclical swings of business, the impression should not be given that all the phases of the cycle have a negative effect on business. This would be far from the truth. It does not require demonstration that the phases of revival and prosperity are marked by business optimism, rising prices and swelling profits. This discussion, however, is concerned solely with the losses which occur during crisis and depression, without attempting to measure the net effect of the cycle as a whole on the revenue of business operators.

BUSINESS FAILURES.—One of the most obvious indexes of the well-being of the business world is found in the record of business failures. During boom times these failures fall off to a very small number, while during times of liquidation and depression the number of bankruptcies is swelled to large proportions. Table 1 shows the course of business failures, as compiled by Bradstreet's, by years, from 1913 to 1924.

Table 1. Business Failures in the United States, 1913–1924

Year	No. of Business Failures	Year	No. of Business Failures
1913.....	14,551	1919....	5,515
1914.....	16,769	1920....	8,463
1915.....	19,035	1921....	20,014
1916.....	16,496	1922....	22,415
1917.....	13,029	1923....	19,163
1918.....	9,331	1924....	19,712

The depression of 1914, the prosperous war-time years, the crisis and depression of 1920 and 1921 are clearly reflected in this mortality table of business enterprise.

MEASURE OF PROSPERITY BY BUSINESS PROFITS.—Equally significant as a measure of the prosperity of business are the figures of business profits. Complete data on this subject for the business world as a whole are lacking, but in certain fields and for certain periods we have records of the earnings of various corporate groups. Table 2, showing the average monthly earnings of the U. S. Steel Corporation from 1913 to 1924, may serve as an example of the fluctuations in profits occurring in a basic industry.

Many more figures might be brought forward to prove the same point, but those given above will have sufficiently demonstrated the effect of falling prices, depreciating inventories and idle equipment upon business enterprises.

LOSSES OF LABOR.—The effects of economic cycles upon employees are equally marked. The **number of unemployed** is materially increased during

Table 2. Earnings of the United States Steel Corporation, 1913–1924[1]

Year	Aver. Monthly Earnings of U. S. Steel Corp.	Year	Aver. Monthly Earnings of U. S. Steel Corp.
1913.....	$11,432,000	1919.....	$11,966,000
1914.....	5,972,000	1920.....	14,724,000
1915.....	10,866,000	1921.....	7,726,000
1916.....	27,798,000	1922.....	8,470,000
1917.....	24,608,000	1923.....	14,971,000
1918.....	15,595,000	1924.....	12,745,000

the period of liquidation and depression, and many of those who retain their jobs do so only on a part-time basis. And this reduction in employment is accompanied by a pronounced decline in earnings.

William A. Berridge has prepared the following table[2] showing the approximate decline in the volume of employment in manufacturing industries between the height of prosperity and the lowest point of depression in certain cycles within recent years.

Between the Peak of the Boom	And the Bottom of the Depression	Employment Declined Approximately
Middle of 1903	Middle of 1904	5%
Middle of 1907	First quarter of 1908	15
Early in 1910	Middle of 1911	5
Early in 1913	End of 1914 and early in 1915	10
Third quarter of 1918	Second quarter of 1919	15
Early in 1920	First half of 1921	25–30

There is, of course, a corresponding fall in earnings at such times. Here again one lacks adequate data, but the importance of such changes is indicated by the figures in Table 3, showing the total payroll of 1,648 concerns in New York state employing more than one-third of the factory workers of the state. The figures given have been obtained by dividing the annual totals by 12, to secure a monthly average for each year of the total amount of the combined payrolls for that year.

Table 3. Payroll of Factories in New York State, 1914–1923

Year	Combined Payroll of 1,648 Concerns in New York State (Monthly Average)	Year	Combined Payroll of 1,648 Concerns in New York State (Monthly Average)
1914.....	$ 5,942,000	1920.....	$16,711,000
1915.....	6,377,000	1921.....	11,943,000
1916.....	8,366,000	1922.....	12,524,000
1917.....	9,892,000	1923.....	15,074,000
1918.....	12,481,000	1924.....	13,967,000
1919.....	13,490,000

LOSSES OF FARMERS.—Another class in the community which suffers severely from the price changes and other readjustments connected with the business cycle is that composed of the agricultural producers. The immediate business aspects of the cycle do not affect the farmer so vitally, though he is by no means completely cut off from the effects of such changes. His chief losses come from the changes in the price level and from the dislocations within the price system which change the relation between the prices of the things the farmer buys and the prices of the things he sells.

This is brought out very clearly in Table 4 by a comparison of the sets of index numbers measuring, respectively, changes in the prices of crops and livestock at the farm, in the wholesale prices of commodities other than farm products and foods, and in the purchasing power of farm products. The latter index is derived directly from the two former, being constructed to measure the value of farm products in terms of the things the farmer buys. The explanation of farm prosperity in 1917, 1918 and 1919, as well as of the distress during 1921 and 1922 in some agricultural regions, is found in the discrepancies which have developed between these sets of prices.

Table 4. Index Numbers of Price and Buying Power of Farm Products*

(Relatives, 1913 = 100)

Year	Farm Prices of Crops and Livestock	Wholesale Prices of Commodities (Excluding farm products and foods)	Purchasing Power of Farm Products
1913.....	100	100	100
1914.....	102	94	109
1915.....	100	97	103
1916.....	117	132	89

GENERAL ECONOMIC LOSSES DUE TO THE BUSINESS CYCLE.—It is somewhat more difficult to measure the general economic losses which result from the unhealthy expansion and wastes of the boom periods, the forced liquidation of the crisis and the idleness of men and equipment during the period of depression. The losses in profits and in wages are the significant items to those whose individual fortunes are at stake, but a summary of such losses, even though it could be a complete one, would not serve as a final measure of the full economic loss. Wesley C. Mitchell and Willford I. King have attempted to determine the amount by which the total national income is reduced in years of depression. Their results, which are only presented as rough approximations to the truth, show that the total production of goods in the years of pronounced depression is from 15 to 20% less than production during the best years, and from 8 to 12% less than in moderately good years. These figures mean that, even when the moderately good years and not the best

years are used as standard, production in years of depression is reduced by an amount valued at several billions of dollars. The losses during such years are not balanced by corresponding gains during the exceptionally active years. Mitchell and King balance the gains against the losses over a generation, and estimate that there is a net loss of nearly 3% of the total output during this period, a loss which is traceable to the cyclical swings of business.

Apart from the actual loss in output, the **changes in the purchasing power of the dollar** which result from the price swings during the business cycle cause a transference of wealth from debtor to creditor, or vice versa, which represents a serious economic injustice, and is a cause of widespread discontent.

EXPLANATIONS OF BUSINESS CYCLE IN TERMS OF OUTSIDE FORCES.—With the shift of interest from the dramatic phase of the cycle, the panic, or crisis, to the cycle as a complete phenomenon which must be explained as a whole, the character of the explanations put forward suffered a change. A single exceptional cause acting at the time of each crisis would no longer serve to explain the cycle as a whole. The explanation must account for the entire round of events making up the cycle, and for the repetition of these events in approximately the same order in cycle after cycle. To enumerate in detail the many theories which have been advanced to account for this periodic sequence would take us far beyond the scope of the present discussion. A very brief comment may serve to place the succeeding exposition in a clearer light, in relation to other explanations.

Certain writers find the cause of the cyclical movements in the economic world in forces outside the economic system. Thus Jevons explained the cycle in economic affairs in terms of **weather cycles,** which he traced back to sun spots. Henry L. Moore finds cycles in **temperature and rainfall** which coincide in a remarkable fashion with the conjunctions of the **planet Venus.** Ellsworth Huntington relates economic cyles to cycles in **health,** which are in turn attributable to cycles in weather.

EXPLANATION OF BUSINESS CYCLE IN ECONOMIC TERMS.—As opposed to such theories, which go outside the economic system for the motivating force of the cycle, are all those which find the explanation of the characteristic cyclical phenomena of business within the economic system. **Theories** of this type may be considered as of **two classes,** though the division is not a rigorously exact one. In the first class are those which explain the cycle as a result of **maladjustments of supply and demand,** in terms of physical quantities of goods of certain types. There are many variations of this general theory, but physical quantities play a central part in all. Theories of the other class center about the **price system,** either in general terms or with reference to some specific aspect of the money economy. The moving force of the cycle is found in profit-seeking, and in **price maladjustments.**

Wesley C. Mitchell, who stands, in general, in the second group mentioned above, has formulated what is probably the most comprehensive, realistic and practically useful theory of the business cycle. The summary which follows is based, in its general outlines, upon Mitchell's formulation, the results of certain other researches being incorporated in the explanation.

PRICE MARGINS, PROFITS, AND THE BUSINESS CYCLE.—The part played by appropriate price differentials in the movement of goods has been mentioned in an earlier section. Mitchell's explanation of the business cycle in terms of prices centers about these price margins. Profits furnish the stimulus to business activity, and profits depend primarily upon two factors—**suitable margins between buying and selling prices** (or between cost of produc-

tion and selling price) and the **volume of business done.** The study of the business cycle, then, must center about these two factors, and in forecasting business changes attention must be centered upon conditions affecting price margins and volume of trading. A clue is thus given to the complex maze of business activities, in their relation to cyclical changes.

PHASES OF THE BUSINESS CYCLE.—The analysis of the business cycle is simplified by considering the changes occurring during the cycle under different heads, corresponding to the successive phases of the cycle. These phases are generally presented as four in number: **Depression, revival, prosperity,** and **crisis.** Warren M. Persons has suggested that the last of these phases is really composed of two periods, one marked by a financial crisis, with liquidation of securities, the second by a commercial crisis, with liquidation of commodities. This subdivision has some significance, as will appear in the detailed discussion.

A study of the cycle may begin with any phase, since the round of events repeats itself, with modifications, from one cycle to the next. Breaking in on this round at the end of a period of depression, we may consider the situation out of which revival develops.

SUMMARY OF CONDITIONS EXISTING AT THE CLOSE OF A PERIOD OF DEPRESSION.—No period of depression is like all others, but all such periods, when well-defined, end with a set of conditions prevailing which resemble, in their major features, those found at the close of previous periods of depression. These conditions may be briefly summarized.

1. Prices Are Low.—The general level of prices, at the end of such a period as that through which American business passed in 1920 and 1921, is low in comparison with the prices of prosperity. Thus between May 1920 and January 1922 the level of commodity prices at wholesale in the United States fell from 247 to 138 (the 1913 price level representing 100). This index, of course, relates to commodities in general, including both raw materials and manufactured goods. While the drop will have been most pronounced with respect to wholesale prices, retail prices and wages will also be relatively low at this time.

2. Business Costs Are Low.—The condition of prices is reflected in the costs of producing goods and carrying on business. Such costs are low, again, in comparison with costs during the preceding phase of prosperity. The reason for this is found in a number of causes.

(a) **Labor Costs Are Low.**—A period of depression is marked by fairly **widespread unemployment.** The competition for jobs on the part of labor of all classes results in the forcing down of wage rates. During such a period, too, the power of organized labor is likely to be somewhat weakened, a fact which conduces to the lowering of wage rates. Labor costs are low at such a time, also, because the efficiency of labor in general is at its maximum after such a period. Only the best men will have been retained during the weeding-out process which has taken place during depression, and the relative scarcity of jobs serves as a spur to endeavor.

(b) **Interest Charges and the Cost of Credit in General Are Relatively Low.**—This, obviously, does not apply to charges on account of long-term bond issues previously outstanding. But with bountiful bank reserves **discount rates** are low, though conservative lending policies are likely to prevail in banking circles. While **market rates of interest** are low at the time, they will not generally have reached their lowest point before revival is under way. This decline in interest rates is traceable to a falling off in the demand for capital

and credit during depression and to the piling up of savings, for accumulation goes on during depression, as well as prosperity.

(c) **Managerial Efficiency Is High.**—The period of depression has been marked by **rigorous competition** among sellers and by low selling prices. Business managers, faced with these conditions, have pared their expenses down to the minimum, checking the wasteful practices and expensive methods which may have developed during the boom days when profits were large and prices were high.

(d) **Capital Charges in Fixing Prices Are Low.**—Figures have been quoted on a preceding page to show the increase in business failures during crisis and depression. Another phase of the same process is the **writing down of capitalization.** This process is by no means universal, but the number of concerns passing through re-organization is large enough to be significant. There is a direct relation, of course, between capitalization and earning power. The high earnings of prosperity often lead to an increase in capitalization. With a reduction in these earnings, a reduction in capitalization may be essential. This writing off of certain capital charges serves by so much to reduce overhead and to decrease costs.

Such new concerns as have been organized during the period of depression are operating also under **capital charges** lower than those prevailing during the preceding era of high earnings. Their plants have been built, or bought in, and their equipment has been secured at relatively low rates, enabling them to enter competition under most favorable conditions.

For all these reasons, then, costs of production are low. The industrial system is in a condition of efficiency such as is found during no other phase of the cycle. Business is stripped for action. The surplus poundage carried in the form of watered stock, wasteful methods and inefficient men is at a minimum.

3. Profit Margins Are Narrow.—Though business costs are low at the close of a period of depression, selling prices are also low, with the result that the margins on which profits are based are at their narrowest. Certain concerns may even be operating at a loss, preferring to do so rather than to close down. It is often more profitable to remain in business, selling goods at a price which will cover direct costs and some share of the overhead charges, rather than to close down and suffer a complete loss of overhead.

4. Stocks of Goods Are Low.—During the phase of prosperity large inventories will have been accumulated in the hands of manufacturers and dealers. Final consumers, too, will have purchased without restraint, laying in stocks of clothes, furniture, and durable consumers' goods of all sorts. The period of crisis generally finds an abundance of such stocks in existence. These are liquidated, either in forced sales, or by slow degrees, and are worked off gradually during depression.

5. Cautious Buying Prevails.—Though stocks are low, there is no eager desire on the part of manufacturers, merchants or consumers to lay in large new stocks. After a fairly long period of sagging prices and depleted consumer purchasing power there is a feeling of caution throughout the business system. Buying is from hand to mouth, only such stocks being bought as may readily be disposed of.

6. Volume of Production and Trade Is Low.—This is a characteristic and obvious feature of depression. In practically all lines, with the single exception of agriculture, goods are being turned out and sold in sub-normal quantities. Agriculture often constitutes a notable exception, for production in this field

is subject rather to the control of weather than of business considerations. A period of low yield may coincide with a period of business depression, but the reverse is equally likely to be the case.

While production and trade fall below normal during depression, the actual loss is rather less than is generally assumed. In certain individual lines the loss may amount to more than 25% of the normal output, but it has been established that the loss in the industrial world at large seldom exceeds 10 or 12%. In terms of dollars this represents a very considerable reduction, but in relation to the total volume of production and trade in the country as a whole it is less striking.

7. Stock Prices Are Low, and Bond Prices Are Rising.—The prices of stocks reflect the prospects of profits. With sales and earnings low, **dividends** are passed or reduced, and **stock prices** suffer corresponding reductions. As will be seen, the quickening of industrial activity is evidenced very early by a revival in the stock market, but this revival does not in general appear until prospective profits at least are in sight. Bond prices, however, have generally started on their upward climb while business is yet in the doldrums. The explanation is found in the intimate relation between **bond prices** and **interest rates,** for the capital value of a bond paying a fixed return will fluctuate inversely to the market rate of interest. Interest rates will have reached their highest point during the crisis, or shortly after depression has set in. The low of bonds comes a month or two after the high of interest rates. Bond prices will, accordingly, be well on their upward way at the end of a period of depression.

THE REVIVAL OF BUSINESS ACTIVITY; EXPANSION IN THE PHYSICAL VOLUME OF TRADE.—A summary outline of the conditions existing at the close of a somewhat prolonged period of depression has been presented above. A brief relapse, such as that which occurred after the armistice, would not be marked by such conditions. The summary, however, presents a true picture of the end of the usual period of business stagnation. What is the leavening force that brings about revival? Where within the business system can the seeds of revival be found?

First, we may note the fact that during the process of liquidation numerous encumbrances to recovery have been cleared away. **Debts** have been paid or written off, **frozen credits** thawed out, and **stocks of surplus goods** worked off. The factors which exerted such a strong negative influence in preventing the continuation of prosperity have been largely eliminated.

On the positive side there are at work a number of agencies, of which three are of outstanding importance.

1. Increase in Consumer Demand due to the exhaustion of stocks of durable consumption goods. During the period of liquidation and the early stages of depression there is a let-down in buying on the part of final consumers. Clothes, shoes, carpets, furniture, automobiles, durable consumption goods of all sorts, are used longer than during the days of abounding prosperity and high wages. But after depression has run its course for some time it is inevitable that there should be a resumption of buying. It will not be at the same rate and with the indifference to price considerations which are likely to be found in prosperity, but the volume of buying on the part of final consumers will begin to pick up. Retail trade, the sales of mail order houses, sales of chain stores, will register this increase. The development within recent years of statistics on the volume of wholesale and retail trade is making it possible to follow more closely than formerly changes in activity in these fields.

2. **Increase in Population.**—The population of the United States is increasing constantly, at a rate exceeding 1,000,000 a year. The effect upon business of this increase is reflected in a constant growth in consumer demand, a growth which is not restricted to periods of depression. But after depression, when the other forces which served to stimulate production during prosperity are missing, the effect of this factor is perhaps most pronounced. Marriages, births, the normal increase in demand connected with a growing population, serve to stimulate subnormal business, to pull it back to a state of normal activity. The rate of production during depression being inadequate to meet this normal increase in needs, more active production is stimulated.

3. **Investment Demand for Industrial Equipment.**—During the period of depression **saving** goes on at a rate not materially less than that which prevails during other times. This fact, taken in conjunction with the **declining demand for capital and credit** from the mercantile and business world in general, results in a lowering of rates on long-term loans. This furnishes a strong stimulus to borrowers desiring to extend industrial equipment. Additional inducements to the extension of industrial equipment during this period are furnished by the **low labor and material costs** prevailing at this time, and by the improvements in technical methods which render old machinery in part obsolete. It is not to be assumed that this demand for industrial equipment is wide-spread in the business world. Only a limited number of the more astute and far-seeing business men extend their plants and purchase new equipment during a prolonged period of depression. There is, however, an appreciable increase in the demand for such equipment, and this increase serves to accentuate the demand which arises out of the depletion of stocks of finished consumption goods in the hands of consumers and dealers.

The demand arising from these three sources serves as an effective stimulus to an expansion in the physical volume of trade. The increased activity in building and in the replacing of old stocks results in the employment of additional labor, with a corresponding increase in the earnings of a considerable proportion of the working population. From this source there comes a further demand for consumption goods, and activity radiates from the original centers of demand until the whole business world feels the influence of reviving prosperity.

RISE IN PRICES.—The next phase of revival takes the form of a rise in commodity prices, both at wholesale and retail. This rise in prices ordinarily lags behind the increase in the volume of trade and the resulting increase in the volume of production. The reasons for the delay in the rise of prices are worthy of note, for it might appear reasonable to expect that the first effect of an increase in demand would be an increase in prices. That this increase in prices is delayed is due to three circumstances:

1. **Efficiency of Business Enterprise.**—The concerns which have survived the period of depression have been forced, as has been noted, to reduce their costs of production to a minimum. Wasteful methods and inefficient practices have been eliminated, and in this fact is found a partial explanation of the failure of prices to rise immediately upon an increase in demand.

2. **Unwillingness of Business Men to Check Revival.**—A second and perhaps more important reason is found in the mental attitude of business men at the end of a period of depression. After 8, 12, or 16 months of lean business and falling orders, signs of an increase in demand are welcomed. There is no desire to check the increase in trade, to frighten the new buyers, by a hasty price increase.

3. Increase of Profits at the Existing Price Level.—The most important reason for the failure of prices to rise immediately upon the beginning of revival is found in the fact that higher profits can be made at the existing price level, as a result of the increase in the volume of trade, so that there is no necessity of increasing prices. Most manufacturers are at this time producing below capacity. This means that a material increase in output is possible with no increase in overhead expenses. The increase in output, therefore, will result in a lowering of the unit cost of production. Increased sales at the existing price will yield higher profits.

If this is the case, the question arises as to why prices should rise at all. If additional profits are to be reaped as a result of the increase in the volume of trade, there would appear to be no reason for any increase in the price level.

PRICE RISE DUE TO CHANGING CONDITIONS.—The explanation of the price rise is found, first, in changing conditions in the commodity markets, and, secondly, in changes in production conditions.

1. As **revival gets under way,** as demand spreads, and activity radiates, the **buyers' market,** which has prevailed during depression and the first stages of revival, slowly gives way, and a **sellers' market** develops. That is, a market in which the buyers have all the advantage in bargaining power because of the excessive eagerness of sellers to dispose of their wares is replaced by a market in which the reverse is true, in which buyers are clamoring for goods, and in which the bargaining power rests largely in the hands of sellers. This change does not take place simultaneously in all parts of the business field. Only by degrees is the transfer of the balance of power effected, first in one market then in another. We should expect the price increase to occur first in those markets in which the advantage first passes to sellers, in which competition to purchase goods first becomes keenest among buyers. Where are these markets found?

The answer is fairly obvious. Increased consumer demand is reflected in new buying orders sent in by retailers to wholesale dealers. The shelves of wholesale dealers are empty of surplus stocks, so that they pass on the orders to manufacturers. Manufacturers are in no hurry to boost prices for reasons that have been noted above. They must, however, secure new supplies in order to meet the new demand. Their orders for semi-finished goods and for raw materials go back to the corresponding markets. The manufacturers of semi-finished goods, in the same position as the first class of manufacturers, accept these orders at prevailing prices, but must secure new supplies of raw material in order to fill them. All these demands, then, emanating from the ultimate consumers and passing through the various stages of distribution and the various processes of production, center ultimately in the raw material markets. The securing of these raw materials is essential to the various competing manufacturers in order that their orders may be filled. Here then is the market in which the balance of bargaining power passes from buyers to sellers. Here a sellers' market first develops, and here, as a result of the competition for raw materials, prices first rise.

The process outlined in the preceding section is repeated in other markets. The increase in demand, which is now becoming general as a result of increased business activity and increased employment, leads to keen competition among buyers—manufacturers, brokers, wholesalers, retailers, consumers—for supplies, and in this competition is found the reason for the general transition from buyers' to sellers' markets.

2. A further reason for the ultimate rise in commodity prices is found in **the increase in the volume of production.** We have noted that most of the

existing plants are operating below capacity. The increase in orders attendant upon the first increases in demand can, therefore, be accommodated with existing equipment. But sooner or later a point is reached at which this existing equipment is producing up to its full capacity. If additional orders are to be taken, new equipment must be bought and plants extended, or new plants erected. This means that the overhead costs which have been stable so far will now be increased. Additional reasons for the increase in manufacturing costs, which is characteristic of this stage of revival, are found in the increased cost of raw materials, in the decreased efficiency of labor resulting from the employment of less efficient men, and in the wage increases which accompany the increased demand for labor.

SEQUENCE OF PRICE CHANGES.—We have explained the rise in prices and have in part accounted for the differences in the rate and time at which different commodity groups increase in price. We may at this point briefly outline the general order in which prices advance when the process of revival is once under way. It should be understood that the sequence here given is by no means invariable, though the usual order of price change is that which is here indicated.

1. **Wholesale prices rise** more quickly and at a more rapid rate than retail prices.
2. In the field of wholesale prices, **raw materials** rise more quickly and at a more rapid rate than manufactured goods.
3. Among raw materials, **prices of mineral and of forest products** reflect business conditions more closely and react more readily to business changes than do the prices of crops and animal products.
4. Among **manufactured goods,** the prices of producers' goods (i.e., goods in a semi-finished stage or goods designed for industrial equipment) rise more quickly and at a more rapid rate than the prices of consumers' goods (i.e., goods in shape for final consumption).

It will be noted that as commodities approach the stage of final consumption their prices become more stable. This is due partly to the increased importance of **overhead costs,** the factors in which are relatively stable in price. It is due also to the fact that purely business considerations, considerations of profit and loss, play a more dominant part in the markets for raw materials and producers' goods than they do in the market for consumers' goods. The demand for consumers' goods traces back to definite human needs, which are fairly stable and unchanging. For raw materials and producers' goods the demand goes back ultimately to the same source, but is affected more immediately by the prospects of business gain or business loss. The demand for these goods is therefore less stable than the demand for consumers' goods, and as a result price fluctuations are more marked in these fields.

RISE IN COMMODITY PRICES FOLLOWED BY INCREASE IN WAGES.—The rise in commodity prices is followed more or less closely by increases in wages, salaries, interest rates and rents. The **increase in wages** is traceable in part to the increased cost of living resulting from the rise in commodity prices. Here we find a reason for the demand for higher wages. This demand is made effective because of the increasing scarcity of labor with the coming of business prosperity. The fringe of unemployed men who stand ready to take jobs at a moment's notice will have disappeared, labor will be harder to get, and as a result the bargaining power of labor will be stronger than it was during depression. It is during revival and prosperity that the power of organized labor increases. In certain powerfully organized trades the wage advances registered

during these periods may exceed the rise in the cost of living, but in general the price of labor rises less rapidly than the prices of commodities.

ADVANCE IN INTEREST RATES.—The advance in interest rates does not come until revival is well under way. During depression large **bank reserves** will have been accumulated, and since the demand for credit is at its lowest during this period rates will be low. Increasing activity brings some increase in the demand for bank credit and for capital, but not a sufficient increase at first to cause an advance in rates. But as the volume of trade increases and as commodity prices advance, the demand for **bank credit** and for **capital** grows rapidly, causing an increase in bank loans and deposits and a decrease in the percentage of reserves. Under these conditions discount rates and interest rates will be advanced. In general, **call loan rates** advance first, followed by **discount rates** upon time loans and later by **interest rates** upon long-term loans.

RISE IN PRICES AND EFFECT ON DEMAND FOR GOODS.—If general prices are advancing during this period, how is it that there does not occur that which was feared by business men as a possibility during the early stages of revival, namely, the checking of demand by the increase in prices? Once the swing of revival is well under way, the prices of commodities of all kinds, wages and interest rates, rents, are all climbing. This fact does serve at a later time to put a damper upon demand, as we shall see, but during the early stages of prosperity it has just the reverse effect. The anticipation of **future price advances** actually stimulates buying. Consumers, dealers, and manufacturers buy today, either because they fear that they will have to pay higher prices tomorrow, or because they expect to sell at higher prices tomorrow. There is always a greater stimulus to buying during a period of rising prices than during a period of falling prices, for under the latter conditions prospective purchasers hold off in the hope that they may buy at a lower price later.

During rising prices the ability of manufacturers and dealers to purchase at the higher prices is increased by their **increased profit margins.** But what of the **ultimate consumer,** upon whom the burden of these price advances ultimately falls? How is he able to pay the higher prices, in view of the fact that wages lag behind commodity price increases? The answer is found in the **steadier employment of labor** at this time. Even though wages may not have increased at the same rate as commodity prices, actual family earnings will have increased at a faster rate. Members of the family formerly unemployed are now at work, and all are working more regularly and for longer hours than during depression. This **increase in general purchasing power** accounts for the growth of demand in the face of rising prices.

INCREASE IN PROFITS.—As has been seen, the question of profits occupies the central place in Mitchell's explanation of the business cycle. The most characteristic feature of the period of revival from the point of view of the business man is the increase in profits. This increase is due, first, to the **increase in the volume of business** done. It is due, secondly, to a **constantly expanding margin between buying prices and selling prices,** or, in the case of the manufacturer, between cost of production and selling prices. The reasons for the increase in this margin have been indicated in the preceding sections. Most of the factors which enter into cost are more stable in price than is the finished product. Thus wages and salaries, interest rates, rents, all rise less rapidly than does the price of the finished product. Raw material prices alone

generally register a more rapid increase, but the price of raw materials is only one element and generally not the chief element in total cost of production.

INCREASE IN THE VOLUME OF INVESTMENTS.—The increase in volume of trade, the increase in prices, and then the increase in prospects of profits lead not only to renewed activity among old enterprises but to plant extensions and the launching of many new enterprises. We have noted that while the business world in general is still in the grip of depression a certain amount of **new building** has begun, that certain far-sighted business men are extending their equipment. This process continues, receiving additional impetus from the general expansion in business. During the later stages of revival **heavy investments** are being made **in industrial equipment** of all sorts. The savings which have accumulated during depression are rendered available through a **renewed demand for securities** of all sorts. Since the rates on long-term loans are low, borrowing for the purpose of plant extension and the purchase of new equipment is encouraged.

One point of importance in connection with this activity is the way in which it reacts to strengthen the general demand for goods of all sorts. When new buildings are erected, demand for labor, for raw material, and for equipment of all sorts is stimulated, and this demand reacts upon the general market. At this stage we find full-blown that feeling of business optimism which plays such an important part in the development of prosperity.

SUMMARY: GENERAL SEQUENCE OF EVENTS DURING THE PERIOD OF REVIVAL.—At this point there may be briefly summarized the events which occur during revival, paying particular attention to a limited number of indices of business conditions which the average business man follows. In submitting this summary the point should be again emphasized that there is nothing invariable about such a sequence. No cycle resembles all others with respect to the order in which events take place, but there is a certain relationship which seems to prevail on the average.

1. Increase in the Volume of Trade.—The **first sign** of reviving activity is likely to be observed in the indices of trade, particularly those which reflect consumer demand directly. Statistics of retail trade, the sales of mail order houses and of department stores are particularly useful in following developments at this time. Certain of these indices are referred to in more detail in a later section.

2. Revival of Speculation in the Securities Market.—In the preceding section no reference was made to developments in the securities market during the stage of revival, since we were concerned primarily with business developments. It may be noted, however, that the market for securities reacts immediately to a change in the prospects of business profits, even before the profits themselves have been realized. Accordingly there is a pick-up in speculative activity practically synchronous with the first signs of reviving trade. The **renewal of speculative activity** may in fact appear to precede signs of recovery in the business field, but that may be due merely to the inadequacy of our statistical record of business activity. This revival in speculation is registered in the rising prices of industrial stocks (railroad stocks do not furnish such an accurate index of business conditions proper, since they reflect legislative and other changes peculiar to the railroads), in an increase in the number of shares traded on the stock exchange, and in an increase in bank clearings and in debits to individual accounts in New York.

3. Increase in Outside Bank Clearings and in debits to individual accounts outside New York. Banking transactions outside New York register in their fluctuations changes in the volume of trade in the country at large. The New York figures are generally excluded in studying changes throughout the country because of the excessive influence of speculative dealings in New York.

4. Increase in the Volume of Production.—The statistics of the physical volume of production in basic industries reflect quite closely changes in the business situation. The coming of revival brings an increase in pig iron production, in bituminous coal production, in the consumption of cotton, and in the production of other basic commodities. Changes in these fields may be watched by observing the records of the individual commodities, or by means of one of the index numbers of the physical volume of production which are now available. (Reference is made to these index numbers at a later point.)

5. Rise in Commodity Prices.—The order in which this rise occurs for different kinds of commodities and certain of the index numbers by means of which this rise may be studied have been described in earlier sections. It is worth noting at this point that the Bureau of Analysis and Research of the Federal Reserve Board publishes monthly in the Federal Reserve Bulletin a series of group index numbers which are exceptionally useful in following price changes. Index numbers are published for the following groups:

Raw materials:
- Crops
- Animal products
- Forest products
- Mineral products

Producers' goods
Consumers' goods

The significance of this grouping will be clear from the preceding discussion.

6. Increase in Discount Rates Upon Time Loans.—Interest rates play a fundamental part in the development of the business cycle, a part which is described in more detail below. With the increase in discount rates attendant upon the reduction in bank reserves, it is apparent that the initial stages of revival are passed and that the activity characteristic of prosperity is under way.

7. Increase in Interest Rates Upon Long-Term Loans.—These rates reflect the situation in the market for capital. They generally rise after call loan and time loan rates have gone up, reflecting the intensified demand for industrial equipment which comes with the stage of prosperity.

PERIOD OF PROSPERITY.—The general characteristics of a period of prosperity need no detailed description. The forces which have been described in the preceding pages will in their natural growth and their reaction upon each other produce the conditions of general prosperity. During this period speculation is active, stock prices are high, trade is booming, the volume of production is large, profits are large, new enterprises are being launched, big dividend payments are being made, employment is steady and family incomes are high. A **spirit of unbounded optimism** prevails. This was the atmosphere prevailing in 1906 and early 1907, to a lesser degree in 1912, to a remarkable degree during the years of war-time prosperity and during late 1919 and early 1920. Our problem now is to account for the termination of this period of prosperity. Once prosperity is well under way, when earnings are high and optimism general, why should not these conditions continue indefinitely?

There is no obvious reason for the termination of prosperity in a period of crisis and liquidation. Yet such a termination there always is.

CONDITIONS ESSENTIAL TO CONTINUANCE OF PROSPERITY.—We may approach this problem by calling attention to the conditions which are essential to a continuance of prosperity. Prosperity, Mitchell has pointed out, depends for its continuance upon the maintenance of an equilibrium between certain fundamental elements in the business system. The **elements which must be kept in equilibrium,** if prosperity is to continue, have been summarized by Mitchell as follows:

1. The demand for goods must keep pace with the increasing supply, in spite of the increase in commodity prices.
2. The cost of raw materials must not increase too much in comparison with the selling prices of manufactured goods.
3. Mercantile collections must grow with mercantile credits.
4. Bank reserves must expand with demand liabilities.
5. The cost of living must not rise faster than money income.
6. Banks and investors must continue to provide the ever-increasing loan funds required by business enterprises.

DEVELOPMENT OF WEAKNESS IN PROSPERITY.—If the various elements are kept in balance we may look for a continuation of prosperity, but if there occur **maladjustments** in the rates at which these various factors grow, we may expect **weak spots** to develop and difficulties to arise within the business system. It is precisely in the development of these weak spots, in the development of stresses and strains within the economic system, that an explanation is found for the termination of prosperity and the coming of widespread business liquidation.

ACCUMULATION OF STRESSES WITHIN THE BUSINESS SYSTEM.—**1. Increasing Costs of Doing Business.**—We have noted in a preceding section that during the period of revival certain of the costs of doing business increase, but that this increase furnishes no serious obstacle to increasing activity and increasing profits. Yet as this increase in costs continues it becomes a source of ultimate difficulty. We may, therefore, note in more detail some of the factors responsible for the increase in the costs of producing and marketing goods.

(a) **Increase in Direct Costs.**—**Raw material** and **labor costs** rise, for reasons that have already been made plain. The fact should be particularly noted that the increase in labor costs is due not only to an increase in the wage rate, but is perhaps even more directly due to the declining efficiency of labor, because of the working of longer hours, the taking on of inefficient men, the fact that fear of unemployment is much less acute than in the stage of depression.

(b) **Increase in Overhead Charges.**—Overhead charges constitute a fairly **stable element in costs,** but sooner or later the forces which are causing the general price advance are reflected in an increase in overhead charges. The salaries of clerks and of executive officers must be increased with the general increase in living costs during prosperity. When leases expire they will be renewed at higher rates. The cost of bank credit is higher with the increase in discount rates. If old bond issues fall due, they must be refunded at a higher rate. Moreover, the initial costs on equipment installed and buildings erected during prosperity will be higher than the corresponding costs on old buildings or on buildings erected during depression.

(c) **Declining Efficiency of Business Management.**—During depression when competition among sellers was keen, all wasteful methods and inefficient practices had to be eliminated. But with the wide profit margins of prosperity less attention is paid to economy in the matter of details, more expensive methods may be employed and management in general tends to be less efficient.

(d) **Entry of High Cost Producers into the Market.**—The three items noted above relate in general to all producers. As an additional reason for higher producing costs we may note the return of the less efficient producers, the high cost producers, who were eliminated during the preceding period of liquidation. The higher selling prices prevailing during prosperity render it possible for many men who could not produce under the lower price conditions again to enter the market, and these formerly **extra-marginal producers** are present as weak links in the business structure.

2. Stringency in the Investment Market.—The rates on **long-term loans** advance less rapidly than the discount rates on **short-term loans.** But when the investment rates begin to advance they exert a more profound influence on the business situation. They are forced up, as we have noted, by the heavy borrowing for the new construction which takes place during the stage of prosperity. But a relatively slight advance in these rates serves as a material check to borrowing. The corporation which borrows for the purpose of erecting a new plant may be willing to pay 4 or 5% over a period of 30 years, but the directors will hesitate to saddle themselves with a 30-year loan bearing interest at the rate of 6, 7 or 8%. A decline in investment borrowing, therefore, follows fairly promptly upon an increase in the rate on long-term loans. The borrowers who have thus withdrawn from the investment market may take one of two courses. They may discontinue construction work altogether, or they may secure funds through the issuance of short-term notes running for 3, 4 or 5 years, hoping to refund these notes by the floating of long-term bond issues, at a lower rate of interest, when the notes fall due.

We may for the moment consider the effect upon the business situation of a following of the first course suggested. The increase in investment rates is reflected in a check to new construction, a check which is felt before prosperity in general has reached its peak. General business is still active and some construction continues even at the higher rates and higher costs, but there appears a noticeable slackening in orders for industrial equipment and in building of all sorts. Here we have a first serious weakening in the business situation. The demand from one strong business group falls off. The general situation is still strong, but a point of pronounced weakness is apparent in this one field. This weakness is of course reflected in the declining earnings of building workers and in the declining demand for the materials employed in construction.

3. Tension in the Money Markets.—During the later stages of prosperity there is a heavy demand for short-term loans. This is in part accounted for by the transfer of demand from the investment market to the market for short-term loans, a transfer which was explained in the preceding paragraph. But this entry of the former investment borrowers into the short-term market comes at a time when the situation in the short-term market is already somewhat acute. The demand for short-term credit has increased during revival and prosperity, as a natural result of the increase in the volume of trade. The manufacturer and the merchant who are producing and selling more goods need more credit. This natural increase is augmented by the fact that at a higher price level more credit, in terms of dollars, is needed to transact a given amount of business than at a lower price level. The difficulties of the situation are

intensified, also, by the prevalent desire on the part of borrowers to take full advantage of the favorable business conditions. The average merchant attempts to swing more business on a given amount of working capital than previously, by using a larger proportion of credit. For all these reasons, therefore, the situation in the market for short-term loans is at the later stages of prosperity somewhat acute.

But the **supply of short-term loans** is limited by the banking resources of the country. The limit has been lifted materially since the introduction of the Federal Reserve System, but there still exists a limit, beyond which the banks must put a check upon credit extension.. The increase in loans resulting from the increased demand for credit is reflected in large deposit credits. Unless the reserves upon which the deposits are based may also be increased, a situation will develop such that credit advances are increasingly difficult. Ultimately our credit system rests upon a gold basis, the gold being held largely in the Federal Reserve banks. In 1920 the credit situation became so acute that it was necessary for the various Federal Reserve banks to raise their rates of discount sharply. Such an increase renders it costly for the business borrower to secure credit.

4. Decline of Prospective Profits.—Prospective profits, as we have seen, occupy a central place in the study of the business cycle. It is the increase in prospective profits after a period of depression which serves as an essential stimulus to business revival. In the same way, as we shall see, liquidation is brought about after a period of prosperity by a decline in prospective profits.

We have described in the preceding pages the increase in the costs of production. Business activity depends for its stimulus upon the existence of a suitable margin between the cost of production and the selling prices of goods. With the increase in cost of production this margin is threatened, unless selling prices can be increased proportionately. At this point in the cycle, during the later stages of prosperity, the central problem that faces every business man is that of preserving his profits against the encroachments of rising costs on all sides.

If selling prices could be advanced by an amount corresponding to the increase in the cost of production, the difficulty might be avoided. This is possible within limits in certain industries, but for the business world in general there are definite barriers to the continued advance of selling prices.

BARRIERS TO INCREASED SELLING PRICES.—Certain of these barriers may be enumerated.

1. Public Regulation and Standard Prices.—In many industries which are subject to public regulation the prices at which goods and services are sold are set by contract or custom and cannot be advanced readily as costs creep up. This is true of railroad rates and of the charges of public utilities in general throughout the country. It is true for many business enterprises which have advertised their products at standard prices until these prices have become so identified with the goods that it is inexpedient to make a change.

2. Over-Production.—Perhaps most important as a barrier to an increase in selling prices is the situation in the markets with regard to supply. During the period of prosperity high prices and high profits have stimulated high production on the part of all producers, and have called into the market as producers many new concerns. Each individual producer, viewing the constant rise in price and the strong demand, plans his own production in a spirit of optimism, without complete knowledge of what other producers are doing. These goods, be it noted, are being produced at constantly increasing costs. It is inevitable

that there should develop a situation in which the markets are over-supplied with goods, a condition of "over-production."

The term "over-production" cannot be taken to mean that more goods are produced than can be consumed, that there are actually more goods on the market than the inhabitants of a given economic area can possibly consume. It is doubtful if such a situation has ever existed. We may have at the end of a period of prosperity a condition of over-supply only in the sense that more goods have been produced than can be sold at a profit. This is the situation that actually exists at such a time. The large stocks of high cost goods are placed on the market at a time when the buying power of consumers is suffering a check.

3. Decrease in Purchasing Power of Certain Classes.—It has been noted that during the periods of revival and prosperity consumers' demand has been increasing. Steady employment, rising wages and overtime work combine to increase the purchasing power of consumers in general. But for large classes in the community the increase in prices in general and in living costs in particular exceeds the increase in income. This is true of all those classes whose income is relatively fixed—the recipients of income from investments and the salaried classes in general. The same is often true of rather large classes of unorganized workers who are not in a position to secure the wage increases which accrue to the more fortunate and more strongly organized wage workers.

4. Accumulation of Goods with Slackening of Consumer Demand.—There is here, then, the making of a **critical situation.** High cost goods are being placed on the market in large quantities by competing producers. These quantities are growing most rapidly just at the time when the demand on the part of large classes of consumers is being checked. With consumer demand slackening, with buyers' strikes threatening, the obvious procedure is to hold the surplus stocks of goods off the market until the time is more propitious for selling. This is attempted. Large stocks are stored in warehouses, credit being secured to finance such operations. This expedient may be employed so long as credit may be readily obtained at a moderate rate. But, as we have seen, the situation in the market for credit is becoming acute. With bank reserves depleted and insistent demands from many quarters for bank credit, bank rates are increased and banks attempt to put the brakes on borrowing. In particular, they are inclined to hesitate to advance credit for the purpose of carrying large stocks of goods which might depreciate materially in price if liquidation were suddenly forced.

5. Undermining of Business Credit.—The credit standing of business concerns depends upon many factors, but in the last analysis it depends most immediately upon the **prospects of profits.** When profits are in sight a concern may secure bank credit with ease, and may secure credit from other business houses. When profits are uncertain it becomes increasingly difficult to secure credit accommodations from any source. During the period of revival and prosperity, when prospective profits are large for all types of business men, the volume of credit is extended. We have mentioned the great increase in the volume of bank credits. Equally important is the increase in the volume of credits granted by business houses to other business concerns. Goods are being bought on time to an extent not approached during depression. So long as complete confidence prevails in the stability of business in general, and of individual business concerns, this credit structure is solid, but as soon as prospective profits are threatened confidence is lost, uncertainty enters and the credit structure is undermined.

The various factors that threaten prospective profits have been outlined above. he threat to prospective profits implied in these conditions destroys confidence the solvency of manufacturers and dealers. The situation is acute throughut the business system. There is a hesitation to renew maturing loans in the eld of commercial credit and in the field of bank credit. Debtors are being alled upon to pay up.

It needs but a match to set the entire structure off. Just where the match s applied may not be a matter of great concern. Some large borrower, called pon to pay a loan based upon warehouse receipts, may be forced to sell large tocks of goods at any price obtainable. A large business house may be unable o pay its debts. A bank heavily stocked with one class of paper may be unble to meet its obligations, and may fail. A general process of liquidation, luring which the primary aim of business men is to secure ready cash and retain iquid assets, is begun. The period of crisis and liquidation is at hand.

SUMMARY OF CONDITIONS GIVING RISE TO CRISES.—A summary nay be made of the preceding section by noting the following factors which are nost important in bringing about a critical situation in the business system:

1. Costs to individual producers are high.
2. The market is flooded with goods, some produced at high prices.
3. Call rates, discount rates and interest rates are high.
4. Construction is declining, with a resulting decrease in the demand from one large group.
5. Men who are holding large stocks of goods off the market in order to maintain prices find it increasingly difficult to secure credit for this purpose.
6. There is a tendency to restrict buying on the part of large classes of consumers.
7. Business credit is generally undermined and there is a loss of confidence in the solvency of business associates.
8. The decline in prospective profits is discounted on the stock market; stocks begin to fall in price.
9. Business men and bankers may refuse to renew maturing loans; debtors are called upon to meet their obligations.

Attention should be called to the fact that the conditions outlined in the preeding paragraph need not be universal in the business world when a critical ituation first develops. Only a minority may be in trouble, a minority restricted to certain localities or to certain industries. But, as we have seen, the rice system furnishes channels by which the effect of factors operating in one art of the business world is quickly transmitted to all other parts of the busiess world. Just as revival cumulates and spreads, so the effects of stresses which develop during prosperity among certain classes of producers and merhants, or in certain parts of the country, are felt almost immediately by other lasses, or in other parts of the country.

CRISIS AND LIQUIDATION.—With the business world in the condition lescribed above, it is only a question of where liquidation shall start, for general quidation, readjustment of costs and some degree of reorganization are inevitable. The **settling up process** usually begins on the stock market. **Stocks eld on margin** are sold, this movement being stimulated by the credit strinency and the preference given to business interests as opposed to speculative nterests by bankers in general at such a time. In the business world the entral emphasis on profit making is abandoned for the time. The **maintenance f solvency** becomes the **prime aim of business endeavor.** Business men must

think of preserving their resources and of meeting their liabilities rather than of pushing their sales. There is a **general falling off of new orders** and in many cases a widespread **cancellation of unfilled orders.** The prospects of profits which were adversely affected by the conditions previously existing, are still further lowered by these developments.

The general clamor for credit forces discount rates still higher. The attempt to liquidate assets, which first causes a decline in security prices, is next reflected in **a general decline of commodity prices.** The necessity of paying off debts and meeting obligations forces many producers and merchants to dispose of accumulated stocks at any price obtainable. The decline in commodity prices follows much the same order as did the increase in prices during revival. Prices of raw materials generally decline before the prices of manufactured goods. Prices of producers' goods usually begin to fall before the prices of consumers' goods. Prices of raw mineral and raw forest products are more likely to reflect the existing business situation than are the prices of crops and animal products. The particular varieties of commodities within these various classes which first fall in price will depend upon the point within the business system at which liquidation has begun. Thus in 1920 a critical situation developed in the textile industry 6 or 8 months before the steel industry was adversely affected, and accordingly the decline in textile prices preceded the decline in iron and steel prices by some time. This is a condition, however, which might be reversed in another period of liquidation.

FINANCIAL AND COMMERCIAL PANICS.—The general decline in prices the sacrifice of goods and the adjustment of credit relations may proceed without a severe wrench. Times will necessarily be difficult, but a serious and violent disruption of economic processes is not inevitable. Whether a period of liquidation shall develop into a **financial panic** depends in large part upon the character of the banking structure. Under the old American banking system it did appear almost inevitable that a serious financial panic should accompany every major period of liquidation. The conditions of the panic of 1907 are still fresh in memory. Such panics as this have been almost unknown in England, however. The strongly centralized English banking system, with the Bank of England standing in a position of dominant importance, has enabled the English business world to pass through such periods of liquidation without severe financial strain. Solvent business men, even though temporarily in difficulties, have been able to secure ample credit accommodations, though the price paid may have been fairly high. In the United States under the old system a thoroughly solvent merchant or manufacturer might find himself absolutely unable to secure credit at such a time, with the result that he was forced to the wall.

EFFECT OF FEDERAL RESERVE SYSTEM ON PANICS.—The introduction of the Federal Reserve System in 1914 marked the beginning of a new era for American business in this respect. The first drastic period of liquidation experienced since that date was the crisis of 1920. This crisis, one of the most severe in the history of American business, did not degenerate into a panic. A severe process of readjustment was carried through without the disruption of business processes which was characteristic of similar periods at an earlier time. Solvent business men were able to secure credit accommodations sufficient to meet their needs, even though the bankers of the country were putting a brake upon inflation. We may hope that the United States has seen its last financial panic, though we may expect to go through many periods of liquidation before the swings of the business cycle are eliminated.

PERIOD OF DEPRESSION.—When the fever of the crisis has passed it eaves a widespread condition of depression. It is obvious that no immediate vival may be expected ordinarily after such a general process of liquidation. he reduction in new building and in the construction of industrial equipment enerally has not only thrown out of work large classes of producers, but it has educed the demand for basic raw materials. The falling off of orders in mer- antile and manufacturing fields has similarly resulted in the laying off of vorkers, reduction of hours of employment and decline in wages. Among a arge class of industrial and clerical workers, therefore, there has been a pro- nounced decline in purchasing power. This decline may or may not have been experienced by agricultural sections. If the general fall in prices has been ccompanied by a decline in the prices of staple agricultural products this will ave been the case, and the falling off in buying on the part of industrial workers will be accompanied by a similar decline in the purchases of agricultural dis- tricts. This decline in purchasing leads to a further reduction in output, which eads to a further reduction of employment, and **the vicious circle** repeats tself. The prospects of profits, which have been most adversely affected by he events of crisis and liquidation, are not brightened by this situation. Ac- ordingly, business initiative is dulled and activity on the stock exchange is lepressed.

BOND PRICES EXCEPTION TO DECLINE.—There is one important ex- eption to the general decline in prices, both of commodities and services, during his period, namely, bond prices. The rise in interest rates generally continues hroughout the period of liquidation, reaching a peak early in the period of lepression. With the accumulation of reserves, interest rates begin then to lecline, and this decline is reflected in an increase in bond prices, beginning arly in depression.

GENERAL EFFECT OF DEPRESSION.—The general decline in orders and n prices brings about that reduction in operating costs and increase in business efficiency which has been described at the beginning of this narrative. Busi- ness loses its surplus poundage and strips to a state of maximum efficiency. At the same time the reduction in production to a state below the current rate of consumption leads to that depletion of accumulated stocks which has been already described. There is thus brought about ultimately a condition which makes revival possible, and the cycle is again under way.

DIVERSITIES DEVELOPING IN THE BUSINESS WORLD DURING THE BUSINESS CYCLE.—It is an essential weakness of such an account of the business cycle as that which has been given above that it conveys the impres- sion that the various elements of the business world always swing through these periods of depression, revival, prosperity, and crisis at the same time or in much the same order. This is far from the truth. A study of any business cycle in detail reveals **many important diversities.** Not only do the prices of different commodities rise and fall at varying times and in varying order, not only do manufacturing and marketing activities vary in their changes from region to region and industry to industry, but there may even be particular industries or exceptional business units which actually experience prosperity while the general business world is passing through depression. These exceptions are not so numerous as to counterbalance the conditions existing in the business world in general. It is a matter of great importance, however, to note the diversities in the matter of time between the cyclical movements in different industries and in different price groups.

The National Bureau of Economic Research has gathered interesting data

bearing upon the differences between industries and upon the diversity of fortunes among different business enterprises during the business cycle. One or two examples taken from their records will indicate how important some of these diversities may be. In Table 5, which constitutes an extract from a table appearing in "Business Cycles and Unemployment," National Bureau of Economic Research, based upon answers to questionnaires used by John Whyte in circularizing the National Association of Credit Men, a comparison is afforded of the dates at which certain critical changes occurred in some selected industries during the crisis of 1920 and the following depression. Figures in parentheses indicate the number of establishments replying to the questionnaire in the manner indicated.

Table 5. Comparison of Cyclical Movements in 6 Industries

Industry	Dates When Depression Began (Commonest dates among the answers)	Dates When Sales Increased Again (Commonest dates among the answers)
Automobile	Mar. 1920 (2); Oct. 1920 (2)	Apr. 1922 (2)
Clothing	May and June 1920 (5); Aug. to Oct. 1920 (6)	Apr. and May 1922 (4); fall 1921 (3)
Electrical supplies	Dec. 1920 and Jan. 1921 (3)	Apr. 1922 (3)
Furniture	Oct. 1920 (3)	Mar. 1922 (4)
Metals	Sept., Oct., and Nov. 1920 (12)	Jan. and Feb. 1922 (10); Apr. 1922 (5)
Shoes	Mar. to July 1920 (6)	Feb. and Mar. 1922 (4)

Table 6. Months in Which 18 Commodities Indicative of the Volume of Manufacture Reached Their Highest and Lowest Production—Jan. 1919 to Feb. 1922

(Secular trend and seasonal variations both eliminated)

Dates	Commodities Reaching Highest Output	Dates	Commodities Reaching Lowest Output
1919		1920	
June	Leather, sole	Oct.	Sugar, meltings
Nov.	Cattle, slaughtered	Nov.	Tobacco and snuff
Dec.	Small cigarettes		Wheat flour
1920		Dec.	Cotton, consumed
Jan.	Paper board		Wool, consumed
	Cotton, consumed	1921	
	Wool, consumed	Jan.	Wrapping paper
	Wheat flour	Feb.	Leather, sole
	Hogs, slaughtered	Apr.	Fine paper
Feb.	Lumber, cut, total three varieties	May	Newsprint paper
Mar.	Tobacco and snuff		Book paper
	Large cigars	July	Lumber, cut, total three varieties
	Pig iron		Paper board
	Steel ingots		Pig iron
	Sugar, meltings		Steel ingots
July	Book paper	Dec.	Cattle, slaughtered
	Fine paper		Large cigars
	Wrapping paper	1922	
Aug.	Newsprint paper	Jan.	Hogs, slaughtered
		Feb.	Small cigarettes

DIVERSITY IN VOLUME OF PRODUCTION AND PRICES.—Price fluctuations show even more pronounced diversities, and nearly as varied as these movements are the differences found in changes in the volume of physical production in different industries. Table 6, taken from "Business Cycles and Unemployment," which is based upon "adjusted relatives indicative of the volume of manufacture" (Harvard University Committee on Economic Research), indicates the extent of the time differences between the turning points in the physical volume of production of 18 commodities.

Equally striking are the differences in the degree to which the production of different commodities is affected by changes connected with the business cycle. For the 18 commodities listed above, the percentage decline during the period of liquidation which began generally during 1920, varied from 74.5% of the maximum output to 34.9%. The percentage declines in the physical production of these 18 commodities during this period of liquidation are shown in Table 7, taken from "Business Cycles and Unemployment," together with the number of months during which the decline continued.

Table 7. Percentage Declines in the Physical Output of 18 Commodities from the Highest Points to the Lowest Points in the Period Jan. 1919 to Feb. 1922

(Commodities arranged in order of percentage declines.)

Commodity	Percentage Decline	No. of Months Declining
Steel ingots	74.5	16
Pig iron	72.7	16
Wool, consumed	64.8	11
Paper board	61.1	18
Sugar, meltings	60.3	7
Fine paper	58.2	9
Small cigarettes	54.6	26
Book paper	52.8	10
Tobacco and snuff	46.1	9
Cattle, slaughtered	44.3	25
Wrapping paper	43.2	6
Cotton, consumed	42.9	11
Sole leather	42.2	20
Newsprint paper	41.0	9
Lumber, cut, three varieties	37.5	17
Wheat flour	37.4	10
Large cigars	35.6	21
Hogs, slaughtered	34.9	24

An appreciation of the existence and importance of these individual diversities in price and production movements is essential to an understanding of the true nature of the business cycle. These cycles are not swings which occur simultaneously in all parts of the business structure. They are movements which begin in different regions and in different parts of the business structure at different times, which spread cumulatively throughout the business world, and which affect different elements in the business structure and different localities in varying degree.

SUMMARY OF PERSONS' EXPLANATION OF THE BUSINESS CYCLE.—The preceding account of the business cycle has been based essentially upon the studies of Professor W. C. Mitchell. His thoroughly realistic explanation

seeks to find no single or constant cause of the business cycle. He endeavors to make a detailed analysis of the actual sequence of events within the business cycle, in order to determine how the process of cumulative change which constitutes the cycle is carried through. The cycle is viewed as the result of the interaction of a number of forces which combine in complex and varying ways to bring revival out of depression and to breed a crisis during prosperity. W. M. Persons, to whose work later reference will be made, has tried to explain the cycle in much simpler terms. His explanation centers about movements of interest rates. Though not as comprehensive as Mitchell's in the number of forces taken account of, it is yet a significant and useful approach to the problem. This explanation may be briefly summarized by outlining the following stages:

1. The later stages of a **period of depression** are characterized by low interest rates which make it profitable to borrow in order to purchase securities. The prices of many securities may be at this stage so low that they yield a return greater than the rate charged for the loan. As a result, idle funds are drawn into the speculative markets.
2. An **upward movement** of speculation results.
3. The stimulus of **low discount and interest rates** extends to the commodity markets, leading to borrowing for business purposes.
4. **Competition** among speculative and business borrowers forces interest rates up.
5. A point is finally reached at which the demand for funds on the part of both speculative and business borrowers cannot be met. Business borrowers who are the constant customers of the banks are at such a time given preference. Funds are withdrawn from the speculative markets to finance business.
6. A **credit stringency** develops in the speculative markets. Rates for collateral loans, on call or time, are high. Securities are dumped upon the market, and a bear market develops. During the resulting liquidation of securities at falling prices, activity in the commodity markets is sustained and profits remain high.
7. The credit stringency extends, affecting the extension of credit for business purposes. **Bank reserves** are low, and credit can be obtained only with difficulty and at high rates. A **liquidation in commodities** is forced. Orders are cancelled, commodity prices fall, factories are closed, business failures increase and unemployment develops.
8. Upon the passing of the strain, bank reserves begin to accumulate and rates for loans to fall. Ultimately **speculative activities** are again stimulated, and the cycle repeats itself.

Having this explanation of the business cycle, Persons is primarily interested in statistical records reflecting speculative conditions, records reflecting commodity prices and business activity, and records reflecting banking conditions and discount and interest rates. By methods which he explains in detail in his account of his work ("Review of Economic Statistics," *Prel. Vol. I*, 1919) he has attempted to determine the sequence of change within these 3 fields. Dividing the business cycle into 5 phases, he has outlined the following sequence of change in the 3 groups of statistics noted:

A. The Phase of Depression:

(a) The volume of speculation and security prices are low.
(b) Business activity and commodity prices are declining.
(c) Bank reserves are increasing and rates on commercial paper are falling.

B. The Phase of Revival:

(a) Speculation in the securities markets revives.
(b) Business activity recovers and commodity prices increase.
(c) Bank reserves decline and rates on commercial paper increase.

C. The Phase of Business Prosperity:

(a) Speculative activity is checked.
(b) Business activity and commodity prices continue to increase.
(c) Bank reserves continue to decrease and rates on commercial paper to increase.

D. The Phase of Financial Strain and Liquidation of Securities:

(a) There is a strong bear market for securities; the volume of speculation declines.
(b) Business activity and the rise in commodity prices are checked.
(c) The rates on commercial paper remain high; bank reserves are depleted.

E. The Phase of Industrial Crisis and Liquidation of Commodities:

(a) Prices of securities reach bottom.
(b) Commodities are liquidated and commodity prices decline.
(c) Bank reserves reach their minimum and rates on commercial paper reach their maximum.

The Analysis of Business Conditions: Business Forecasting

RELATION TO BUSINESS CYCLE.—The attempt has been made in the preceding section to describe in a quite general way the usual sequence of events during a business cycle, and to give reasons for the changes which occur in the business world during the business cycle. We now approach the more **immediately practical problem** concerned with the analysis of business conditions and the attempt to forecast business changes. This problem is obviously closely related to the preceding one. We cannot attempt to analyze conditions and to forecast changes without an understanding of the basic facts of the business cycle. On the other hand, something more is needed in the practical work of analysis and forecasting than a general knowledge of the theory of the business cycle. We must know how this theory may be applied to the study of a specific situation and to the analysis of factors affecting an individual business.

TWO PARTS OF PROBLEM—EXTERNAL AND INTERNAL TO SPECIFIC BUSINESS.—This problem, as it presents itself to the individual business man, has two parts. It involves, first, the analysis of **general developments** external to the individual business. No business unit is completely divorced from the outside business world. General changes in prices, volume of trade, interest rates, etc., affect each individual business, no matter how circumscribed its activities may be. For this reason no business man may ignore these general changes. The first problem, therefore, is that of analyzing and interpreting changes of this sort, which are external to the individual business enterprise.

The second problem relates to the **internal operation** of a business. A given manufacturer or merchant wishes to know how the cycle affects his own production, his own costs, his own orders and sales. He must analyze these various series, determining how they have acted in the past during the business cycle,

in order that he may judge how they may act in the future. To do this he must determine how the cyclical swings in his own business are tied to the cycles in general business, whether they precede or lag behind such general cyclical changes, whether the amplitude of the swings in his own business is greater or less than the amplitude of the swings in general business.

ANALYSES AND FORECASTS OF GENERAL BUSINESS CONDITIONS.—We shall concern ourselves for the present with the first problem, relating to analyses and forecasts of general business conditions. Such analyses may be based upon various methods. The general comments of trade journals or of financial publications may be followed. Such general **non-quantitative information** is without doubt useful, but it is likely to be too abstract and too ambiguous to have practical value in connection with the problems of a given concern. A second method is based upon the **study of individual business series,** such as interest rates, pig iron production, bituminous coal production, or cotton consumption. The individual business man may follow the movements of such series, selecting those which seem to have the closest relation to his own business. A third method is to utilize the publications of some of the **various agencies** which construct **business barometers** or forecasting indices. A corporation of considerable magnitude may construct such barometers for its own use, employing materials which are particularly appropriate to its own operations. We may for our present purpose confine ourselves to a consideration of the second and third methods by means of which a business man may keep in touch with business developments and may attempt to forecast impending changes.

ANALYSIS OF INDIVIDUAL STATISTICAL SERIES.—A necessary first step in the analysis of an individual statistical series is the **graphic representation** of that series. Its general trend, and the changes in that trend, are much more clearly apparent in this graphic form than when the data are presented as a page of figures. For many purposes the study of the raw figures and of the graph based upon them may be sufficient. General changes in the past may be determined from such a study, and prospective movements estimated. As an example of such a series, the figures given in column (2) of Table 8, showing the production of pig iron from 1897 to 1923, may be presented.

GRAPH SHOWING PIG IRON PRODUCTION IN UNITED STATES.—The data in Table 8 are plotted graphically in Fig. 2. It is apparent upon inspection that the production of pig iron undergoes pronounced changes. The depression of 1908, the crisis and liquidation in 1920 and 1921, the revival in 1922 are clearly reflected in the raw figures and in the graph. If an accurate analysis is needed, however, these raw figures must be refined before conclusions may be based upon them. The figures as they stand are not in a state which permits of comparison between business conditions at different dates, as reflected in pig iron production. Thus in 1902 the amount of pig iron produced was 17.82 millions of tons. In 1914 the amount of pig iron produced was 23.33 millions of tons. It would appear from a comparison of these figures as they stand that the later period, during which the volume of production was greater, was marked by greater prosperity than the earlier period. Yet the reverse was true, as a reference to contemporary business records quickly reveals.

The explanation of this apparent anomaly is found in the fact that business series are affected by a number of forces. The figures at any one date represent the combined effect of such forces, and we may not compare data for two different periods unless allowance is made for the disturbing influence of factors

Table 8. Production of Pig Iron in the United States, 1897–1924

(Showing actual and normal production and deviations of actual from normal.)
(Unit: 1,000,000 long tons.)

(1) Year	(2) Pig Iron Production Actual	(3) Pig Iron Production Normal	(4) Deviation of Actual from Normal	(5) Percentage Deviation of Actual from Normal
1897	9.65	12.77	− 3.12	−24.4
1898	11.77	13.68	− 1.91	−14.0
1899	13.62	14.60	− .98	− 6.7
1900	13.79	15.52	− 1.73	−11.1
1901	15.88	16.44	− .56	− 3.4
1902	17.82	17.36	+ .46	+ 2.6
1903	18.01	18.26	− .25	− 1.8
1904	16.50	19.19	− 2.69	−14.0
1905	22.99	20.11	+ 2.88	+14.3
1906	25.31	21.03	+ 4.28	+20.4
1907	25.78	21.95	+ 3.83	+17.4
1908	15.94	22.87	− 6.93	−30.3
1909	25.80	23.78	+ 2.02	+ 8.5
1910	27.30	24.70	+ 2.60	+10.5
1911	23.65	25.62	− 1.97	− 7.7
1912	29.73	26.54	+ 3.19	+12.0
1913	30.97	27.46	+ 3.51	+12.8
1914	23.33	28.38	− 5.05	−17.8
1915	29.92	29.29	+ .63	+ 2.2
1916	39.44	30.21	+ 9.23	+30.6
1917	38.62	31.13	+ 7.49	+24.1
1918	39.06	32.05	+ 7.01	+21.9
1919	31.02	32.97	− 1.95	− 5.9
1920	36.93	33.89	+ 3.04	+ 9.0
1921	16.69	34.80	−18.11	−52.0
1922	27.22	35.72	− 8.50	−23.8
1923	40.25	36.64	+ 3.61	+ 9.9
1924	31.09	*37.56*	− *6.47*	−*20.8*

other than those with which we are directly concerned. What are the forces which thus affect such series as the production of pig iron?

SECULAR TREND IS STEADY TREND.—The chart in Fig. 2 reveals a steady upward trend in pig iron production. During each succeeding period of prosperity a new height is reached. Pig iron production fluctuates about a constantly higher level. It is obvious that the significance of changes in production cannot be determined unless account be taken of this constant change in base. This long-term movement of pig iron production in an upward direction is called the **secular trend.** It represents the effect of a number of factors quite divorced from the temporary fluctuations associated with the business cycle. Thus, the steady increase in the population of the United States would account for a constantly increasing use of pig iron. The change in methods of construction, involving the use of more steel and less wood, constitutes another factor responsible for this regular upward movement. Referring now to the production figures for 1902 and 1914, we may see that the fact that the later figure exceeds the earlier does not necessarily prove that better business conditions prevailed at the later date. During the years elapsing between these two dates we should expect a considerable increase in the normal production of pig iron, to satisfy the increasing demands resulting from a larger population and a greater use of iron and steel. These figures must be interpreted with

reference to some standard which may be taken to represent a normal state of affairs. In their absolute form they are not comparable. How may we secure such a **measure of the normal state of affairs?**

Various methods have been employed for this purpose. A simple and generally satisfactory method involves the representation of secular trend, of the normal long-term development, by a straight line, so fitted to the data that the sums of the squares of the deviations of the actual items from this line shall be a minimum. The method by which this is done is explained in current textbooks on statistics. Such a line has been fitted to the data of pig iron production and has been plotted in Fig. 2. The normal or trend figures are given in column (3) of Table 8.

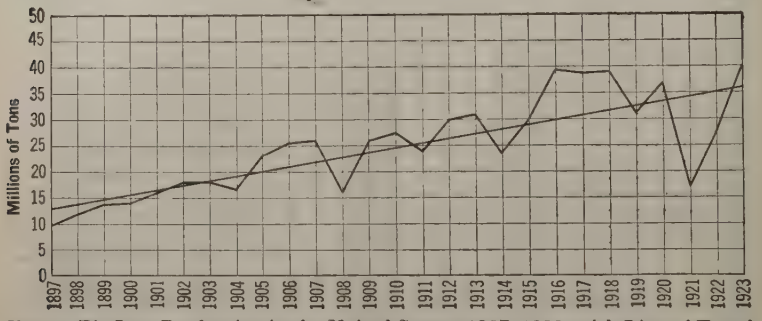

FIG. 2. Pig Iron Production in the United States, 1897–1923, with Line of Trend

SECULAR TREND OF A BUSINESS SERIES EITHER UP OR DOWN.—It should be noted that the secular trend of a business series is not necessarily positive. That is, the long-term movement may show a regular annual decline instead of an increase. This was true of interest rates for the 20 or 30 years prior to the War. It has been true, for example, of the production of horse-drawn vehicles in the United States. The concept of secular trend applies to both positive and negative changes occurring over a long period of time. Such changes are, by definition, smooth and regular in their operation, whether the movement be positive or negative.

SEASONAL VARIATIONS.—The secular trend is only one of the forces accounting for the movements of a series in time. Periodic fluctuations, of greater or less magnitude, occur in every economic series. They are themselves of two types. Over the period of a year we may have seasonal variations, repeating themselves every twelve months. In many series such seasonal variations are pronounced and important. Thus the sale of straw hats and of overshoes, the volume of sales of department stores, the price of eggs, all show a definite and fairly constant seasonal swing. Most economic series reflect these seasonal variations in activity to a greater or less degree. The seasonal swings in pig iron production are not pronounced, but they are nevertheless definitely present. The table and chart given above, being based upon annual data, do not reflect the influence of such seasonal fluctuations. Methods by which these seasonal movements may be measured are also explained in statistical texts dealing with the analysis of time series.

CYCLICAL FLUCTUATIONS.—Periodic fluctuations of another type are quite clearly present in the case of pig iron production. These are the cyclical fluctuations connected with the swings in business activity which have been described in the preceding pages. These periodic movements have not the constancy which is found in the seasonal swings. A given cyclical movement may be completed in 2 years, or it may extend over 4, 5, or even a greater number of years. But there is some regularity to such swings, a fact which is clear from a study of the graph in Fig. 2.

OTHER FACTORS AFFECTING FLUCTUATIONS IN A BUSINESS SERIES.—But we have not accounted for all the variations in pig iron production in listing the effect of secular trend, seasonal variations and cyclical fluctuations. There still remain many irregularities in the curve, sharp drops from month to month or year to year, or sudden increases which may not be accounted for by any of these fairly regularly operating forces. We have, it is clear, a host of minor factors which may affect any individual business series, such factors as strikes, floods, fires, earthquakes, wars. In brief, there are numerous movements which may be attributed to **accidental or catastrophic causes.** Most of these accidental irregularities are of minor importance, though occasionally a great war or prolonged strike may affect economic series very materially. It is not possible, in general, to measure the influence of these accidental causes. Some refined methods of doing so are available, but in the present state of our knowledge their applicability is questionable.

METHOD OF ANALYZING ECONOMIC FLUCTUATIONS.—The method employed in analyzing a business series will depend upon the object of immediate interest. It may be that our prime interest lies in the secular trend, that we are interested solely in determining the rate of long-term growth or decline. If this be the case, our investigation will end when a line of secular trend has been fitted. We may be interested primarily in the seasonal swings, quite apart from the secular trend or cyclical movements. In most cases, however, **primary interest** from a business point of view attaches to the cyclical swings in economic series. It is such swings in prices, sales, and volume of production which affect business profits most immediately and vitally. The secular trend is, by its very nature, a gradual, long-term movement, the effects of which may be easily foreseen and anticipated. Seasonal movements again are in general quite regular. The changes which are of primary concern are those which are less certain, less easily anticipated, and these are generally the ones which are associated with cyclical fluctuations in business activity.

Accordingly, the task which usually confronts the business man or the business statistician is that of breaking up data, presented in the form of a statistical series of sales, prices, or production, in order that the effects of secular trend and seasonal variations may be eliminated. The residue which is left is a composite of the cyclical fluctuations and the accidental movements. Since the latter cannot ordinarily be eliminated, they are lumped in with the cyclical swings, the assumption being made that in the long run such accidental variations will cancel themselves.

GRAPHIC PRESENTATION OF CYCLICAL FLUCTUATIONS IN PIG IRON PRODUCTION.—In Fig. 3 is a rough picture of the cyclical fluctuations in annual pig iron production, based upon the data given in column (5) of Table 8. These are the percentage deviations from normal, as normal is measured by the line of secular trend. In effect, Fig. 3 is just Fig. 2 revolved until the line of trend is horizontal. It should be noted that the deviations from normal

as here plotted, represent the combined effect of cyclical and accidental causes. We cannot, unfortunately, measure and eliminate the latter.

A similar chart could be constructed on a monthly basis by using monthly figures, correcting these for seasonal movements, and finally plotting the corrected deviations from normal, by months. Fig. 1, given on pages 24 and 25, represents an index based upon a number of such corrected monthly series.

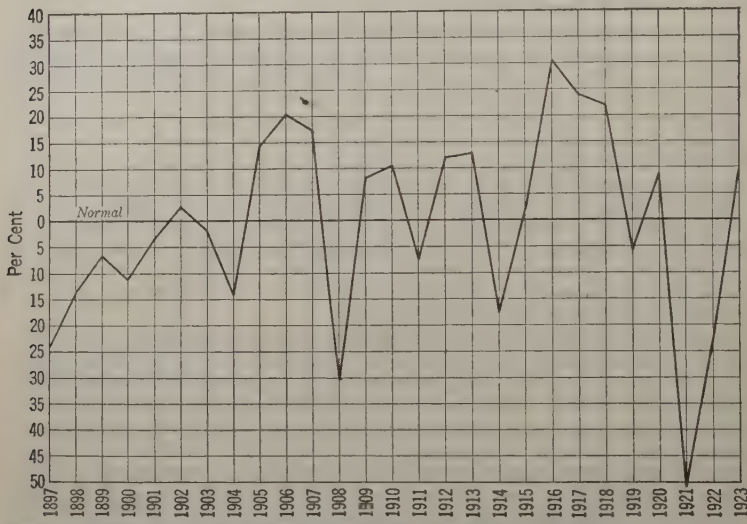

FIG. 3. Cyclical Fluctuations in Pig Iron Production, 1897–1923, showing Annual Deviations from Trend

SOURCES OF STATISTICAL DATA RELATING TO BUSINESS CONDITIONS.—The particular series which should be studied by a business man desirous of following business changes will be in part selected with special business interests in mind. There are certain series of general utility, however, which may be profitably studied by men in all industries. In the sections which follow certain sources of such general statistical data are noted, and certain important series are enumerated.

The list which follows is not designed to be exhaustive. It includes some of the important primary and secondary sources of statistical material reflecting business changes.

1. Governmental Publications:

Agricultural Year Book. U. S. Department of Agriculture.
Commerce Year Book. U. S. Department of Commerce.
Commerce and Navigation of the United States. U. S. Department of Commerce.
Annual Report. U. S. Geological Survey.
Statistics of Railways in the United States (annual). Interstate Commerce Commission.

Bulletin on Wholesale Prices (annual). U. S. Bureau of Labor Statistics.
Bulletin on Retail Prices and Cost of Living (annual). U. S. Bureau of Labor Statistics.
Statistical Abstract of the United States. U. S. Department of Commerce.
Survey of Current Business (monthly). U. S. Department of Commerce.
Federal Reserve Bulletin (monthly). Federal Reserve Board.
Monthly Summary of Foreign Commerce. U. S. Bureau of Foreign and Domestic Commerce.
Monthly Labor Review. U. S. Bureau of Labor Statistics.
Crops and Markets (weekly, with monthly statistical supplement). U. S. Department of Agriculture.
Bulletins, U. S. Bureau of the Census.
Bulletins, U. S. Geological Survey.
Bulletins, U. S. Bureau of Mines.

2. **Private Publications:**

Statistical Bulletin (quarterly). Standard Daily Trade Service, N. Y.
Commercial and Financial Chronicle (weekly). N. Y.
Bradstreet's (weekly). N. Y.
Dun's Review (weekly). N. Y.
Journal of Commerce (daily). N. Y.
New York Commercial (daily). N. Y.
Trade Journals (e.g., *Iron Age*).

A **useful summary of sources** will be found in "Source Book of Research Data," New York University Bureau of Business Research, N. Y.

CERTAIN STATISTICAL SERIES WHICH REFLECT BUSINESS CONDITIONS.—There are available numerous statistical series by the following of which business men may keep in touch with current economic developments. Sources from which some of these series may be obtained have been noted in the preceding section. Certain **individual series** which are commonly accepted as barometers of business conditions may now be enumerated. At a later point something will be said about index numbers, representing the combination of a number of business series. Such index numbers are very valuable to the student of business conditions, but they can never replace the records of individual series, to which primary interest will always attach.

For convenience, the series to be noted are classified under 6 main heads:

1. **Statistical Series Measuring the Volume of Production:**

(a) Agricultural:
- Cotton
- Wheat
- Corn
- Oats
- Barley

Estimates of current acreage and production are published monthly in "Crops and Markets" during the growing season.

(b) Raw mineral:
- Bituminous coal
- Anthracite coal
- Crude petroleum
- Copper

(c) Industrial production:
- Pig iron
- Steel billets

Unfilled orders of the U. S. Steel Corporation
Cement
Automobiles
Electric power
Consumption of raw cotton

(d) Building:
Contracts awarded

Production figures should be supplemented by data relating to inventories. Such figures are available for certain of the series named above, notably cotton, wheat and petroleum.

2. **Statistical Series Measuring the Volume of Trade:**

(a) Domestic trade:
Freight car loadings
Sales of department stores, chain stores and mail order houses
Wholesale trade (by federal reserve districts)
Bank clearings outside New York
Debits to individual accounts outside New York

Changes in the value of **outside clearings** and in the total of **debits to individual accounts** may be due either to an increase in the volume of trade represented by such transactions, or to an increase in the price level. If prices should double, the volume of bank clearings necessary to transact the same actual amount of trade would be doubled. Accordingly, in the interpretation of such value figures it is essential that they should be deflated, that is, corrected for changes in the price level. When this has been done, it may be assumed that the remaining changes reflect actual fluctuations in the volume of trade. To deflate such a series, it is necessary only that the actual value figures be divided by an appropriate index number of prices.

(b) Foreign trade:
Merchandise imports
Merchandise exports

In using trade figures expressed in dollars, the problem of correcting for changes in the price level again arises, and the process of deflation described above is necessary.

3. **Statistical Series Reflecting Price Changes:**

(a) Prices of important commodities, such as wheat, corn, cotton, pig iron, bituminous coal, petroleum, etc.

(b) Index numbers of prices:
Bradstreet's index of wholesale prices
Dun's index of wholesale prices
U. S. Bureau of Labor Statistics index of wholesale prices. A general index is published with separate index numbers of prices for the following commodity groups:
Farm products
Foods
Cloths and clothing
Fuel and lighting
Metals and metal products
Building materials
Chemicals and drugs
House furnishing goods
Miscellaneous

Federal Reserve Board's index numbers of wholesale prices. The Board compiles comparable index numbers of wholesale prices in the following countries:
- United States
- England
- France
- Canada
- Japan

For each country separate index numbers for the following commodity groups are compiled and published:
- Raw materials
- Producers' goods
- Consumers' goods
- Domestic goods
- Imported goods
- Exported goods

Fisher's weekly index number of wholesale commodity prices
Persons' wholesale price index of business cycles
U. S. Bureau of Labor Statistics index of retail food prices
U. S. Bureau of Labor Statistics index of the cost of living

4. **Statistical Series Measuring Speculative Activity:**
   Prices of industrial stocks:
   - Index compiled by Standard Daily Trade Service
   - Dow-Jones average of industrial stock prices

   Shares traded on the New York Stock Exchange
   New York bank clearings
   Debits to individual accounts in New York banks
5. **Statistical Series Depicting Financial Conditions:**
   Total loans and discounts, reporting member banks of the Federal Reserve System
   Total bills on hand, federal reserve banks
   Reserve ratio, federal reserve banks
   Federal reserve banks' discount rates
   Call loan rate, New York
   Discount rate, 60–90 day commercial paper
6. **Statistical Series Measuring Business Profits and the Number of Business Failures:**
   Net earnings, U. S. Steel Corporation
   Dividend payments of industrial corporations
   Number of business failures

USE AND INTERPRETATION OF STATISTICAL INFORMATION.—The list of individual series which has been given above includes some of the most important series currently available. Though not complete, it indicates the general subjects which should be followed by a business man desirous of keeping in touch with business conditions. The use and interpretation of such series will call for various types of study. The mere reading of the records as published weekly or monthly will not, in general, give a very complete picture. A **system of wall charts** on which the most important series are plotted will give a truer perspective for judging the significance of current developments. If, in addition, the individual series are corrected for secular trend and seasonal variation, a **comparison of the corrected figures** from month to month will furnish a very clear picture of the current situation, and will, in conjunction

with a knowledge of the usual sequence of events during the business cycle, enable impending developments to be foretold with some degree of accuracy.

The number of series which may be employed in following business developments has been increased materially within recent years. The work of the Federal Reserve Board and of the Department of Commerce under Secretary Hoover's direction has served materially to increase our knowledge of business changes by rendering available more detailed records. The work of trade associations, in so far as their records have been made public, has served the same purpose.

COMPOSITE INDEX NUMBERS OF BUSINESS ACTIVITY.—The series which have been described above have been in most cases individual in character, reflecting changes in the prices or in the production of individual commodities. Reference has been made incidentally to certain series which are composites of a number of individual series. All the index numbers of prices are of this character. The absolute necessity of constructing such a composite index in the case of price changes is evident. Any single commodity is subject, in its price movements, to the influence of so many diverse factors, which may affect this commodity alone, that a true picture of general price changes may only be secured by taking an average of the prices of a number of individual commodities. The same problem arises in studying the volume of trade or the volume of production. The production of bituminous coal, for example, is affected by cyclical movements, but it is, in addition, influenced by many accidental causes which are peculiar to that series alone. There are needed, in the fields of trade and production, index numbers which are based upon a number of individual series. In the combination of a number of such individual records we may get away from the accidental and exceptional movements peculiar to individual series, and secure a true measure of the wider movements characteristic of the trade of the country or of the physical volume of production in the country as a whole. Within comparatively recent years several such index numbers of the volume of trade and of the volume of production have been constructed. Certain of these may be briefly described, in order that intelligent use may be made of them by the man desirous of following business changes.

COMPOSITE INDEX OF AMERICAN TELEPHONE & TELEGRAPH CO.—The composite index of general business activity constructed by the American Telephone & Telegraph Co. has been based upon eleven statistical series representing production and distribution in basic industries. These 11 series, with the weight attached to each, are as follows:

	Weight
Net ton miles of freight	10
Freight car loadings	10
Pig iron production	20
Steel ingot production	10
Cotton consumption	10
Activity of wool machinery	10
Paper production	10
Lumber production	5
Leather production	5
Bituminous coal production	5
Electric power production	5
Total, 11 series	100

In the combination of these series into a single index the procedure which has been described above is employed in the analysis of the individual series. That is, an appropriate **line of trend** is fitted to each series, index numbers of seasonal variation are computed, and the deviations of the actual figures from the trend

are expressed as percentages of the normal values and corrected for the influence of seasonal variations. Thus we have for each of the 11 series a record, by months, showing the corrected percentage deviations from normal. For each month an average of these 11 values is obtained, each series being given the weight indicated in the preceding table. (In effecting this combination a further correction is needed to prevent undue weight being given to the series marked by extremely wide fluctuations. The means by which this is done need not concern us here.)

This index extends back by months to the year 1877, and constitutes the longest continuous record of fluctuations in American business. The composition of the curve has not been the same throughout. During the earlier years it was based upon a smaller number of series than at present. For the first 8 years, in fact, it was based solely upon records relating to pig iron production. The values of this index by months since 1877 are presented in Table 9. From a study of the figures as here presented and as plotted in Fig. 1, a clear picture of the cyclical fluctuations in American business may be obtained.

FEDERAL RESERVE BOARD'S INDEX OF PRODUCTION.—Somewhat similar in character, though constructed after a slightly different method, is the index of production compiled by the Division of Analysis and Research of the Federal Reserve Board. It is **based upon 22 series** relating to production in basic lines, over the period from January 1913 to date. The chief difference between this index and the one previously described is that no effort is made to correct for the influence of secular trend in the compilation of the Federal Reserve Board's index. The final figures, as published in the Federal Reserve Bulletin, express the current month's production as a relative figure, with the average monthly production during the year 1919 as base. Although no attempt is made to construct an arbitrary "normal" by the fitting of lines of trend, correction is made for the influence of seasonal variation.

FEDERAL RESERVE BOARD'S INDEX NUMBERS FOR SPECIFIC LINES.—Further service is rendered by this division of the Federal Reserve Board in the compilation of a number of very useful index numbers showing the degree of activity in specific lines. Index numbers of agricultural movements, of mineral production, and of production by manufacturing enterprises have been published for some time. More recently index numbers have been compiled for measuring changes in factory employment, in wholesale trade, in department store sales and department store stocks, and in bank debits. All these appear currently in the Federal Reserve Bulletin, and constitute one of the most useful sets of statistical measures available for the following of business conditions.

FEDERAL RESERVE BANK INDEX OF VOLUME OF TRADE.—Covering a different field is the index of volume of trade compiled by the Federal Reserve Bank of New York. This index, which is designed to measure changes in trading activities as well as producing activities, is the most comprehensive currently compiled, being based upon a greater number of economic series than any similar index. The various individual series entering into the final index are analyzed after the method previously explained, corrections being made for secular trend and seasonal variation. The corrected figures, representing primarily the effect of the cyclical factors, are combined into the index as published.

Somewhat similar index numbers of the volume of production and of trade are constructed by the **Harvard Committee on Economic Research,** and appear in their current publications.

* Denotes months in which composition of curve changes.

INDEX NUMBERS OF BUSINESS COMPILED BY U. S. DEPARTMENT OF COMMERCE.—A number of useful index numbers appear monthly in the "Survey of Current Business" compiled by the U. S. Department of Commerce. These cover the fields of production, building construction, wholesale and retail trade, stocks, unfilled orders, and prices.

BUSINESS FORECASTING; PRIVATE AGENCIES.—The business man who is concerned with the analysis of current business conditions and with the forecasting of business changes need not confine himself to an individual study of the available records of business. A number of private agencies have been developed for the purpose of selling to the business world such analyses and forecasts of business prospects. Studies and forecasts of the same nature are contained in various financial and trade publications. The work of such agencies varies in character and in method. No attempt can be made here to explain in detail the methods employed by the different agencies. Their general nature may be revealed, however, by a brief consideration of the methods employed by several of these organizations.

In this discussion we are concerned only with one phase of the work done by such agencies. All these agencies give advice on specific aspects of the business situation and information relating to specific commodities and trade lines. Our present concern, however, lies only in their general work connected with the analysis of the business situation and the forecasting of general business changes.

BABSON'S STATISTICAL ORGANIZATION.—The fundamental elements in Babson's forecasting work are represented in the **"compositplot"** which is published weekly. This plot is built up as follows. An index of business activity is composed of the following 12 series:

Immigration	Railroad earnings
New building	Foreign trade
Business failures	Foreign money rates
Check transactions	Domestic money rates
Commodity prices	Canadian conditions
Yield of leading crops	Stock market conditions

By methods which need not concern us here, an average of these series is obtained. The method of averaging is designed to eliminate the effects of seasonal movements. This average when plotted gives a broken line reflecting the course of business activity.

The next step is the construction of a line of growth called by Babson **the XY line.** This line is drawn through the plotted series representing the index of business activity in such a way that the areas marked out below the line will equal the areas traced out above the line. It is a fundamental thesis with Babson that in economics as in physics "action and reaction are equal." Interpreting this in an economic sense, it means that when the line representing the index of business activity traces out a certain area above the line of normal growth, there must be a swing downward, namely, a period of depression, such that an equal area will be traced out below the line. The assumption is not made that a period of depression will cover a length of time equal to the time covered by the preceding period of prosperity. The time factor must be multiplied by the intensity of a given period of prosperity or depression, the area representing the combined effect of these two factors.

In the projection of the line of normal growth into the future, use was made formerly of bank clearings outside New York, these being taken since they represented not only physical growth but changes in pecuniary values as

well. Since 1919 bank clearings have been replaced by check transactions for this purpose.

BROOKMIRE ECONOMIC SERVICE.—Chief emphasis in the work of the Brookmire Service is placed upon the construction of a curve designed to forecast **changes in stock and commodity prices.** The values upon which this curve is based are secured by averaging the following series:

Index of speculative activity (index based on stock prices and shares traded on the New York Stock Exchange).
A composite index of domestic production and marketing.
Ratio of imports to exports.
Rate of turnover of bank deposits.
Rate on 4 to 6 months' commercial paper.
The open market rate on money in London.

A correction is made for secular trend for the second series noted above. There is said to be no secular trend apparent in the case of the other series. In the interpretation of this index current figures are compared with the average during the period 1904 to 1913. The movement of the forecasting line is upward so long as the index is above the average for the 1904 to 1913 base period. The actual value of the forecasting curve at any one time is determined by cumulating the values of the index proper, so long as these values remain above the 1904–1913 base. A neutral zone has been established by the compilers of this index, and significance is attached to the movements of the forecasting curve only when it gets beyond this neutral zone, which extends above and below the base line a distance equal to about 3% of the total range of fluctuations.

It is held that movements of the forecasting curve anticipate stock price changes by one month, and anticipate commodity price changes by 6 or 7 months. No attempt is made to forecast the extent of a movement, sole emphasis being placed upon the problem of determining when a change in direction will take place.

This series in its present form has been published for only about 3 years. An earlier method employed by the Brookmire Economic Service was discontinued as a result of the extreme price movements during the war period.

HARVARD ECONOMIC SERVICE.—The most ambitious attempt to construct a forecasting index based upon a scientific study of the sequences prevailing during the business cycle is that which is represented in the work of the Harvard Committee on Economic Research, conducted under the direction of Prof. W. M. Persons. Various studies were made by Persons with the prime aim of determining the precise order in which the most important business series moved during the business cycle. His first studies were based upon an analysis of annual data during the period from 1879 to 1913. These studies were later refined and carried out in greater detail, monthly data over a somewhat shorter period being employed.

The process involved, first, the correction of all the individual series for secular trend and seasonal variation. The resulting figures, representing the cyclical movements in the individual series, were plotted and the graphs compared in order to determine roughly whether there was any consistent time relationship between the cyclical movements of the different series. In this rough way it was determined that the different series studied could be divided into fairly definite classes, series being grouped together if their movements during the business cycle were synchronous.

This rough grouping was next tested and verified by the use of the co-

efficient of correlation, a statistical device used to determine the degree of relationship between variable quantities. By means of this index it was possible to determine whether, for example, Bradstreet's index of prices and the discount rate on 60–90 day paper moved concurrently in their cyclical fluctuations, or whether there was a lagging of one series after the other. The coefficient of correlation afforded a means of measuring quite accurately the time relationship between the cyclical fluctuations in these different series.

By this means Persons ascertained that the cyclical fluctuations in the prices of industrial stocks preceded fluctuations in commodity prices on the average by 10 months. He determined also that cyclical fluctuations in the rate on 4 to 6 months' paper lagged behind cyclical fluctuations in commodity prices by 4 months on the average. The relations between movements in other series and commodity prices were similarly measured. In his final grouping of the series he had studied he formed 3 classes. These were:

1. Series reflecting speculative activity.
2. Series reflecting business activity.
3. Series reflecting banking conditions.

Persons found that, on the average, series falling in the first group preceded in their cyclical changes the series falling in the second group by 4 to 10 months, and that series falling in the second group preceded series falling in the third group by 2 to 8 months. Accordingly, 3 different index numbers were constructed, the forecasts of impending changes being based upon the relation between these 3 index numbers representing, respectively, speculative, business and banking conditions.

These index numbers as at present constituted are constructed as follows:

1. The index of speculative activity is based on New York bank debits and industrial stock prices.
2. The index of business activity is based on outside bank debits and commodity prices at wholesale.
3. The index of money conditions is based on commercial paper rates.

The movements in these different index numbers for the period since the Armistice are shown in Fig. 4, which is here reproduced by courtesy of the Harvard Economic Service.

In the interpretation of such a chart as this, the method of constructing the index numbers depicted, and the nature of the constituent series, must be borne in mind. The index of business conditions, represented by the heavy black line in Fig. 4, fluctuated, during the first 6 months of 1924, within rather narrow limits above and below the line representing a normal state of affairs. Yet during this period practically every American industry was experiencing a pronounced recession. For 4 successive months (March to June 1924) the volume of production declined, the loss being particularly severe in the textile and iron and steel trades. The explanation of the failure of curve "B" of the Harvard chart to reflect this recession is found in the constitution of the business index. The movements of the two series employed in the compilation of this index—bank debits outside New York and an index of commodity prices at wholesale—were not thoroughly representative of the state of general business during this period. The composite index of business activity constructed by the Statistical Division of the American Telephone & Telegraph Co., being based upon a wider and more representative list of statistical series, reflects the drop in the spring of 1924 much more faithfully.

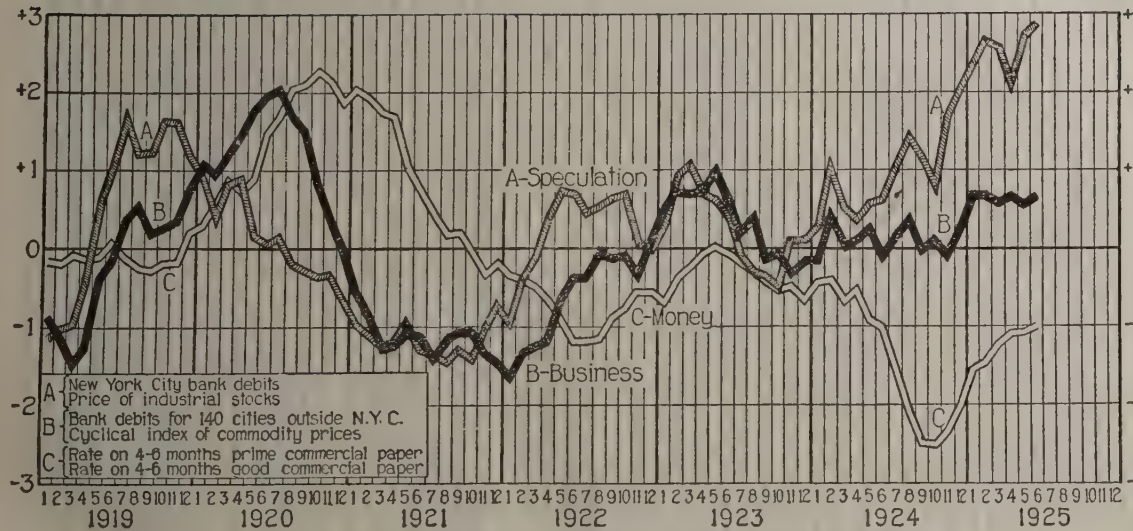

FIG. 4. Index Chart of Business Conditions—Harvard Economic Service

The Control of the Individual Business Enterprise During the Business Cycle

EFFECT OF CYCLICAL CHANGES IN INDUSTRIAL BUSINESS.— In the preceding discussion we have been concerned primarily with the business cycle as it affects the business world in general, and with methods of forecasting business events with reference only to general developments. We may now take up the more practical problem concerned with the individual business unit, as its activities are affected by cyclical changes in business conditions.

Certain of the effects of the cycle on individual concerns are favorable. During revival and prosperity demand is increasing, selling prices are rising more rapidly than costs, and profits are being augmented. During these phases of the cycle individual manufacturers and merchants are feeling in general nothing but good effects from the cyclical swings of business. Since our major concern, however, is that of alleviating the bad effects of cycles, we may outline in more detail the disabilities which affect individual units as a result of cyclical fluctuations.

Even during revival and the beginning of prosperity, certain of these ill effects are beginning to appear. The increase in raw material prices, in labor costs and rents, and the higher rates charged for credit accommodations are increasing the costs of carrying on business. Later, when the situation becomes more difficult, the evil of cancellation develops. The business man finds that his customers are refusing to take goods which they have ordered, and that there is a falling off in the volume of orders. During the later stages of prosperity each concern is faced by much more severe competition. Prices are maintained with difficulty. Collections are slow, while at the same time banks and mercantile creditors are pressing for the payment of debts. The decline in prices, which is characteristic of the period of crisis, usually finds merchants and manufacturers with large inventories which depreciate materially in value at this time. These excessive inventories are usually made up of finished goods rather than raw materials.

During the period of liquidation the individual business man usually suffers through being forced to dispose of his goods at a loss in order to meet his obligations. There may result then either bankruptcy, shutting down, or operation at reduced rate, all involving at least a sacrifice of profits, and possibly necessitating the carrying on of business at an actual loss. During depression these difficulties are likely to continue. One of the most important reasons for financial loss during such a period is found in the **continuation of fixed charges** of all sorts. It is possible during depression for the individual concern to reduce its direct costs by the discharge of labor and the reduction of purchases of raw materials, but most of the elements of overhead cost cannot be so reduced. In this fact, coupled with the necessity of operating below capacity, is found one of the most important sources of economic loss during depression.

These, then, are some of the ways in which the average business unit is made to feel the ill effects of the business cycle. Since the cycle in its major movements lies quite beyond the control of the individual business man, the latter, in seeking to avoid these evil effects, is forced to do so primarily by adapting his operating program to changes in external conditions. With an increasing knowledge of the business cycle on the part of business men in general, this process of adaptation is being more widely followed, though it is by no means characteristic of general business practice.

PREVENTIVE AND RELIEF MEASURES FOR PERIODIC FLUCTUATIONS.—Devices which have been employed to avoid the evil effects of **seasonal fluctuations,** to secure continuity of production during the year, may be first noted. Certain of these have been outlined by M. I. Stone, General Manager of the Hickey-Freeman Company ("Business Cycles and Unemployment," National Bureau of Economic Research).

1. Spreading the delivery of orders over a large part of the season. This method has been employed by clothing houses and by manufacturers of "holiday goods." Retailers have been persuaded in many cases to accept deliveries in advance through the offer of special discounts or through deferred dating.
2. Inducing retailers to place orders well in advance of delivery.
3. The development of staple products on which the plant can be kept busy between seasons.
4. Manufacturing to stock. This device has been employed rather widely. It is clear, of course, that it may involve the tying up of financial resources in a large inventory. It appears to be particularly suitable to industries in which the staple products combine a high labor and a low material value.
5. The transfer of surplus help from one operation to another or from one department to another. It is essential to the employment of this method that members of the working force be trained to perform more than one operation.
6. The reduction in selling prices during the off season. This practice has been consistently followed in the distribution of anthracite coal.

MINIMIZING EFFECTS OF BUSINESS CYCLE.—Many of the devices described above are applicable with or without modification to the similar problem which is connected with **cyclical fluctuations.** The methods that have been employed by business men to enable the ill effects of the cycle to be avoided or minimized are of **two general types.** These are:

1. Those methods based on prevention and foresight, which are designed to prevent the individual concern from suffering severely during crisis and liquidation.
2. Those methods of relief which are designed to assist in the recovery following upon a period of liquidation.

The former class includes all measures which would be adopted during the period of prosperity for the purpose of regulating purchases, safeguarding assets, and avoiding unwise credit extension. The second class includes the measures which might be adopted during depression in order to stimulate sales and to stabilize production.

The application of measures of the first class is only possible when there exists on the part of the managers of the enterprise in question a knowledge of the economic characteristics of the business cycle and of the usual sequence of events during the business cycle, a knowledge of the practical world of business which enables an intelligent judgment to be made at any time as to the phase of the cycle through which business is then passing, and a knowledge of the behavior of that particular business enterprise during the business cycle. It is essential, therefore, that studies shall have previously been made having as objects the determination of the precise relation between cyclical changes in general business and cyclical changes in the business of the given enterprise. In particular, cyclical movements in production and sales, and in the prices of commodities purchased and sold, should be studied in their relation to the

general business cycle. Securing this knowledge constitutes a first step in any intelligent program designed to adapt business polices to external business changes. It is essential, finally, that the operations of the business enterprise be conducted on the budget basis.[3] Without the planning and co-ordination which the formation of a budget calls for, no comprehensive program of cyclical control can be adopted.

PREVENTIVE MEASURES.—Certain of the measures which may be employed in forestalling and preventing the ill effects of liquidation may be enumerated:

1. The collection and interpretation of internal statistics. The current compilation of statistics on the following subjects is necessary to an intelligent co-ordination of the activities of the individual enterprise with the movements in general business:
   (a) Production
   (b) Sales
   (c) Purchases
   (d) Raw material costs
   (e) Selling prices
   (f) Stock of raw materials
   (g) Stock of finished goods on hand
   (h) Shipments
   (i) Unfilled orders
   (j) Collections

   These statistics, with others pertinent to the operations of the given concern, should be assembled periodically (daily, weekly, or monthly), and perhaps presented in graphic form to executive officers and boards of directors. The collection and charting of statistics relating to general business conditions may be carried on in conjunction with this work.
2. The conservation of assests during prosperity, avoiding undue increase in plant and equipment, and in dividends.
3. Management of plant in such a way as to:
   (a) Avoid decrease in unit production.
   (b) Avoid increase in unit overhead.
   (c) Maintain satisfactory labor conditions and steady employment throughout the year.
4. Avoidance of excess of inventories of raw materials, material in process, and finished stock.
5. Avoidance of purchase commitments in excess of financial resources and of reasonably quick use.
6. Avoidance of excessive sales which result in cancellations.[4]
7. Employment of a somewhat flexible credit standard, which may be tightened during prosperity and relaxed during depression.

REGULATION OF INVENTORIES IN DIFFERENT PERIODS OF CYCLE.—Something more in detail may be said concerning the regulation of inventories noted in item (4) above. In the crisis of 1920 the loss through shrinkage of inventories was pronounced in practically every industrial line, and few business concerns escaped without suffering. If purchases are regulated on the

[3] For description of budget basis see Section 4 on Budgets.

[4] Items 2 to 6 above are those enumerated by Sanford E. Thompson in "Business Cycles and Unemployment."

basis of a study of cyclical movements, such loss through inventory shrinkage may be largely avoided. A **practical method** of doing this has been employed by Henry S. Dennison of the Dennison Mfg. Co.[5] This company has determined roughly the **maximum and minimum inventories** of each important raw material to be carried in different periods of the cycle. These estimates of maximum and minimum inventories are employed in conjunction with price figures for the various raw materials. The method is illustrated in Fig. 5, published by courtesy of the American Statistical Association. In this chart the price of jute from 1905 to 1921 is plotted. A line of trend has been drawn

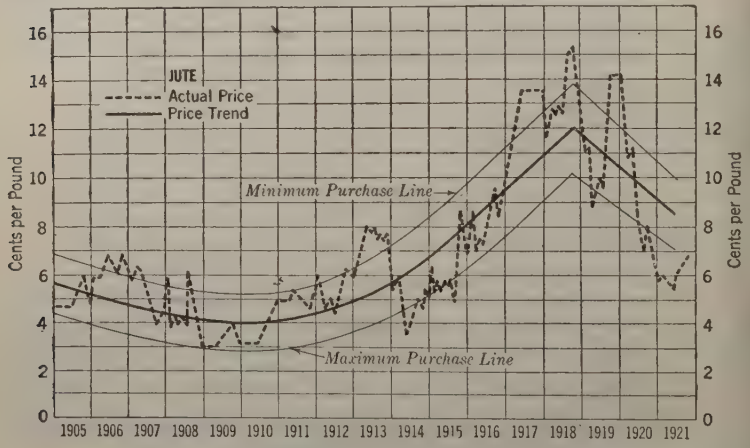

FIG. 5. The Price Trend as a Guide to Purchasing

Reproduced from an article by Henry S. Dennison, by permission of the American Statistical Association.

through the graph of the actual prices. Above and below this line of trend and parallel to it are drawn what are termed minimum and maximum purchase lines. The minimum purchase line represents the smallest amount which the company would carry for current needs, while the maximum purchase line represents the largest inventory that would be carried. Thus, on a certain raw material the standard inventory might be 6 weeks' supply, the minimum inventory 2 weeks' supply, and the maximum inventory 12 weeks' supply. Actual purchases are varied, according to the position of actual prices relative to the 3 lines representing price trend and minimum and maximum purchases. When prices are below the line of secular trend, an amount equal to the maximum inventory may be purchased; when prices are above the line of secular trend, the actual purchase may fall until only a minimum inventory is on hand.

Mr. Dennison has also called attention to the importance of what he terms **impending inventories.** That is, the merchant should take account of merchandise on order and en route, as well as goods on hand, in the formulation of his policies.

[5] Cf. *Journal of the American Statistical Association*, March 1922, pp. 23–26.

CREDIT POLICY IN DIFFERENT PERIODS OF CYCLE.—The Dennison Mfg. Co. has employed other devices for the prevention of cyclical losses, notably in the conduct of its credit department. During prosperity **credit standards** are stiffened, and its accounts strengthened. During this time, when orders are numerous, new orders are seldom accepted from customers having poor records. As a corollary of this policy, the Dennison Co. extends credit with a fair degree of freedom during depression. That is, although risks are scrutinized carefully, somewhat bigger chances are taken than during prosperity, for the reason that the orders are needed more keenly at such a time. That this policy has been a fruitful one is apparent from the records of the Dennison Co. During the depression of 1914–1915, the ratio of losses to sales was 0.0052. During the more severe period of depression in 1921, following the preparation of the credit department according to the policies described above, the loss ratio was only 0.0013.

RELIEF MEASURES.—Of measures which have been employed to mitigate the effects of depression, the following are noted by Sanford E. Thompson ("Business Cycles and Unemployment"):

1. Quick liquidation of inventories and adjustment of prices to replacement values.
2. Reduction of costs of manufacture, both direct and indirect.
3. Improvement of quality to enhance demand.
4. Adoption of selling methods based on accurate analysis of the new situation.
5. Development of plant and organization for future business.
6. Part-time operation.
7. Utilization of profits gained in good times for payments to out-of-work employees.

There may be added to this list of remedial measures, certain which have been resorted to by the Dennison Mfg. Co. This company has found it profitable to launch new merchandise lines during slack periods when the work is needed. Plans for these new lines are perfected before the depression arrives, so that the plant is ready to begin production at once when the occasion calls for it. Such a policy is particularly appropriate for a concern manufacturing novelties, as is the Dennison Co., though perhaps not widely applicable in this direct form. Modifications of this plan, involving the pushing of new lines during depression, have been employed advantageously in many fields.

The transference of employees from one department to another during depression has been mentioned above. If such a versatile labor force has been secured, some of the worst effects of depression on the personnel of a manufacturing plant can be avoided by transferring workers from manufacturing to construction departments during depression. Such a move not only benefits the plant in question but hastens recovery in the business system at large through the maintenance of purchasing power among the working population.

A PROGRAM FOR FIXED INVESTMENTS.—Another phase of the work of the Dennison Co. in attempting to control the cyclical movements of their business is that which relates to the fixed investments. In planning a **building program,** it has been found advisable to determine the long-term trend of the given business, just as the rate of normal growth may be determined for any economic series. Over-expansion of equipment may thus be avoided. Moreover, if future needs are thus estimated in advance, the building program may be so conducted that extensions are made and new plants erected at those periods

of the cycle when costs are lowest. Some such policy is applicable in the conduct of practically every business enterprise, particularly in cases in which records extending over a number of years in the past are available. Such records enable the rate of normal growth to be fairly accurately determined, and thus enable future extensions to be planned in advance.

RETAIL MERCHANTS AND THE BUSINESS CYCLE.—Most of the methods outlined above apply particularly to the manufacturer. Certain of these are applicable to the retailer, in facing liquidation and depression, but the problems of the retailer at such times are many of them peculiar to merchandising operations. During prosperity, booming trade and rising prices bring large profits to merchants generally. Competition among dealers for supplies leads usually to the accumulation of excessive inventories during this period. Then when the decline in trade and the break in prices come, merchants find themselves stocked with high cost goods which must be sold at a sacrifice. The **chief losses of retailers** during liquidation are due to the declining values of inventories rather than to a reduction in volume of sales. This important fact was abundantly demonstrated during the crisis of 1920.

In his study of merchandising, as it was affected by the business cycle, Sanford E. Thompson named, among other conclusions, **4 important lessons** which the crisis of 1920 had taught ("Business Cycles and Unemployment"):

1. That there is a lack of effective contact and teamwork between the manufacturer, the wholesaler or jobber, and the retailer.
2. That there is a lack of appreciation of the value of external statistics in forecasting changes in conditions.
3. That there is a need of comprehensive information regarding the statistical position of all important commodities.
4. That there is a need for greater development of methods of laying out buying schedules and of co-ordinating the three main functions of merchandising, i.e., management, buying and selling.

These conclusions indicate the direction in which improvement is to be made in minimizing the evil effects of the cycle upon the business of the retail merchant. Close contact and frank relations between manufacturer, jobber and retailer, co-ordination of buying and selling programs, statistical study of general business conditions and intensive statistical study of important commodities—these are essential to successful retailing in the modern business world.

RETAILER'S SPECIFIC REMEDIES.—The following specific methods of meeting the problems brought by liquidation and depression may be enumerated, in addition to the more general remedies suggested above:

1. Securing a frequent stock turnover. This is perhaps the most important single method of avoiding the ill effects of depression. The merchant whose turnover is rapid does not face the heavy loss due to shrinkage in inventory values and consequent heavy mark-downs which are the usual accompaniment of liquidation.
2. Prevention of over-buying and accumulation of excessive inventories by itemized departmental budgets and carefully drawn minimum and maximum stock limits.
3. Attention to all possible managerial economies during depression.
4. Prompt price reduction during depression in order to secure quick liquidation.
5. Maintenance of volume of sales through advertising, special features and special sales.

NECESSITY OF LONG RANGE PLANNING.—It is obviously impossible o lay down a complete set of rules for the management of any specific business luring the periods of liquidation and depression. The attempt has been made bove to present merely a summary of certain practices which have been ound helpful by some business men. In the control of a specific enterprise ccount must be taken of the particular characteristics of that business in aming a program for such occasions. The point of major importance which s emphasized by a study of business experience is that such a program must e **a comprehensive long-range plan,** a program covering all the phases of he business cycle, not a hasty improvisation drawn up only when the crisis is at hand.

SECTION 2

MATHEMATICS OF FINANCE

Interest

DEFINITION.—Interest is the consideration paid for the use of money for a period of time. The **factors involved** in computing interest are (1) **principal,** (2) **rate,** (3) **time.**

Principal.—The principal is the sum of money upon which the interest is paid. This sum may be the amount of money invested in a business, loaned or borrowed.

Rate.—The rate is a fraction, usually expressed on a percentage basis, and is the ratio of the interest earned to the principal in the unit of time.

Time.—The **unit of time** usually used in the computation of interest is one year although any other unit, such as a month, or a day, may be used.

SIMPLE INTEREST.—When the interest is directly proportional to the time we have simple interest. This is always computed on the original principal.

COMPOUND INTEREST.—When the principal is increased by the interest, thus arriving at a new principal periodically, the interest upon this augmented principal becomes compound interest.

COMPUTING THE NUMBER OF DAYS BETWEEN DATES.—In computing days between two dates either the first day is included and the last day excluded or the first day is excluded and the last day included. Business and commercial houses as a rule count only the first or last day, but not both.

Example.—To find the number of days between July 12 and October 23. Excluding July 12, there are in

July	19 days
August	31 days
September	30 days
October	23 days
Total	103 days

Brokers and bankers frequently charge interest by counting both the first and last days when the interest is payable to themselves. In the illustration above there would thus be 104 days between July 12 and October 23.

When banks pay interest a widely different rule is applied in all instances benefiting the bank and not the customer. As these rules vary so much, it is best to obtain the information from one's own bank.

The stock-broker, by rendering accounts monthly and calculating interest for the same period, compounds the interest monthly.

To simplify the labor of determining the number of days between any two dates, Table 1 gives the number of days from January 1 to any other day of the year. Taking the problem just stated and solving it by means of the table,

from January 1 to July 12 there are 193 days, and from January 1 to October 23 there are 296 days, or a difference of 103 days. If it is a leap year, there would be 194 days and 297 respectively, or still 103 days.

Table 1. The Number of Each Day of the Year Counting from January 1

Day of Month	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1	1	32	60	91	121	152	182	213	244	274	305	335
2	2	33	61	92	122	153	183	214	245	275	306	336

4	4	35	63	94	124	155	185	216	247	277	308	338
5	5	36	64	95	125	156	186	217	248	278	309	339
6	6	37	65	96	126	157	187	218	249	279	310	340
7	7	38	66	97	127	158	188	219	250	280	311	341
8	8	39	67	98	128	159	189	220	251	281	312	342
9	9	40	68	99	129	160	190	221	252	282	313	343
10	10	41	69	100	130	161	191	222	253	283	314	344
11	11	42	70	101	131	162	192	223	254	284	315	345
12	12	43	71	102	132	163	193	224	255	285	316	346
13	13	44	72	103	133	164	194	225	256	286	317	347
14	14	45	73	104	134	165	195	226	257	287	318	348
15	15	46	74	105	135	166	196	227	258	288	319	349
16	16	47	75	106	136	167	197	228	259	289	320	350
17	17	48	76	107	137	168	198	229	260	290	321	351
18	18	49	77	108	138	169	199	230	261	291	322	352
19	19	50	78	109	139	170	200	231	262	292	323	353
20	20	51	79	110	140	171	201	232	263	293	324	354
21	21	52	80	111	141	172	202	233	264	294	325	355
22	22	53	81	112	142	173	203	234	265	295	326	356
23	23	54	82	113	143	174	204	235	266	296	327	357
24	24	55	83	114	144	175	205	236	267	297	328	358
25	25	56	84	115	145	176	206	237	268	298	329	359
26	26	57	85	116	146	177	207	238	269	299	330	360
27	27	58	86	117	147	178	208	239	270	300	331	361
28	28	59	87	118	148	179	209	240	271	301	332	362
29	29		88	119	149	180	210	241	272	302	333	363
30	30		89	120	150	181	211	242	273	303	334	364
31	31		90		151		212	243		304		365

NOTE.—For leap years the number of the day is one greater than the tabular number after February 28.

EXACT INTEREST.—Exact interest is simple interest computed on the basis of 365 days to the year. **Ordinary interest** is simple interest computed on the basis of 360 days to the year.

Computation by Formula.—When interest tables are not available, exact interest may be obtained by substituting in the formula, **principal** × **rate** × **time,** the rate per annum in hundredths and the time in years or multiples of a year.

Example: To find the interest on \$10,428.40 for 193 days at 4½%.

Solution: $\$10{,}428.40 \times \frac{9}{200} \times \frac{193}{365} = \$248.14$

Computation by Use of Interest Tables.—By using the 5% exact interest table (Table 3) we find that the exact interest on \$8,426.10 for 223 days is \$257.40.

Table 2. 4% Interest Table

EXACT INTEREST ON 365-DAY BASIS AT 4%, BY DAYS FROM 1 TO 360 DAYS

Da.	$1,000	$2,000	$3,000	$4,000	$5,000	$6,000	$7,000	$8,000	$9,000

SHORT-CUT COMPUTATION OF ORDINARY INTEREST AT 6%.—The rate of 6% per annum is in more common use than is any other rate. As 6 is a multiple of 12, the number of months in the year, it lends itself to certain mathematical short cuts. Also, as 30 days per month gives 360 days to the year, this is often used as a basis upon which ordinary interest computations are made. On this basis the rate per month is ½ of 1%, or 1% for 60 days. Therefore, in order to compute the interest for 60 days on any amount when the rate is 6%, it is only necessary to move the decimal point two places to the left. For example, the interest on $1,580 at 6% for 60 days is $15.80.

If the number of days is a **multiple of 6,** the solution of any interest problem under this method is simplified, as is shown by the following examples.

Example 1: Find the interest on $847.15 for 108 days at 6%:

	$8.4715	interest for		60	days
	16.9430	"	"	120	"
Less:	1.6943	"	"	12	"
	$15.2487	"	"	108	"

The interest is $15.25.

Example 2: Find the interest on $1,430.12 for 83 days at 6%:

$14.3012	interest for		60	days
4.7671	"	"	20	"
.7151	"	"	3	"
$19.7834	"	"	83	"

The interest is $19.78.

SHORT-CUT INTEREST COMPUTATION BY INTERCHANGE OF PRINCIPAL AND DAYS.—When the principal is a factor or multiple of 6, interchange principal and days. The interest on $4,800 for 27 days is the same as the interest on $27 for 4,800 days. The interest on $27 for 60 days equals $.27, secured by moving the decimal point two places to the left. Multiplying $.27 by 80 gives $21.60, the interest on $27 for 4,800 days, or its equivalent, the interest on $4,800 for 27 days.

ADJUSTING INTEREST COMPUTATION FROM 360- TO 365-DAY BASIS.—When interest has been computed on the basis of 360 days as in preceding illustrations, and it is desired to adjust it to a 365-day basis, the amount of the interest should be decreased by 1/73 of itself, because the difference of 5 days is 1/73 of 365. Thus, to find the exact interest on $942.52 for 19 days at 6%, take the amount computed on a 360-day basis, $2.98465, and from this amount deduct 1/73 of itself, which leaves $2.94377 as the interest for the given time and rate on a 365-day basis.

Explanation of reason why 1/73 is subtracted from ordinary interest:

1 day's int. on 360-day basis is 1/360 of year's int.
" " " " 365-day " " 1/365 " " "

1 day's exact int.: 1 day's ordinary int. = 1/365 : 1/360
or as 1/73: 1/72 = 1/73 × 72/1 = 72/73
or, exact int.: Ordinary int. = 72 : 73

SHORT-CUT INTEREST COMPUTATION WHEN RATE DIFFERS FROM 6%.—The following additional rules are to be applied when the rate of interest differs from 6%. Point off 2 places of decimals to the left for

72 days at 5%	90 days at 4%
80 days at 4½%	120 days at 3%

These were obtained in each instance by dividing 360 by the rate.

Example: To find the interest on $518.60 at 5% for 90 days:

	$51.86	interest for	72 days
¼ of $51.86 or	12.97	"	" 18 days
	$64.83	"	" 90 days at 5%

At 4½% the interest for 90 days would be as follows:

	$51.86	interest for	80 days
⅛ of $51.86 or	6.48	"	" 10 days
	$58.34	"	" 90 days at 4½%

ALTERNATIVE METHOD WHEN RATE DIFFERS FROM 6%.—Where the number of days upon which the interest is to be computed is not a multiple of the days shown in the above tabulation, the following rule is to be applied:

1. Secure the interest for 6 days at 6% by pointing off 3 places in the principal.
2. Multiply this result by the number of days interest is reckoned, which gives interest for six times the required number of days.
3. Divide this result by 6.

Example: To find the interest on $942.52 for 19 days at 6%:

$ .94252 interest for 6 days
19
848268
94252
$17.90788 interest for 114 days
$17.90788 ÷ 6 = $2.98465 interest for 19 days

With a rate other than 6%, find the interest at 6% as above and adjust the interest to the required basis. For example, with a rate of 5% the interest on $942.52 for 19 days is $2.48721. This would be found by taking 5/6 of the interest at 6% which was $2.98465.

With a rate of 7%, take 7/6 of the interest at 6%, which gives $3.48209.

INTEREST ON U.S. GOVERNMENT SECURITIES.—Interest on bonds or notes issued by the United States government is computed on the basis of **exact interest** for the exact number of days falling within the interest period. Thus, the number of days in the 6 months' periods ending on the 15th of March, May, July and August, during ordinary years, is 181 days, and in leap years is 182. The number of days in the 6 months' periods ending on the 15th of April and June in ordinary years is 182, in leap years is 183; for 6 months ending on the 15th of October and December in both ordinary and leap years the number of days is 183. As February does not enter into the 6 months' periods ending on the 15th of January, February, September and November, the number of days in these periods is 184, whether in ordinary or leap years.

As an example, the interest on $10,000 U. S. 4th Liberty bonds, 4¼%, payable April 15, in an ordinary year, which bonds had been held for 174 days, is $203.16. This figure is obtained as follows:

The number of days in the 6 months' period is 182, or for the 12 months' period it would be 364.

$$\$10{,}000 \times \frac{174}{364} \times \frac{17}{400} = \$203.16$$

The interest on $10,000 U. S. 3rd Liberty bonds, 4¼%, due September 15, which have been held for 174 days is $200.95. Though the principal, interest rate and time in days are the same as in the previous illustration, there is a

difference of $2.21 in interest. This is due to the fact that the number of days in the 6 months' interest period is 184, or 368 days for the 12 months' period. The computation is as follows:

$$\$10{,}000 \times \frac{174}{368} \times \frac{17}{400} = \$200.95$$

UNITED STATES TREASURY INTEREST TABLE.—The following interest table (Table 5) has been compiled to conform with rules of the Treasury Department in computing interest on securities issued by the United States. This table gives the interest for one day on a $1,000 bond at various interest rates.

Table 5. Interest for 1 day on $1,000 Bond

Rate per Annum %	Interest period ending on the 1st or 15th of— Jan., Feb., Sept., Nov., or during any half-year comprising 184 days	Oct., Dec., April,* June,* or during any half-year comprising 183 days	April, June, Mar.,* May,* July,* Aug.,* or during any half-year comprising 182 days	Mar., May, July, Aug., or during any half-year comprising 181 days
2	$.05434783	$.05464481	$.05494505	$.05524862

*Leap Year.

COMPUTATION OF INTEREST UNDER PARTIAL PAYMENT PLANS.—When a short-term indebtedness is reduced through periodical payments, the interest upon the indebtedness is computed upon either one of two bases. The basis commonly used among business men is known as the **"Merchant's Rule."** This method gives the results more quickly but not as accurately as the computation under the other, the **"United States Rule."**

The "Merchant's Rule."—In following the "Merchant's Rule" the interest is computed upon the total indebtedness from the date of inception to the date of maturity, and the interest earned from the date each partial payment is made to the date of maturity of the debt is deducted therefrom.

Example: A merchant obligates himself to liquidate a debt of $7,500 incurred January 1 and due on June 1 with interest at 6% per annum by making the following payments: $2,500 on February 1, $2,500 on March 15, $1,500 on May 1 and the balance on June 1.

Original debt		$7,500.00
Interest on $7,500 for 5 months		$ 187.50
Less:		
Interest on $2,500 for 4 months	$50.00	
Interest on 2,500 for 2½ months	31.25	
Interest on 1,500 for 1 month	7.50	88.75
Interest due June 1		98.75
Unpaid principal		1,000.00
Balance due June 1		$1,098.75

The "United States Rule."—Under the "United States Rule," so-called from its approval by the U. S. Supreme Court,[1] each instalment is first applied against the interest due at the date the partial payment is made, and the balance of the instalment is then applied to reduce the principal. Interest is always computed upon the reduced principal as in the solution below:

Original debt		$7,500.00
Payment made February 1	$2,500.00	
Interest on $7,500 for 1 month	37.50	2,462.50
		5,037.50
Payment made March 15	2,500.00	
Interest on $5,037.50 for 1½ months	37.78	2,462.22
		2,575.28
Payment made May 1	1,500.00	
Interest on $2,575.28 for 1½ months	19.31	1,480.69
		1,094.59
Interest on $1,094.59 for 1 month to June 1		5.47
Balance due June 1		$1,100.06

BANK INTEREST ON DAILY BALANCES.—Many commercial banks allow interest to depositors on the daily balances when they exceed a specified amount ranging from $200 to $1,000. The rate of interest allowed usually varies from 1 to 2%. Both minimum balances and rate of interest may be the subject of special arrangement. Many depositors accept the amount of interest credited to their accounts without attempting to verify its accuracy. Where the amount involved is small any errors in computation would entail little material loss. Where large balances are maintained, the accuracy of the interest allowed on balances by the bank is of importance.

The following is an example of the method employed by a bank which agrees to pay interest at the rate of 2% per annum on the daily balances when such balances are in excess of $1,000. This bank, for convenience, bases its computation on even hundred dollars; other banks merely eliminate cents.

Date	Deposits	Withdrawals	Balances	Days Balance is Maintained	Day Dollars
Sept. 1			$10,265.20	2	$ 20,400
3		$8,600	1,665.20	3	4,800
6	$ 1,200.00		2,865.20	2	5,600
8	22,187.60		25,052.80	4	100,000
12		20,000	5,052.80	6	30,000
18	14,375.00		19,427.80	5	97,000
23	8,642.55		28,070.35	3	84,000
26		27,600	470.35	1	–
27	10,000.00		10,470.35	3	31,200
30	5,260.00		15,730.35	–	–
					$373,000

[1] *Woodward, Baldwin & Co.* v. *Daniel A. Jewell et al.*, 140 U. S. 247.

The above shows that the depositor had balances in the bank in excess of $1,000 for every day of the month except one. The computation shows that balances carried for the month were equivalent to $373,000 for one day. The depositor is therefore entitled to one day's interest on this $373,000 at 2%. Using the daily interest rate shown below, we have .0000548 × $373,000 = $20.44, the amount of interest due this depositor.

One-day Interest Table—365 day Basis.—One day's interest at 1% per annum:

1 %	$.0000274	2½%	.0000684
1½%	.0000411	3 %	.0000822
2 %	.0000548		

Bank Discount

DEFINITION.—Bank discount is the consideration deducted by the bank from the face of the note or draft for cashing it before its date of maturity.

COMPUTATION.—The discount is computed as **simple interest** on the amount of the note or draft from the date of discount to the date of maturity and is paid in advance.

PROCEEDS OF DISCOUNTED PAPER.—The proceeds is the amount received from the bank and is the face value of the note or draft less the discount.

DAYS COMPUTED IN DISCOUNT.—Banks usually compute the term of discount in **exact days.** In Arkansas, Kentucky, Louisiana, Maryland, in the large cities of Missouri, in North Carolina, Pennsylvania, Utah and Virginia, both the date of maturity and the date of discount are included in the term of discount.

DUE DATES FALLING ON SUNDAY OR LEGAL HOLIDAYS.—In Mississippi and Texas commercial instruments falling due on Sunday or a legal holiday are payable the preceding day; in all other states they are payable on the succeeding business day.

COMPUTING THE PROCEEDS AND DISCOUNT ON DISCOUNTED PAPER.—

Example: To find the proceeds of a 4 months' note of $3,200 dated August 4, 1924, and discounted September 26, 1924, at 6% with collection charges of 1/10%:

Date of maturity	December 4, 1924	
The term of discount from September 26 to December 4 is 69 days.		
Face value of note		$3,200.00
Discount for 60 days	$32.00	
" " 9 "	4.80	
" " 69 "	36.80	
Collection charges 1/10% on $3,200	3.20	
Total charge		40.00
Proceeds		$3,160.00

COMPUTING PROCEEDS AND DISCOUNT ON INTEREST BEARING PAPER DISCOUNTED.—Notes bearing interest on their face are treated in a similar manner:

Example: A 90-day note for $2,700 dated September 5, 1924, bearing interest at 6% is discounted September 29 with interest at 6%. Collection charge 1/10%.

Date of maturity		December 4, 1924
The term of discount from September 29 to December 4 is 66 days.		
Face value of note		$2,700.00
Interest at 6% on face of note for 60 days	$27.00	
" " 6% " " " " " 30 "	13.50	
" " 6% " " " " " 90 "		40.50
Total value of note at maturity		$2,740.50
Discount for 60 days	$27.41	
" " 6 "	2.74	
" " 66 "	30.15	
Collection charges 1/10% on $2,740.50	2.74	
Total charges		32.89
Proceeds		$2,707.61

Trade Discount

PURPOSE OF TRADE DISCOUNTS.—The trade discount permits the fixing of a **basic or list price** which may remain unchanged for a long period of time. It is used by manufacturers and jobbers in businesses that deal in articles which are more or less standardized and are in continuous demand, but have fluctuating prices. Catalogs descriptive of the articles manufactured or traded in need not be reissued at each fluctuation in the market price, but a small leaflet stating the new discount rates takes care of the price adjustments caused by the market fluctuations. As the market rises, the trade discount falls, and as the market falls the trade discount rises. **Cumulative discounts** provide the necessary device for following the rise and fall of the market.

COMPUTATION OF CUMULATIVE TRADE DISCOUNTS.—An item listed at $7.20 per dozen, less 20% and 10%, means that after deducting 20% discount, the next discount of 10% is taken on the diminished amount, shown as follows:

$7.20 less 20% is $7.20 less $1.44, or $5.76
$5.76 less 10% is $5.76 less $ .58, or $5.18, which is the net price per dozen to the purchaser.

TOTAL OF CHAIN OF DISCOUNTS NOT THE SAME AS TOTAL OF DISCOUNTS.—A chain of discounts of 20% and 10% is not equivalent to a single discount of 30%. Where there are many such chain discounts to be computed, it is well to have the clerk prepare a table like Table 6, taking into consideration the usual discounts given in the particular trade.

Table 6. Table Showing Net Equivalent After Chain Discounts

	5%	10%	12½%	16⅔%	20%	25%	33⅓%
Net	.95000	.90000	.87500	.83333	.80000	.75000	.66667
2½%	.92625	.87750	.85313	.81250	.78000	.73125	.65000
5%	.90250	.85500	.83125	.79167	.76000	.72150	.63333
10%	.85500	.81000	.78750	.75000	.72000	.67500	.60000
10%, 5%	.81225	.76950	.74813	.71250	.68400	.64125	.57000
20%	.76000	.72000	.70000	.66667	.64000	.60000	.53333
20%, 5%	.72200	.68400	.66500	.63333	.60800	.57000	.50667
20%, 10%	.68400	.64800	.63000	.60000	.57600	.54000	.48000
20%, 10%, 5%	.64980	.61560	.59850	.57000	.54720	.51300	.45600
25%	.71250	.67500	.65625	.62500	.60000	.56250	.50000

USE OF TABLE SHOWING SINGLE EQUIVALENTS OF CUMULATIVE DISCOUNTS.—To find the cost of articles listed at $62 per dozen, less discounts of 10%, 10% and 5%:

The first discount of 10% is found to be the second column on the top row. Then proceed down that column to where 10% and 5% are shown. This is .76950, which is the net equivalent after discounts of 10%, 10% and 5%. Multiply $62 by .76950 = $47.71, the net price.

Anticipation

USE OF TERM.—This is a customary term used in retail business in connection with invoices for purchases which have **dating terms.** Thus, a bill of merchandise is purchased at 2%, 10 days, 90 days extra. If merchandise is received within 10 days from date of invoice, most concerns permit the purchaser to take additional discount at the rate of, say, 6% per annum for 90 days, equivalent to 1½%, in addition to 2% cash discount.

ANTICIPATION RATES ILLUSTRATED.—In computing **anticipation on invoices,** Table 7 (adapted from publications of the Controllers' Congress of National Retail Dry Goods Association) will be of assistance. The annual rates have been reduced to a daily basis.

This table is based upon 365 days to the year and covers annual anticipation rates from 1% to 10% inclusive, covering periods from 1 to 90 days. The figures shown opposite the various number of days is the per cent applicable to the respective period, based upon the annual percentage shown at the top of the column.

Invoice dated March 31 for $4,750.90, terms 2%, 10 days, 90 days extra, f.o.b. destination, paid on April 26.

Invoice	$4,750.90
Less: Freight	30.40
	4,720.50
Less: Discount 2%	94.41
	4,626.09
Less: Anticipation 6% for 73 days (1.2%, see table)	55.51
Amount of check	$4,570.58

The 1.2% anticipation shown above is taken from Table 7 against 73 days and under the 6% column.

It is the custom with some stores to compute the discount on the face of the invoice and the anticipation on the net amount after deducting the discount; then deducting the freight charges. This plan, which favors the purchaser, is illustrated below:

Using the same example as shown above, namely, invoice dated March 31 for $4,750.90, terms 2%, 10 days, 90 days extra, f.o.b. destination, paid on April 27, the computations are as follows:

Invoice	$4,750.90
Less: Discount 2%	95.02
	4,655.88
Less: Anticipation 6% for 73 days (1.2%, see table)	55.87
	4,600.01
Less: Freight	30.40
	$4,569.61

Compound Interest

INTEREST COMPOUNDED PERIODICALLY.—When interest is added to the principal at stated uniform intervals of time, thus increasing the principal at the end of each period, the interest is said to be compounded periodically. The period is usually a quarter of a year, a half year, or a year, although it may be any fractional part of a year.

The accumulated amount obtained at the close of the final period of time is called the **compound amount** and the difference between the compound amount and the original principal is the **compound interest.**

SALIENT FEATURES OF COMPOUND INTEREST.—

1. Interest is computed upon a constantly increasing investment.
2. For each period the growth in the investment is proportional to the amount of the principal invested at the beginning of that period.

Example: Find the compound amount on $1,500 for 3 years at 6% per annum, compounded semi-annually.

Investment	$1,500.00
Interest 6 months, $1,500 at 3%	45.00
Amount at end of first 6 months	1,545.00
Interest 6 months, $1,545 at 3%	46.35
Amount at end of second 6 months	1,591.35
Interest 6 months, $1,591.35 at 3%	47.74
Amount at end of third 6 months	1,639.09
Interest 6 months, $1.639.09 at 3%	49.17
Amount at end of fourth 6 months	1,688.26
Interest 6 months, $1,688.26 at 3%	50.65
Amount at end of fifth 6 months	1,738.91
Interest 6 months, $1,739.01 at 3%	52.17
Compound amount at end of 3 years	$1,791.08
Compound amount at end of 3 years	$1,791.08
Amount at beginning	1,500.00
Compound interest	$ 291.08

If the principal amount is reduced to unity, say $1, the above statement can be restated as follows:

Investment	$1.00
Interest 6 months, $1 at 3% or	.03
Amount at end of first 6 months	1.03
Interest 6 months, $1.03 at 3%	.0309
Amount at end of second 6 months	1.0609
Interest 6 months, $1.0609 at 3%	.031827
Amount at end of third 6 months	1.092727
Interest 6 months, $1.092727 at 3%	.032782
Amount at end of fourth 6 months	1.125509
Interest 6 months, $1.125509 at 3%	.033765
Amount at end of fifth 6 months	1.159274
Interest 6 months, $1.159274 at 3%	.034778
Compound amount at end of 3 years	$1.194052

It is obvious therefore that if we represent the rate of interest per period by i, the statement immediately above may be recast as follows:

Compound amount at end of first	6 months	$1.03	$= (1 + i)$
" " " " second	6 "	1.0609	$= (1 + i)^2$
" " " " third	6 "	1.092727	$= (1 + i)^3$
" " " " fourth	6 "	1.125509	$= (1 + i)^4$
" " " " fifth	6 "	1.159274	$= (1 + i)^5$
" " " " sixth	6 "	1.194052	$= (1 + i)^6$

From Table 8 on the line corresponding to the sixth period in the 3% column, we find the value 1.19405230 which is the same as that derived above except for the fact that in the latter case the last two figures were dropped.

GENERAL FORMULA FOR COMPOUND INTEREST.—To make this apply to any number of periods, the general formula for the compound amount becomes—

$a = (1 + i)^n$, where n is the number of periods and i is the interest rate per period expressed as a decimal.

This problem can, of course, be solved arithmetically; but when n is a large number recourse must be had to logarithms. However, tables giving the compound amount for any number of periods up to 100 and at different interest rates are readily obtainable. Table 8 gives the value of 1 compounded periodically from one period to 100 periods at various rates.

Present Value

DEFINITION.—The value of a sum of money due at a future time is called the **present worth** or **present value** of that sum. It is the reciprocal of the compound amount, and may also be defined as that sum of money, which, when placed at compound interest for the full number of periods involved, will amount to that given sum.

Example: $1,500 at compound interest for 6 periods at 3% per period will amount to $1,791.08. The present worth of $1,791.08 due 6 periods hence at 3% per period compounded will be $1,500.

The formula corresponding to this would be

$$P.\ V. = \frac{1}{(1 + i)^n} \text{ or } \frac{1}{a}$$

$P.\ V.$ = present value
i = simple interest in hundredths
n = the number of periods

COMPOUND DISCOUNT.—The difference between the present worth of the future sum and that future sum is called the **compound discount** and is usually designated by the letter D.

Example: Find the present worth and compound discount of $2,100 with interest at 4½% per annum, compounded semi-annually for 6 years.

The number of periods is 12 and the interest per period is 2¼%. From Table 9, line 12, column of 2¼%, the present worth of $1 is found to be .7656675. Therefore, the present value ($P.\ V.$) of $2,100 = .7656675 × 2,100 = $1,607.90, and the compound discount is $2,100—$1,607.90, or $492.10.

Annuities

ANNUITY.—An annuity is the payment or receipt of a fixed sum of money at uniform intervals of time. An **example** of an annuity is rent on the use of property. Payments of annuities are often called **rents.**

Ordinary Annuity.—An annuity payment is generally made or received at the close of a period of time. This is an **ordinary annuity or an annuity certain.**

Annuity Due.—An annuity due is one in which the payment is made or received at the beginning of a period. A **life insurance premium** paid in advance is an example of an annuity due.

Deferred Annuity.—A deferred annuity is one in which payment is to be made or received after a number of periods have elapsed.

Amount of Annuity.—The total of all annuity payments made or received is the amount of annuity.

Annuity in Perpetuity.—An annuity in which the payments continue indefinitely is a perpetuity. An example of this type is to be found in the payment made from endowment funds.

AMOUNT OF AN ORDINARY ANNUITY.—The **formula** for determining the amount of an ordinary annuity is as follows:

$$A = \frac{(1+i)^n - 1}{i} = \frac{a-1}{i}$$

Where A = amount of annuity
$a-1$ = compound interest for the number of periods (n)
n = the number of periods
i = simple interest per period

This formula is readily remembered when stated in the following way: The amount of annuity is the compound interest accumulated during the time the annuity runs, divided by the simple interest for one period. Table 10 will simplify the computations which are ordinarily met with in business.

Example: To find the amount of an annuity of $2,000 received semi-annually for 10 years when invested at 4% per annum:

In the amount of annuity table for 20 periods in the 2% column the factor is found to be 24.2973698. Multiply this factor by 2,000,

$$\$2{,}000 \times 24.2973698 = \$48{,}594.74$$

The Amount of an Annuity Due.—In the case of an annuity due the payments are made at the beginning rather than at the close of the period in which case there is one more interest payment than in the previous illustration.

Thus the amount of an annuity due, using the preceding example will mean adding to the amount of $48,594.74 interest on that sum at 2%, or $971.89.

Amount of annuity due = $48,594.74 + $971.89 = $49,566.63

Table 10. Amount of Annuity

AMOUNT OF 1 PER ANNUM. $A = \dfrac{(1+i)^n - 1}{i} = \dfrac{a-1}{i}$

PRESENT VALUE OF AN ANNUITY.—The present value of an annuity is that sum which if placed at interest compounded periodically will permit the payment or receipt of a fixed sum at uniform intervals of time.

The **formula** for obtaining this value is:

$$\text{Present value of an annuity } (P.\ V.\ A.) = \frac{1 - \frac{1}{(1+i)^n}}{i} = \frac{D}{i}$$

where $\frac{1}{(1+i)^n}$ = present value of one

D = compound discount

In other words, the present worth of an annuity is equal to the compound discount divided by the simple interest for one period. To facilitate solving problems of this nature Table 11 has been devised and its use is illustrated in the following example.

Example: A corporation owning a patent with an eight year life, receives a quarterly royalty in the amount of $5,500. At what value shall it set up this asset upon its balance sheet assuming that money is worth 5% per annum?

Table 11 shows the present value of an annuity of $1 at 1¼% for 32 periods as 26.2412742.

$$\$5{,}500 \times 26.2412742 = \$144{,}327.01,$$

which is the required value of the asset.

AN ANNUITY WHICH $1 WILL BUY.—The annuity which $1 will buy is equivalent to an annuity whose present worth is $1.

Example: A man at the age of 40 falls heir to $50,000. He invests this money at an effective rate of 4% per annum. What is the annuity he may expect to receive for the next 30 years beginning 1 year hence?

The formula in this instance is

$$A_1 = \frac{1}{A} + i$$

where A is the amount of the annuity and i, as heretofore, is the simple interest per period expressed decimally. Using Table 12, for 30 periods the factor at 4% is .0578301, which multiplied by $50,000, gives an annual instalment of $2,891.50.

Table 12. Annuity 1 Will Buy

ANNUITY WHICH 1 WILL BUY. $A_1 = \frac{1}{A} + i$

SINKING FUND CALCULATIONS.—Sinking funds are usually used to accumulate sums for the **extinguishment of debts or the replacement of assets.** Such sums consist of periodical contributions and thus form annuities. Such problems are not uncommon in business. Corporations floating bond issues frequently advertise that sinking funds will be created to retire the issues at maturity.

The problem becomes one of determining what sum shall be set aside periodically to provide a sinking fund. This is equivalent to determining the amount of an annuity of $1 at the given rate of interest for the number of periods and dividing the amount thus found into the total amount to be retired. The sinking fund factor is found by means of the following formula:

$$\text{Sinking fund factor} = \frac{S.\ F.}{A}$$

S. F. represents the amount to be accumulated in the sinking fund or the bond issue to be retired and *A* represents the amount of the annuity of $1 for a given number of periods at a given rate of interest.

Example: A corporation on June 1, 1922 issued bonds due June 1, 1928, to the amount of $200,000, bearing interest at 6% per annum payable semi-annually. Provision was made to set up a sinking fund to retire the entire issue at maturity.

There are 12 interest periods with interest at 3%. The factor 14.1920296 is obtained from Table 10 "The Amount of an Annuity," in the 3% column and on the line corresponding to 12 periods.

Dividing $200,000, the total bond issue, by 14.1920296, gives $14,092.42 as the semi-annual sinking fund instalment.

SCHEDULE OF SINKING FUND INSTALMENTS.—The following schedule shows the periodical amounts set up and the interest earned on the accumulated balances in the sinking fund. The total semi-annual instalments plus the accumulated interest earned by the sinking fund equal $200,000, the accumulated amount in the sinking fund June 1, 1928, the date of maturity of the bonds:

Date	Semi-Annual Instalment	Interest at 3% on Accumulated Sinking Fund	Total Additions to Sinking Fund	Accumulated Amounts in Sinking Fund
June 1, 1922.....	–	–	–	–
Dec. 1, 1922.....	$ 14,092.42	–	$ 14,092.42	$ 14,092.42
June 1, 1923.....	14,092.42	$ 422.77	14,515.19	28,607.61
Dec. 1, 1923.....	14,092.42	858.23	14,950.65	43,558.26
June 1, 1924.....	14,092.42	1,306.75	15,399.17	58,957.43
Dec. 1, 1924.....	14,092.42	1,768.71	15,861.13	74,818.56
June 1, 1925.....	14,092.42	2,244.55	16,336.97	91,155.53
Dec. 1, 1925.....	14,092.42	2,734.66	16,827.08	107,982.61
June 1, 1926.....	14,092.42	3,239.48	17,331.90	125,314.51
Dec. 1, 1926.....	14,092.42	3,759.43	17,851.85	143,166.36
June 1, 1927.....	14,092.42	4,294.99	18,387.41	161,553.77
Dec. 1, 1927.....	14,092.42	4,846.61	18,939.03	180,492.80
June 1, 1928.....	14,092.42	5,414.78	19,507.20	200,000.00
	$169,109.04	$30,890.96	$200,000.00	

SINKING FUNDS FOR CALLABLE BONDS.—Some callable bonds require that a sinking fund be set up to retire them as soon as possible. An example of such a problem is given in the following illustration.

The Brass Fixture Co. on May 1, 1920, issued $300,000, 6% bonds due May 1, 1928, interest payable semi-annually. The bonds are in denominations of $1,000 and are callable by lot at par and accrued interest. The present value of an annuity of $1 for 16 periods at 3%, is 12.5611020 as shown from Table 11, "Present Value of Annuity."

Dividing $300,000 by 12.5611020 gives $23,883.25, as the semi-annual instalment out of which to pay the interest charges and retire the bonds. A schedule showing how the bonds are retired is given below.

On November 1, 1920, out of $23,883.25 the semi-annual sinking fund instalment, $9,000 is due as interest and the balance, $14,883.25 can be applied against the principal outstanding. The bonds, however, are of $1,000 denominations: hence it is necessary to retire an even amount, say, fifteen bonds. This necessitates setting aside $24,000, the first time. The more bonds retired at the end of each period the smaller the interest due and consequently the larger the amount available to retire the bonds. A practical requirement of this problem is that it is necessary to adhere as closely as possible to the $14,883.25, so that no one period shall be burdened with a greater addition to the reserve than another. The payment made May 1, 1921, will require $8,550 for interest, leaving $15,333.25 to be used for retiring bonds. Therefore, fifteen will again be retired. In the next period the interest charges are $8,100 which leaves $15,783.25 to be used for the retirement of bonds. This amount with a small addition will retire sixteen bonds.

SCHEDULE OF SINKING FUND INSTALMENTS, INTEREST PAYMENTS AND BOND RETIREMENT FOR CALLABLE BOND ISSUE.—

Date	Outstanding	Semi-annual Amount to Pay Interest and Retire Bonds	Interest at 3% Semi-annual Payment	Par Value of Bonds Retired	Number of Bonds Retired
May 1, 1920	$300,000	—	—	—	—

Bond Calculations

DEFINITIONS.—The **par value** of a bond is the amount stated on its face. The **redemption value** is the price at which the bond will be redeemed. In many old issues this is the same as par value; in many more recent issues **premiums are paid** when bonds are redeemed before or at maturity.

CLASSIFICATION OF BONDS ON BASIS OF RETIREMENT.—For the purpose of this section, bonds may be divided into three general classes based on the method under which they are retired: (1) bonds that mature on a given date; (2) bonds that can be called in under certain named conditions, at the option of the issuing company at a specified price before the maturity date of other bonds of the same issue; (3) serial bonds, or those that are redeemable in given amounts on specified dates during the life of the entire issue.

PREMIUM AND DISCOUNT ON BONDS.—When bonds sell at a price greater than par, they are said to sell at a **premium,** and when at a price less than par they are said to sell at a **discount.**

NOMINAL AND EFFECTIVE RATES OF INTEREST.—The purchase of a bond at a premium reduces the yield of that bond from the rate stated on its face, which is the **nominal rate,** to another but lower rate which is the **effective rate.**

PRICE TO BE PAID FOR BONDS TO GIVE A CERTAIN YIELD.—The determination of the price that should be paid for a bond of a known nominal rate to give a desired yield can be shown by the following illustration.

Example: What price shall be paid for a 6% 20-year bond, interest payable semi-annually, to yield a return of 5% per annum?

In dealing with this problem there are two facts to be considered: (1) that the face value of the bond will be returned to the holder in 20 years, and (2) that the holder will receive $30 every 6 months during the life of the issue for each $1,000 invested. The present value of $1 and the present value of an annuity of $1 are the factors involved. The question resolves itself into finding the present value of a $1,000 bond at 5% interest per annum, compounded semi-annually, plus the present value of an annuity of $30 compounded for 40 periods at 2½% per period.

From Tables 9 and 11 the following statement is built:

The present value of $1 for 40 periods at 2½% is	$ .3724306
The present value of an annuity of $1 for 40 periods at 2½% is	25.1027751
$1,000 × .3724306	$ 372.43
$ 30 × 25.1027751	753.08
Price to be paid for this bond	$1,125.51

The preceding illustration covered a case in which the bond sold at a premium. To illustrate the case of a bond selling at a discount take the same data given in the above problem, with the exception of the yield, which is to be 7%.

From Tables 9 and 11 the following statement is built:

The present value of $1 for 40 periods at 3½% is	.2525725
The present value of an annuity of $1 for 40 periods at 3½% is	21.3550723
$1,000 × .2525725	$252.57
$ 30 × 21.3550723	640.65
Price to be paid for this bond	$893.22

BOND TABLES.—Bond tables have been devised to simplify the labor involved in determining

1. The price to be paid when the yield is known
2. The yield when the cost is known.

Such tables usually give the common investment yield rates on a semi-annual basis, and for periods of maturity varying from one year to 100 years at rates that range from 3% to 8% per annum.

To illustrate the use of such tables the following five examples are given, in connection with which Tables 13, 14, 15, 16, taken from Sprague's Extended Bond Tables, are used.

How to Find the Price of a Bond When the Yield is Known.—

Example 1: What price shall be paid for a $1,000 bond, due 18 years hence, bearing interest at 4½% per annum, payable semi-annually, to yield 5% per annum on the investment.

In the 4½% table (Table 15) look down the column headed 18 years until the line of net income of 5% is reached. The price to be paid for the bond is $941.11.

Example 2: An advertisement contains in part the following information "These 3½% bonds maturing in 9 years will yield the purchaser 4.23% per annum on his investment." What price shall be paid for the bonds? This is similar to the problem above except that the yield rate will not be found in the table but will have to be obtained by interpolation. Proceed as follows: In the 3½% table (Table 13) headed 9 years, set down the price of a $1,000 bond at 4.20 and 4.25%

Yield	Price
4.20	$947.98633
4.25	944.39289
.05	$ 3.59344
.01	$ .71869
.03	$ 2.15606
4.20	$947.98633
.03	2.15606
4.23	$945.83027

The price to be paid for each $1,000 bond is $945.83.

Example 3: The following example illustrates how to find the value of a bond whose life from date of purchase to maturity can not be found in the table. Find the value of a 5% bond maturing in 22 years and 4 months to yield 3¾% on the investment.

From the 5% table (Table 16) in the column headed 22 years with a yield of 3¾% we find the value to be $1,186.13483 for each $1,000 bond. However, the time is 4 months greater. As the table gives a value of $1,188.84401 for 22½ years, we may interpolate to find the value for 22 years and 4 months.

22½	years	$1,188.84401
22	years	1,186.13483
½	year or 6 months	$ 2.70918
1	month	$ .45153
4	months	$ 1.80612
22	years	1,186.13483
22 years 4 months		$1,187.94095

The value required is $1,187.94 for each $1,000 bond.

How to Find the Yield When the Cost is Known.—

Example 4: A problem that occurs quite frequently and which is somewhat difficult of solution by ordinary formula and even then requiring the use of logarithms, may be more easily solved by the use of bond tables. Such a problem may be stated as follows. What rate of interest may an investor expect who pays 118¾ for a 4½% bond maturing in 19½ years?

Turn to the 4½% table (Table 15) in the column headed 19½ years. Follow down the column until the value 118.75 is reached. It will be found to be on the net income line of 3.20%. In other words, a 4½% bond bought at 118¾ maturing in 19½ years will yield 3.20% per annum on the investment.

Example 5: When the value does not appear on the table a slight modification of the proceedure outlined in the preceding problem must be made. This is shown in the following illustration. What rate of interest may an investor expect who pays 97½ for a 4% $1,000 bond maturing in 7 years?

Turn to the 4% table (Table 14) and follow down the column headed 7 years. It will be seen that 97½ does not appear on that column. It lies between two figures which represent a net income rate of 4.40% and 4.45%.

4.40%	976.12485
4.45	973.18736
	2.93749

The difference between the price paid 975.00000 and the price at 4.40, namely, 976.12485 is 1.12485. The ratio of 1.12485 to 2.93749 multiplied by the difference on income rate .05 will give the amount to be added to 4.40 to give the net income required. To put it more simply, to travel 5 units of net income, it requires 293749 units of price. As we only wish to travel 112485 units of price, we must travel 112485/293749 parts of those 5 units of net income. The ratio of 112485/293749 is .3829289. Multiplying this by .05 gives .01914644. Adding this to 4.40 gives the rate of interest the investor may expect which is 4.41914644%.

Table 13. Values, to the nearest Cent, of a Bond for $1,000,000 at 3½% Interest, payable semi-annually

5 00	1 000 000 00	1 000 000 00	1 000 000 00	1 000 000 00	1 000 000 00

COMPUTATION OF PRICE TO BE PAID FOR BONDS PURCHASED BETWEEN INTEREST DATES.—When a purchaser acquires a bond between the dates on which interest is payable, the seller is entitled to the interest that has accrued on the bond to the date of sale.

A slightly different computation must be made when the purchase date of bonds thus falls between interest dates. The rule for such a computation may be stated as follows:

1. The price of the bond is computed to the interest date immediately preceding and immediately following the date of the purchase.
2. The difference between these two prices is to be prorated from the preceding interest date to the date of the purchase and deducted from the price obtained at the preceding interest date.
3. To the price obtained under (2) add the interest accrued to the date of purchase.

Example: What price shall be paid for a $1,000 bond, dated February 1, 1922, and due February 1, 1932, bearing interest at 5½% per annum, payable February 1 and August 1, if purchased April 1, 1925, to yield 4½%?

The life of the bond from interest date preceding the date of purchase to maturity is 7 years.

The present value of $1 for 14 periods (February 1, 1925, to February 1, 1932) at 2¼% is	.7323414
The present value of an annuity of $1 for 14 periods at 2¼% is	11.8959392
The present value of $1 for 13 periods (August 1, 1925, to February 1, 1932) at 2¼% is	.7488190
The present value of an annuity of $1 for 13 periods at 2¼% is	11.1635979
$1,000 × .7323414	$ 732.34
$27.50 × 11.8959392	327.14
Price at February 1, 1925	$1,059.48
$1,000 × .7488190	$ 748.82
$27.50 × 11.1635979	307.00
Price at August 1, 1925	$1,055.82
Difference to be prorated	$ 3.66
Prorated to April 1, 1925, 1/3 of $3.66	$ 1.22
Price at February 1, 1925	$1,059.48
Less: Prorated difference	1.22
	$1,058.26
Accrued interest February 1, 1925, to April 1, 1925	9.17
Price at April 1, 1925	$1,067.43

Further Example: What price should be paid for a $1,000 bond dated November 1, 1920, and due November 1, 1935, bearing interest at 4% per annum payable May 1 and November 1, if purchased March 1, 1925 to yield 5%? The life of the bond from the interest date, November 1, 1924, to maturity is 11 years.

The present value of $1 for 22 periods (November 1, 1924, to November 1, 1935) at 2½% is	.5808647
The present value of an annuity of $1 for 22 periods at 2½% is	16.7654132
The present value of $1 for 21 periods (May 1, 1925, to November 11, 1935) at 2½% is	.5953863

The present value of an annuity of \$1 for 21 periods at 2½% is..	16.1845486
\$1,000 × .5808647	\$580.86
20 × 16.7654132	335.31
Price November 1, 1924	\$916.17
\$1,000 × .5953863	\$595.39
20 × 16.1845486	323.69
Price May 1, 1925	\$919.08
Difference to be prorated	\$ 2.91
Prorated to March 1, 1925, ⅔ of \$2.91	\$ 1.94
Price at November 1, 1924	\$916.17
Less: Prorated difference	1.94
	\$914.23
Accrued interest November 1, 1924, to March 1, 1925	13.33
Price at March 1, 1925	\$927.56

Bonus Calculations

COMPUTATION OF BONUS AFTER DEDUCTING FEDERAL INCOME TAXES.—Agreements are frequently made between employees and corporations wherein the former accept a nominal salary on the condition that they receive **a percentage of the net profits.** Such agreements should contain explicit definitions as to what constitutes net profits. Often the net profits are construed as the net taxable profits as reported in the federal income tax return less the federal income tax due.

The use of the following formula will solve such a problem unless excess profits taxes are restored:

Let N = net income before bonus and federal income tax
" B = bonus
" r = rate of federal income tax in decimals
" b = rate of bonus in decimals
" E = specific exemption, if any, allowable under the revenue act in force

The formula to be used is:

$$B = \frac{b}{1 - br}[N - r(N - E)]$$

Substitute known values for the above symbols as follows:

N = \$100,000
r = 12½% under the Revenue Act of 1924
b = 7%
E = none, as net income is in excess of \$25,000

Substituting these values in the formula gives

$$B = \frac{.07}{1 - (.07 \times .125)}[100{,}000 - (.125 \times 100{,}000)]$$

$$= \frac{.07}{1 - .00875}(100{,}000 - 12{,}500) = \frac{.07}{.99125}(87{,}500)$$

$$= \frac{6{,}125}{.99125} = \$6{,}179.07$$

The bonus therefore is \$6,179.07.

Proof of the correctness of this solution by the use of the foregoing formula can be obtained in the following manner.

PROOF:

Net income	$100,000.00	
Less: Bonus	6,179.07	
Net income after bonus	$ 93,820.93	
Tax at 12½% = $93,820.93 × .125 =		$ 11,727.62
Net income before tax and bonus		$100,000.00
Tax		11,727.62
Net income after tax		$ 88,272.38
Bonus at 7% on net income after taxes (88,272.38 × .07)		$ 6,179.07

which agrees with that derived from the above formula.

COMPUTATION OF BONUS AFTER DEDUCTION OF BOTH TAXES AND BONUS.—Frequently it is desired to determine the bonus after allowing for both tax and bonus. As in the previous illustration, the bonus is first deducted before determining the tax. After the tax has been computed, it, as well as the bonus, is deducted from the net income. The bonus is then determined from this new figure. Using the same symbols as in first case above, the formula becomes:

$$B = \frac{b}{1 - br + b}[N - r(N - E)]$$

Substituting as in the preceding case:

$$B = \frac{.07}{1 - .00875 + .07}[100{,}000 - 12{,}500]$$

$$= \frac{.07}{1.06125}(87{,}500)$$

$$= \$5{,}771.50$$

The bonus therefore is $5,771.50.

Proof of the correctness of the solution of this type of problem by the use of the formula can be made in the following manner:

PROOF:

Net income	$100,000.00	
Less: Bonus	5,771.50	
Net income after bonus	$ 94,228.50	
Tax at 12½% = $94,228.50 × .125 =		$ 11,778.56
Net income		$100,000.00
Less: Bonus	$ 5,771.50	
Tax	11,778.56	17,550.06
Net income upon which bonus is computed		$ 82,449.94
Bonus = $82,449.94 × .07 =		$ 5,771.50

which agrees with that derived from the above formula.

COMPUTATION OF BONUS AFTER DEDUCTION OF BONUS AND TAXES WITH EXEMPTION.—When the net income is greater than \$25,250, as under the Revenue Act of 1924, the value of E, the specific exemption, becomes zero and thus drops out of the computation. If the net income is less than \$25,250, then E, the exemption, is equal to \$2,000. Assume that the net income is \$22,000 and the rate of bonus is 10%. The bonus is to be determined after allowance for both taxes and bonus. The formula then is:

$$B = \frac{b}{1 - br + b}[N - r(N - E)]$$

Substituting:

$$B = \frac{.10}{1 - .0125 + .10}[22{,}000 - .125(22{,}000 - 2{,}000)]$$

$$= \frac{.10}{1.0875}[22{,}000 - 2{,}500]$$

$$= \frac{.10}{1.0875} \times 19{,}500 = \$1{,}793.10$$

The bonus then is \$1,793.10.

PROOF:

Net income before taxes and bonus		\$22,000.00
Bonus	\$1,793.10	
Exemption	2,000.00	3,793.10
Taxable net income		\$18,206.90
Tax at 12½% = \$18,206.90 × .125 =		\$ 2,275.86
Net income before taxes and bonus		\$22,000.00
Less: Tax	\$2,275.86	
Bonus	1,793.10	4,068.96
Amount upon which bonus is based		\$17,931.04

10% of this amount is the bonus, or \$1,793.10 as above.

Such problems occur in so many forms that it is impractical to supply a solution for each special condition.

Averages

DEFINITION.—An average is a number which may be considered representative of a **series of numbers.** It is frequently used in business as a means for comparing two or more series of numbers or groups.

TYPES OF AVERAGES.—There are various types of averages. The **four more important ones** are:

1. Simple average
2. Weighted average
3. Moving average
4. Progressive average

SIMPLE AVERAGE.—A simple average is an **arithmetical mean** and is obtained by adding together the units in the series and dividing the sum by the number of units.

Example: A problem illustrative of the method of finding a simple average frequently met with in business is to find the average profits of a concern for a given number of years, say from 1920 to 1924 inclusive.

Year	Net Profit
1920	$ 82,300
1921	61,200
1922	58,000
1923	86,600
1924	94,000
Total.....	$382,100

$$\text{Average is } \frac{\$382,100}{5} = 76,420$$

WEIGHTED AVERAGE.—A weighted average is necessary where the values entering into the computation differ in character in two or more ways. It differs from a simple average in that consideration is given to the fact that units of the series may have values which are different from one another in kind or character. Many business men are apt to use a simple average when a weighted average should be used to obtain a correct result.

Example: What is the average salary paid to the office staff?

No. of Individuals	Yearly Salary	Total
12	$ 1,800	$21,600
6	900	5,400
5	2,400	12,000
7	3,000	21,000
2	4,200	8,400
3	5,000	15,000
1	7,200	7,200
36	$24,500	$90,600

The simple average of the yearly salary would be $24,500 ÷ 7 = $3,500. This is absurd. The correct solution is obtained by dividing $90,600 by 36, which gives $2,516.67.

MOVING AVERAGE.—A moving average is obtained by taking the simple average of a group of terms. Then the first term of this group is dropped, a new term is added and a simple average is again obtained of the new group of terms. This process is continued until the entire series of terms has been exhausted. The number of terms in each group averaged must always remain the same.

Moving averages are used with best success in industries where there are no seasonal fluctuations. If there are seasonal fluctuations the moving averages **will accentuate the peaks and depressions** as they appear.

The example that best illustrates a moving average is that of obtaining the average monthly sales over a period of years.

Example: The following figures represent the monthly sales of a concern for a 2-year period expressed in round numbers:

	1923	1924		1923	1924
Jan.....	$12,000	$17,500	July.....	$12,500	$19,000
Feb.....	11,500	16,000	Aug.....	14,000	19,500
Mar.....	11,700	17,000	Sept.....	15,000	22,000
Apr.....	12,000	18,000	Oct.....	16,000	26,000
May.....	11,000	18,500	Nov.....	16,500	27,000
June.....	13,000	19,000	Dec.....	18,000	30,000

] Taking the year as the basis, first find the average for the 12 months, January December 1923, which amounts to $13,600. Next find the average for the -month period, February 1923, to January 1924. That is, January 1923 is opped from the computation, while January 1924 is included. The average then found to be $14,058.33. This process is continued, each time 1 month ng dropped at the beginning and one added at the end of the yearly period, ntil December 1924 is included. The following series is the result:

eriod (dates inclusive)	Moving Average
an: 1923–Dec. 1923	$13,600.00
eb. " –Jan. 1924	14,058.33
lar. " –Feb. "	14,433.33
pr. " –Mar. "	14,875.00
lay " –Apr. "	15,375.00
ne " –May "	16,000.00
ly " –June "	16,500.00
Aug. 1923–July 1924	$17,041.67
Sept. " –Aug. "	17,500.00
Oct. " –Sept. "	18,083.33
Nov. " –Oct. "	18,916.67
Dec. " –Nov. "	19,791.67
Jan. 1924–Dec. "	20,791.67

PROGRESSIVE AVERAGE.—A progressive average differs from a moving verage in that a simple average of the first two terms of a series is first obtained; ien a simple average of the first three terms is obtained and so on. Each me the simple average is taken of one more term than the preceding time ntil a final simple average is obtained of all terms in the series.

A progressive average **tends to smooth over peaks and depressions** and to ake the result appear to be more uniform than the conditions warrant.

Example: The following table shows the progressive average for the data iven in the preceding illustration. The first average is for the first 2 months f 1923, and the following averages are secured by including an additional onth each time.

	Progressive Average
n. 1923–Feb. 1923	$11,750.00
" –Mar. "	11,733.33
" –Apr. "	11,800.00
" –May "	11,640.00
" –June "	11,866.67
" –July "	11,957.14
" –Aug. "	12,212.50
" –Sept. "	12,522.22
" –Oct. "	12,870.00
" –Nov. "	13,200.00
" –Dec. "	13,600.00
" –Jan. 1924	13,900.00
Jan. 1923 –Feb. 1924	$14,050.00
" " –Mar. "	14,246.67
" " –Apr. "	14,481.25
" " –May "	14,717.65
" " –June "	14,955.56
" " –July "	15,168.42
" " –Aug. "	15,385.00
" " –Sept. "	15,700.00
" " –Oct. "	16,254.55
" " –Nov. "	16,639.13
" " –Dec. "	17,195.83

Use of Averages in Business

AVERAGING ACCOUNTS.—Averaging accounts is the process of finding single date when settlement of an account, consisting of several items due different dates, may be made without loss of interest to either party to the ansaction.

The **equated date** is the due date or date of settlement as determined by veraging the accounts.

The **focal date** is the assumed date of settlement for the purposes of computing the equated date. The focal date may be any date in the account, but it is usually more convenient to use the earliest or latest date.

TO FIND THE EQUATED DATE OF A ONE-SIDED ACCOUNT.—Take the following illustration from the books of a company.

1925	Amount	Terms	Due Date	Days to Focal Date	Day Dollars
Feb. 10	$ 600	30 days	Mar. 12	38	$22,800
Feb. 18	1,550	60 "	Apr. 19	—	—
Mar. 8	920	30 "	Apr. 7	12	11,040
	$3,070				$33.840

This account might have been settled on March 12, April 7, and April 19, but the debtor finds that he is unable to meet the account due March 12 and promises the creditor that he will anticipate one or both of the other two items so that the creditor will not have lost anything. Or again, it may be necessary to find the average date in order that interest may be computed on the balance instead of on the individual items in the account.

The problem is to determine the date that payment can be made in order that the account may be settled equitably between the interested parties.

To solve this problem take the latest date, April 19, as the focal date. Determine the number of days to the focal date as shown. Multiply the amount by the number of days to obtain the day dollars. The sum of day dollars, 33,840, divided by the total amount due in the account, $3,070, gives 11 days. This is the number of days back from the focal date to the equated due date to be found which is, therefore, **April 8.**

AVERAGING COMPOUND ACCOUNTS.—Compound accounts contain both debit and credit items, and when there are several items on each side, the computation becomes a trifle more complex but the principle remains exactly the same.

RULES FOR AVERAGING COMPOUND ACCOUNTS.—

1. Choose a focal date, using the same one for the debit and the credit side.
2. Find the number of days from the due date of the account to the focal date.
3. Compute the day dollars.
4. Find the balance of the account.
5. Find the difference in the day dollars, debit and credit.
6. Divide item 5 by item 4.
7. If the difference in the days dollars, debit and credit, is on the same side of the account as the balance of the account, count the number of days backward from the focal date. When the balances are on opposite sides, count the days forward from the focal date.

ILLUSTRATIONS OF AVERAGING COMPOUND ACCOUNTS.—Following are two examples to illustrate the operation of the rules set forth above.

Merchandise was purchased as follows:

May 28.....$1,500 n/60
June 6..... 2,350 n/60
June 17..... 3,100 n/30
June 28..... 1,600 n/30

Payments were made as follows:

July 17.....$2,000
July 23..... 1,800

Find the equated due date.

	Debit			Credit			
Due Date	Amount	Days to Focal Date	Day Dollars	Date Paid	Amount	Days to Focal Date	Day Dollars
July 17...	$3,100	19	$58,900	July 17....	$2,000	19	$38,000
July 27...	1,500	9	13,500	July 23....	1,800	13	23,400
July 28...	1,600	8	12,800				
Aug. 5...	2,350	—	—				
	$8,550		$85,200		$3,800		$61,400
	3,800		61,400				
	$4,750		$23,800				

Dividing 23,800 by 4,750, gives 5 days, from the focal date, August 5, which makes July 31 as the equated due date.

PROOF:

	Debit			Credit			
Date	Amount	Days to July 31	Day Dollars	Date Paid	Amount	Days to July 31	Day Dollars
July 17...	$3,100	14	$43,400	July 17....	$2,000	14	$28,000
July 27...	1,500	4	6,000	July 23....	1,800	8	14,400
July 28...	1,600	3	4,800	July 31....	4,750	—	—
			54,200				
Aug. 5...	2,350	5 disc.	11,750				
	$8,550		$42,450		$8,550		$42,400

The fact that the amount due on August 5 would be paid in advance makes an item of discount and consequently affects the account in the same manner as a credit does.

As illustrative of the **second type of problem** take the same data as in the foregoing example with the exception of the payments which are as follows:

July 17.....$3,000
July 25..... 1,600
July 27..... 2,400

	Debit			Credit			
Due Date	Amount	Days to Focal Date	Day Dollars	Date Paid	Amount	Days to Focal Date	Day Dollars
July 17...	$3,100	19	$58,900	July 17....	$3,000	19	$57,000
July 27...	1,500	9	13,500	July 25....	1,600	11	17,600
July 28...	1,600	8	12,800	July 27....	2,040	9	18,360
Aug. 5...	2,350	—	—				
	$8,550		$85,200		$6,640		$92,960
	6,640						85,200
	$1,910						$ 7,760

In this instance the balance in day dollars is on the credit side while the balance in the account is debit.

$$7{,}760 \div 1{,}910 = 4 \text{ days}$$

As the fractional part is less than half a day, it may be dropped. Since the balance of the day dollars is on the credit side while the balance of the account is a debit, we count 4 days **forward** from the focal date and arrive at August 9 as the equated due date.

PROOF:

Debit				Credit			
Due Date	Amount	Days to Aug. 9	Day Dollars	Date Paid	Amount	Days to Aug. 9	Day Dollars
July 17...	$3,100	23	$ 71,300	July 17....	$3,000	23	$ 69,000
July 27...	1,500	13	19,500	July 25....	1,600	15	24,000
July 28...	1,600	12	19,200	July 27....	2,040	13	26,520
Aug. 5...	2,350	4	9,400	Aug. 9....	1,910	—	—
	$8,550		$119,400		$8,550		$119,520

The difference of 120 day dollars out of a total of 119,400 shows that the fractional part over 4 days which was dropped was negligible.

Logarithms

USE AND PURPOSE OF LOGARITHMS.—By means of logarithms, extended multiplications and divisions are much simplified and complex arithmetical problems are readily solved. **Tables of logarithms** are as easily handled as are interest tables. Proficiency is only a matter of practice. In order to have a working knowledge of the use of logarithms it is necessary to understand the use of exponents.

An **exponent** is a number placed to the right of and a little above another number to indicate the number of times the latter is to be taken as a factor.

Thus, $2^4 = 16$, means that 2 has been taken as a factor 4 times, or $2 \times 2 \times 2 \times 2 = 16$.

LOGARITHMS ARE EXPONENTS.—The logarithm of any number is the exponent of that number to the base of 10. Thus, in the expression $10^3 = 1{,}000$, 3 is the exponent or logarithm of 1,000 to the base 10. The exponent 3 indicates the number of times 10 has been used as a factor to obtain the number 1,000. When extensive multiplications are made of one factor it is best to set up a table. Thus we find that a table of tens might be formed as follows:

$$\begin{aligned} 10^1 &= 10 \\ 10^2 &= 100 \\ 10^3 &= 1{,}000 \\ 10^4 &= 10{,}000 \\ 10^5 &= 100{,}000 \\ 10^6 &= 1{,}000{,}000 \\ 10^7 &= 10{,}000{,}000 \end{aligned}$$

From a study of this table it is evident that $10^7 = 10{,}000{,}000$, can be obtained by multiplying $1{,}000 \times 10{,}000$. This reveals the principal quality of exponents, namely, that multiplying numbers with like bases is equivalent to adding the exponents. In the illustration just given

$$\begin{aligned} 10^3 &= 1{,}000 \\ 10^4 &= 10{,}000 \\ \hline 10^7 &= 10{,}000{,}000 \\ \hline 10^2 &= 100 \\ 10^5 &= 100{,}000 \\ \hline 10^7 &= 100 \times 100{,}000 = 10{,}000{,}000 \end{aligned}$$

From an inspection of the table shown above it appears that the exponent and the number of ciphers following the whole number are in agreement. It follows then that the logarithm of 10,000 is 4 and the logarithm of 10,000,000 is 7.

CHARACTERISTIC AND MANTISSA.—From appropriate tables of logarithms the logarithm of 3 is found to be 0.4771213. The logarithm thus consists of two parts, the characteristic, which in this case is zero, and the mantissa, which is the decimal part of the number, namely, .4771213. The characteristic changes as the number of places to the left of the decimal point in the number itself changes. The mantissa is permanent.

In other words the logarithm of

$$\begin{aligned} 3. &= 0.4771213 \\ 30. &= 1.4771213 \\ 300. &= 2.4771213 \\ 3{,}000. &= 3.4771213 \end{aligned}$$

It is significant that the characteristic is one less than the number of figures that precede the decimal point. This is further shown by the following:

$$\begin{aligned} \text{Logarithm of } 371.2 &= 2.5696080 \\ \text{“ } \quad \text{“ } 3.712 &= 0.5696080 \end{aligned}$$

LOGARITHM OF A DECIMAL HAS A NEGATIVE CHARACTERISTIC.—When the number is a decimal, its characteristic is negative as shown by the logarithm of .3712 which is $\bar{1}.5696080$, and the logarithm of .003712, which is $\bar{3}.5696080$. The mantissa always remains positive, which permits the formulation of logarithmic tables.

How Negative Characteristics are Shown in Logarithms.—As stated, in the logarithm of a decimal the characteristic is negative but the mantissa is positive. To eliminate the resulting ambiguity of writing a negative characteristic as shown in the previous paragraph, there is substituted for the -3 its equal $7 - 10$, and the logarithm is written as $7.4771213 - 10$. By using this notation the computation is made much simpler. In writing the $- 10$, an extra spacing should be left between the last figure of the mantissa and the minus sign to avoid confusion in computation.

RULE GOVERNING THE CHARACTERISTICS OF LOGARITHMS.—The characteristic of the logarithm, **when positive,** is one less than the number of places in the number to the left of the decimal point.

The characteristic of the logarithm is **negative** when the number is a decimal and is one greater, numerically, than the number of ciphers that immediately follow the decimal point.

LOGARITHMIC TABLES.—Logarithmic tables have been prepared having mantissas with 4 to 10 places. It is not advisable to use tables giving logarithms with less than 6 or 7 places.

Typical Logarithmic Tables.—For illustrative purposes two pages of a logarithmic table (Table 17) are presented. These pages are taken (with some slight adaptations of form) from **Vegas Logarithmic Tables,** which give logarithms to 7 places, which answer for most practical purposes.

Table 17. Logarithmic Table

How to Use Logarithmic Tables.—How to use logarithmic tables can be shown best by a few concrete examples.

MULTIPLICATION BY USE OF LOGARITHMS.—

Example 1: Multiply 24 by 1.27 by the use of logarithmic tables.

$$\begin{aligned} \text{Log of } 24 &= 1.3802112 \\ \text{Log of } 1.27 &= 0.1038037 \\ \text{Log } (24 \times 1.27) &= 1.4840149 \end{aligned}$$

We now have the logarithm of the product. To obtain the number corresponding to this logarithm look in the table (Table 17) for the log nearest to this mantissa. This mantissa lies between .4828736, which corresponds to 304 in the table, and .4842998, which corresponds to 305. The difference between these mantissas is 14262. The difference between the mantissa .4840149 and the lower of the two is .11413. The ratio of 11413/14262 = .8, which is the decimal part between 304 and 305. Thus the number corresponding to a mantissa of 4840149 is 3048.

As the characteristic is one, it indicates that the number is greater than one and that there are two figures that precede the decimal point or the number represented by a logarithm 1.4840149 is 30.48.

Another example of multiplication by use of logarithms:

Example 2: Multiply 133 by .037.

The logarithm of .037 has a negative characteristic of 2. This is equivalent to a positive characteristic of 8 minus 10.

$$\begin{aligned} \text{Log } 133 &= 2.1238516 \\ \text{Log } .037 &= 8.5682017-10 \\ \text{Log } (133 \times .037) &= 10.6920533-10 \end{aligned}$$

Look up the mantissa .6920533. This lies between the logarithm of 492 and 493. The difference between these mantissas is 8818. The difference between the lower of the two and .6920533 is 882. This is very nearly one-tenth. The number corresponding to this logarithm is 4921. As the characteristic is zero (10 − 10), it means that there is one significant figure to the left of the decimal point, making the correct answer 4.921.

These illustrations bear out the statement that logarithms are exponents. As shown before, when multiplying numbers exponents are added. In the examples cited we added logarithms when multiplying numbers.

DIVISION BY USE OF LOGARITHMS.—Since division is the opposite of multiplication, we **subtract the logarithm** of the divisor from that of the dividend to obtain the logarithm of the quotient.

Example 1: Divide 439 by 2.31.

$$\begin{aligned} \text{Log of } 439 &= 2.6424645 \\ \text{Log of } 2.31 &= 0.3636120 \\ \text{Log } (439 \div 2.31) &= 2.2788525 \end{aligned}$$

In the same manner as before the number corresponding to this logarithm is found to be 190.043.

Example 2: Divide 2.31 by 439.

In this instance the characteristic of 2.31 is less than that of 439. It becomes necessary to add to the characteristic of the logarithm of the former the unit of 10, subtracting it at the same time, as when changing a negative to a positive characteristic.

Log of 2.31	$= 10.3636120 - 10$
Log of 439	$= 2.6424645$
Log (2.31 ÷ 439)	$= 7.7211475 - 10$

Bearing in mind that this is a negative characteristic of 3, the decimal point in the number is followed by two ciphers. The number corresponding to this logarithm is .005261959.

USE OF LOGARITHMS TO FIND ROOTS OR POWERS.—In obtaining the root of a number or the power of a number, find the logarithm of the number and multiply the logarithm by the exponent or divide by the root as the case may be. Then find the number corresponding to the logarithm thus obtained.

USE OF LOGARITHMS WHEN ANNUITY OR COMPOUND INTEREST TABLES ARE NOT AVAILABLE.—When regular annuity or compound interest tables are not available or fail to give the information needed, recourse must be had to logarithms. When large sums of money are involved tables giving accurate results are a prime necessity.

Example: Find the amount of money on deposit at the end of 10 years when an initial deposit of $2,500 has been made. Interest is payable at the rate of 4% per annum compounded quarterly.

This makes the interest rate per quarter 1%. There will be 40 such quarterly periods of compounding. To express such a statement it is written as $(1 + .01)^{40}$. That is, each $1 will earn $.01 each quarter, the amount to be compounded will, therefore, be $1.01 per quarter for each dollar. As there are 40 quarterly periods, $1.01 is to be taken as a factor 40 times. $2,500 times this will give the required answer. Such multiplication by long-hand method would require a prohibitive amount of time, but by the use of logarithms it is made simple.

Log 1.01	$= .0043214$
	$\times \quad 40$
Log $(1.01)^{40}$	$= .1728560$
Log 2,500	$= 3.3979400$
	3.5707960

The number corresponding to this logarithm is

$3,722.168 or $3,722.17

WHERE LOGARITHMS CAN AND CANNOT BE USED.—From the nature of exponents, it is evident that computations, a large part of which are made up of addition or subtraction, are not adapted to the use of logarithms unless the multiplication, division or powers included are of sufficient magnitude to warrant the use of logarithms for those parts. It must be remembered, moreover, that addition and subtraction of numbers cannot be done by logarithms

The Slide Rule

ITS USE.—An executive will find in the slide rule a useful and time-saving device By its use various calculations such as percentages, multiplication, division, etc., can be solved with a minimum of mental effort and in less time than is possible with the ordinary methods of performing such computations. The slide rule has the advantage of compactness and in many ways is superior to many tables which might be consulted.

A **manual of instructions** accompanies every slide rule and in it will be found complete diagrams and full explanations permitting the operator to perform all manner of computations.

The 10-inch slide rule gives results which are accurate to 3 or even 4 significant figures. The use of a 20-inch rule will give a higher degree of accuracy.

THE MERCHANT'S SLIDE RULE.—For the business man who is not interested in the computations of problems necessary for the engineer or technical man, a special merchant's slide rule has been devised by Keuffel & Esser Co., of New York.

The operation of the merchant's slide rule does not require a special knowledge of mathematics other than that of decimal fractions, even though the principle on which the slide rule operates is based on the theory of logarithms.

DESCRIPTION OF THE MERCHANT'S SLIDE RULE AND HOW TO USE IT.—The merchant's slide rule is double-faced with 4 scales on the face of the rule designated DF, CF, C and D, as shown in Fig. 1 and two scales C1 and D on the reverse side. As nearly all computations may be performed on scale C and D, a description of these only will be given here.

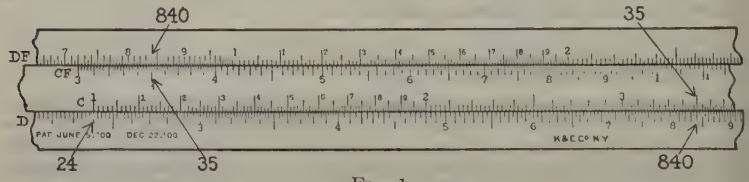

Fig. 1

MULTIPLICATION.—The use of the slide rule for multiplication can be shown by the following example. Multiply 24 by 35. Set the figure 1 at the extreme left of the movable scale C on 24 on the fixed scale D. Next move the slide along scale C until the hair line is directly over 35 on scale C. Read the result directly underneath on scale D. It will be found to be 840. By one setting 24 may be multiplied by an indefinite number of multipliers provided that they can be set on scale C. When the multiplier on scale C no longer appears opposite a number on scale D, it becomes necessary to set the figure 1 at the extreme right of the movable slide C on 24 on the fixed scale. Then proceed as before. A special device is employed on this type of slide rule which obviates the need for this change. It is, however, easily made and requires no mental effort to remember.

DIVISION.—The use of the slide rule for division can be shown by the following example. Divide 725 by 25. Set the slider over the dividend 725 on scale D. Then bring the divisor 25 on scale C, to coincide with the dividend 725 on scale D. Read the number on scale D directly under the figure 1 on scale C. In this illustration the quotient is 29. (Fig 2).

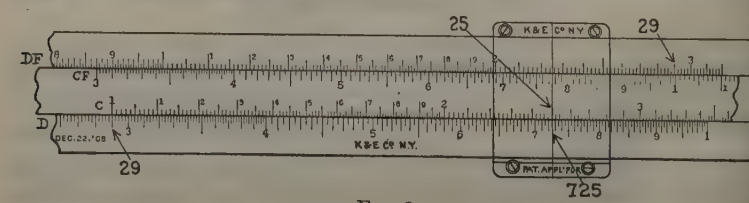

Fig. 2

It will be noted that the numbers beginning at the left of scales C and D may be read as 10, 11, 12 and so on, or they may be considered as 1.0, 1.1, 1.2. The ordinary rules for decimal points will determine this.

Ratio and Proportion

RATIO DEFINED.—The ratio of one number to another is the **quotient** obtained by dividing the first by the second. The ratio is expressed either as a fraction, such as 2/3, or by placing a colon between the numbers as 2 : 3.

PROPORTION DEFINED.—When two ratios are equal in numerical value they form a proportion. For example, 2 : 3 = 8 : 12.

MEANS AND EXTREMES OF A PROPORTION.—The extreme terms, 2 and 12, are called the **extremes.** The second and third terms are called the **means.** Given any three terms of a proportion the fourth can readily be found.

RULE FOR COMPUTING PROPORTIONS.—The rule for dividing a number in proportion to a given series of numbers is to divide the number by the sum of the numbers in the series and then multiply the quotient by each number of the series.

PRACTICAL USE OF RATIOS AND PROPORTIONS.—Practical applications of ratios and proportions are frequently found in business. One of the most common is in the distribution of net profits among partners.

Example: A partnership has net earnings for the year amounting to $136,500 which is to be distributed among the three partners in the ratio of 2, 3, 8.

The sum of this series is 13.
Dividing $136,500 by 13 gives $10,500.
Multiplying by the numbers in the series the distribution of profit is as follows:

$$2 \times 10{,}500 = \$21{,}000$$
$$3 \times 10{,}500 = \$31{,}500$$
$$8 \times 10{,}500 = \$84{,}000$$
$$\text{Total} \ldots\ldots \$136{,}500$$

Progressions

ARITHMETICAL PROGRESSIONS.—A progression is a sequence of terms which proceed according to some fixed law. An arithmetical progression is a sequence of numbers, the difference between any two consecutive terms of which is constant. Thus 3, 6, 9, 12, 15, etc., is an arithmetical progression, the difference between any two consecutive terms being 3.

In an **increasing arithmetical progression** the difference is positive and in a **decreasing one** it is negative.

ARITHMETICAL FORMULAS AND THEIR USES.—If we represent the first term by a, the common difference by d, the number of terms by n, and the last term of an arithmetical progression by l, then the last term can be found from the formula:

$$l = a + (n-1)d$$

The sum of the terms in such a progression is obtained by means of the formula:

$$\text{Sum } (s) = \frac{n(a+l)}{2}$$

When any three of the factors of an arithmetical progression are known, the others may be found by use of the two formulas.

Example: To find the sum of 7 terms of the arithmetical progression 7, 15, 23, 31, etc.

Substitute in the formulas above $a = 7$, $d = 8$, $n = 7$; $l = 7 + (7 - 1)8$, $l = 55$; $s = \frac{7(7 + 55)}{2} = 217$.

GEOMETRIC PROGRESSION.—A geometric progression is a sequence of terms in which each term except the first is obtained by multiplying the term immediately preceding by a fixed quantity known as the geometric ratio. Thus 6, 18, 54, 162 is a geometric progression with a ratio of 3.

GEOMETRIC FORMULAS AND THEIR USES.—As before, let a represent the first term, l the last term, n the number of terms, and r the ratio, then the formula for the last term of a geometrical progression becomes:

$$l = ar^{n-1}$$

The formula for obtaining the sum of the terms is the following:

$$s = \frac{ar^n - a}{r - 1} \text{ or } \frac{rl - a}{r - 1}$$

The use of such a formula is shown in the following illustration: Find the sum to 6 terms of the geometrical progression: 3, 6, 12, 24. Substitute the values in the formula which results in

$$s = \frac{3(2)^6 - 3}{2 - 1} = \frac{192 - 3}{1} = 189.$$

Percentage of Profit Based on Selling Price

The selling price of goods when certain factors are known can be readily obtained through the use of the formula or a table (Table 18). These factors are:

1. Cost of goods.
2. Per cent cost of doing business based on selling price.
3. Per cent of net profit desired based on selling price.

The table gives the selling price factor and has been derived from the formula

$$S.\ P.\ \text{factor} = \frac{1}{1 - (C + P)}$$

where C = per cent cost on sales of doing business
P = per cent net profit on sales desired.

Example: What should the selling price of an article be when its cost is \$22, the desired percentage of net profit on sales is 20%, and the percentage cost of doing business on sales is 25%. Referring to column headed 25% on the line 20%, we find the factor 1.818. Multiply \$22 by 1.818 to give the selling price which is \$40.

PROOF:

Cost of doing business 25% of \$40	\$10
Per cent profit desired 20% of \$40	8
Cost of goods	22
Selling price	\$40

Table 18. Selling Price Factor on Cost

Per cent of Net profit Desired	PER CENT COST TO DO BUSINESS															
	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25

Standard Values of Foreign Coins

Country	Legal standard	Monetary unit		U. S. money	Remarks
Argentine Republic	Gold	Peso		$0.9648	Currency: Paper, normally convertible at 44 per cent of face value; now inconvertible.
Austria	Gold	Schilling		.1407	
Belgium	Gold and silver	Franc		.1930	Member Latin Union; gold is actual standard.
Bolivia	Gold	Boliviano		.3893	12½ bolivianos equal 1 pound sterling.
Brazil	Gold	Milreis		.5462	Currency: Government paper normally convertible at 16 pence (=$0.3244) per milreis.
British Cols. in Australasia and Africa	Gold	Pound sterling		4.8665	
British Honduras	Gold	Dollar		1.0000	
Bulgaria	Gold	Lev		.1930	
Canada	Gold	Dollar		1.0000	
Chile	Gold	Peso		.3650	Currency: Inconvertible paper.
China	Silver	Tael	Amoy	.8318	The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.
			Canton	.8293	
			Cheefoo	.7955	
			Chin Kiang	.8125	
			Fuchau	.7694	
			Haikwan (customs)	.8463	
			Hankow	.7782	
			Kiaochow	.8060	
			Nankin	.8237	
			Niuchwang	.7800	
			Ningpo	.7997	
			Peking	.8109	
			Shanghai	.7598	
			Swatow	.7683	
			Takau	.8370	
			Tientsin	.8060	
			Yuan	.5390	The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to .644+ of the Haikwan tael.
		Dollar	Hongkong	.5471	
			British	.5471	
			Mexican	.5511	Mexican silver pesos issued under Mexican decree of Nov. 13, 1918, are of silver content approximately 41% less than dollar here quoted; those issued under decree of Oct. 27, 1919, contain about 51% less silver.
Colombia	Gold	Peso		.9733	Currency: Government paper and gold.
Costa Rica	Gold	Colon		.4653	
Cuba	Gold	Peso		1.0000	
Czechoslovakia	Gold	Krone		.2026	

Denmark	Gold	Krone	.2680	
Ecuador	Gold	Sucre	.4867

The Metric System

The metric system of weights and measures is based on the decimal system. It is in use in nearly all civilized countries. The United States and England are exceptions. It was officially adopted by the United States in 1866 but is as yet used only in scientific work. All units of measure and weight are based on the **meter**, which is the fundamental unit of the system. It is equal to one ten-millionth of the distance from the equator to the pole, or 39.37 in.

Linear Measure

10 millimeters (mm.)	= 1 centimeter (cm.)
10 centimeters	= 1 decimeter (dm.)
10 decimeters	= 1 **meter** (m.)
10 **meters**	= 1 decameter (Dm.)
10 decameters	= 1 hectometer (Hm.)
10 hectometers	= 1 kilometer (Km.)
10 kilometers	= 1 myriameter (Mm.)

Square Measure

100 square millimeters (sq. mm.)	= 1 square centimeter (sq. cm.)
100 square centimeters	= 1 square decimeter (sq. dm.)
100 square decimeters	= 1 **square meter** (sq. m.)
100 **square meters**	= 1 square decameter (sq. Dm.)
100 square decameters	= 1 square hectometer (sq. Hm.)
100 square hectometers	= 1 square kilometer (sq. Km.)

Land Measure

100 centares (ca.)	= 1 are (a.)	= 100 sq. m.
100 ares	= 1 hectare (Ha.)	= 10,000 sq. m.

Cubic Measure

1,000 cubic millimeters (cu. mm.)	= 1 cubic centimeter (cu. cm.)
1,000 cubic centimeters	= 1 cubic decimeter (cu. dm.)
1,000 cubic decimeters	= 1 cubic meter (cu. m.)

Wood Measure

10 decisteres (ds.)	= 1 stere (s.)	= 1 cu. m.
10 steres	= 1 decastere (Ds.)	= 10 cu. m.

Measure of Capacity

10 milliliters (ml.)	= 1 centiliter (cl.)
10 centiliters	= 1 deciliter (dl.)
10 deciliters	= 1 liter (l.)
10 liters	= 1 decaliter (Dl.)
10 decaliters	= 1 hectoliter (Hl.)
10 hectoliters	= 1 kiloliter (Kl.)

The liter is used for measuring liquids in ordinary quantities.
The centiliter or milliliter is used for measuring liquids in minute quantities.
The hectoliter is used for measuring grain and vegetables.

Measure of Weight

10 milligrams (m.g.)	= 1 centigram (cg.)
10 centigrams	= 1 decigram (dg.)
10 decigrams	= 1 gram (g.)
10 grams	= 1 decagram (Dg.)
10 decagrams	= 1 hectogram (Hg.)
10 hectograms	= 1 kilogram (Kg.)
10 kilograms	= 1 myriagram (Mg.)
10 myriagrams	= 1 quintal (Q.)
10 quintals	= 1 tonneau (T.)

The gram is the unit of weight. It is the weight of 1 cu. cm. of distilled water in a vacuum, at its greatest density (39.2° F.). It is equivalent to 15.4324 gr.

The gram is used to weigh drugs, letters, etc.

The kilogram is used to weigh merchandise; in large quantities the quintal and tonneau are used.

Tables of Equivalents

The following tables give equivalent values of both English and metric systems:

Linear Measure

1 inch	= 2.54 centimeters	1 centimeter	= .3937 of an inch
1 foot	= .3048 of a meter	1 decimeter	= .328 of a foot
1 yard	= .9144 of a meter	1 meter	= 1.0936 yards
1 rod	= 5.029 meters	1 decameter	= 1.9884 rods
1 mile	= 1.6093 kilometers	1 kilometer	= .62137 of a mile

Surface Measure

1 sq. inch	= 6.452 sq. centimeters	1 sq. centimeter	= .155 of a sq. inch
1 sq. foot	= .0929 of a sq. meter	1 sq. decimeter	= .1076 of a sq. foot
1 sq. yard	= .8361 of a sq. meter	1 sq. meter	= 1.196 sq. yards
1 sq. rd.	= 25.293 sq. meters	1 are	= 3.954 sq. rods
1 acre	= 40.47 ares	1 hectare	= 2.471 acres
1 sq. mile	= 259 hectares	1 sq. kilometer	= .3861 of a sq. mile

Cubic Measure

1 cu. inch	= 16.387 cu. centimeters	1 cu. centimeter	= .061 of a cu. inch
1 cu. foot	= 28.317 cu. decimeters	1 cu. decimeter	= .0353 of a cu. foot
1 cu. yard	= .7646 of a cu. meter	1 cu. meter	= 1.308 cu. yards
1 cord	= 3.624 steres	1 stere	= .2759 of a cord

Measures of Capacity

1 dry quart	= 1.101 liters	1 liter	= .908 of a dry quart
1 liquid quart	= .9463 of a liter	1 liter	= 1.0567 liquid qt.
1 liquid gallon	= .3785 of a decaliter	1 decaliter	= 2.6417 liquid gal.
1 peck	= .881 of a decaliter	1 decaliter	= 1.135 pecks
1 bushel	= .3524 of a hectoliter	1 hectoliter	= 2.8377 bushels

Measures of Weight

grain, troy	= .0648 of a gram	1 gram	= 15.432 grains, troy
ounce, troy	= 31.104 grams	1 gram	= .03215 of an oz., troy
ounce, avoir.	= 28.35 grams	1 gram	= .03527 of an oz., avoir.
lb., troy	= .3732 of a kilogram	1 kilogram	= 2.679 lb., troy
lb., avoir.	= .4536 of a kilogram	1 kilogram	= 2.2046 lb., avoir.
ton (short)	= .9072 of a tonneau or ton	1 tonneau	= 1.1023 tons (short)

Convenient Equivalent Values

cu. cm. of water = 1 ml. of water, and weighs 1 gram = 15.432 gr.
cu. dm. of water = 1 l. of water, and weighs 1 Kg. = 2.2046 lb.
cu. m. of water = 1 Kl. of water, and weighs 1 tonneau = 2204.6 lb.

Practical Measurements and Tables

Linear Measure

Linear measures are employed in measuring distance and length.

12	inches (in.)	= 1 foot (ft.)
3	feet	= 1 yard (yd.)
$5\frac{1}{2}$	yards, or $16\frac{1}{2}$ feet	= 1 rod (rd.)
320	rods, or 5,280 feet	= 1 mile (mi.)

Sometimes the signs (′) and (″) are used in place of ft. and in., contractions for feet and inches. Thus, 3′ 4″ instead of 3 ft. 4 in.

Square Measure

Square measure is used in measuring surfaces.

144	square inches (sq. in.)	= 1 square foot (sq. ft.)
9	square feet	= 1 square yard (sq. yd.)
$30\frac{1}{4}$	square yards	= 1 square rod (sq. rd.)
160	square rods	= 1 acre (A)
640	acres	= 1 square mile (sq. mi.)
1	acre = 4,840 sq.yds.	= 43,560 sq. ft.

Cubic Measure

Cubic measure is used in measuring volumes.

1,728 cubic inches (cu. in.)	= 1 cubic foot (cu. ft.)
27 cubic feet	= 1 cubic yard (cu. yd.)
128 cubic feet	= 1 cord (cd.)

Dry Measure

2 pints (pt.)	= 1 quart (qt.)
8 quarts	= 1 peck (pk.)
4 pecks	= 1 bushel (bu.)

Liquid Measure

2 pints = 1 quart
4 quarts = 1 gallon
63 gallons = 1 hogshead (hhd.)

A standard bushel contains 2,150.42 cubic inches.
A heaped bushel contains 2,747.715 cubic inches.

Avoirdupois Weight

16 ounces (oz.) = 1 pound (lb.)
2,000 pounds = 1 ton (T.)

Grain and Seeds

The number of pounds in a bushel of the following commodities are given below as used in most states of the United States. These weights are not, however, uniform in all states.

Corn (shelled)	56 lb.	Flaxseed	56 lb.
Corn on cob	70 "	Cloverseed	60 "
Corn (in husk or shuck)	72 "	Beans	60 "
Wheat	60 "	Bran	20 "
Oats	32 "	Peas	60 "
Rye	56 "	Timothy seed	45 "
Barley	48 "	Corn meal	48 "
		Potatoes	60 "

Paper

25 sheets = 1 quire (qr.)
20 quires = 1 ream (rm.)
2 reams = 1 bundle (bdl.)
5 bundles = 1 bale (bl.)

Some paper mills use 480 sheets to the ream, instead of 500.

Troy Weight

24 grains (gr.) = 1 pennyweight (pwt.)
20 pennyweight = 1 ounce (oz.)
12 ounces = 1 pound (lb.)

Troy weight is used in weighing precious metals. The standard is the troy pound, containing 5,760 grains. The avoirdupois pound contains 7,000 grains. The amount of pure gold in an article is expressed in carats, 24 units being the standard. Eighteen carats means 18/24, or $\frac{3}{4}$ pure gold and 6/24, or $\frac{1}{4}$ alloy. In weighing diamonds the carat is 3 1/6 grains.

1 Assay Ton = 29,167 milligrams

or as many milligrams as there are troy ounces in a ton of 2,000 lb. avoirdupois. Consequently, the number of milligrams of precious metal yielded by an assay ton of ore gives directly the number of troy ounces that would be obtained from a ton of 2,000 pounds avoirdupois.

Apothecaries' Weight

20 grains (gr.) = 1 scruple (℈)
3 scruples = 1 dram (ʒ)
8 drams = 1 ounce (℥)
12 ounces = 1 pound (lb.)

Decimal Equivalent of Fractions

Fraction	Decimal	Fraction	Decimal
1/64 =	.015625	1/4 =	.25000
1/32 =	.031250	3/8 =	.37500
1/16 =	.06250	1/2 =	.50000
1/12 =	.08333	5/8 =	.62500
1/8 =	.12500	3/4 =	.75000
1/6 =	.16667	7/8 =	.87500

WEIGHTS AND MEASURES OF VARIOUS COUNTRIES.—There are general use throughout the world, **two main systems** of weights and measures. hese are the **metric system** and the **English system.** The system in use in the nited States is the English system with slight modifications.

The following tables have been compiled from data furnished by the Bureau Commerce, Washington, D.C.

COUNTRIES WHICH USE THE METRIC SYSTEM.—Countries in which e metric system is in common use or has been made the standard by law are e following:

Africa:
- French Africa
- Italian Africa
- Congo
- Algeria
- Madagascar
- Tripoli
- Portuguese West Africa
- Tunis

Asia:
- French Indo China
- Dutch East Indies
- Japan
- Siam

Central America:
- All Central America use the metric system except British Honduras.

Europe:
- Austria
- Czechoslovakia
- Denmark
- Finland
- France
- Germany
- Greece
- Italy
- Netherlands
- Norway
- Portugal
- Rumania
- Russia
- Servia
- Spain
- Sweden

Europe—(Continued)
Switzerland
Turkey
North America:
Mexico alone of the three North American countries uses the metric system.
Oceania:
Samoa
Society Islands
Java
Philippine Islands
South America:
The metric system is in use throughout all the countries on this continent with the exception of British Guiana.

COUNTRIES WHICH USE THE ENGLISH SYSTEM OF WEIGHTS AND MEASURES.—The countries which use the English system are: dependencies of Great Britain—Australia, New Zealand, British Honduras, British Guiana, British West Indies, Canada, Great Britain, British possessions in Africa, Malta, British India, Ceylon, parts of China, Straits Settlements, and Zanzibar.

COUNTRIES WHICH USE A MODIFIED ENGLISH SYSTEM OF WEIGHTS AND MEASURES.—A modified English system is also used in those countries which are more or less closely associated with the United States. These are Porto Rico, Panama, Liberia, Philippine Islands. The metric system, however, is used in these countries to an even greater degree than the modified English system.

LOCAL SYSTEMS OF WEIGHTS AND MEASURES OF VARIOUS COUNTRIES.—Some countries use in addition to the two main systems mentioned above, **local systems** of their own. When exporting to or importing from the following countries it may be well to have in mind that the natives frequently use the weights and measures in the following table, which, however, contains only the more important units.

Local Systems of Weights and Measures

Depreciation

DEPRECIATION DEFINED.—Depreciation is a decline in value of property as a result of **wear and tear** and gradual **obsolescence.**

The purpose of this section is not to discuss the theory of depreciation nor its application to assets but rather to consider briefly the methods of computing depreciation.

CAUSES OF DEPRECIATION.—

1. Wear and tear through use
2. Action of the elements
3. Inadequacy
4. Obsolescence
5. Accident

Wear and tear through use occurs during operation. Even though the moving parts of a machine are kept constantly repaired and oiled those parts wear out. Likewise a building gradually decays even if it is painted with regularity.

Rusting of iron, corrosion of metals, and decay of wood, are examples of the cause of depreciation through the **action of the elements.**

Inadequacy is the inability of an asset to perform its work in a satisfactory or efficient manner. This may be due to new developments, changes in policy or to lack of capacity to meet increased demands for production.

Obsolescence occurs when an asset can no longer compete with more efficient machinery. Obsolescence is primarily brought about by new inventions.

Accident is an injury occurring to an asset through unavoidable causes or

rough carelessness during operation. It is frequently included under the ading of wear and tear.

BASES FOR COMPUTING DEPRECIATION.—All computations of de-ciation are based upon one or more of the following factors:

1. Original cost of the asset
2. Scrap or residual value
3. Life of the asset in time or units produced
4. Arbitrary interest rate

The **original cost** of the asset includes not only the purchase price but also cost of placing the asset in service, including freight and expense of tallation. The **scrap or residual value** is the estimated value that may be tained for the asset at the end of its useful life. This value includes cost of noval and breaking up. The **life of an asset** measured in time is the esti-ted number of years that it can be operated efficiently. This time may in fiscal periods or working hours. The life of the asset is frequently asured in units produced. Such units may be tons, pieces, yards, or other units.

METHODS OF COMPUTING DEPRECIATION.—There are **four general thods** of computing depreciation:

1. Proportion methods
2. Variable percentage methods
3. Compound interest methods
4. Miscellaneous methods

PROPORTION METHODS.—There are four general methods based upon assumption that the life of an asset diminishes in accordance with a fixed io: (1) straight line method; (2) working hour method; (3) composite life thod; (4) unit production method.

STRAIGHT LINE METHOD.—The straight line method is the **simplest operation,** and therefore, is most commonly used. Under this method the et is considered as wearing out evenly during its normal life and provision made for setting aside periodically a uniform amount of money regardless the fact that the asset depreciates more rapidly at some stages of its life than others. When the factor of inadequacy, obsolescence or accident is unlikely nter, this method has much to recommend it, although the additional burden repairs with a uniform rate of depreciation is likely to increase the cost of ration in later years and so penalize the operating division.

The amount of annual depreciation is obtained by dividing the initial cost the asset by the estimated life in years when the assumption is that there l be no scrap value. Should the asset have an estimated scrap value this ount will have to be deducted from the initial cost before dividing by the imated life in years.

Assuming an asset of $1,000 with a scrap value at the end of a 10-year life $100, the annual depreciation charge will be

$$\frac{(\$1{,}000 - \$100)}{10} = \$90 \text{ per annum}$$

WORKING HOUR METHOD.—The working hour method is similar to the ight line method with the exception that the time element expressed in al periods in the latter is superseded by the service life expressed in operat-hours.

Thus, if an asset costing $1,000 has a scrap value of $100 and an operating of 9,000 hours, the depreciation would be at the rate of 10 cents per hour rated. If at the end of a year a machine has been operated 2,000 hours, the preciation for that period is $200. This method will be quite satisfactory vided that there are no inequalities in wear and tear during the different

operations performed. Under this method care must be taken to have the base or operating life in hours estimated as accurately as possible.

COMPOSITE LIFE METHOD.—The composite life method is based on the straight line method and is of value in checking computations made under that method. By the use of the composite life method the rate of depreciation determined is applied to the plant as a whole, rather than to the individual assets.

The disadvantages of the composite life method are the same as those set forth under the straight line method and in addition it gives no consideration to the individual assets.

There are two methods for determining the composite rate. The method given below is generally considered the better one.

Assets	Cost less Scrap Value	Estimated Life	Rate of Depreciation	Annual Depreciation
Trucks	$ 25,000	5 yrs.	20 %	$ 5,000.00
Factory fixtures	8,000	12	8⅓	666.67
Buildings	30,000	30	3⅓	1,000.00
Machinery	60,000	10	10	6,000.00
	$123,000		10.30%	$12,666.67

The rate of depreciation on the composite life is 10.30% per annum obtained by dividing the composite annual depreciation $12,666.67 by the composite value of the plant less scrap value, $123,000.

UNIT PRODUCTION METHOD.—The unit production method is particularly applicable to assets producing a uniform product. In determining depreciation of equipment in mines, oil wells or forests, this method is almost exclusively used. It is also used by the New York Edison Co. which bases its depreciation on the kilowatt-hours produced.

In the coal mining industry it is assumed that the coal tipple will last as long as the mine. Therefore, with the knowledge of the available ore and the cost of the tipple, the annual depreciation of the latter can be figured thus:

Estimated tonnage in the mine..... 4,000,000
Cost of tipple having no scrap value.... $250,000

	Tons Produced	Ore Reserves
Dec. 31, 1920.....	50,000	3,950,000
1921.....	150,000	3,800,000
1922.....	200,000	3,600,000
1923.....	250,000	3,350,000
1924.....	250,000	3,100,000

$$\frac{50,000}{4,000,000} \times \$250,000 = \$3,125 \text{ depreciation for 1920}$$

$$\frac{150,000}{3,950,000} \times \$246,875 = \$9,375 \text{ depreciation for 1921}$$

Each year the depreciation is based on the ratio of tonnage produced to the ore reserve at the beginning of the year, multiplied by the remaining cost of the tipple. In the last computation the tonnage produced in 1921 was 150,000. The reserve of January 1, 1921, was $3,950,000; the net book value of the asset at January 1, 1921 was $246,875, from which the charge for depreciation amounting to $9,375 was obtained.

VARIABLE PERCENTAGE METHODS.—Variable percentage methods differ from those in the preceding group in that either the base or the percentage rate varies. There are two classes: (1) fixed percentage on diminishing value; and (2) sum of expected life periods.

FIXED PERCENTAGE ON DIMINISHING VALUE.—The fixed percentage diminishing value method charges off a constant percentage on the net book lue of the asset at the beginning of the year. If the asset cost $1,000 and the te of depreciation is 20%, then the first year the depreciation will be $200, aving a net book value of $800. The second year the depreciation will be 20% $800, or $160, leaving a net book value of $640, and so on. It will be noted at each year the book value of the asset becomes less, also that the asset lue never reaches zero. As there is usually a scrap value, the balance of the sset will be cleaned out by this means.

The formula for this method is:

$$d = 100\left(1 - \sqrt[n]{\frac{S}{C}}\right)$$

where d = per cent of depreciation
s = scrap or residual value
c = cost of asset
n = estimated life of asset in years

This formula is readily solved by logarithms by methods described on page 130.

Example: Assume an asset whose original cost was $1,000 with a scrap lue of $100 and a life of 5 years. Then the formula becomes

$$d = 100\left(1 - \sqrt[5]{\frac{100}{1{,}000}}\right) = 36.9043$$

Years	Annual Depreciation	Depreciated Value or Net Book Value	Accumulated Depreciation
0	$———	$1,000.00	$———
1	369.04	630.96	369.04
2	232.85	398.11	601.89
3	146.92	251.19	748.81
4	92.70	158.49	841.51
5	58.49	100.00	900.00

It will be seen that the net book value at the close of the 5th year is the scrap alue of the asset.

SUM OF EXPECTED LIFE PERIODS METHOD.—This method differs om the one immediately preceding in that the base or book value remains nstant while the annual rate of depreciation changes. This variable rate is btained in the following manner. The numerator of the fraction for each year the expected life of the asset in that particular year. The denominator of he fraction is the sum of these expected life periods.

An asset costing $1,000 and having a scrap value of $100 has a 5-year life. n the beginning the asset has an expected life of 5 years, one year later it has n expected life of 4 years, and so on. Thus the expected life periods are 5, 4, , 2 and 1 years. The sum of these expected life periods is 15 and this is the ommon denominator of the annual rates. The numerators are respectively , 4, 3, 2, 1. Thus the rates are 5/15, 4/15, 3/15, 2/15, 1/15. The base is 1,000 − $100 = $900.

Age of sset in ears	Varying Depreciation Rates	Annual Depreciation	Accumulated Depreciation	Book Value of Asset $1,000
0	—	—	—	
1	5/15 or 33⅓%	$300	$300	700
2	4/15 or 26⅔%	240	540	460
3	3/15 or 20%	180	720	280
4	2/15 or 13⅓%	120	840	160
5	1/15 or 6⅔%	60	900	100

Either of these two methods will be found useful as well as equitable when experience has shown cost of repairs to increase as depreciation charges decrease.

COMPOUND INTEREST METHODS.—The principle involved in compound interest methods is that the amounts set aside periodically are expected to bear interest such as may be expected of other cash funds. Thus, in addition to the annual contributions to the reserve there is also included in it the interest it earns. There are three divisions of the compound interest method: (1) sinking fund method, (2) annuity method, and (3) unit cost method.

SINKING FUND METHOD.—The problem in this instance is to determine the amount, which set aside periodically at a fixed rate of interest compounded. will, at the close of the life of the asset, have accumulated the original cost less scrap value.

As the method to be used in finding the periodic additions to the sinking fund has already been explained in the foregoing pages (see page 113), it will not be necessary to repeat it here in connection with computation of periodic depreciation by the sinking fund method.

As in the preceding example, assume an asset of $1,000 with a scrap value of $100 and a life of 5 years. The following is a schedule of depreciation obtained by using the sinking fund method:

	Periodic Depreciation Charges			Net Book Value of Asset	Accumulations in Sinking Fund
Periods	S. F. Contribution	Interest at 5%	Total		
0	$ —	$ —	$ —	$1,000.00	$ —
1	162.88	—	162.88	837.12	162.88
2	162.88	8.14	171.02	666.10	333.90
3	162.88	16.69	179.57	486.53	513.47
4	162.88	25.67	188.55	297.98	702.02
5	162.88	35.10	197.98	100.00	900.00
	$814.40	$85.60			

The net book value at the close of the 5th year is the scrap value or $100. The total amount accumulated in the sinking fund is $900, yet the total amount set aside out of earnings has only been $814.40, the balance $85.60 has been earned by the accumulated deposits in the sinking fund with interest at 5%.

ANNUITY METHOD.—The annuity method also makes use of compound interest but the annual charge to depreciation is greater than in the preceding instance. The assumption made here is that the interest earned by the accumulations to the sinking fund are first added to the book value of the asset and the depreciation is then deducted from that net book value thus augmented. A part of the charge to depreciation is therefore the same interest which has been added to the asset.

The chief characteristic of this method is that the entire investment is always earning interest either through the sinking fund or through the net book value. The schedule following will make this clear. Use the same data as in the preceding illustration.

	Periodic Depreciation Charges				Net Book Value plus Interest	Net Book Value
Periods	Fixed Amount	Int. at 5% on Fixed Amount	Interest on Net Book Value at 5%	Total Charge		
0	$ —	$ —	$ —	$ —	$ —	$1,000.00
1	162.88	—	50.00	212.88	1,050.00	837.12
2	162.88	8.14	41.86	212.88	878.98	666.10
3	162.88	16.69	33.31	212.88	699.41	486.53
4	162.88	25.67	24.33	212.88	510.86	297.98
5	162.88	35.10	14.90	212.88	312.88	100.00
	$814.40	$85.60	$164.40	$1,064.40		

ttention is called to the fact that the fixed amount, interest on the fixed ount and net book value in the above schedule are the same as those appear- in the corresponding columns in the previous sinking fund schedule. The l charge to depreciation, however, is increased under the annuity method the interest on the net book value. This method has little to recommend it. s more complicated than the preceding one, and in addition, it introduces a estionable procedure when it includes interest as a depreciation charge.

NIT COST METHOD.—This method introduces such complicated mathe- ical processes that it is rarely used. It is mentioned here merely to complete discussion on depreciation methods and to give briefly its purpose. The et of this method is to distribute over each unit of product the total de- iation charge consisting of:

1. Cost of interest on the investment
2. Cost of operation and repairs
3. True depreciation by sinking fund method

MISCELLANEOUS.—There are several other methods for computing reciation which do not fit into any of the previous classifications. These e been designated by one well known author as "a miscellaneous mongrel d." However, there are four miscellaneous methods which should be sidered.

1. Maintenance method
2. Appraisal method
3. Gross earnings method
4. Insurance method

MAINTENANCE METHOD.—In this method, the charge for maintaining asset is the amount charged to depreciation. Thus in the early years of the of the asset the charge will be small, becoming greater in later years. It a great disadvantage in that during years of retrenchment when only the st needed repairs are made, the depreciation is not retarded and therefore actual asset value is less than book value. Maintenance is not a measure depreciation.

APPRAISAL METHOD.—At the close of the period a physical appraisal the asset is taken. The difference between the appraised value of the asset t the beginning and end of the year is charged to depreciation. This method **two disadvantages** other than the cost of taking the appraisals. These are: the appraisals are too close together to permit a true valuation; (2) the ysical appraisals are subject to present market fluctuations which really ve no bearing on actual wear and tear.

GROSS EARNINGS METHOD.—This method does not differ very much m the unit production method in that it is dependent on the profits earned. the article manufactured is of standard design and the price is fairly constant, s method has much to commend it. The gross earnings method is used as lows: The gross earnings are estimated for the composite life of the plant d the depreciation charges are prorated over the same period on the basis of tual gross earnings for each period as compared with the estimated gross rnings. If the gross earnings bear no relation to the quantity produced viously this method should not be used.

INSURANCE METHOD.—This method can be successfully used only in ose industries having a very large number of like units and sufficient statistical ta to permit the life of the unit to be determined. It requires the setting up mortality tables for the assets similar in every way to the mortality tables ed in life insurance. In fact this method involves the actuarial principles of e insurance.

Depreciation Rates

(From Montgomery—Income Tax Procedure—1925)

NOTE: The inclusion of any suggested rate in the following table does not necessarily indicate that the author of this book approves of such rate. In general, however, he believes the rates to be reasonable. Rates marked by an asterisk (*) are stated by the organizations publishing them to have been submitted to, and approved by, the Bureau of Internal Revenue.

Valuation of Wasting Assets

WASTING ASSETS DEFINED.—Wasting assets are considered to be those whose life cannot be restored through replacement, or prolonged through repairs or renewals.

Depletion is the amount by which the value of property has been reduced through removal or extraction of material such as mineral from mines, oil from oil wells, timber from forests. It is analogous to depreciation and has sometimes been defined as depreciation of natural resources.

PROBLEM OF VALUATION.—The man who invests his money in a wasting asset expects that investment to yield not only interest on the amount invested but also to return his principal when the asset is exhausted. It becomes necessary, therefore, for the concern operating the property to create a **sinking fund** to return the investment at the end of the estimated life of the property.

FACTORS INVOLVED IN VALUATION OF MINES.—In valuing mines or other natural resources the following factors are required.

1. Estimated life of mine.
2. Estimated productive tonnage.
3. Estimated cost of plant necessary to remove tonnage.
4. Rate of investment return.
5. Rate of interest sinking fund investment will yield.
6. Estimated annual net profit to be expected.

In the United States, the rate of interest the sinking fund investment is expected to yield is 4% compounded annually. The other factors are variable.

U. S. TREASURY TABLE FOR DETERMINING VALUE OF WASTING ASSETS.—Table 19 is a modified form of **Hoskold's table** and is used by engineers in the Natural Resources Division of the Treasury Department. It will be noted that the columns are headed at the yield rate, but the factors themselves include a redemption rate of 4%.

Example: An estate wishes to dispose of a coal mine which has been in operation for several years. A competent engineer submits the following data.

1. Life of mine is estimated to be 21 years.
2. Gross tonnage available for sale is 25,000,000 during the life of the mine.
3. Estimated gross profit per ton will be 65 cents.
4. Plant will need to be practically rebuilt within 3 years at a cost of $500,000. The old plant has little scrap value.
5. The discount factor is 8% and 4%.

This discount factor represents an annual dividend of 8% per year over the life of the property and replacement of capital through sinking fund investment at 4%.

What price shall be paid for this property? In other words, what is the present value?

Gross tonnage available	25,000,000
Gross profits per ton	$.65
Total gross profit expected	$16,250,000.00
Discount factor at 8% and 4% for 21 years (taken from table)	.427920
Gross value of property $16,250,000 × .427920 =	$ 6,953,700.00
Less: Present value of new plant to be installed within 3 years, using an interest rate of 6%—from Table 9 the factor is .8396193.	
$500,000 × .8396193	419,809.65
Price to be paid for mine	$ 6,533,890.35

Table 19. Present Worth of Each Dollar of Operating Profit

Accumulated during life of n years, assuming annual rate of production and operating profits per unit to be uniform and providing for interest on present worth at i_1 per cent annually and a payment into a sinking fund which at 4 per cent, interest compounded annually, will amount to the present worth, i.e., provide for return of capital, at the end of life.

Factors in Above Table

$$\frac{P.V.}{n} = \frac{1}{\frac{ni}{R^n - 1} + ni_1}$$

Derived from Hoskold's Formula

Present value of \$1 per annum in n years, interest on capital being at one rate, i_1, and for redemption another rate, i, per cent. $\Big\}$ $= P.V.$

$$P.V. = \frac{1}{\frac{i}{R_n - 1} + i_1} \quad \text{where } R^n = (1 + i)^n$$

SECTION 3

FINANCIAL STATEMENTS AND REPORTS

GENERAL.—This section is planned for the reader who has a working knowledge of financial statements, and is limited to a consideration of the financial **statements and reports of ordinary businesses,** such as manufacturing and trading, which have no highly technical phases requiring special treatment in their statements. Technical features of financial statements of governments and their various branches, banks, insurance companies, public utilities, etc., will not be dealt with.

Any statement dealing with financial affairs might be called a financial statement. The financial statements herein considered, however, are primarily those statements which are prepared according to fairly well settled and generally understood principles of form; that is, statements in the forms generally used by well conducted business concerns. The principal statements are the balance sheet, which is intended to show the financial condition of a business at a given date, and the income or profit and loss statement, which is intended to show the gross income, costs, expenses and net income or loss of a business during a given period. These statements are more or less standardized for different kinds of undertakings. In addition to these standard statements all sorts of statements are in use to give other information relative to the financial affairs of businesses.

There are few fixed rules applicable to the preparation of financial statements; form and contents must vary according to circumstances and purposes as well as according to the integrity, judgment and skill of those who prepare them.

Some of the more **important purposes** for which financial statements and reports are required are:

1. Internal management
2. Reports to stockholders
3. Maintenance of credit relations
4. Reports to governmental bodies
5. Flotation of security issues
6. General publication

Balance Sheet

DEFINITION AND STRUCTURE.—A balance sheet is a condensed statement of the **assets, liabilities and net worth or deficiency** of an individual organization, or any financial entity, at a given date and in a form more or less definitely prescribed by custom. This statement is universally used to show the financial condition of business concerns.

Unless otherwise indicated a balance sheet should show conditions as at the close of business of the date named. If the source or the basis of the figures is not apparent proper explanation should appear on the face of the balance sheet. This requirement particularly applies to appraisals, revaluations and analyses of surplus or deficit. Some concerns have a bad habit of concealing important changes. As with other bad habits there is an inevitable day of reckoning. If concerns will adopt the rule of too many—rather than too few

—explanations on the face of balance sheets their officers may avoid many embarrassing moments.

Every balance sheet has two divisions, one composed of **assets** and the other of (a) **liabilities** and (b) **net worth or deficit.** In the case of a corporation net worth is capital stock plus surplus or minus deficit; in the case of an individual or partnership net worth or deficit is the difference between the assets and liabilities. In the United States and most other countries assets are shown either at the left or at the top (according to the form in which the items are tabulated) of liabilities and net worth. In England the order of arrangement is the reverse.

Items within the two divisions vary from liquid, current or quick to permanent or fixed and should be arranged in this order or its reverse. Items are grouped or shown in detail according to the purpose which the balance sheet is to serve.

A balance sheet is not a mere mechanical trial balance of a ledger. In the preparation of a balance sheet no pains should be spared in determining just what the items in the trial balance consist of and in rearranging, reclassifying, modifying, adding to, subtracting from and describing the items for the sake of clear, concise and correct presentation. The items in a properly prepared balance sheet seldom agree in detail with the book accounts. It is desirable, however, that the books be corrected, if necessary, to agree with the balance sheet in total amounts.

Where there are no books of account a balance sheet may be prepared from information obtained from other sources. When assets and liabilities are fully and correctly stated the main object of a balance sheet has been attained. Whether or not it balances is a minor consideration.

Assets

CLASSIFICATION OF ASSETS.—The principal classification of assets for balance sheet purposes are (1) current, quick or liquid and (2) fixed, permanent or capital. Common classifications in addition to these are (3) prepaid or deferred items, (4) intangibles and (5) investments.

Current, quick or liquid assets were defined as follows by the chairman of the committee of the American Institute of Accountants in answer to a question by a committee of the Robert Morris Associates:

"The terms 'current assets,' 'quick assets' and 'liquid assets' are generally used as almost interchangeable terms, although, strictly, they do not have exactly the same meaning. **Current assets** have been defined as cash, receivables from outsiders, and inventories of stock in trade, which in the regular course of business will be readily and quickly realized, together with such additional assets as may readily be converted into cash without impairing a business or enterprise (e.g., marketable securities other than those held for purposes of control, notes or accounts receivable from officers, stockholders or employees). **'Quick assets'** is most commonly used in banking circles and includes those current assets which consist of cash or which can and will be quickly converted into cash, e.g., inventories and accounts and notes receivable. The balance sheet included in the Federal Reserve Bulletin (see pages 180, 181) makes just this distinction between current and quick assets. A sub-total of quick assets is made including inventories, accounts and notes receivable, and cash, and to this sub-total are then added marketable securities which can be sold without impairing the business, and notes and accounts due from officers, stockholders and employees, the resulting total being described as 'total current assets.'

"The meaning of **'liquid assets'** in practice is the same as 'quick assets.' Regardless of the foregoing distinction, the terms 'quick' and 'liquid' assets are often somewhat loosely applied to the total of the assets described above as current assets.

"**'Working assets'** is a term adopted as descriptive of assets intermediate in character between capital and current assets; specifically, assets which are consumed by an enterprise in the activities carried on without themselves forming an integral part of the product, e.g., supplies used in operations. In practice it is usual in the case of a manufacturing concern to include the working assets, such as supplies, under the general caption of 'current assets.'

"In trust deeds and certificates of incorporation, 'current assets' and 'quick assets' are used as alternative terms, and such items as supplies, and also prepaid insurance, etc., are usually specifically included in the general definition of 'current assets' or 'quick assets.' In trust deeds the term 'liquid assets' is used much less frequently than the other two terms."

Assets which cannot be liquidated within a year, without serious injury to the business, are not ordinarily and should not be included under current assets.

Fixed, permanent or capital assets, as their name implies, include land, buildings, machinery, equipment, etc., which have a substantial length of life and which are held for use rather than for sale or for direct conversion into something for sale. Ordinarily assets of this character which are not held for use but for some other purpose should be classified separately. **Intangibles** should always be classified separately.

Funds tied up in securities or other property not necessary to the regular business of the concern are usually classified separately, often under the heading **"investments."** Investments in securities or other property may be included under current assets, however, if the securities can be readily liquidated at a determinable amount and can be used for current needs without serious consequences.

Prepaid expenses and deferred charges are usually grouped, but important items of this sort should be classified separately where material differences in character exist. Prepaid interest, insurance, taxes, etc., the amounts of which are based on definite periods of time, should not be mixed with deferred charges for development expenses, etc., the amounts of which are matters of judgment.

The following is a classification from Montgomery's "Auditing, Theory and Practice":

1. Current Assets:

(a) Cash (cash "items," if any, must be distributed under some other caption).
(b) Items the equivalent of cash, such as postage, revenue and war savings stamps.
(c) Accounts, notes receivable, and acceptances from trade debtors, net of reserves for bad and doubtful accounts, the maturities of which are less than one year from the date of the balance sheet.
(d) Instalment or deferred accounts and notes receivable, even though maturing more than one year from the date of the balance sheet, provided that such accounts or notes were accepted in ordinary course and conform to the terms which generally prevail in that line of business.
(e) Inventories of raw materials and finished goods, operating supplies, goods in process, and ordinary maintenance material and parts.
(f) Accounts and notes receivable from stockholders, employees, and

others when separately stated on the balance sheet and known to be collectible within less than one year.

(g) Advances on contracts; prepaid expenses, such as interest on bank loans; prepaid royalties, insurance, and taxes; and all other items, such as current advertising, catalogs, and booklets, which directly relate, as does the inventory, to current operations and which when and as used are operating costs. This class is limited to those items which would be paid in any event after the date of the balance sheet and which are not indicative of any expansion of the business.

(h) Securities and other items which are the equivalent of cash and which are intended to be or which readily may be converted into cash.

2. Fixed Tangible Assets:

(a) Plant, including land, mines, other natural resources and development costs, machinery, equipment, automobiles, furniture, tools, containers, and patterns.

(b) Inventories of plant items, such as construction and renewal materials and parts other than for maintenance.

(c) Items the same as (c) and (f) above, the benefits or maturities of which are more than one year from the date of the balance sheet.

(d) Deposits, prepaid items, etc., the benefit of which extend beyond one year from the date of the balance sheet.

(e) Securities of subsidiary or affiliated concerns. (If a consolidated balance sheet is not made up, advances to, and accounts receivable from, such concerns should be included in this group.)

(f) Fund investments when the assets in the funds are to be applied to the reduction of debts or for reinvestment for the purposes of the concern.

(g) Patents when acquired for cash.

3. Fixed Intangible Assets:

(a) Patents, trademarks, copyrights, subscription lists, etc.

(b) Goodwill.

(c) Deferred items, such as discount on bonds, and deferred items of an extraordinary nature, such as organization and exploitation expenses.

4. Miscellaneous Assets:

(a) Fiduciary and other items, such as claims and disputed items which cannot be included in the foregoing classifications.

(b) Discount on bonds.

CLASSIFICATION OF LIABILITIES.—Liabilities may be classified as (1) **current,** and (2) **long-term or fixed. Reserves** for uncertain liabilities and reserves for contingencies, are often included in a third group. Liabilities which should be paid within a year from the date of the balance sheet are usually considered current. Where a liability is payable in instalments over a period of years any amounts due within a year's time should ordinarily be included with current liabilities. The distinction between current and other liabilities is not, however, well settled.

CAPITAL.—The amounts of owners' or proprietors' rights in a business, constituting the net worth or capital, should be shown separately from the liabilities. As a rule, particularly in the case of corporations, **capital accounts** (such as capital stock and capital surplus) representing assets paid in are shown separately from accounts (such as earned surplus) created through the opera-

tions of the business. Where the rights of owners differ, the amounts representing assets paid in by each class should be shown separately in a detailed balance sheet.

FORMS OF BALANCE SHEETS.—Among large industrial corporations which publish their balance sheets, the most popular form is as follows:

Assets			Liabilities		
PLANT ASSETS:			CAPITAL STOCK		$.....
(Including Real Estate, Machinery, Patents, Goodwill, etc.)		$.....	BONDED DEBT		.....
DEFERRED CHARGES TO OPERATIONS:			CURRENT LIABILITIES:		
Insurance, Interest, etc., Prepaid		.....	Notes Payable	$.....	
CURRENT ASSETS:			Accounts Payable	.....	
Inventories	$.....		Accrued Wages, etc.	.....	.....
Accounts and Notes Receivable	.....		RESERVES		.....
Cash	.....	.....	SURPLUS		.....
		$.....			$.....

The above arrangement is not easy reading for one unaccustomed to accounts. Moreover it presupposes that the reader can discriminate between actual liabilities and surplus. The inclusion of surplus under a caption which is misleading, is unfortunate, especially when such procedure is unnecessary. When a financial manager issues a financial statement he should try to make its language understandable by those whose sympathetic support he may sometime need.

The form shown on page 179 is preferable.

It is asserted that there is a demand for the form of balance sheet given above from those whose principal desire is to see the relation of the fixed assets to the capital stock. But this information can be more readily secured from the above form, because where fixed items appear first it is usual to place the capital stock first among the liabilities and the surplus last. Since the surplus may be as large as or larger than the capital stock, it is very necessary to have these figures in juxtaposition, as provided in the second form.

One general principle which should be observed in all balance sheets is that the matter of the arrangement of the groups is not of so much importance as is the relation of one to another. That is, it does not greatly matter whether the fixed assets are placed first or last, but it is important that the balance sheet shall indicate, if possible, the relation of the fixed assets to the other assets and to the liabilities. For instance, a concern owning a million dollars of fixed assets should have a capital and surplus, or funded debt, of at least as much. Otherwise the current liabilities would be excessive.

FEDERAL RESERVE BOARD FORM.—In Fig. 1 is presented a balance sheet form suggested in 1917 by **the Federal Reserve Board** as a tentative proposal. In this form the item "deferred charges" is not included in current assets; no provision is made for the segregation of items such as stripping costs in a mine, bond discounts, etc. In modern practice deferred charges appear in their proper place in the balance sheet. Instead of showing goodwill as an asset, the book value is deducted from capital. The suggestion is unique. No doubt the intention was to show net worth exclusive of goodwill. The suggestion does not accord with the usual practice. In a later (1921) Federal Reserve form goodwill appears among the assets.

A MANUFACTURING COMPANY, INCORPORATED

BALANCE SHEET, DECEMBER 31, 1925

ASSETS

CURRENT ASSETS:		
Cash		$ 100,000.00

FIG. 4. (*Reverse*)

For some years bankers have required borrowers to furnish statements of their assets and liabilities. At first a **uniform statement** was not insisted on, but it was found that some borrowers were disinclined to submit full reports while others did not know what details the banker wanted. Individual banks thereupon compiled their own forms and furnished blanks to their customers. These blanks were by no means uniform, and since many borrowers used more than one bank, the diversity became a nuisance to both banks and borrowers. The former, in exchanging credit information with other banks, found comparisons difficult, and the latter were put to unnecessary trouble in arranging and rearranging their statements.

FORMS PREPARED BY BANKERS.—Finally an attempt was made through the various bankers' associations to formulate a uniform or standard blank which would embody the information most useful to banks. The form shown in Fig. 2 is that designed and officially **approved by the American Bankers' Association.**

A more recent form, prepared by the Irving Bank-Columbia Trust Co. of New York, one of the largest banking institutions in the country, is shown in detail in Fig. 3. This form follows the rules laid down by the Federal Reserve Board. A desirable innovation is found in this form in the provision for a **notary's certificate.** Together with other features which are designed to put the borrower squarely on record as to his actual assets and liabilities, this form is expected to furnish legal evidence sufficient to convict the borrower of fraud if it is shown subsequently that any material discrepancy exists between the statement and the facts.

FEDERAL RESERVE BOARD MODEL FORMS.—The Federal Reserve Board has issued **model forms.** These are for corporations, partnerships or individual owners, and individuals, respectively. The forms issued by the Federal Reserve Bank of New York are reproduced in Figs. 4 to 7.

Notice especially the manner in which the segregation of current assets from other assets is made; also the manner of arrangement of the liability side of

the balance sheet. The forms also contain a **detailed questionnaire.** Space is given on each form to the important matter of **contingent liabilities.**

FORM RECOMMENDED BY THE NATIONAL ASSOCIATION OF CREDIT MEN.—The form recommended and indorsed by the National Association of Credit Men (Fig. 8) does not differ materially from that used by bankers, but the exact form is of interest to those who are anxious to ascertain the point of view of men to whom reports are frequently addressed. Preceding the form is the following pertinent observation: "Large assets are not always necessary to the creation of credit. What is most desirable, is that credit be in relative proportion to the actual assets. The giver of credit is a contributor of capital, and becomes, in a certain sense, a partner of the debtor, and, as such, has a natural right to complete information of the debtor's condition at all times."

As in the case of the forms of statements asked for by bankers, so the credit men's form indicates the business man's desire, when surveying a financial situation, to have the assets stated in the order of their availability, starting with the most liquid, and the liabilities in the order of urgency as to payment.

It is evident from the phraseology and arrangement of the form of statement recommended by the National Association of Credit Men, that **reserves for doubtful accounts** properly are intended to be deducted from receivables before

FIG. 6. (*Reverse*)

stating the amount or value thereof, and that **depreciation reserves** are likewise to be deducted from the assets to which they apply, and the net value of such assets entered in the statement.

The importance to the grantor of credit of knowing whether or not any of the assets have been hypothecated or are encumbered by liens of any description, is evident from the statement. Bitter experience has taught credit men that this is one of the most vital elements involved in a credit situation.

FORMS ISSUED BY DUN'S AND BRADSTREET'S.—To complete the presentation of the forms in general use throughout the United States, the ones issued by two leading mercantile agencies will be next considered. Bradstreet's is presented in Fig. 9, and Dun's in Fig. 10. These forms are supplied to practically every business concern, and are therefore more familiar to the average business man than any others. The arrangement of these forms is not ideal and the information which may be gathered from them falls far short of that supplied in forms used by the bankers' and credit men's associations. It is possible that the agencies do not feel at liberty to request a statement as full as the others, but it is obvious that their forms could be improved without seriously affecting their chances of securing information.

It has been suggested that the mercantile agencies, in addition to requiring information on their own forms, call for financial statements certified to by professional auditors. It would be entirely feasible to assign preferential ratings to concerns which furnish satisfactory audited statements. The mercantile agencies would assume no more risk than they now incur; credit grantors would secure information vastly more trustworthy than that which is usually furnished; and the concerns which furnish the audited statements would properly benefit, as compared with the concerns which would not or could not submit their accounts to the scrutiny of independent and disinterested auditors.

FOR THE PROMOTION AND PROTECTION OF CREDIT

ESTABLISHED 1841

R. G. DUN & CO.

THE MERCANTILE AGENCY

Dun Building, 290 Broadway, New York City

Branch Offices in the Principal Cities of the World

New York,.....19.....

"Statements" as an Aid in Determining Credits

"A WELL MANAGED CREDIT amounts to ten fold the funds of a merchant: And he gains as much by his credit as if he had ten times as much money. This maxim is generally received among all merchants. Credit, therefore, is the greatest wealth to everyone who carries on commerce." In commercial countries the use of credit in the place of money vastly exceeds the use of money. Goods sold and delivered in exchange for promises to pay money vastly exceed in value goods sold and delivered in exchange for money.

In a credit transaction it is the right of one party to receive and the duty of the other to give information sufficient to enable the one proposing to become a creditor to form an intelligent opinion as to the probable ability of the one proposing to become a debtor to fulfill his promise to pay. The object of THE MERCANTILE AGENCY is to obtain and communicate information relating to the amount of credit which one party to a credit transaction may prudently give and the other party may prudently accept. The disaster to one through accepting too much may be greater than the disaster to the other through giving too much. The usefulness to both the two classes of parties of their availing themselves of the service of THE MERCANTILE AGENCY for that purpose has been proved by their experience through all the years since 1841.

These are the grounds upon which we respectfully make application for the information indicated by the form of this "Statement," a statement which it is our intention to communicate to such of our subscribers as may have occasion to consider the subject of credit transactions between the maker of the statement and themselves. The usefulness of such statements to those who make them has been so abundantly proved by experience that the making of them has become the common practice. That usefulness is found not only in the obtaining of credit, but in the warning not to accept credit too much in amount or maturing at times when there may be an inability to pay. Statements made upon the results of a careful examination of things as they really are and under a disposition to avoid the common error of an overvaluation of assets are protective to debtor and creditor alike.

Information not expressly called for by this printed form, which may serve to prove or indicate the degree of probable accuracy of figures, or which should be considered both by him who gives and him who accepts credit, is requested, and may be stated in a paper attached to the form and identified by a signature and date. It is recommended that a copy of the Statement be placed upon the files of the person who makes it.

FIG. 10. (*Page 3*)

individual conducts an enterprise as a **sole proprietor** and keeps its affairs separate so far as possible from the rest of his affairs, a balance sheet of the enterprise alone is often desired. In such a case the heading of the balance sheet should show clearly that it is a balance sheet of the enterprise alone and not of the individual as an entity. Since a business conducted by an individual as a sole proprietor is not a legal entity distinct from the entity of the individual the balance sheet of such a business may be of little real significance, or actually misleading, if it does not contain a reference to significant assets or liabilities of the individual not included in the assets and liabilities of the business.

BALANCE SHEET OF A PARTNERSHIP.—Although a partnership usually is not a legal entity distinct from the separate entities of the individuals of which it is composed, the balance sheet of a partnership usually contains only the assets and liabilities of the partnership under the partnership agreement with no reference to the other assets or liabilities of the individual partners. Opinions differ as to how much, if any, information relative to the so-called private financial affairs of individual partners should be given in the balance sheet of a partnership.

CORPORATION BALANCE SHEET.—Since a corporation is a distinct entity authorized by law its financial affairs should not be confused with the affairs of those who control it and its balance sheet should contain only its own assets and liabilities; but where a corporation controls one or more corporations through stock ownership **consolidated balance sheets** are often required to show the combined assets and liabilities of the group with inter-company assets and liabilities eliminated. The rule as to the separation of corporate and personal entities is subject to modification when the relations in fact nullify the fiction of separate entities. An advance or loan to the controlling stockholder of a corporation may or may not be an "account receivable." Usually

it is not. It is bad business practice to use a corporate entity to conceal questionable transactions. When there is any doubt about the financial standing of an individual, he should be required to submit a consolidated statement of all his interests. If he takes the position that individual and corporate balance sheets cannot be merged, he is admitting that something is wrong. They can be merged.

BALANCE SHEETS OF TRUSTS.—Balance sheets of trusts, estates, etc., are based on the same principles as balance sheets of individuals, partnerships and corporations, except as they are **affected by laws relating to "corpus" and "income."**

Assets

CASH.—Cash should include all money, good checks, drafts, money orders, etc., owned and available for current needs and all balances in depositories subject to withdrawal on order. Cash owned but not immediately available should be shown separately if the amount is important. **Overdrafts** should be shown as liabilities or used to reduce cash on hand in other depositories according to the circumstances. **Bank balances** are almost invariably shown at amounts remaining after deducting outstanding checks. **Foreign money,** bank balances, etc., should be valued at market if below cost.

ACCOUNTS RECEIVABLE.—Accounts receivable which may be included in current assets consist of amounts which (1) fall due, or, if past due, which will be collected, within a reasonably short period (usually within a year at least), (2) arise from transactions which have been completed at the date of the balance sheet, (3) are not represented by notes or other similar instruments, and (4) are reasonably definite and not of the nature of claims.

Accounts receivable **should be classified** on the balance sheet to show separately (1) those resulting from the ordinary operations of the business, (2) those due from stockholders, officers, or employees, (3) those due from affiliated companies, and (4) those due on account of loans not covered by notes, etc.

For balance sheet purposes accounts receivable should be valued at the amount estimated to be collectible. Worthless accounts should not be included and the amount of the remaining accounts should be reduced by **reserves for doubtful accounts, discounts,** etc. Accounts receivable which do not fall due within a year's time should be shown separately and not as a current asset, unless otherwise governed by a recognized trade custom.

NOTES, BILLS AND ACCEPTANCES RECEIVABLE.—The principles of classification and valuation described for accounts receivable are applicable to notes, acceptances and bills receivable. When paper of this sort which has been discounted is outstanding the amount may be shown both as an asset and as a liability or it may be shown in a footnote.

ACCRUED ASSETS.—Interest, rent, etc., not due may be accrued to the date of the balance sheet and **included in current assets or elsewhere** according to the due date.

ADVANCES, DEPOSITS, ETC.—Advances, deposits, etc., which are **returnable within a year's time** or which have been made for current requirements may be included under current assets. Advances which are **not returnable within a year's time** or which are for fixed assets or other long-term investments should not be included under current assets.

SUBSCRIPTIONS TO CAPITAL STOCK.—Subscriptions to capital stock should be shown separately and should be classified as current assets or otherwise according to conditions. The due dates are of great importance. If such subscriptions are shown under assets the corresponding amount of capital stock should be shown as capital stock subscribed.

CLAIMS RECEIVABLE AND OTHER CONTINGENT ASSETS.—Claims receivable involving important amounts should never be shown on a balance sheet as accounts receivable unless proceedings have advanced to a point where the claim has the status of a liquidated account.

Contingent assets are those which have not been reduced to definite money values; if shown on a balance sheet they are not included in the aggregate valuation of the assets. In nearly all active business concerns claims exist which are in dispute. Taxes may be overpaid, damages may be claimed for infringement of patents or for failure to fulfil the terms of contracts. When important enough, mention thereof should be made on balance sheets.

LIFE INSURANCE POLICIES.—The **cash surrender value** of a life insurance policy and any **prepaid premium** may be included, separately, under current assets. The practice of treating the full amount of premiums paid on a life insurance policy as an asset is not sound.

PREPAID EXPENSES AND DEFERRED CHARGES.—Prepaid expenses and deferred charges, on an accrual basis of accounting, are written off over the period to which they apply and are shown on the balance sheet at the amounts which apply to future periods. Prepaid expenses which are properly chargeable to operations within a year from the date of the balance sheet may be treated as current assets. Payments for services which are to be rendered in the future should be treated as prepaid expenses but payments for services which have been rendered in the past should not be considered as prepaid expenses unless definitely determinable benefits will be derived therefrom in the future. Important differences in the nature of prepaid expenses and deferred charges should be disclosed.

INVESTMENTS.—Investments in stocks, bonds, etc., which can be readily liquidated at a determinable amount and which can be used for current needs of the business may be included in current assets, in which case they should be valued on the basis of **"cost or market, whichever is lower,"** or at least the market value should be indicated. Where there is a definite market for such securities at definite prices, there can be no objection to a valuation at market, even if above cost, provided the basis is noted. Valuing at market is a practice sometimes followed by dealers in securities.

Investments of any kind which cannot be readily liquidated and used for the current needs of the business should not be included in current assets. Such investments should be valued at cost unless there has been a radical and permanent change in conditions which makes a revaluation advisable. In the case of bonds and other similar investments cost may be adjusted for accrued amortization of discount or premium. The market value is often shown in a parenthetical note beside the description of the item.

INVENTORIES.—The term "inventory" as used in balance sheets, unless otherwise specifically indicated, should refer only to raw materials, goods in process, finished goods, merchandise, supplies, and other similar property owned by the concern and which are to be sold or to be consumed in the production of articles to be sold. Sometimes certain portions of a concern's inventory do not constitute current assets. Such portions should be shown separately from current assets on the balance sheet.

A common classification of inventories of an industrial concern for balance sheet purposes is (1) raw materials and supplies, (2) work in process, and (3) finished product.

Inventories are commonly valued for balance sheet purposes on the basis of **"cost"** or **"cost or market, whichever is lower."** Both bases are approved for federal income tax computations. "Cost" consists of the cost of material, labor and expenses applicable to the acquisition or production of the particular articles. Administrative and selling expenses, interest, etc., should not be treated as a part of "cost." "Market" usually means replacement cost in the case of raw materials and replacement cost or net value based on selling prices, whichever is lower, in the case of goods in process and finished goods. On either basis obsolete and other similar stocks should not be valued at more than they are expected to realize.

If the basis of "cost or market, whichever is lower" is used it should be applied separately to each item in the inventory.

Under the **retail method** inventories are valued by deducting from selling prices percentages representing selling expenses, profit, etc. This is the best method for department stores, chain stores and similar businesses. This method is approved for federal income tax computations.

Under the **base stock, normal stock** or **cushion method** certain parts of the inventory are carried at normal or nominal prices. Usually the part of the inventory so treated is a normal or a minimum quantity of the principal goods or materials handled and the prices are usually fixed low enough so that a loss will not have to be taken as a result of a downward fluctuation in the market.

This method is used by some concerns, dealing in basic commodities, which are obliged to keep large normal or minimum stocks on hand at all times. As stocks are sold and replenished on a rising market their value on the basis of "cost" or "cost or market" whichever is lower increases or is inflated and when the market declines there is a corresponding decrease or deflation. But if stocks are valued on the basis of so-called normal prices there is no inflation or deflation in the statement of financial condition. If properly carried out and if used under the right circumstances this method has decided merit. It is not, however, allowed by the Treasury Department in computing federal income taxes.

The object in the valuation of inventories for ordinary balance sheet purposes should be to include no unrealized profit and to anticipate losses which are reasonably certain. The basis of inventory valuation is often noted in the balance sheet. In the absence of such a notation there is no rule by which it can be assumed what the basis of valuation is.

Ordinarily it is not good practice to set up surplus reserves for inventory losses. In theory, the best practice it to write down all inventories, including goods to arrive, to market prices. This practice is not advocated unless the so-called market prices are reasonably stable. The result is not accomplished by setting up a reserve for possible loss out of general surplus. The greatest objection is that charges against such reserves do not appear at any time as charges against income.

If it is believed that a permanent decline has taken place, the amount written down belongs in the income account. If the decline is believed to be temporary, it obscures the picture to merely segregate part of surplus.

SINKING FUNDS AND OTHER RESTRICTED ASSETS.—Assets or "funds," the use of which is restricted, constitute current assets only if they can be used for current purposes. Where restrictions may have an important bearing on the financial condition, the assets involved should be shown separately

and described in such a way as to indicate that their use is limited. Bonds of an issue for which a sinking fund is provided acquired for the sinking fund should be shown as an asset or as a deduction from the corresponding liability according to the terms of the indenture. Where it is required that the sinking fund be controlled by trustees such bonds should be treated as an asset and the corresponding par value as an outstnainding liability until released by the trustees.

TREASURY STOCK AND BONDS.—Treasury stocks and bonds, except when held under certain restrictions in a sinking fund, should not ordinarily appear among the assets but should be deducted from the corresponding capital or liability items. In the case of bonds and stocks with **par value** the deduction should be made at par. There is not yet a generally accepted method of treatment of treasury stock of no par value.

DEPRECIATION, DEPLETION, OBSOLESCENCE, AMORTIZATION, ETC.—Fixed or permanent assets used in the business are ordinarily valued for balance sheet purposes at cost or value at time of acquisition, reduced by depreciation to cover the expired portion of the life of the asset or depletion to cover the reduction in quantity. Buildings, machinery, etc., are written down on the basis of the estimated useful life of each item or group of similar items. **Improvements to leased property** which become useless or become the property of the lessor at the end of the term of the lease are written off over the term of the lease. **Leaseholds, patents and other assets** which have a definite life are written down on the basis of actual or effective life. The underlying principle is that an amount invested in such assets constitutes an expense which is prepaid over the period of the assets' use and which should be written off over that period.

Mines, timber lands, etc., are written down on the basis of actual **depletion** due to extraction, consumption, conversion. etc.

The usual method of computing the **annual allowance for depreciation** is to divide the cost less the estimated residual value by the known or estimated number of years of useful life of the asset. There are various refinements of this method but all are intended to accomplish the same result, namely, to write off the asset over the period of its useful life and to charge to each year's operations the portion of the total cost applicable to the year. Modifications of the simple method of writing off depreciation are: (1) the annuity method, which takes into account the element of interest; (2) the method which takes repairs into account with the object of apportioning to each year the same amount in total of repairs and depreciation; (3) the method which is based on quantity of output or actual time in operation.

Fixed assets which have been permanently discarded because of **obsolescence** or other causes and assets the use of which has been radically changed for their remaining life should be written down below cost less ordinary depreciation or depletion if necessary to reflect the remaining value of the assets in the business. Examples of assets which might be subject to such a write down are munitions machinery which was discarded at the end of the war or the buildings of a munitions plant which were of use only for storage purposes after the war ceased, patterns for types of product which are no longer in demand, copyrights for publications which will not be printed again, etc.

Amortization is a term which was not commonly applied to the writing off of such assets as buildings and machinery until the war. When applied to such assets it refers to abnormal write-offs due to abnormal costs, abnormal conditions with respect to the period of use of the assets, etc.

The primary purpose of writing off depreciation is not to reflect the actual value of the asset from year to year but simply to apportion the cost of the asset, which is really of the nature of a prepaid expense, over the years which receive the benefits and to preserve the captial investment unimpaired. The principle on which depletion is based is similar. The writing off of extraordinary obsolescence and amortization, however, is based on the actual reduced values at the time the abnormal reductions in values become certain.

Many **public utilities** have in recent years adopted a method of writing off plant through a **reserve for retirements.** This method, which is intended to take the place of depreciation, has not yet been generally accepted.

APPRECIATION.—Appreciation in the value of assets should be reflected in a balance sheet only under unusual circumstances, and when included, the fact should be clearly indicated and the corresponding amount should be shown as a separate surplus item. Where, for instance, the appreciation in value is of such a nature that it is taken into account by a bona fide investor in measuring the value of an asset as security on an obligation, it may be reflected on the balance sheet.

Appreciation is probably more often of significance with respect to **land** than it is with respect to any other asset. Where the appreciation has been conclusively demonstrated by the discovery of oil, valuable minerals, etc., it is proper to show it. It is also proper to show appreciation in the **value of patents** and other similar assets provided the value has been conclusively demonstrated.

When depreciation, depletion, etc., are computed upon the basis of appreciated values reflected on the books, an amount equivalent to that portion which is applicable to the appreciation should be transferred from the surplus amount arising from appreciation to the credit of earned surplus.

LAND, BUILDINGS, MACHINERY, ETC.—Fixed assets which are not used in the regular operations of the business but which are held for some other purpose should ordinarily be shown separately on the balance sheet. Fixed assets which are used in the business should ordinarily be valued at cost less allowances for depreciation, depletion, obsolescence, amortization, etc.

Land is usually carried at cost without any allowance for decline in value, but land purchased under abnormal circumstances such as for munitions manufacture during the war or land the value of which is affected by other extraordinary conditions should be valued at its appraised value. **Buildings,** etc., in process of construction should be shown separately and the fact that the asset is not ready for use should be indicated by its description. It is usually more practicable to inventory **small tools** and other similar items each year than to account for them through the ordinary plant accounts. In valuing such tools adequate allowances for depreciation, obsolescence, etc., should be made.

LEASEHOLDS, PATENTS, AND OTHER ASSETS WHICH HAVE A DEFINITE LIFE.—An asset such as a leasehold or a patent which has a definite life should be shown on the balance sheet at cost of acquisition less the pro rata deduction applicable to the expired portion of the asset's life. Although some value may attach to a patented article after the patent has expired, it is generally conceded that it is well to write off the entire cost of a patent during its legal life. If the commercial value of a patent or other similar asset expires before its termination a corresponding allowance should be made in writing off the asset. This is particularly applicable to copyrights.

In the United States patents run for 17 years and are renewable only by special act of Congress; trademarks have a life of 20 years, and are renewable

for an equal period; and **copyrights** have a life of 28 years and are renewable for an equal period.

GOODWILL AND OTHER ASSETS WITH UNLIMITED LIFE.—Ordinarily it is not necessary for balance sheet purposes to depreciate the cost of goodwill, secret formulas and other assets whose life is unlimited. The practice of treating advertising and other similar expenses as a fixed rather than a deferred asset, on the theory that such expenses represent a cost of goodwill, is not considered sound unless the expenditures are designed to increase the concern's goodwill permanently and unquestionably accomplish the intended result. Even then some part should be charged off against the periods which are specifically benefited by the expenditures.

ORGANIZATION EXPENSES.—Bona fide organization expenses may properly be carried as an asset on a balance sheet. Such expenses are carried as an asset throughout the life of the concern or charged off after sufficient profits have accumulated. The **best practice** is to charge off such expenditures within a relatively short period.

DISCOUNT ON CAPITAL STOCK AND BONDS.—Where capital stock is issued for less than its par value under the laws of a state which permits such issuance, the discount should be shown on the asset side of the balance sheet. If capital stock has been issued partly at a **premium** and partly at a discount the net amount should be shown as an asset or as capital surplus as the case may be. Discount on bonds issued should be shown as an asset and should be amortized over the life of the bonds. **Premium on bonds** issued should be shown as a liability and should be amortized over the life of the bonds.

EXPERIMENTAL EXPENSES, DEVELOPMENT EXPENSES, ETC.—Experimental expenses, development expenses and similar items are sometimes carried on a balance sheet as assets. Such items should be shown as **deferred charges** and be charged off during the periods benefited, should be described clearly to show their nature and should not be carried as assets after they cease to represent benefits which the concern may enjoy in the future.

RETURNABLE CONTAINERS.—Concerns which ship their product in returnable containers often charge their customers for the containers when shipped and credit the customers when the containers are returned. In such cases the cost of all containers less depreciation, or the inventory value of all containers, on hand and in the hands of customers, should be included among the assets on the balance sheet, and the full amount of the liability to pay for containers when returned should be included among the liabilities.

HYPOTHECATION OF ASSETS.—Any hypothecation of assets should be noted in the balance sheet.

Liabilities

STATING LIABILITIES IN THE BALANCE SHEET.—Where goods have been accepted but not paid for, the amounts payable have fully accrued and should be shown as liabilities on the balance sheet. Where purchase contracts have been signed but no goods have been delivered, there is only a contingent liability, which ordinarily need not be shown. Some financial managers omit from inventories and liabilities all reference to certain goods received before the date of a balance sheet and justify the practice by claiming that the items exactly balance each other. As a matter of fact the items do not balance each other except in the unimportant detail of the amount. They usually adversely

affect a balance sheet, since the liabilities are "quicker" than the assets. The honest executive will have the courage to present his actual condition.

As a general rule where value has been received or circumstances have given rise to liabilities prior to the date of the balance sheet, the liabilities should be shown in the balance sheet. Where value commensurate with the liability will not be received until after the date of the balance sheet, the liability need not be shown in the balance sheet unless title has passed to the purchaser, as in the case of goods shipped but not received. Important **contingent liabilities** or important happenings with respect to liabilities subsequent to the date of the balance sheet should be disclosed in a note on the face of the balance sheet.

If a liability is **payable in goods, foreign money or other property** the value of which fluctuates, it should be shown at the cost of liquidation on the date of the balance sheet.

CURRENT LIABILITIES.—Liabilities payable within a year from the date of the balance sheet should ordinarily be treated as current, but there is no definite rule as to the differentiation between current and fixed or long-term liabilities. Current liabilities are usually classified as accounts, vouchers or invoices payable, notes payable, acceptances payable, accrued pay rolls, interest, rent, taxes, etc. The order of arrangement is not usually important. Reference to the security should be made in the case of secured accounts. **Notes receivable discounted** may be shown among the liabilities and the corresponding amount among the assets to indicate the contingent liability.

ADVANCES, UNEARNED INCOME, ETC.—Advances received for values to be given or services to be rendered in the future should be shown as liabilities until the values are given or the services are rendered. Advances for interest, rent and other items which are charged for on the basis of time are written off, if the accrual method of accounting is followed, on the time basis. Such prepayments are often described as unearned interest, unearned rent, etc.

DIVIDENDS PAYABLE.—Dividends declared and unpaid at the date of the balance sheet should be shown as liabilities. **Cumulative dividends in arrears** do not constitute a liability until declared and should not be shown as such on the balance sheet. Where cumulative dividends are in arrears, the fact is often stated in a note on the balance sheet. Whether the fact should be stated on the balance sheet or not depends upon the purpose for which the balance sheet is prepared.

LONG-TERM LIABILITIES.—Different classes of long-term liabilities should be shown separately. **Mortgages** which are an obligation of the concern should be shown as liabilities and not as deductions from the assets mortgaged. But where a concern owns only the equity in property which is subject to a mortgage obligation of another party, the mortgage may be shown as a deduction from the asset. The balance sheet of a holding company should show the mortgage indebtedness of controlled or affiliated companies, whether or not a consolidated balance sheet is prepared. It must be assumed that balance sheets will be read and acted upon by others than those who know the facts. It is not helpful in the long run for a financial manager to publish a statement which in any degree fails to disclose all liabilities, including those which are not directly assumed.

In the description of long-term liabilities the interest rates and the due dates are usually shown in addition to the kind of obligation.

RESERVES.—There are **three main classes** of reserves which are common in balance sheets: (1) valuation reserves, (2) reserves to cover liabilities, and (3) reserves representing appropriations of surplus.

Reserves for valuation purposes are used where values are more or less doubtful, as in the case of doubtful receivables, or where it is desirable to indicate the original book value of an asset and the amount written off in addition to the net amount at which the asset is being carried, as in the case of plant which is being depreciated or mines which are being depleted. Such reserves should be deducted from the assets to which they apply and should not be shown on the liability side of the balance sheet. Although, broadly speaking, reserves for depreciation or depletion are valuation reserves, such reserves are not intended to adjust original book values of assets to actual values at the date of the balance sheet but merely to reflect the amounts written off on the basis of expired life or consumption up to the date of the balance sheet.

Reserves to cover liabilities are used when the amount of the liability is uncertain, when there is uncertainty as to whether or not there is a liability or when the liability is contingent upon future happenings. For example, the balance sheet at June 30 of a corporation which operates on a calendar year basis should contain among the liabilities a reserve for federal income taxes based on the income for the 6 months ended June 30 even though the liability of the corporation will be finally determined upon the results of the entire year. Or where a concern is threatened with an additional assessment of taxes, the amount of the liability may be uncertain or there may be uncertainty as to whether there is any liability, and it becomes necessary to reflect the estimated liability in a reserve. Reserves are also set up to cover obligations to perform a service or pay money in the future which arise from values or benefits received in the past. Reserves to cover liabilities should be included with current liabilities if the amounts will probably fall due within a year.

Reserves required under the terms of bond or capital stock issues do not usually represent obligations to pay anything (the obligations being already expressed on the balance sheet in the amounts of bonds or capital stock outstanding) but **restrictions on the distribution of surplus** made for the purpose of insuring the payment of sums on the bonds or capital stock when they fall due. Such reserves are a **part of capital** and should be shown, as separate items, in the group of capital items. Portions of surplus set aside by directors or stockholders in connection with such matters as (1) additions to plant, (2) replacement of assets not covered by insurance, in case of loss, etc., are also capital items and should be shown on the balance sheet as such.

Amounts set aside out of surplus for additions to or replacements of plant should not be confused with reserves for depreciation. In the first case there is merely a voluntary segregation of surplus to prevent the distribution of dividends out of funds required for the purposes mentioned, whereas in the second case there is an actual charge to expense to cover the expired portion of the life of the asset. The reserves of the first class may be credited back to free surplus after the need for them has ceased to exist, but reserves for depreciation, if properly computed, are mere segregated deductions from the asset accounts. When **appreciation** in the value of fixed assets is shown on the balance sheet, the offsetting amount of surplus thereby created may be shown as a reserve.

Capital

CAPITAL.—The term "capital" as used in the balance sheet should refer to the **excess of assets over liabilities,** or the **net worth** of the concern. It should include all **undivided profits,** whether set aside in reserves or unrestricted, as well as original investments, but should include no liabilities, nor reserves which

are the equivalent of liabilities. When there is doubt as to whether the relationship involved is that of creditor or that of proprietor the facts should be indicated as fully as space will permit. Capital should be plainly differentiated from liabilities.

In a detailed balance sheet the different items of capital should be shown separately. Capital or surplus at the beginning of the year, earnings for the year, withdrawals during the year and capital or surplus at the end of the year are often shown. The financial manager who follows this practice receives favorable comment from those whose duty it is to analyze balance sheets, and such comment may be of great value when times are bad.

The usual practice in the case of a sole proprietorship is to show only the total capital or to show the balance at the beginning of the fiscal period, the earnings and withdrawals during the period and the balance at the end of the period. Partnership capital is usually shown in the same way, either in total or by partners.

CAPITAL STOCK.—**Different classes** of outstanding capital stock should be shown separately. **Fully paid capital stock** with par value should be shown at its par value. Capital stock **without par value** should be shown at the value of the assets paid in for it at the time paid in or at its stated value when issued. Capital stock which has **not** been **fully paid** should be shown at the amount paid in with a note indicating the par value.

Usually the differences between various classes of stock cannot be brought out in detail by the necessarily brief balance sheet descriptions but, so far as practicable, the descriptions should indicate (1) the kind of stock, (2) if **preferred as to dividends,** the rate of dividend and whether **cumulative or non-cumulative,** and (3) if **redeemable** above par the redemption price.

For handling of subscriptions to capital stock see page 206.

SURPLUS.—Surplus is the excess of assets over the sum of liabilities and capital stock. In a detailed balance sheet capital, **paid-in or donated surplus** and earned surplus should be shown separately. **Earned surplus** should include only amounts earned in the operation of the business less losses and earnings distributed. There is no real distinction between capital surplus and paid-in surplus. **Capital surplus** should include premiums on sales of capital stock, capital donated or paid in, and any other capital gains arising in connection with the issuance or reacquirement of capital stock. Any premiums paid for the reacquirement of capital stock should be applied to reduce capital surplus or earned surplus if there is no capital surplus.

It is sometimes advisable to treat **extraordinary gains** from the sale or conversion of capital assets as special surplus. When surplus is set up through the **revaluation of assets** which have appreciated in value the amount should be shown separately and its origin should be indicated. Any part of surplus which is restricted should be so designated. A common example is surplus reserved for a sinking fund under the requirements of a bond issue. Any part of surplus set aside merely by action of the board of directors may or may not be shown separately, depending upon the purposes for which set aside and the purpose for which the balance sheet is prepared. **Undivided profits** is a term which is used loosely. It may refer to the entire earned surplus or it may refer only to some part of it.

A summary of changes in surplus during the fiscal period should be given in the balance sheet, at the end of the profit and loss statement or in a separate statement accompanying the balance sheet and the profit and loss statement. This reasonable requirement is often omitted. When the closing surplus of

one balance sheet plus profits and minus dividends and losses for the year does not reconcile with the surplus at the end of the year, great annoyance is caused to those who analyze balance sheets. The wise financial manager will anticipate the absent treatment which his balance sheet will receive and will furnish the necessary reconciliation.

SURPLUS—NO-PAR VALUE STOCK.—In case of no-par value stock it is important that capital surplus and earned surplus be separated. Many balance sheets are not understandable because capital and earned surplus are not separated. In order to show the true status of affairs it is necessary to segregate capital stock, capital surplus, and earned surplus. Usually the state laws require that **a minimum value** be ascribed to no-par value shares, irrespective of the number issued. Bearing this in mind the arrangement of these items in the balance sheet should be essentially as is shown below:

Stock of No-Par Value:
..... shares authorized at $.... per share.
..... shares issued.

Capital Surplus
This item should represent the excess of assets over liabilities at the formation of the company, minus the amount ascribed to capital stock and plus or minus capital gains or losses. Changes in capital surplus occurring after incorporation should be shown on the balance sheet.

Earned Surplus
This should show the net result of operations after incorporation.

DEFICIT.—A deficit, as the term is used on balance sheets, is the excess of the sum of liabilities and capital stock over assets. If a deficit is shown on the asset side of the balance sheet it should be plainly set out from actual assets. It is better practice to show a deficit as **a deduction from capital stock,** as:

Capital Stock	$100,000	
Less Deficit	25,000	$75,000

Other Balance Sheet Considerations

CONTINGENT ASSETS AND LIABILITIES.—Ordinary contingencies, such as the customary **purchase and sales contracts** at favorable prices, are not usually mentioned on a balance sheet. But where contingencies have an important bearing on the financial condition they should be indicated by footnotes. The contingent liability on discounted paper is often reflected in the balance sheet by showing the amount both as an asset and as a liability.

COMMITMENTS.—It is not general practice to show in balance sheets future commitments—sales or purchases; until it becomes fairly general it cannot be considered good accounting practice to insist upon it, but whenever the information is essential to a true statement of financial position, it must be done. The information conveyed is of great interest and, unless publication discloses trade secrets, the practice started to some extent as of December 31, 1920, should be encouraged. When it is deemed proper to disclose the information, the following forms are suggested:

The company's contracts for purchase of material and for construction outstanding on (date of balance sheet) aggregated $..... payable during (period of time).

The company's contracts for purchase of materials to be delivered during (period of time) outstanding at (date of balance sheet) aggregated $..... or $..... more than the market value of the materials at (even date or more recent date).

On the basis of market values at (date of balance sheet or more recent date) the purchase contracts unfulfilled at (date of balance sheet) aggregating $..... would show a contingent loss of approximately $.....

The company's contracts for purchase of materials to be delivered during (period of time) outstanding at (date of balance sheet) aggregated $..... or $..... more than the market value of the materials at (even date or more recent date), but $..... is covered by sale contracts, leaving $..... as the net amount of possible loss.

The unfulfilled purchase contracts aggregate $..... at (date of balance sheet), and after applying thereto the unfulfilled sale contracts in excess of the inventory at (date of balance sheet) would show, on the basis of market values at (date of balance sheet or more recent date), a contingent loss of approximately $.....

Whenever such information is of known value to competitors it may be wise to omit it. But most statements regarding the undue advantage which concerns get out of the published reports of their competitors are inaccurate. The benefits arising out of the favorable comments always accorded to full disclosure of possible unfavorable conditions usually outweigh any detrimental effect. When the financial manager is in doubt he should resolve the doubt in favor of publication and against suppression.

BALANCE SHEETS GIVING EFFECT TO SUBSEQUENT HAPPENINGS.—Balance sheets are sometimes required to show the financial condition of a concern at a given date modified by certain important subsequent happenings, such as **new issues of stocks, bonds, etc.** An example follows:

S. S. JONES CORPORATION

BALANCE SHEET

As at December 31, 1924

Modified to give effect to the following transactions yet to be consummated:
(1) Issuance of $100,000 7% cumulative preferred stock for cash
(2) Payment of $50,000 short term notes payable

Assets		Liabilities	
Current:		Current:	
Cash	$ 60,000.00	Notes Payable	$ 30,000.00
Accounts Receivable	40,000.00	Accounts Payable	25,000.00
Inventory	120,000.00	Federal Income Tax	25,000.00
Total Current Assets	220,000.00	Total Liabilities	80,000.00
		Capital	
Plant (less Reserve for Depreciation)	200,000.00	Preferred Stock (7% Cumulative)	100,000.00
Patents	80,000.00	Common Stock	200,000.00
		Surplus	120,000.00
	$500,000.00		$500,000.00

The Special Committee on Co-operation with Bankers of the American Institute of Accountants on September 10, 1923, submitted the following **recommendations in regard to the certification** of such statements:

"I. The accountant may certify a statement of a company giving effect as at the date thereof to transactions entered into subsequently only under the following conditions, viz.:

(a) If the subsequent transactions are the subject of a definite (preferably written) contract or agreement between the company and bankers

(or parties) who the accountant is satisfied are responsible and able to carry out their engagement;

(b) If the interval between the date of the statement and the date of the subsequent transactions is reasonably short—not to exceed, say, 4 months;

(c) If the accountant, after due inquiry, or, preferably after actual investigation, has no reason to suppose that other transactions or developments have in the interval materially affected adversely the position of the company; and

(d) If the character of the transaction to which effect is given is clearly disclosed, i.e., either at the heading of the statement or somewhere in the statement there shall be stated clearly the purpose for which the statement is issued.

"II. The accountant should not certify a statement giving effect to transactions contemplated but not actually entered into at the date of the certificate, with the sole exception that he may give effect to the proposed application of the proceeds of new financing where the application is clearly disclosed on the face of the statement or in the certificate and the accountant is satisfied that the funds can and will be applied in the manner indicated. It is not necessary that the precise liability shown in the balance sheet before adjustment should actually be paid out of the new money. It is sufficient, for instance, where the balance sheet before the financing shows bank loans, if the proceeds are to be applied to bank loans which are either identical with or have replaced the bank loans actually outstanding at the date of the balance sheet. Ordinarily, however, the accountant should not apply the proceeds of financing to the payment of current trade accounts payable, at least not against a normal volume of such current accounts payable, because there must always be such accounts outstanding and the application of new moneys against the outstandings at the date of the balance sheet results in showing a position which in fact could never be attained. The accountant may usually best satisfy himself that the funds will be applied as indicated by getting an assurance from the issuing house on the point.

"III. In any description of a statement or in any certificate relating thereto it is desirable that the past tense should be used. It should also be made clear that the transactions embodied have been definitely covered by contracts.

"IV. When the accountant feels that he cannot certify to such a hypothetical statement, probably because of the length of the period which has elapsed since the accounts have been audited, he may be prepared to write a letter, not a certificate form, stating that at the request of the addressee a statement has been examined or prepared in which effect is given, in his opinion correctly, to proposed transactions (which must be clearly specified). Such letters should be given only in very special cases and with the greatest care."

The committee illustrates the special form of statement and certificate, and also of the letter coming within the terms of Rule IV, as follows:

"Form of balance sheet and certificate where conditions laid down in rules I and II have been meet.

A. B. C. COMPANY

BALANCE SHEET

DECEMBER 31, 1922

(Giving effect as at that date to the sale of $5,000,000 first mortgage bonds since consummated and the application of the proceeds in part in reduction of liabilities.)

(ASSETS)

(LIABILITIES)

We have examined the books and accounts of the A. B. C. Company for the year ended December 31, 1922, and the agreement dated March 2, 1923, for the sale of $5,000,000 first mortgage bonds, and we certify that the above balance sheet is, in our opinion, a fair and accurate statement as of December 31, 1922, of the financial position of the company, giving effect at that date to the provisions of the agreement mentioned.

New York
March 2, 1923 .....

The letter coming within terms of Rule IV:

New York, August 25, 1923.

Mr. John Smith, Vice-president,
A. B. C. Company,
52 William Street,
New York.

Dear Sir: In accordance with your request, we have examined the attached balance sheet of the A. B. C. Company as of June 30, 1923, and beg to advise you that in our opinion it is prepared so as to reflect correctly the position of the company as shown by the books, but giving effect as at that date to the pending issue of $300,000 first mortgage bonds as provided in the agreement dated August 25, 1923, and to the extinguishment out of the proceeds of the new financing of the notes payable to bankers to the amount of $300,000.

It will be understood that we have not audited the books since the close of the fiscal year on December 31, 1922. You have heretofore been furnished with the audited accounts as of that date, which were in accord with the books.

Yours very truly,

.....

Comparative Balance Sheet

A comparative balance sheet shows the assets, liabilities and net worth as at two or more dates so that changes which have taken place may be seen readily. It is usually desirable to set up a comparative balance sheet in less detail than a detailed balance sheet for the sake of easy reading. An example follows:

ASSETS	Dec. 31, 1925	Dec. 31, 1924	Increase Decrease
Current:			
Cash	$10,000	$ 5,000	$5,000
Accounts Receivable	15,000	17,000	2,000
Inventory	13,000	12,000	1,000
Total Current Assets	38,000	34,000	4,000
Plant (less Reserves for Depreciation)	30,000	28,000	2,000
Patents	1,000	2,000	1,000
	$69,000	$64,000	$5,000
LIABILITIES			
Current:			
Notes Payable	5,000		5,000
Accounts Payable	2,000	1,000	1,000
Total Current Liabilities	7,000	1,000	6,000
CAPITAL			
Capital Stock	40,000	40,000	
Surplus	22,000	23,000	1,000
	$69,000	$64,000	$5,000

The column showing increases or decreases is often omitted, and sometimes the column containing figures for the earlier date is omitted and only the column showing increases and decreases is given in addition to the column containing current figures.

Income or Profit and Loss Statement

The income, or profit and loss statement, shows in more or less detail, according to the purposes for which the statement is prepared, the gross income, cost, expenses, and net results of doing business during a given period.

LACK OF UNIFORMITY OF TERMINOLOGY.—Inspection of annual reports issued during 1921 by many well known corporations, containing balance sheets and income statements prepared and certified by equally well known public accountants, proves beyond a doubt that there is **a great lack of uniformity in terminology** regarding the items of income and expenses. At one time it seemed the trend of good accounting practice was towards the term "profit and loss account"; but at the present time the use of other terms is as frequent, showing that there was no trend in any direction. The terms **"profits," "income," "revenue,"** and **"earnings"** are used synonymously at times and at other times a distinction is drawn; but there is no uniformity in the distinction, so that it increases the confusion to differentiate. One result of the lack of uniformity in accounting terminology is the difficulty, and in some cases the impossibility, of comparing the results of one concern with those of another.

It is suggested that the term **"income statement"** be adopted. Many of our leading corporations use it and it has much to recommend it.

FORM OF INCOME ACCOUNT.—It is generally accepted practice to prepare income accounts in what may be called **narrative form** as distinguished from **the account form.** In the former case the gross sales or earnings are stated, deductions are made, and extraordinary items of income are added. Thus those interested are enabled to read the statement as a continuous story of what has been done. The story is unfolded so that no effort is required and no calculation need be made to comprehend each step and the final result. It is advisable to adopt uniform methods whenever feasible, particularly when comparisons with other periods and other businesses are to be made, but form must be subordinated to intelligent use and usability. It is wise to depart from prescribed forms when the story can be told better by the use of differently arranged forms.

The **account form** contains sales or gross earnings on the credit side of the account, and costs, expenses, losses, etc., on the debit side; the balance is brought down as net income or deficit. The account form does not lend itself to continuous reading and has little if anything to recommend it.

FORM SUGGESTED BY FEDERAL RESERVE BOARD.—A form of income statement suggested by the Federal Reserve Board in 1917 is shown in Fig. 11. Note that each class of expense is to be "itemized to correspond with ledger accounts kept." If there were many of these items it would be better to show them in separate schedules. It would also be better in many cases to show the details of cost of sales in a separate schedule instead of in the profit and loss statement. This is particularly true where manufacturing expenses as well as purchases are a part of the total cost. Where all the items of cost and expense can be arranged on one sheet conveniently, supplementary schedules should not be used. In many cases there are more items of "other income" and "deductions from income" than those shown on the form.

Since 1917, when the Federal Reserve Board form was published, the **federal income tax** has become of sufficient importance to be shown as a separate item. A common practice is to deduct the tax from "net income before deducting federal income tax," and show the remainder as "net income after deducting federal income tax."

The term "net income—profit and loss" is not well considered. A better term would be "net income before special credits and charges." Important

COMPARATIVE STATEMENT OF PROFIT AND LOSS

FOR THREE YEARS ENDING.....19

	Year ending—		
	19—	19—	19—
Gross sales	$.....	$.....	$.....

Add special credits to profit and loss			
Deduct special charges to profit and loss			
Profit and loss for period			
Surplus beginning of period			
Dividends paid			
Surplus ending of period			

FIG. 11. Income Statement Form Recommended by Federal Reserve Board

special credits and special charges to profit and loss should be described in the income statement if possible. The **analysis of surplus** for the period is placed where it should be, viz., at the end of the statement.

FORMS PREPARED BY BANKS.—Several forms prepared by banks for use in granting credit are shown on pages 183 and 185. These are in account form so that they may be conveniently placed on the same general report with the balance sheet and the analysis of surplus.

INCOME FROM ORDINARY OPERATIONS.—The only earnings which should be shown in the first division of the income account are those which are incident to the normal operation of the business. All other earnings should be excluded from this division.

GROSS INCOME.—It is customary and desirable to show the gross business transacted, whether arising from sales of goods, or from services rendered by professional men and others, or by public service corporations or similar enterprises.

RETURNS.—Where earnings arise from the delivery of goods and for any reason the goods are returned, the aggregate returned is usually **deducted** before stating **the gross income.** The reason for this is that, if the goods are returned and credited at the same price at which charged, and are available for resale, it is improper to augment the sales by transactions never consummated, thus rendering the calculations of gross profits, etc., less valuable. This is the general rule, but if it is desired to have the returned sales shown as a deduction from the gross sales, there is no objection to such procedure. It may be of interest as a means of showing whether or not the proportion of returns to the total volume of business is proper.

ALLOWANCES.—It is not always easy to determine the distinction between allowances which represent true deductions from gross sales and those which should be included among costs or expenses. In the retail automobile business it is customary to accept used cars in part payment for new cars. The used cars usually realize less than their nominal cost. On the face of the transaction the dealer sells a new car for $3,000, allows $1,000 on a used car, and collects $2,000 in cash. He sells the used car for $800. Under good accounting practice, the apparent loss of $200 (plus expenses of resale) should be shown as a deduction from the gross sales price of the new car, rather than as a loss arising from the sale of a used car.

DISCOUNTS ON SALES.—When the rate of discount for prepayment is 2% flat or less, it is proper to consider it a **true cash discount.** When the rate of discount is more than 2%, it is not logical to look upon it as a **premium for prepayment.** Many so-called cash discounts are 7% flat. When such a rate is used it is not logical to deal with it in any other way than as a deduction from sales. The concern making such sales should deduct the discounts (in an aggregate sum if more convenient) from the outstanding accounts and the purchasers should deduct the discounts from their cost prices and from their inventories. The rule is a somewhat rough and ready one but it is accurate enough. It is not inflexible but should be followed unless a better general rule can be devised. In defining "cost" and "net sales" there must be some uniformity even though precise formulas are not always possible.

The aggregate of cash discounts should be entered among the expenses of the business and not as a direct deduction from gross earnings. The theory is that the discount allowed is a premium given to secure prompt payment as well as for the use of the money at an earlier date than it would be received if

no inducement were offered. If these allowances are strictly cash discounts, and are granted only if the debtor pays within the time specified, they are clearly an expense and should not be charged against sales as if in the nature of an abatement of the purchase price of the goods.

COST OF SALES.—The amount of detail of the cost of a manufacturing business that may be presented in a statement is limited only by the classification of accounts or by the analysis that may be made of them. Following, given in Bell's "Accountant's Reports," is a fairly complete statement of the cost of manufactured goods sold:

Cost of Manufacture:

- Materials consumed
- Direct labor
- Factory expenses:
  - Superintendent and foremen
  - Factory office salaries and supplies
  - Receiving department expenses
  - Cartage inward—estimated
  - Storage department expenses
  - Stock department expenses
  - Janitors, watchmen and elevatormen
  - Power, heat and light:
    - Fuel
    - Wages
    - Oil, waste, etc.
    - Current purchased
  - Repairs:
    - Building
    - Machinery and equipment
  - Depreciation:
    - Building
    - Machinery and equipment
  - Property taxes
  - Insurance—fire, liability, etc.
  - Rent of factory building
  - Unemployed time
  - Inspection
  - Defective goods
  - Experimental expenses
  - Infirmary
  - Miscellaneous
    - Total factory expenses
- Total materials, direct labor and factory expenses
- Less:
  - Sales of scrap
  - Increase in inventory of work in process
    - Total
      - Total cost of manufacture

Add Decrease in Inventory of Finished Goods

Manufacturing Cost of Goods Sold

Packing and Shipping Expenses:

Salaries and wages
Materials
Cartage outward—estimated
Total

Cost of Goods Sold

In the foregoing it is assumed that **inward freight, duty, marine insurance, and other direct costs** have been applied to the material and supply accounts affected, but that the company does its own carting and no distribution of the cost is made except a more or less arbitrary division between inward and outward.

The statement is also based upon the assumption that the finished goods are not packed until they are shipped. If, as often happens, the goods are carried in stock in the containers in which they are shipped, or they are not carried in stock at all, but are shipped as soon as manufactured, the major part of **packing and shipping expenses** should be classified as Factory Expenses, and thus be reflected in the Cost of Manufacture, which should be the basis for valuation of the inventory of finished goods. In such cases the remainder, representing shipping expenses, is relatively so inconsequential that it is treated in the same way.

According to Bell, the **cost of materials** consumed may be shown in greater detail if desired—as to kinds of material and as to purchases (net) and inventories at the beginning and end of the period. It is not considered necessary to show returned purchases as a separate item in any event. The differences in inventories of work in process and finished goods may also be detailed by showing in each case the inventories at the beginning and end. Most business men prefer the condensed form; if they want to know the amounts of the inventories they look at the balance sheet.

It is comparatively seldom that the degree of detail shown above would be given in a statement of income and profit and loss. For the presentation of such elaborate details, whether of cost or expenses, schedules are usually employed, only the totals being shown in the exhibits. In some cases excise or revenue taxes are properly treated as cost of manufacture.

SHIPPING EXPENSES.—Packing and shipping expenses should be shown (1) as a part of cost of sales, (2) as a part of selling and shipping expenses, or (3) as a separate item, according to circumstances.

SELLING EXPENSES.—As given by Bell, the items comprised in this group are usually somewhat as follows:

Salaries of sales manager and clerks
Salaries of salesmen
Commissions
Traveling
Advertising
Catalogues, etc.
Rent of sales offices
Postage, stationery, etc.
Telephone and telegraph
Sundry sales office expenses
Miscellaneous

GENERAL EXPENSES.—This group is often called **Administrative and General Expenses.** It is intended to include expenses which apply to the business as a whole, and not exclusively to any one of its major operations. These expenses, as listed by Bell, are as follows:

Salaries of officers
Salaries of general office clerks
Rent of general office
Traveling
Corporation and capital stock taxes
Exchange (domestic) and collection charges

Postage, stationery and printing
Telephone and telegraph
Legal
Professional accounting
Directors' fees
Dues and subscriptions
Contributions and donations
Sundry office expenses
Miscellaneous

BAD DEBTS.—Ordinary losses from bad debts may be included under general expenses, but sometimes extraordinary losses of this nature should be shown as separate items or included under Other Charges.

OTHER INCOME CREDITS.—The items to be grouped under this caption should represent income from sources other than the regular operations of the business, including as such **extraneous income** derived from financial operations and considered applicable to the current period. Such items, in the case of a manufacturing or mercantile business, may, according to Bell, be as follows:

Cash discounts on purchases
Interest on bonds owned
Interest on notes and accounts receivable
Interest on bank balances
Dividends on stocks owned
Net income from real estate
Profit from sale of temporary investments
Profit from foreign exchange
Royalties received
Commissions received
Profit from sale of materials, etc.
Miscellaneous

OTHER CHARGES.—Interest charges and expenses and losses in transactions outside of the regular field of a business should be included under "Other Charges," or "Deductions from Income."

NET INCOME.—It is proper to show deductions from gross income, but there should be no deductions from net income except extraordinary items of substantial amounts which have no relation to the current period; every effort should be made to avoid this class of deductions. The amount of net income should be transferred to surplus. No charges should appear in surplus except charges for dividends and deficits, and no credits except credits for net income.

The **courts** in various jurisdictions have defined "income," "net income," and "net profits" available for dividends, in so many ways that a corporate officer who desires authority for any position which he wishes to assume can usually find it in the law reports.

If a public accountant were asked to define the term "net income," he would probably reply: "The net income of a business is the surplus remaining from the earnings after providing for all costs, expenses, and reserves for accrued or probable losses."

The expression, "balance available for depreciation, amortization, depletion, and taxes," is very bad practice. Bankers seem to think that interest can be met out of the general reserves mentioned above. For a limited period this is true, except as to taxes, but even then the postponement may be for a year only. Depreciation reserves may be available for several years. Depletion alone may be permanent. But it is not good practice in published statements to omit the amounts reserved in the books, or to indicate that such reserves may be used for the payment of interest. When a financial manager makes such a statement whether or not under pressure, he is merely laying up trouble for himself. In effect it is an overstatement of net income.

COMPLETED TRANSACTIONS.—Earnings which are represented by completed transactions with trade debtors must be clearly distinguished from those earnings which are represented by transactions only partially completed, the results of which are in doubt. Except in unusual cases, no profit should be

taken **unless a cause of action has arisen** which can be enforced against the debtor. In other words, if work in progress cannot be earmarked as being for a definite customer, or if it has not proceeded far enough to form the basis of an action, it must be taken into the inventory and valued as an inventory item and not as an account receivable. Ordinarily no profit or loss thereon should appear in the income account except when there is a definite change in values at the date of the balance sheet and accuracy demands a revision. If a revision is justified, the result thereof must appear as a separate item; it must not be merged with realized income. But if work is undertaken **"on order"** and is proceeding satisfactorily, and if it is apparent that the estimated profit thereon will be realized, more or less, then it is permissible to take credit for the proportion of profit earned to the date of the income account.

Under ordinary conditions **profits on undelivered sales** should not be anticipated. Most concerns which sell ahead have a fairly constant and uniform business so that no statistical problem arises when sales expenses are charged to one period while the following period reaps the benefit thereof. But a shipbuilder may have a dozen jobs under way at the end of one fiscal period, while he may have 6 or 18 jobs under way at the end of the next period. If he takes up the profit on completed jobs only, his books may show a state of affairs vastly different from the facts. His most prosperous year may easily show up as the worst. The same is true of contractors in the building and other trades.

The practice of having work done at a maximum profit or upon a fixed percentage has been extended to much work which formerly was undertaken for a round sum. In such a case the profit is determined by the amount of the work completed and may be taken into account in the same manner as with professional earnings.

INTERCOMPANY PROFITS.—Some large industrial enterprises control several or all of the processes of manufacture of one or more products. Frequently the various processes are performed by plants which are entirely distinct units operating under their own individual charters. As a consequence frequent sales and resales are made, with the result that profits are shown on intercompany sales and quantities of merchandise appear in the inventories at prices greater than actual cost. It is now generally recognized as good practice to eliminate all intercompany profits and the corresponding **excessive inventory valuations** from statements which purport to show the true financial status of the group of related companies. The United States Steel Corporation, for example, in its consolidated balance sheet, lists its inventories of products on hand which have been sold and transferred from one subsidiary company to another, at net value, i.e., substantially the cost of production to the companies which furnish the products.

PROFITS ON PRICE FLUCTUATIONS.—Many enterprises using staple raw materials frequently buy their requirements in advance, and in numerous instances have found it more profitable to sell their entire stock on a rapidly advancing market than to operate their mills. This occurs oftener with cotton than with any other commodity, but the practice obtains in other lines, such as grain, pork, copper, etc. If such profits are actually realized, they should appear as **a special item** in the current income account. If the transactions have resulted in a net loss, it also should appear as a special item in the current accounts, inasmuch as it must be paid out of current net income.

ITEMS APPLICABLE TO PRIOR PERIODS.—The items of expenses in an income account embrace those which have accrued during the period, whether paid for or not. At the closing date all accrued expenses, rents, taxes, interest,

and similar items should be ascertained and entered as liabilities on one side and charged to their respective expense accounts on the other.

Since many of these expenses are more or less unusual in their nature, it seems that some are unavoidably omitted. The question then arises in subsequent periods, whether or not the items applying to prior periods should be charged to surplus or be included among the current expenses of the period in which paid. There are two reasons in favor of the latter practice but no good reason in favor of the former. In the first place, when charges are made against an old book surplus it simply means that so far as published accounts go they are never in evidence. That is, the items are not known at the time and are therefore omitted from the accounts in the period to which they belonged, and, being eliminated from the period in which paid, they practically disappear.

The most valuable records compiled are **comparative schedules of earnings and expenses,** and when these are carried along from year to year it is practically impossible to adjust reports which are perhaps a year old and of which frequent use has been made. Therefore, proper practice permits the inclusion of such items in the current income account, without calling special attention to the matter, unless the items are large enough to alter materially the results, in which case the items are deducted from the net income of the current year before a transfer to surplus is made. If the items are comparatively small it may be assumed that corresponding items are omitted from the current accounts. These will have to be taken care of in the subsequent period.

This must not be construed as an excuse for closing accounts before every known liability is taken into consideration. The financial manager who does not satisfy himself that all known liabilities and those which should be known are included in a balance sheet, is guilty of negligence and deserves any ill consequence which may ensue.

COMPARISONS.—The financial manager should strive so to arrange the accounts as to show a comparison with previous periods; also, if the nature of the business permits, unit costs or earnings should be shown. For instance, the accounts of a taxicab company, if properly set up, show the average gross earnings of cabs per day. They also show the operating cost per mile. Perhaps the simplest illustration is a blast furnace. It is relatively easy to determine the cost of producing a ton of pig iron, but the figures are of little value unless the output is shown along with the average cost. The production for one week may be 10,000 tons at an average cost of $8 per ton; if the production the next week is 15,000 tons at a cost of $8 per ton, the natural inquiry is: Why not the cost proportionately less upon the greater output? If the cost per ton is reported separately from the production, attention may not be called to the possibility that lower costs are in order.

The **ratio of each class of expense** to the total volume of business is always interesting. In dull times certain so-called fixed charges may not be expected to vary, but there are other classes of expenses which should fluctuate ratably with the volume of business.

Consolidated Statements

Where a corporation controls another corporation or other corporations or where corporations are controlled by the same interests, if the businesses are conducted as a unit or a close relationship is maintained, consolidated statements are usually necessary to show the financial condition of the group.

CONSOLIDATED BALANCE SHEETS.—A consolidated balance sheet is made up of the totals of items in the individual balance sheets with **inter-**

company items eliminated. If the individual balance sheets are properly prepared the amount of the accounts receivable of one company should ordinarily be the same as the amount of the corresponding accounts payable of the other companies subject to **adjustment for items in transit,** and the elimination of these accounts should not, therefore, affect the combined amounts of net worth. But where capital stocks or bonds of one of the companies are owned by another of the companies there may be differences between the stocks or bonds as shown in the balance sheet of the company which owns them and the amounts of the corresponding liability or capital items in the balance sheet of the other company. In such a case the necessary adjustment of the differences must be made by increasing or reducing the sum of the surplus accounts of the companies or by setting up an asset, which is usually described as goodwill.

If X corporation acquires control of Y corporation through a purchase of the capital stock of Y and the amount paid for the stock is in excess of its book value, such excess is deemed to represent the value of **goodwill** and, in a consolidated balance sheet, is shown as goodwill. As in the case of the balance sheet of a single corporation, the amount of such goodwill need not be written down subsequently unless disposed of.

If X corporation acquires control of Y corporation through a purchase of the capital stock of Y at a price which is less than its book value the difference should be applied in a consolidated balance sheet (1) to reduce the value of any assets of Y which are believed to be overvalued, or (2) to create or increase **capital surplus.** Simple examples follow:

Capital Stock of Y Corporation Acquired by X Corporation for an Amount Exactly Equal to Book Value of Y's Assets

Assets	X Co.	Y Co.	Eliminations	Consolidated
Account receivable from Y Co	$10,000		$10,000	
Capital stock of Y Co	29,000		29,000	
Other assets	11,000	$40,000		$51,000
	$50,000	$40,000	$39,000	$51,000
Liabilities				
Account payable to X Co		10,000	10,000	
Other liabilities	15,000	1,000		16,000
Total liabilities	15,000	11,000	10,000	16,000
Capital				
Capital stock	30,000	1,000	1,000	30,000
Surplus	5,000	28,000	28,000	5,000
	$50,000	$40,000	$39,000	$51,000

Capital Stock of Y Corporation Acquired by X Corporation for an Amount in Excess of Book Value of Y's Assets

Assets	X Co.	Y Co.	Eliminations	Consolidated
Account receivable from Y Co	$10,000		$10,000	
Capital stock of Y Co	35,000		35,000	
Other assets	5,000	$40,000		$45,000
Goodwill			6,000	6,000
	$50,000	$40,000	$39,000	$51,000
Liabilities				
Account payable to X Co		10,000	10,000	
Other liabilities	15,000	1,000		16,000
Total liabilities	15,000	11,000	10,000	16,000

Capital				
Capital stock	30,000	1,000	1,000	30,000
Surplus	5,000	28,000	28,000	5,000
	$50,000	$40,000	$39,000	$51,000

Capital Stock of Y Corporation Acquired by X Corporation for an Amount Less than Book Value of Y's Assets

Assets	X Co.	Y Co.	Eliminations	Consolidated
Account receivable from Y Co	$10,000		$10,000	
Capital stock of Y Co	20,000		20,000	
Other assets	20,000	$35,000		$55,000
Goodwill		5,000	5,000	
	$50,000	$40,000	$35,000	$55,000
Liabilities				
Account payable to X Co		10,000	10,000	
Other liabilities	15,000	1,000		16,000
Total liabilities	15,000	11,000	10,000	16,000
Capital				
Capital stock	30,000	1,000	1,000	30,000
Capital surplus			4,000	4,000
Earned surplus	5,000	28,000	28,000	5,000
	$50,000	$40,000	$35,000	$55,000

In this last illustration corporation X pays nothing for the goodwill item that is carried by Y ($5,000). Therefore such value should be eliminated in the consolidated balance sheet. Corporation X also purchased the tangible net assets of corporation Y for $4,000 less than book value. It is possible that a revaluation of the tangible assets of corporation Y would result in a writing down of specific items to reflect the apparent overvaluation of $4,000, but unless and until such revaluation is made the tangible assets of corporation Y should be carried at book value, thus requiring the setting up of a capital surplus account in the consolidated balance sheet.

MINORITY INTEREST.—In a consolidated balance sheet capital which is held outside the controlling group should be shown separately at the book value of the assets which it represents. Different classes of capital stock held by minority interests and portions of surplus allotted thereto are shown separately or in one amount according to the purpose which the balance sheet serves.

90% of Capital Stock of Y Corporation acquired by X Corporation at a Price Exactly Equal to Book Value

Assets	X Co.	Y Co.	Eliminations	Consolidated
Account receivable from Y Co	$10,000		$10,000	
Capital stock of Y Co. (90% of total)	26,100		26,100	
Other assets	13,900	$40,000		$53,900
	$50,000	$40,000	$36,100	$53,900
Liabilities				
Account payable to X Co		10,000	10,000	
Other liabilities	15,000	1,000		16,000
Total liabilities	15,000	11,000	10,000	16,000
Capital				
Capital stock	30,000	1,000	1,000	30,000
Surplus	5,000	28,000	28,000	5,000
Minority interest in Y Co. (show number of shares)			2,900	2,900
	$50,000	$40,000	$36,100	$53,900

If less than 100% of the stock of Y corporation is acquired by X corporation and the amount paid is greater or less than the book value of the stock, the adjustment in a consolidated balance sheet to care for the difference should be for only the amount of the difference. A similar adjustment of values represented by the minority interest should not be made.

90% of Capital Stock of Y Corporation Acquired by X Corporation for an Amount in Excess of Book Value of Y's Assets

Assets	X Co.	Y Co.	Elimi-nations	Consoli-dated
Account receivable from Y Co	$10,000		$10,000	
Capital stock of Y Co. (90% of total)	31,500		31,500	
Other assets	8,500	$40,000		$48,500
Goodwill			5,400	5,400
	$50,000	$40,000	$36,100	$53,900
Liabilities				
Account payable to X Co		10,000	10,000	
Other liabilities	15,000	1,000		16,000
Total liabilities	15,000	11,000	10,000	16,000
Capital				
Capital stock	30,000	1,000	1,000	30,000
Surplus	5,000	28,000	28,000	5,000
Minority interest in Y Co. (show number of shares)			2,900	2,900
	$50,000	$40,000	$36,100	$53,900

INTERCOMPANY PROFITS.—On a strict basis intercompany profits included in assets of individual corporations should be eliminated in a consolidated statement but in practice this elimination is not usually made unless the amounts involved are comparatively large.

BONDS OF SUBSIDIARY NOT GUARANTEED.—Desirable accounting practice at the present time requires that all of the assets and liabilities of a wholly owned or substantially owned subsidiary be consolidated with the assets and liabilities of the parent company. The rule is not changed when the subsidiary incurs liabilities which are not directly assumed by the parent company.

FUNDED DEBT, CAPITAL STOCK AND SURPLUS.—The elimination of intercompany accounts practically clears the balance sheet of all items which do not appear in the ordinary balance sheet except when there are minority interests. In the case of funded debt, the consolidated balance sheet shows the funded debt of the holding company and of the subsidiaries in the hands of the public set forth in the usual way. Likewise the capital stocks of the holding company and the subsidiaries in the hands of the public are separately stated. In stating the surplus accounts the parts applicable to the holding company and to the subsidiaries are shown. A further separation is usually required to show surplus at date of acquisition (which is capital surplus so far as the holding company is concerned) and surplus earned after date of acquisition. When there are preferred stock issues, the minority interests in the surplus are computed on the basis of preferred stock at par, unless the preferred stocks are entitled to a share in the profits; in such cases an adjustment must be made.

The stock in the hands of the public and the share of surplus applicable thereto, including the share of earned surplus, may be shown together. As stated, the share of surplus accruing to the holding company is treated as a capital item; its share of subsequent surplus is merged with its earned surplus.

PARTIALLY OWNED SUBSIDIARIES.—In many cases the accounts of artially owned subsidiaries are not consolidated with those of the holding mpany. Ownership of 51% of the stock of a subsidiary may insure permanent legal and operating control; but the relations between the holding ompany and the subsidiary may be such as to render it unnecessary or objectionable to consolidate the accounts.

The Anaconda Copper Co. adopted the policy in 1920 of consolidating the ccounts of all subsidiaries which were 75% or more owned. So far as any niformity at all exists this represents **present practice.** Agreements regarding ote issues usually define subsidiary companies as those which are 75% or nore owned.

ATTITUDE OF FEDERAL RESERVE BANK OF NEW YORK.—The importance of the correct statement of the financial position of parent and subsidiary companies for purposes of determining the eligibility of commercial paper and its desirablity for rediscount, is set forth in the following quotations rom a letter written by J. H. Case, deputy governor of the Federal Reserve Bank of New York:

"We have always felt that where a corporation owns all or enough of the aptial stock of another corporation so that the latter corporation might be onsidered either a controlled, a subsidiary, or a proprietary concern, the alance sheet submitted should be the consolidated statement of the parent nd the subsidiary corporation in order that we might have full information n passing upon the eligibility as well as desirability of the paper for rediscount y this bank.

"In addition to the consolidated balance sheet last mentioned, we believe hat there should also be furnished in instances of this kind, separate, individual tatements giving the assets and liabilities of the parent company and each f the controlled, subsidiary, or proprietary concerns, as it sometimes happens hat the borrowing is done not by the parent or principal concern but by the ubsidiary. Moreover, notes of a purely holding company as a general rule re not eligible, although the paper of an operating subsidiary might be, provided its statement showed a reasonable excess of quick assets over current abilities.

"With regard to affiliated companies as distinguished from subsidiaries, hich may not be owned or actually controlled by another corporation but ffiliated through common ownership or otherwise, we do not feel that a conolidated balance sheet discloses the required information, but that each of he affiliated corporations should make separate financial statements.

"Unless complete, detailed statements as indicated herein were available, would be difficult to determine whether or not notes of this character would be ligible for rediscount by us, under the regulations of the Federal Reserve oard."

The **regulations of the Federal Reserve Board** dated August 15, 1924, contain the following with reference to financial statements required as evidence of he eligibility of promissory notes for discount:

"Whenever the borrower has closely affiliated or subsidiary corporations or rms, the borrower's financial statement shall be accompanied by separate nancial statements of such affiliated or subsidiary corporations or firms, nless the statement of the borrower clearly indicates that such note is both ligible from a legal standpoint and acceptable from a credit standpoint: *Provided, owever*, That the Federal reserve bank to which such note is offered for rediscount may waive this requirement until May 1, 1925, in any case where

such borrower and the affiliated or subsidiary corporations or firms have not issued separate financial statements prior thereto."

CORPORATIONS CONTROLLED BY AN INDIVIDUAL.—One of the major reasons for the growing practice of requiring consolidated accounts is the danger of **suppression of unfavorable affiliations.** When one corporation owns all or nearly all of the stock of one or more other corporations, good accounting practice requires consolidation; when an individual owns all or nearly all of the stock of more than one corporation, and there is no corporate ownership, the practice is not settled. The financial manager should be guided by the relations between the three or more parties in interest. When an individual owns the stocks of two corporations and the inter-relations are such that separate accounts might mislead those who are entitled to information, the accounts of all of the jointly owned properties, including the accounts of the individual, should be consolidated. In some cases consolidated accounts alone may not tell the whole story, and separate statements are necessary. It is obvious, however, that separate statements may not exhibit the status of the affiliated interests as a unit; in such cases consolidated statements supported by separate statements should be prepared.

CONSOLIDATED INCOME STATEMENTS.—A consolidated income statement, like a consolidated balance sheet, is made up of the totals of items in the individual statements with intercompany items eliminated.

UNDESIRABLE PRACTICE.—Certain holding companies continue to show as gross earnings only such dividends as have been received during the period from the subsidiary companies. Such practice merits the strongest censure. It is sometimes contended that, inasmuch as the only legal method which a corporation has of distributing profits is by means of dividends, it is improper for a holding company to take credit for part or all of the earnings of a subsidiary company which had not been so distributed. This sounds well in theory, but in practice it is the argument of dishonest men. Almost invariably the sole reason for taking advantage of this technicality is that one or more of the subsidiaries have incurred a net loss in excess of the aggregate profits of all of the companies, and the management of the holding company, wishing to conceal such loss, seeks by subterfuge to justify the action.

The financial manager who is responsible for the preparation of consolidated statements cannot be too careful on this point. Whenever a holding company owns and controls one or more subsidiaries, the profits or losses of the subsidiaries must be stated for the same period as that of the holding company and consolidated. Any other method may lead to gross abuse.

HOLDING COMPANY'S SHARE OF PROFITS AND LOSSES.—If a profit is shown, the amount to be included as the share of the holding company is the proportion that the stock, owned by the holding company, bears to the total capital stock outstanding. It must be assumed that the **minority stockholders** will eventually receive through dividends their share of the profits.

If a loss is shown, and if losses form the chronic condition of the subsidiary, it may as well be recognized that the holding company must assume all of them. This, of course, applies only to those cases in which a subsidiary company is so largely owned by the holding company that the minority interest cannot be depended upon to advance its share of the funds necessary to take care of the loss.

The holding company may carry these advances as an asset, but the financial manager should only place such a value upon these items as the facts warrant. It is reasonably certain that the final decision will be to include all of the loss

in the consolidated income account, although something less than 100% of the stock of the subsidiary is owned.

Changes in Assets and Liabilities

The financial statements for a given period (other than condensed statements for publication) are incomplete if they do not include, in addition to the balance sheet at the end of the period and the profit and loss statement for the period, a statement showing the changes in assets, liabilities and net worth during the period. A comparative balance sheet showing amounts at the beginning and at the end of the period and increases or decreases during the period, serves this purpose. The **comparative balance sheet** may often be supplemented with a statement showing the changes alone. Either form of statement shows the effect of the operations of the period on the financial condition of the business, whereas the profit and loss statement shows merely how much profit or loss resulted and how the profit or loss was made up. A simple statement of changes in assets and liabilities follows:

Increase in Capital

Increase in capital stock:		
Preferred stock issued at par		$100,000.00
Increase in surplus:		
Net profit	$500,000.00	
Less dividends paid	200,000.00	300,000.00
Total increase in capital		$400,000.00

Increase in Net Assets

Increase in current assets		200,000.00
Decrease in current liabilities		50,000.00
Increase in net current assets (see below)		250,000.00
Increase in plant (additions $200.000 less depreciation $50,000)		150,000.00
Total increase in net assets		$400,000.00

Increase in Working Capital

Increase in current assets:		
Cash	$ 25,000.00	
Accounts receivable	135,000.00	
Inventories	100,000.00	
	260,000.00	
Less decrease in notes receivable	60,000.00	
Increase in current assets		200,000.00
Decrease in current liabilities:		
Notes payable	50,000.00	
Accounts payable	50,000.00	
	100,000.00	
Less increase in federal taxes	50,000.00	
Decrease in current liabilities		50,000.00
Increase in net current assets		$250,000.00

Ratios and Comparisons

STANDARD RELATIONSHIPS.—The relationships of the various elements of balance sheets and profit and loss statements are just as important as the elements themselves. Certain more or less standard relationships have been established for business in general and for particular lines of business. Some standards apply only to individual businesses and are not known to outsiders. Standards should be determined so far as possible by each concern. Compari-

sons with ratios derived from published statements of other concerns in the same line of business may help to disclose the strong and the weak places in the financial and operating organization.

Comparisons, both of facts and relationships, with standards and with previous conditions and results must be made before the full significance of a statement of the financial condition of a concern or a statement of the results of operations can be discerned. An individual who is constantly in touch with a business may remember all important facts and relationships and may not need information for comparisons, but an individual who is not close enough to a business to rely on his memory will need facts and relationships in comparative form.

BALANCE SHEET RATIOS.—In his "Borrowing From Your Bank," S. H. Patterson makes the following observations on the balance sheet relationships:

"The segregation of the balance sheet into quick and slow assets and liabilities is the first step in determining **liquid condition.** The next step is a comparison with similar figures for preceding years to see whether the latest figures show an improvement or a less favorable condition.

"Another important test to bring out any unusual conditions is made through the **method of ratio comparisons.** Relationship between items or groups of tems when shown by ratios, and compared with average ratios for similar businesses, discloses rapidly and conclusively facts which would otherwise be difficult to detect. Of course, a fixed set of ratios cannot be used in all lines of business, but where there is a variation from the general average, it indicates that there is some unusual factor or condition to be investigated and studied to determine whether an exception should be made in the case under review.

"To attempt to express the various ratios in figures might be misleading, as some banks work on higher ratios than others, but the manner of computing certain ratios by some credit men is as follows:

Ratios to be Determined	How Determined
Cash position	Current assets (minus inventory) divided by current liabilities.
Quick position	Current assets (including inventory) divided by current liabilities.
Inventory position	Inventory divided by current assets.
Turnover of capital	Net sales divided by capital, surplus and funded debt, at beginning of year.
Net profit on sales	Net income before dividends divided by net sales.
Utilization of plant	Cost of product divided by plant and building account.
Utilization of net worth	Net sales divided by amount of net worth.
Fixed interest charges	Net income before interest on funded debt divided by interest on funded debt.
Debt position	Total liabilities except capital and surplus divided by capital and surplus.
Fixed assets position	Plant and permanent investments divided by capital and surplus.
Trend of collections	Receivables divided by net sales.
Reserve position	Reserves divided by total assets.
Contingent position	Contingent liabilities divided by capital and surplus.
Surplus strength	Total tangible assets divided by surplus account.

"It is, however, a general practice among banks (dependent to a certain extent on the kind of business) to set as general standards that:

Cash should be at least 12% of the amount of the current liabilities;
Cash and receivables should at least equal the total current liabilities;
Current assets should be at least double the amount of current liabilities;
Inventories should be about 50%, and never exceed 60% of current assets.

"More concretely expressed this may be indicated as follows:

		% of Current Assets
Cash	$ 4,800	6%
Receivables	35,200	44
Inventory	40,000	50
Total current assets	$80,000	100%
Current liabilities	40,000	
Per cent of current assets to current liabilities		200%

"It is further held generally that:

Accounts receivable should always represent merchandise transactions and that notes receivable (excluding trade acceptances) should be small in proportion to the accounts receivable, particularly in a business where there is a rapid turnover of merchandise;
Notes payable should never exceed the net worth;
Notes payable for merchandise (other than trade acceptances) should be small, as otherwise it indicates failure to take advantage of discounts;
Unsecured notes payable to banks or sold through brokers should not exceed one-third of the net worth. (Net worth is the amount of capital and surplus after deducting goodwill, trade-marks, patterns, etc., except the amount of their known realizable cash value);
Annual sales should equal and in general be greater than the amount of capital;
Net income before interest should be double the interest on funded debt.

"While a bank may have definite standards for the purpose of disclosing weak spots in a business, that does not necessarily mean that it will not make a loan under less satisfactory conditions, if there is confidence in the men running the business or if other conditions indicate that the business is improving its financial position."

INCOME AND EXPENSE RATIOS.—Some important income and expense relationships follow:

Costs, expenses and profits to sales or gross income;
Net profits to capital stock, net worth, and total capital used;
Inventories, accounts receivable, fixed assets and total capital to gross business;
Indirect expenses to direct expenses;
Profits from various departments, products and other sources to amounts of investment.

Financial Reports

REPORTS FOR VARIOUS PURPOSES.—Usually a single form of financial report (including financial statements) will not meet all the needs of a concern. Reports and statements for different purposes must vary both in arrangement and in volume to serve their varying purposes satisfactorily. A report which satisfies the needs of an executive who is intimately acquainted with all the

ramifications of a business may fall far short of supplying the needs of a new executive who is just beginning to get acquainted with the business. A report which is prepared for publication and which is, therefore, condensed will not be sufficient for a banker who is to underwrite an issue of the concern's securities.

Not only must there be variations in the volume of information presented in reports for different purposes, but there must also be variations in the form in which the reports are prepared. Idiosyncrasies of individuals for whom reports are prepared as well as differences in the uses which the different individuals make of the reports are sometimes important.

REPORT TO STOCKHOLDERS.—The stockholders compose the corporation and are entitled to information as to its condition and progress. Frequently, however, there are trade reasons for withholding the more confidential details from them. It is obvious that if a full showing of the corporate business and the results of its operations were made annually to the stockholders of a corporation, it would become public property and serious results might follow. Primarily for this reason, but also because the stockholders do not need nor usually desire fully detailed statements of the corporate business, the reports made to the stockholders are usually general in their character. But there is a trend towards greater detail and more information. On the whole the more prosperous the corporation, the more the stockholders learn of actual conditions. It may well be that before long a "short and simple" report will be referred to as the annals of the poor corporation. The report to the stockholders generally takes the form of a statement of earnings designed to give a view of the company's operations, together with a condensed balance sheet. In many corporations, the **treasurer** makes no independent report, the president's report covering the general affairs and conditions of the corporation together with its finances and plans for the future. This is true, for instance, of the United States Steel Corporation, where but one formal report—that of the chairman of the board—is made to the stockholders. In the majority of smaller or closely held corporations, however, the treasurer makes his own report to the stockholders, covering in it such details of the financial affairs of the corporation as the directors deem it expedient for the stockholders to know; or, to express it otherwise, all financial details of interest to the stockholders, the publication of which will not result in injury to the company's business.

Where but one formal report is made to the stockholders and this report is made by the president, the treasurer or the treasurer's department will, of course, supply the president with material for the financial portion of the statement. In any case, the two officials should work in sufficiently close touch to prevent any serious overlapping of their reports.

PERIODICAL REPORTS.—The chief executives of most large concerns are kept informed in regard to the financial condition of their businesses and the results of operations through reports issued periodically throughout the year in addition to special reports issued as needed. **Complete reports** are usually issued each month, but reports relative to certain phases of the business may be issued on a daily or weekly basis.

Monthly reports for officers, executive committees and directors should contain concise explanations of important items or transactions and statements such as the following (see also Sections 4 and 5):

Balance sheet in detail with supporting schedules.
Comparative condensed balance sheet, showing comparison with beginning of month and beginning of year.

Income statement (with supporting schedules) for month and year to date compared with same month and same part of preceding year.
Statements of sales, costs and gross profits by departments, products, etc.
Comparisons of actual income, expenses and changes in assets and liabilities with budget.
Statistics, ratios, etc.

Periodical reports relating to the affairs of particular departments and divisions of the business should be rendered by the financial manager to heads of departments and divisions. These reports should ordinarily contain only such information as is required for the efficient conduct of the activities of the particular department.

REPORTS TO THE TREASURER.—The outline below of information required by the treasurer is taken from "Financial Reports for Industrial Executives" by the Bureau of Commercial and Industrial Affairs of the Boston Chamber of Commerce. In order to provide for the financial needs of the company, the treasurer requires information on the following five points:

1. Immediate Cash Requirements.—By the immediate future is meant a period one month in advance. The predictions for this period can be made in more detail and with greater accuracy than is possible for a longer period. All individual items of definite amount and maturity such as notes receivable or payable can be accurately predicted. Other items can be predicted on the basis of the actual figures and relationships in the past. The average payments for supplies and pay roll and the average receipts from sales, for example, would form the basis for predicting the amount of these items for the coming month. A statement of the **contingent liabilities** of the company should probably be made once a month, too.

2. Future Cash Requirements.—The treasurer needs to know how matters of **business policy for the future,** such as expansion of plant and equipment, addition of new lines of product, dividend policy, prospective issues of new securities, etc., will affect the financial requirements. He also wants to know how the **business cycle,** the **seasonal movement** and the normal increase in the company's business will vary the need for cash.

Some of the larger cash transactions, such as issue of bonds and stocks, retirement of bonds, purchase of treasury stocks, sale or purchase of fixed assets and payments of bond interest or principal, are definitely known both as to amount and maturity some time in advance. These items can be accurately estimated and by means of a tickler file can be automatically brought to the attention of the treasurer. The effect of these items can be studied by showing them in estimated balance sheets as of various future dates.

Future cash requirements would ordinarily cover a period more than 3 months ahead.

3. Present Cash Position.—A statement of present cash position gives the treasurer accurate information on the previous day's transactions without going into details of past transactions. It also gives him the exact situation at the beginning of the current day, both as regards cash and readily marketable securities. It will also tell him of the day's requirements.

4. Past Cash Transactions.—The treasurer needs information in regard to past cash transactions not so much as a check on the operation of the company, but for the purpose of enabling him to compare the actual figures of the past with the estimated ones, to study trends, and to estimate for the future. The items and relationships which are to be presented will depend largely upon the

ones needed for the statement of present cash position. This information should probably be obtained once a month.

5. Efficiency of Financial Department.—The financial executive should have some means of knowing how well his department is progressing toward the aims stated above. He should know whether his department is operating at an excessive cost or not, and, if so, why. He should also know whether or not the business is being provided with sufficient funds or too much cash, and whether or not his loans are costing him too much. This information also should probably be presented once a month.

The forms at the end of this Section (Figs. 12 to 24) are suggested in "Financial Reports for Industrial Executives" as appropriate forms for presenting various types of financial reports to the treasurer.

CERTIFIED STATEMENTS.—Some few years ago the American Association of Public Accountants, now the American Institute of Accountants, addressed an inquiry to the bankers throughout the country asking them to express their attitude toward certified financial statements as a basis for credit. Eight hundred and forty-four replies were received and classified as follows:

Strongly in favor	121
Favorable	501
Opposed	15
Strongly opposed	5
Non-committal	202

It is obvious from the foregoing that the financial manager who arranges to have his accounts certified to by professional accountants may greatly benefit therefrom and it cannot possibly do him any harm.

REQUIREMENTS OF FEDERAL RESERVE BOARD.—The following requirements relating to financial statements are taken from the Regulations of the Federal Reserve Board dated August 15, 1924:

REGULATION A—SECTION IV. PROMISSORY NOTES

Evidence of Eligibility and Requirement of Statements.—A federal reserve bank must be satisfied by reference to the note or otherwise that it is eligible for discount. The member bank shall certify in its application whether the note offered for discount has been discounted for a depositor other than a bank or for a non-depositor and, if discounted for a bank, whether for a member or a non-member bank. The member bank must also certify whether a financial statement of the borrower is on file with it.

A recent financial statement of the borrower must be on file with the member bank in all cases, unless the note was discounted by a member bank for a depositor (other than a bank) or for another member bank, and—

1. It is secured by a warehouse, terminal, or other similar receipt covering goods in storage, by a valid prior lien on livestock which is being marketed or fattened for market, or by bonds or notes of the United States; or
2. The aggregate of obligations of the borrower discounted and offered for discount at the federal reserve bank by the member bank is less than a sum equal to 10 per cent of the paid-in capital of the member bank and is less than $5,000.

REQUIREMENTS OF NEW YORK STOCK EXCHANGE.—The requirements of the Committee on Stock List of the New York Stock Exchange, published on July 1, 1924, contain the following provisions with reference to financial statements:

REQUIREMENTS FOR ORIGINAL LISTING

Every application for an original listing of capital stock shall recite:

Financial statements; (1) earnings for preceding five years, if available with interest harges, depreciation and federal taxes; (2) income and surplus account of recent date r at least two years, if available; (3) balance sheets of same dates; (4) balance sheet iving effect to recent financing, if any; (5) similar accountings for predecessor, constituent, ubsidiary, owned or controlled companies; (6) corporations consolidated within one year revious to date of application, income and surplus account and balance sheet of all com- anies merged and balance sheet of applying corporation; (7) if in hands of receiver ithin one year previous to date of application, (a) income account and balance sheet of eceiver at time of discharge, and (b) balance sheet at close of receivership.

An application for an original listing of bonds shall recite all information required for sting stock.

REQUIREMENTS FOR LISTING OF ADDITIONAL AMOUNTS

Refer to previous applications and last application by number and date, and recite:

Income account, surplus account and balance sheet of recent date, also for constituent, ubsidiary, owned or controlled companies, or a consolidated income account, consoli- ated surplus account and a consolidated balance sheet.

PAPERS TO BE FILED WITH APPLICATIONS

In addition to application for listing, the following papers must be filed:

For Stocks:
- Certified copy of income account, surplus account and balance sheet contained in application.

For Bonds:
- All papers required for listing stocks.

For Securities of Reorganized Corporations:
- All papers required for listing stocks and bonds.
- Certified income and surplus account and balance sheet at close of receivership, if available.
- Certified balance sheet at date of reorganization.

For additional amounts:
- (Requirements similar to those for original listings.)

For Certificates of Deposit, Voting Trust, etc.:
- Papers required for listing stocks and bonds.

AGREEMENTS

To be made part of applications where applicable:

To publish once in each year and submit to the stockholders, at least fifteen days in dvance of the annual meeting of the corporation, a statement of its financial condition, consolidated income account covering the previous fiscal year and a consolidated balance heet showing assets and liabilities at the end of the year; or an income account and bal- nce sheet of the parent company and of all constituent, subsidiary, owned or controlled ompanies.

STATEMENTS PREPARED FOR STOCKHOLDERS.—An example of an ncome statement and a balance sheet prepared for stockholders follows:

Calendar Years—	1925	1924	1923	1922
Gross Income less Operating Expenses	$1,740,627	$2,088,442	$2,298,063	$1,094,534
Depreciation	172,932	176,132	160,911	130,162

Surplus	1,462,216	1,755,403
Total	$12,733,085	$13,023,349

REQUIREMENTS OF NEW YORK CURB MARKET.—The rules and regulations of the New York Curb Market contain the following:

It shall be required of all listed companies:

1. To publish annually an income account and balance sheet.

2. To publish and submit to the stockholders at least ten days in advance of the Annual Meeting of the Company, a statement of its physical and financial condition, an income account covering the previous fiscal year, and a balance sheet showing assets and liabilities at the end of the year; also annually an income account and balance sheet of all constituent, subsidiary, owned or controlled companies, and to furnish the Exchange with certified copies thereof.

Information in connection with preparation of documents to be submitted in compliance with listing requirements.

Under requirement Nos. 1 and 1a the following procedure should be strictly observed:

The accountant must be a recognized practicing public accountant in good standing.

The Balance Sheet must be prepared in accordance with good accounting principles.

Schedules must accompany the Balance Sheet showing a clear analysis of the following:

PROPERTIES: How acquired. If by stock or cash. Give amounts of each.

UNPAID STOCK SUBSCRIPTIONS, and stock sales agreement, if any.

CAPITAL STOCK: How issued and for what purpose. Amount realized. Explain in detail.

EARNINGS AND EXPENSES: Either a complete detailed Profit and Loss Statement or in the case of companies which are developing and have not reached production stage, a statement of Cash Receipts and Disbursements will be accepted.

SURPLUS: How acquired. Complete condensed analysis prepared for a number of years. Paid-in Surplus and other increases must be clearly separated from Earned Surplus.

All other assets or liabilities which should properly be analyzed to clearly set forth the financial condition.

All accounts must be in accord with minutes of meetings of Stockholders and Board of Directors.

We suggest that the accountant when certifying use the following form:

"I have examined the minutes of all meetings of the stockholders and Board of Directors and the books of accounts of the.....Company and hereby certify that the accompanying balance sheet, more fully shown in the detailed exhibits and schedules which are a part thereof, truly represents the condition of the said company as at .....”

All financial statements are submitted to the Consulting Accountant appointed by the New York Curb Market for approval as to form, substance and agreement with the requirements of the By-Laws. Any inquiries as to accounting procedure will be answered by him only through the medium of the Exchange.

REPORT FOR PROSPECTIVE PURCHASER OR INVESTOR.—A report for a prospective purchaser of or investor in a business is not complete if it contains only balance sheets and income statements of recent years. Unless the purchaser or investor is fully informed about the situation, such a report should, according to circumstances, contain pertinent information relative to such subjects as the following:

Description of plant or other **property**; including location, condition, capacity, etc.
Description of **products**; including trade names, grade, competitive features, etc.
History of business
Organization
Methods of doing business
Future prospects

GRAPHIC CHARTS.—Graphic charts should be used in financial reports whenever they will serve to present information more clearly than other forms.

STATEMENT OF CASH RECEIPTS AND DISBURSEMENTS.—A statement of cash receipts and disbursements should show **cash on hand at the beginning and the end of the period** and **receipts and disbursements** during the period detailed or classified according to the requirements of the particular case. A simple example follows:

CASH RECEIPTS AND DISBURSEMENTS

YEAR ENDED DECEMBER 31, 1925

CASH ON HAND January 1, 1925		$ 50,275.61
RECEIPTS:		
Accounts Receivable:		
Customers	$150,125.60	
Officers	10,000.00	
Bank Loans	25,000.00	
Sale of Capital Stock	20,000.00	
Interest on Bank Balances and Liberty Bonds	1,261.32	
Miscellaneous	116.25	206,503.17
		256,778.78
DISBURSEMENTS:		
Accounts Payable—Merchandise and Expenses	106,776.81	
Bank Loans	25,000.00	
Interest on Bank Loans	750.00	
Dividends	70,000.00	202,526.81
CASH ON HAND December 31, 1925		$ 54,251.97

STATEMENT OF AFFAIRS.—The balance sheet is a statement of the financial condition at a specific date of a going concern. Such a statement is adequate for ordinary needs so long as the concern continues to operate and continues to maintain its standing, but if the concern faces the prospect of liquidation the liquidating value of its assets becomes important and a statement showing the financial condition of the concern on the basis of liquidating values is required. Such a statement, which is sometimes called a statement of affairs, is designed to show the **estimated liquidating value of assets** in the order in which they are likely to be liquidated and liabilities in the order of priority. If any liabilities are fully secured by specific assets such liabilities are shown as offsets to the particular assets, and if any liabilities are partially secured by specific assets such assets are shown as offsets to the particular liabilities. An example of a statement of affairs is shown on page 240.

A. B. C. COMPANY

STATEMENT OF AFFAIRS

As at December 31, 1925

ASSETS	Book Value	Estimated Shrinkage	Expected to Realize
Cash	$ 1,000		$ 1,000
Accounts receivable	50,000	$ 10,000	40,000
Inventory	100,000	50,000	50,000
Land and buildings	100,000	60,000	(a) Contra
Machinery and equipment	100,000	75,000	25,000
	$351,000	$195,000	116,000
Deduct:			
Claims having priority:			
Accrued payroll, (b) contra $ 2,000			
Estimated liquidating costs 30,000			32,000
Estimated amount available for payment of unsecured claims			84,000
Estimated deficiency to be borne by creditors			26,000
Total unsecured claims			$110,000

LIABILITIES	Book Value	Expected to Rank
Unsecured claims:		
Accounts payable:		
Trade	$ 40,000	$ 40,000
Others	10,000	10,000
Secured claims:		
Mortgage on real estate $100,000		
Less: Estimated value of security, (a) contra 40,000		(a) Contra
Balance unsecured $ 60,000	100,000	60,000
Claims having priority:		
Accrued payroll, (b) contra	2,000	(b) Contra
	152,000	110,000
CAPITAL		
Capital stock	150,000	
Surplus	49,000	
	$351,000	$110,000

STATEMENT OF DEFICIENCY.—A statement of affairs, or any statement designed to show the financial condition of a concern on the basis of liquidation, is often accompanied by a reconciliation of the concern's balance sheet and its statement of affairs. This statement is sometimes called a deficiency account or a statement of deficiency.

A. B. C. COMPANY

STATEMENT OF DEFICIENCY

As at December 31, 1925

Estimated shrinkage of assets, per statement of affairs:		
Accounts receivable	$ 10,000	
Inventory	50,000	
Land and buildings	60,000	
Machinery and equipment	75,000	$195,000
Estimated liquidating costs		30,000
		225,000
Less: Capital stock	150,000	
Surplus	49,000	199,000
Deficiency to be borne by creditors		$ 26,000

Purpose of Classification of Expense	289

SECTION 4

BUDGETS

WHAT A BUSINESS BUDGET IS.—The business budget is a modern adaptation to business of an ancient method of controlling public or social receipts and expenditures. It is one of the rare instances in which the business man has been able to learn something from the politician. The business budget is not in general use, but businesses which have adopted the budget system are the most progressive and profitable in the country. It is an innovation which may be tried out without risk.

The budget is prepared from estimates or forecasts, for a definite future period, of the expected operations in each functional department of a business. The forecast of each department is dependent upon the anticipated activities of all other departments; for example, a manufacturing program must be based upon expected sales and the estimate of sales is limited by the producing capacity of the factory.

THE TENTATIVE BUDGET.—The forecasts of all departments are combined to show a statement of estimated cash receipts and expenditures, an estimated income or operating statement and an estimated balance sheet as at the end of the period. These three statements as first estimated and compiled comprise a tentative budget to be submitted to the heads of the business for revision and approval. Their responsibility is to denominate the volume of sales which in their judgment ought to shape financial policy for the ensuing period. The entire budget is made to co-ordinate with the policy thus dictated. **Standards of performance** are established for certain departments while **limits of expenditure** are placed upon others. Overhead expenses, costs and projects for extensions and replacements, as first estimated, are adjusted and readjusted until a budget is finally struck that appears to insure fair profits and a sound financial condition. The **approved budget** becomes, for the time being at least, the program for the forthcoming period.

Actual results are compared with estimates every month and plans are revised instantly whenever the trend of affairs is favorable to a change in the budgetary program, or the executives take a different view of future prospects.

A well co-ordinated budget can be developed only by continuous operation. If the procedure is permitted to lapse in a period of prosperity, no budget will be in existence as signs of adversity appear and at that moment the need of a budget is most imperative. In prosperous times profits ought to be greater with the aid of a budget than without one.

Budgetary methods suitable for a typical manufacturing business, as described in this section, have their applications in every industry, in mercantile establishments and other enterprises. Applications differ in degree, not in principle. If one commodity is produced and sold, the problem is relatively simple; as commodities multiply and lines are diversified, the problem becomes complex.

The **purpose of a budget** is co-ordinated control of the following factors which are present in every business:

1. Margin between selling prices and costs—that is, gross profit.
2. Regulation of expenses—which with (1) determines net profit.
3. Investment in inventories and rate of turnover.
4. Expenditures for plant additions or extensions, betterments, improved equipment, replacements and repairs.
5. Availability of capital: short-term notes, long-term notes, bonds and capital stock of different classes.
6. Policy relative to dividends and appropriations of surplus profits.

THE BUDGET PERIOD.—The budget period will vary even with concerns engaged in the same line of business. Plans for the future must allow for financing, purchasing, designing, production and distribution of the products. Into every budget calculation there enters the element of time; for instance, the time from receipt of materials to delivery to the first operation, the time of manufacture and the time that finished goods shall be carried until shipped.

Ordinarily the budget period should not be less than the time required for a complete cycle from purchase of raw materials to sale of finished goods. In a seasonal business the budget period should be long enough to include the months of greatest activity and those of comparative dullness. Periods of three months, six months or one year are the more common terms. There should be a **monthly revision** of the budget: the first month should be eliminated and a new month should be added, so that a continuous forecast and operating plan are scheduled every month for a standard term.

If a concern has insufficient capital to finance its operations, its chances of securing the needed additional capital on favorable terms ought to be better when a summary of the budget with a definite plan for repayment of loans is submitted with the application for funds. Such a plan would hardly be effective if the budget should be for too short a period. Three months would be the minimum. The illustrations of procedure in this section are based on a budget period of six months.

ORGANIZATION FOR PREPARATION OF THE BUDGET.—The man responsible for the preparation of the budget should be intimately familiar with the affairs of the concern. He should understand the operating problems thoroughly and be possessed of native common sense and good judgment. For a business of any considerable size the head of the budget department will need a staff of assistants.

The **first step** in the establishment of budget routine is to classify activities or functions and to fix the responsibility for the preparation of estimates of the probable operations for the budget period. Selling, production, purchasing, general administration and financing are the main functions in any business.

Ordinarily, each of these functions is specifically in charge of an officer of the corporation or a partner of the firm. He is the one responsible for preparing an estimate of the probable revenue and expenditure within his particular field. The chief executives should be the members of a **budget committee** to revise and finally approve the budget unless the board of directors assumes responsibility for final approval.

Functional heads, of course, will take advantage of the knowledge and experience of employees and, wherever possible, should require written estimates from competent employees, to be approved or revised according to the judgment of their superiors. In the selling field, for example, preliminary estimates of the probable volume of business for the budget period might be prepared in

the first instance by salesmen, confirmed or revised by the sales manager, and submitted for approval to the officer or partner in charge of sales. No rule can be laid down for the routing and approval of estimates from the lowest to the highest authority; much depends upon the character of the organization and the caliber of the employees. In the event of differing opinions on major estimates, more than one forecast may deserve consideration by the budget committee, especially the varying forecasts of expected volume of business which, as previously stated, is the primary factor to be settled by the committee as the foundation of the entire budget.

It is the duty of the individual in charge of preparation of the budget to see that the **departmental forecasts** and other sections of the budget are compiled well in advance of the beginning of the budget period; to furnish functional heads with information relative to past performance; to confer with functional heads for the co-ordination of their forecasts; to prepare the estimated balance sheet and statement of profit and loss; to gather all the data and to submit it in an orderly manner to the budget committee.

THE SALES FORECAST—GAUGING SALES POSSIBILITIES.—All the available knowledge and experience in the organization should be brought to bear upon the problem of forecasting probable sales. Responsibility for the preparation of the sales forecast, as well as for other forecasts related to selling described later, rests upon the sales executive. The budget head should see that the proper forms are supplied, together with helpful information regarding the sales in prior periods.

The following outline of desirable information for the purpose of gauging sales possibilities is found in a leaflet entitled "The Sales Budget" issued by the Metropolitan Life Insurance Co.:

(A) Desirable Information Regarding the Past

1. Sales of the last and preceding years shown in dollars and quantity for:
   - (a) Commodities
   - (b) Styles
   - (c) Departments
   - (d) Agencies and branches
   - (e) Salesmen
   - (f) Territories

(B) Desirable Information Regarding the Present

1. Statistics of the individual company and, if procurable, for the industry:
   - (a) Production
   - (b) Shipments and sales
   - (c) Orders—new, canceled and unfilled
   - (d) Plant capacity
   - (e) Percentage of present operation to capacity
   - (f) Operating costs
   - (g) Wages and number of employees
   - (h) Stocks on hand
2. Statistics applying to industries generally (popularly known as "business barometers"):
   - (a) Pig iron and bituminous coal production
   - (b) Stock exchange quotations
   - (c) Current quotations for week, of cotton, corn, copper, etc.
   - (d) Weekly Federal Reserve report and government crop report
   - (e) Wholesale price indices
   - (f) Bank clearings

(g) Foreign trade
(h) Gold movements
(i) Interest rates
(j) Status of federal finances
(k) Business failures
(l) Corporation earnings
(m) Railroad net earnings, etc.

The foregoing statistical information is obtainable through:

(a) Daily papers
(b) Financial journals
(c) The private statistical services
(d) The monthly bulletin of the Federal Reserve Board
(e) The monthly Survey of Current Business and the issue of Commerce Reports, both published by the U. S. Department of Commerce
(f) The publications of the U. S. Department of Labor

(C) Helpful Information in Determining Sales Possibilities

1. Population:
   By cities, towns, countries and in large cities by blocks, for staples, such as salt, sugar, coffee.
2. Users—Number of:
   Where such indicates the limit of consumption, e.g., market for electrical devices fixed by number of users of electricity.
3. Occupations:
   As indicating specific needs, e.g., physicians, as buyers of automobiles.
4. Climate:
   Season of heavy rain-fall or snow, e.g., rubber goods.
5. Enterprises—Number of:
   For certain commodities the firm, rather than the individual, is the logical purchasing unit—applicable to office appliances.
6. Readers—Number of:
   Of newspapers and magazines in any given territory, e.g., soap and toilet articles marketed largely through advertising.
7. Local Business Conditions:
   Affect commodities variously—staples, like salt, inconsiderably, farm implements and building material directly.

PREPARATION OF SALES FORECAST ILLUSTRATED.—Work upon the sales forecast should start early so that it may be completed in time to prepare the correlated production, purchasing and financing forecasts well in advance of the beginning of the budget period. Sufficient time must be allowed to put into execution the most carefully laid plans if they are to become effective within the budget period.

No formal method of preparation will be adapted to all sales departments. A simple case, however, will illustrate the principles that are applicable to the needs of any manufacturing business.

A corporation manufactures a line of goods, all of the same general class, numbering 50 different grades and styles. The product is sold by the company's own organization in every state of the Union. The vice-president in charge of sales is assisted by a general sales manager. The states of the Union are classified into **sales territories** for each of which there is a resident manager who employs the salesmen to call upon the trade.

Each salesman estimates the **quantity of goods** that he will be able to dispose of each month during the forthcoming period at prices established by the

house. As an aid to him in making fair estimates he should be supplied with a statement of the quantities sold in his section of the territory during past months. The estimate should be in terms of quantities for each commodity.

The **salesmen's forecasts** are submitted to their **territorial managers,** who make such revisions as their judgment may dictate. The temperament of the salesman will color his forecast and the manager must not be color-blind. Optimistic forecasts have to be cut down; pessimistic ones may be raised; unbalanced ones need to be adjusted. Each territorial manager prepares a summary of the revised forecasts of his salesmen and forwards it to the general sales manager at the home office. These summaries are in terms of quantities representing the total sales expected from the territory for each month of the budget period.

The forecasts for each territory are reviewed by the **sales manager.** He makes revisions according as experience has taught him to modify up or down the forecasts of his individual subordinates. Other revisions he will make in the light of his knowledge of general business conditions and the limitations prescribed by sales policy, production capacity and financial considerations. The several territorial forecasts are then summarized to show the total expected sales in all territories by months and for the whole period.

The sales forecast is now ready for submission to the other functional heads, each of whom should consider its effect upon his particular department. Are the production facilities of the concern adequate to accomplish the expected deliveries? Can the quantities planned for individual items be produced economically? Can raw materials be purchased to meet the requirements of production? Will the financial resources of the company permit the handling of the expected volume of business? Do the forecasted sales represent goods that will yield the maximum profit? It is not always possible to confine a business to the articles which will yield the greatest profit; frequently certain styles or models must be sold at a loss in order to complete the line and assist in the disposal of the profit-producing goods. Any tendency to stress the low price and low profit goods must be curbed if a fair average profit is to be expected on the entire business.

From the salesman's point of view a sale has been completed when the customer places the order, while those who are responsible for the preparation of the budget are concerned chiefly with **expected shipments.** Some businesses sell goods from accumulated stock; if orders are for immediate delivery, orders secured during a month may be taken for budgetary purposes as equivalent to shipments in that month. In most businesses the volume of orders taken in a month is no measure of the shipments for that month. The forecasts of the salesman will represent expected orders, and whether he should be required to translate orders into deliveries or whether this should be done by his immediate superior or by the general sales manager at the home office is a question for each concern to decide for itself. In any event, before the sales forecast is submitted to the functional heads it should be adjusted to represent shipments.

Up to this point the sales forecast is in terms of quantities. While the application of selling prices and the calculation of sales values for the various preliminary estimates might assist judgment in making revisions, the clerical labor involved is considerable, especially where the estimates are subject to a number of revisions. When the forecast is submitted for the consideration of functional heads, however, **prices and sales values** should be shown, as well as quantities. The preliminary estimates should be readily available for reference, also, to assist those who must now approve or again revise the sales forecast upon which the preparation of other forecasts is largely dependent.

FORMS ILLUSTRATING PRELIMINARY ESTIMATES AND SALES FORECAST.—Two forms illustrated herewith will serve the purposes of the preliminary estimates and the sales forecast as described above. Form in Fig. 1 showing quantities only is for the **preliminary estimates by salesmen** and for the summary by each territorial manager. Information regarding sales made in the same period of the previous year should be entered in the column

PRELIMINARY SALES ESTIMATE

PERIOD FROM ..... 19.. TO ..... 19..

TERRITORY ..... SALESMAN .....

provided for that purpose before the forms are distributed to the salesmen. The form in Fig. 2 is intended for the forecast of both quantities and values. Details for each territory may or may not be entered on this form; if useful, the data should be shown. A separate sheet should be used for each month and a summary should be prepared to show the total anticipated sales for the entire budget period. When completed, all the details of the forecast, including

FIG. 2. Sales Forecast

the preliminary estimates, should be turned over to the **budget head** to be submitted later with other forecasts to the budget committee. On the form in Fig. 2, the column headed "Actual Sales" is for the later comparison of actual results with the budget.

VARIATIONS IN PROCEDURE.—Special conditions will suggest variations in the above procedure to adapt the method to particular businesses. For example, if the goods sold are of great variety, comprising many different grades and styles, it may be desirable to estimate by classes instead of by individual items; however, estimates may be prepared for individual items of those goods which comprise the bulk or the most significant part of the business and the remainder may be handled by classes. While the exact method to be followed is an important question to be decided eventually, the essential objective in the earlier stages of the introduction of the budget is the formation of the habit of forecasting future business regularly each month by the most obvious method, subject to refinement later.

THE SELLING EXPENSE FORECAST.—The principal object of the selling expense forecast as well as other expense forecasts is control of expenditure. The costs of selling, especially advertising, may be regulated about as the policy of the house is disposed to dictate. The increase or decrease of these expenses may have immediate effect upon the volume of business. But the response to redoubled sales effort cannot be predicted with certainty; on the other hand, retrenchment in advertising has cost some concerns far more in loss of trade than the apparent saving in expense.

While the kinds of expense that for various purposes should be classed as applicable to selling may be subject to differences of opinion, for the purposes of the budget the matter is clear. Selling expenses should include all expenditures under the control of the chief sales executive or his subordinates. The **principal items** for a manufacturing business are as follows:

Salaries of sales executives (not including officers or partners unless their efforts are devoted exclusively to sales).
Salaries of salesmen.
Salaries of clerks and stenographers at branch sales offices and in the sales department of the home office.
Commissions.
Traveling expenses of salesmen and others on business connected with sales.
Entertainment of customers.
Dues of clubs and associations in which membership is maintained for the benefit of sales.
Local advertising.
National advertising.

PREPARATION OF ESTIMATES.—**Original estimates** should be prepared by the territorial managers, covering expenses over which they have control. These estimates may be made for the entire budget period instead of for each month unless there is fluctuation, as between months, in amounts to be expended.

The general sales manager at the home office will prepare similar estimates covering salaries to be paid to territorial managers and expenses of the sales department of the home office.

The estimates will be considered and possibly revised by the general sales manager and the vice president in charge of sales. **Summaries** should then be prepared to show the total expense of each territory for all months of the budget period and the total for all territories, including the home office.

FIG. 3. Selling Expense Forecast

The form in Fig. 3 is designed to serve all the purposes of the original estimates, subsequent revisions and summaries. The names of the different expenses should be shown on the original territorial estimates under the heading "Items," and when necessary or helpful these should be supported by details; for example, the item "salesmen's salaries" may be supported by a statement showing the name and the amount to be paid to each salesman.

All **advertising expenses** should be covered by an appropriation of a certain sum of money to carry on a definite campaign. The process of allocating the appropriation to the various mediums of advertising will fix the amount of expense to be incurred in each month.

THE PRODUCTION FORECAST.—The executive in charge of manufacturing is responsible for the preparation of the production forecast. His forecast necessarily will be delimited by the sales policy laid down by the budget committee or board of directors.

If it appears that the **maximum output** for the budget period cannot be sold at regular prices, consideration may be given to a **reduction in prices** as a means of keeping the factory running, and to whether this move would result in a smaller loss of profit than would be suffered with a partially idle plant. Reduced prices with consequent greater sale of the product might be effected by an improvement in equipment and by more economical methods of manufacture. These remedies failing, it may be necessary to lay plans for a reduction in the schedule of operation and in overhead expense. On the other hand, an anticipated volume of business in excess of the factory's capacity may indicate the possibility of increasing the selling price or reducing the sales force. If the increased business appears likely to be long-sustained, plans may be perfected for the installation of improved or additional equipment to increase output. It is far better to push production of present equipment to the highest possible point, resorting to overtime operation if necessary, than to invest large sums in plant and equipment which later may lie idle.

GOODS ON ORDER AND FOR STOCK.—Goods are made for stock in anticipation of sales orders, or manufacture may wait upon the receipt of sales orders. Buyers of the former class of goods are accustomed to immediate deliveries. To hold their business, an inventory of finished goods must be carried to meet the demand for prompt shipments. Others expect to await manufacture because no earlier delivery of the particular goods can be secured under the custom of the trade. Most concerns carry stocks of certain commodities and produce others only to order.

When in the nature of the business a stock of finished goods has to be maintained, the quantities shown by the sales forecast (representing deliveries) should be reduced by the goods on hand at the beginning of the budget period and increased by those expected to remain on hand at the end, in order to arrive at quantities to be produced.

The problem in the control of goods manufactured for stock is to maintain a minimum inventory that shall still be adequate to satisfy promptly the demands of the trade. Essential to this control is the setting of minimum and maximum quantities to carry in stock, and standard quantities to order into the factory, and keeping a perpetual inventory record of finished goods as on the form in Fig. 4.

The **minimum stock** is the smallest quantity which experience indicates will supply the trade while a new lot is being processed. The **standard quantity** to order into the factory will not be smaller than can be processed economically nor larger than can be sold in a reasonable length of time. The chief object is

FIG. 4. Perpetual Inventory Record of Finished Goods

to hold the investment in finished goods to as low a volume as will be consistent with economical manufacture and satisfaction of customers. The **maximum stock** is the sum of the minimum stock and the standard quantity to order into the factory.

The Unfilled Orders column in the perpetual inventory record (Fig. 4) shows the portion of the balance on hand applicable to **orders not yet shipped.** A

large figure in that column may indicate that a new lot of more than the standard quantity should be started into work before the minimum stock shall have been reached.

A **seasonal business** necessitates the manufacture and accumulation of goods during the period of low sales. The plan of inventory control described is flexible: the range between minimum and maximum stocks may be lengthened or shortened and the standards may be varied according to season.

When production is strictly to order, the anticipated deliveries to customers constitute the production program without adjustments for inventories of fin-

ished goods. Few concerns, however, avoid altogether the accumulation of goods returned for one reason or another, **overruns,** and goods made in periods of depression without sales orders. Such inventories should be considered in the preparation of the sales forecast and the complementary **production forecast.**

The form in Fig. 5 is intended for presentation of the production forecast in terms of quantities. It should be prepared for each month with a summary to show the total estimated output for the entire budget period. If production is planned to be constant from month to month, the form in Fig. 6 can be used to advantage. This form provides for monthly comparison of actual output with the monthly average of anticipated production.

THE PLANT AND EQUIPMENT FORECAST.—Expenditures for plant and equipment are classified as follows:

1. Replacements of worn-out or obsolete units.
2. Extraordinary repairs that are in the nature of partial rather than complete replacements of specific units.
3. Additions to plant and equipment to increase productive capacity, to effect better balance as between operations, or to raise the quality of the output.
4. Ordinary repairs incidental to operation, which may be defined as those which neither materially add to the value of the property nor appreciably prolong its life, but keep it in an ordinarily efficient operating condition.

Ordinary repairs are dealt with under the head of Manufacturing Expense Forecast (page 274).

Outlays for Replacements and Repairs.—Replacements and extraordinary repairs ordinarily maintain the plant at efficient productive capacity if not postponed unduly. They cannot be too long deferred without threatening serious breakdowns in the continuity of production. For this reason it may be sound policy to authorize outlays for replacements even in the face of an impending period of part-time production, provided the outlays can be financed. A heavy production schedule, however, will very likely entail special and possibly large outlays for replacements. Substantial increase in production may be possible only by replacements of obsolescent equipment with improved units. The estimate of anticipated expenditures for replacements, therefore, will depend in great measure upon the production program.

Expenditures for Plant and Equipment.—Additions to plant and equipment should not be authorized until there has been a searching review of the estimated cost of the projects, the plans for financing the cost and the expected profits to be earned. An enterprising management that is continually developing new business will not lag in erecting new buildings and installing machinery to enlarge the facilities of production. It is not an object of the budget to repress business enterprise. No scheme of budgetary control should be administered in such a way as to imprison mechanical invention and marketing genius. At the same time there ought to be a predetermined plan for lifting the financial burdens of extensive projects of construction. And the program of financing additions to plant and equipment cannot be considered apart from all the other financial transactions as estimated for the same period.

The **proposals for additions** to plant and equipment should be in writing and as detailed in specifications as indicated by the following list of data:

1. Description of project in engineering terms.
2. Need of the facilities, benefits to be derived therefrom, etc.

3. Estimated cost.
4. Loss on assets to be discarded, if any.
5. Alternatives and their cost.
6. Additional expense expected as a result of the increased investment in fixed assets.
7. Estimated net savings in operating cost.
8. Plan for defraying cost out of earnings or capital.

The budget committee should weigh the anticipated benefits as against the expected additional expense and make its decision accordingly. Those expenditures which are approved will form the basis of the forecast.

Form for Plant and Equipment Forecast.—A form for presentation of the completed forecast is illustrated in Fig. 7. A separate sheet may be used for each month with a **summary** representing the total anticipated expenditures for the budget period or, if no great number of plant transactions are contemplated, the anticipated expenditures over the whole period may be set up on one sheet provided with columns for monthly entries of actual expenditures similar to the form in Fig. 6.

The amounts of money to be entered as anticipated expenditures should be those which it is expected the company will have to pay or will become liable for in each month; for example, the expected placing of an order for new equipment in January to be received in February would call for entry on the February forecast.

Other anticipated expenditures in the fixed asset class, such as furniture and fixtures, water rights, patents, copyrights, trade-names, etc., will be dealt with in a similar manner, the forecast being prepared under the supervision of the executive in charge.

THE PURCHASING FORECAST.—The principal object of the purchasing forecast is the definition of a purchasing program that will maintain stocks on hand at the lowest level consistent with prompt deliveries to the factory. The head of purchasing, who is responsible for the preparation of this forecast, bases his estimates on the requirements of the production schedule.

The quantities of materials and supplies in the production schedule must be modified to allow for stocks already on hand at the beginning of the budget period and for stocks to remain on hand at the end of the period. The usual practice for the regulation of purchases is to direct all buying to the maintenance of stocks on hand at a proper level. Theoretically, the proper level might be the smallest quantity of each commodity that would supply the demands of production during the time required for the placing of an order and the receipt of a new lot. However, it is impossible to keep the stock on hand always at the exact level which theoretically might serve all purposes to the best advantage; moreover, the economical quantity to purchase must have consideration. The customary practice is to establish minimum and maximum quantities to be kept on hand and a standard quantity to purchase.

The **minimum** is the smallest quantity that will supply the demands of the production department during the time necessary for the purchase and receipt of a new lot. Since unavoidable delays in the receipt of purchased materials are likely to occur, the minimum should be high enough to guard against them. As soon as the minimum stock of a commodity is reached, an order for the purchase of a new lot should be placed at once.

The **standard quantity** to order should be fixed with consideration of the economical quantity to purchase; but in order to avoid unnecessary employment of capital and to guard against deterioration, obsolescence and decline in market

FIG. 7. Forecast of Plant and Equipment Expenditures

values, it should not be more than will supply the requirements of the factory for a reasonable length of time. Experience and good judgment must be brought to bear upon the problem, and the standards should be changed from time to time to accord with changing conditions or until it is believed that they represent the best quantities to purchase in view of all the limitations.

The **maximum stock** will be the sum of the minimum stock and the standard quantity to order.

The regulation of purchases as described above contemplates buying for current needs only, but it does not inhibit the purchase of larger quantities if that should appear to be warranted by market conditions. The price advantage to be gained, however, must be substantial to offset the disadvantage of tying up excessive amounts of capital over any considerable length of time. **Speculation in raw materials** should not be indulged in except with the sanction of the board of directors.

FORM FOR PERPETUAL INVENTORY OF RAW MATERIALS.—Information must be readily available relative to the quantities on hand of each item. A record similar to that illustrated in Fig. 8 will meet the requirements in most cases.

The Balance on Hand column shows the position relative to the minimum or maximum stock. The function of the Applied column is to show the portion of the balance applicable to factory orders on hand even though the materials may not have been requisitioned out of stock. This constitutes an additional safeguard against lack of materials, when needed, and may indicate the necessity of placing a new order, possibly of more than the standard quantity, before the minimum stock is reached. Information as to application of materials to factory orders should come from the planning department.

FORM FOR PURCHASING FORECAST.—The purchasing forecast will be presented on a form similar to that shown in Fig. 9. If materials shrink in process, the quantities shown in the Work in Process inventory columns should represent as near as possible the equivalents in the raw state. In many enterprises quantities in process are fairly constant, and they may, therefore, be ignored in the preparation of the purchasing forecast, except possibly in periods of restricted operation or of greater than normal activity when they are likely to vary materially as between the beginning and end of a period. When the equipment is not balanced, due allowance must be made for accumulation of partly finished materials at various points in the process.

A separate purchasing forecast should be prepared for those supplies which are treated in the accounts as manufacturing expense or factory overhead.

In order to provide a means for **monthly comparison** of actual purchases with anticipated purchases and to furnish data for the compilation of the financial forecast, the purchasing forecast should be prepared for each month as well as for the whole budget period.

THE DIRECT LABOR FORECAST.—The production program having already been decided upon and the operating schedule determined, the amount which must be paid for direct labor in each department of the factory should be estimated accordingly with due regard for expected increases or decreases in the wage schedule.

Indirect labor represents amounts paid to employees whose efforts are essential to continuous production but who do not themselves actually engage in the fabrication, operation of productive machines, assembling or otherwise making ready the product for market; for example, superintendents, foremen, designers or draughtsmen, repair men, engineers, firemen, watchmen, etc. The

FIG. 9. Purchasing Forecast

amounts paid for such services ordinarily cannot be reduced in direct proportion to a restricted schedule of operation. Usually they are regarded as manufacturing expense and will be treated as such in the budget procedure described herein.

The direct labor forecast should be prepared under the supervision of the production executive with the aid of the planning and cost departments. The planning department will be in possession of information relative to capacity of machines in various departments and will predetermine the number of units to be operated and the number of operatives necessary in order to fulfil the production program. The cost department will furnish labor costs per unit of output for each department or each operation. With these data as a basis, the anticipated total amounts to be paid for direct labor are estimated.

DIRECT LABOR FORECAST

PERIOD FROM ..... 19.. TO ..... 19..

DEPARTMENT	Class of Operative	Number of Operatives	Man-Hours	Rate per Hour	Anticipated Amounts	Actual Amounts

FIG. 10. Direct Labor Forecast

Fig. 10 shows a convenient means of presenting the direct labor forecast for consideration of budget committee. This is designed for the preparation of a separate forecast for each month with a summary showing the total for the entire budget period. The anticipated expenditure for labor during the budget period may vary little as between months; in that event the forecast for the entire budget period could be prepared on a single sheet showing the amounts expected to be paid for the whole period and the average per month with columns for the entry of actual expenditures of each month similar to the method illustrated in Fig. 6. The plan contemplated here, however, calls for monthly comparisons of actual with estimated results and for this purpose, as will be explained later, a separate forecast should be prepared for each month with a summary showing the total for the budget period.

THE MANUFACTURING EXPENSE FORECAST.—These expenses constitute that element of manufacturing cost commonly referred to as factory overhead expense, overhead burden, or simply burden. The kind of expenses which, in accordance with general practice, should be included with this group are indicated in the following table:

Works manager	Purchased power
Plant engineer	Manufacturing supplies
Superintendents and foremen	Incidental repair supplies
Designers and draughtsmen	Fuel
Incidental repair labor	Small tools
Watchmen	Depreciation
Engineers and firemen	Insurance
Factory clerks	Real estate and personal property taxes
Other indirect labor	

Relative Fixity of Overhead Expense.—Some of these expenses are affected to a greater or lesser degree by the schedule of operations; that is to say, they may be reduced somewhat as the operation of the plant is restricted below normal, but ordinarily they cannot be brought down in direct proportion to the reduction in output. Some of them can be reduced but little and would still have to be met if the plant should be wholly idle. Conversely, as production is increased toward capacity, an increase in many of the manufacturing expenses may be looked for but not in proportion to the increase in output. For example, the amounts paid to the works manager and the plant engineer, mentioned in the foregoing list of typical manufacturing expenses, would remain stationary under changing conditions of operation unless the salaries of the executives should be raised or lowered; superintendents and foremen, in most cases, could not be substantially reduced unless entire departments could be shut down; watchmen must be employed whether the plant is running or is wholly idle, and the force of engineers and firemen would be increased or could be reduced to any material degree only through the starting up or shutting down of complete power units. Minor repairs incidental to the operation of the plant, which do not appreciably prolong the useful life of the assets nor materially add to their value (see page 267), should be treated as an expense of manufacture. A definite relation will usually be found to exist between the amounts expended for repairs of this nature and the percentage of capacity at which the plant is operated.

Similarly other items of overhead expense may be affected in varying degree by changes in the operating schedule. The forecast of those expenses which represent wages paid to various employees will be definitely affected by a contemplated increase or decrease in the wage scale.

Relation of Overhead Expense to Cash Outlays.—All of the manufacturing expenses so far described represent cash outlay or increase of accounts payable within the budget period. There are other items which are properly classified as manufacturing expense but which do not represent cash outlay. The amounts chargeable to operations for manufacturing or expense supplies, for example, represent consumption of supplies while the cash outlay would be directed to the maintenance of a sufficient stock on hand. This might be said also in relation to small tools, except that many concerns carry in their accounts a fixed sum to represent small tools and write off purchases as expense. However, assuming that stocks on hand or inventories of supplies, small tools and the like are properly accounted for and that only the value consumed is considered as manufacturing expense, the purchase of these items should be handled in

FIG. 11. Manufacturing Expense Forecast

the budget procedure in a manner similar to that described for purchases of raw materials and supplies (see page 268).

The **allowance for depreciation** calls for no cash outlay, but the gradual decline in value of plant and equipment through use in the production of goods must be considered an item of manufacturing expense in any sound budgeting or accounting plan. Consideration should be given to increasing the regular depreciation allowance for anticipated overtime operation. Depreciation possibly may be decreased for operation of less than the normal hours per week but it should be remembered that a considerable part of the decline in value is due to other causes than wear and tear and continues whether or not the plant is in operation.

Insurance is usually paid for once a year or once in three years. The amount to be set up in the manufacturing expense forecast for the budget period or any portion of it is the proportionate part of the annual premium for that period. Likewise **real estate and personal property taxes** should be computed for the budget period in proportion to the annual payment.

Form for Manufacturing Expense Forecast.—Manufacturing expense being a part of the cost of the output, the forecast should be prepared under the supervision of the production head; however, the accounting department or the cost division of that department will be called upon for information relative to expenses of past periods and may well be called upon to prepare the first draft of the forecast.

The manufacturing expense forecast will be submitted on the form in Fig. 11 separately for each month, with a summary showing the totals for the entire budget period in accordance with the general plan outlined in this article. If from the nature of the business there is little variation in the various expenses from month to month, it may be possible to dispense with the monthly forecast; however, the average monthly expenses, based on the totals for the budget period, should be shown as a **standard for comparison** with the actual monthly expenses in a manner similar to that suggested for the production forecast (Fig. 6).

It may be well to reiterate that it is consumption of **supplies, fuel, small tools** and other items for which inventories may be carried in the accounts, that should be considered in the manufacturing expense forecast. The amounts of money will be derived by estimating the cost of the quantities which will appear on the supplies purchasing forecast [column (a) in Fig. 9], which, as already mentioned, should be prepared separately from the forecast for the purchase of raw materials.

THE ADMINISTRATIVE EXPENSE FORECAST.—The kinds of expenses which should be considered under this head are indicated below:

Salaries of officers
Other administrative and executive salaries
Traveling expenses of officers and executives
Salaries of clerks and other office employees
Office supplies and expense
Telephone and telegraph
Postage
Rent of office building
Legal services
Auditing
Donations
Taxes (exclusive of personal property and real estate taxes included with

manufacturing expenses and federal income tax which is treated as a separate item)
Depreciation on office furniture and fixtures

The forecast will be prepared by someone delegated by the president or chief executive. In large organizations the administrative function ordinarily will be departmentalized, as for example:

General administrative
Finance
Purchases
Cost accounts
General accounts
Statistics
Personnel

The executive in charge of each department should be required to prepare a separate monthly forecast to be submitted to the president or his assistant for approval or revision. A summary should be prepared to show the total expected administrative expense of all departments and an additional summary to show the total for the budget period.

A form similar to that illustrated in Fig. 11 will be suitable for the forecast of administrative expenses. Here again if there is little or no variation in the various anticipated expenses from month to month, it may be possible to dispense with the monthly forecasts, showing only the total amounts for the budget period and a monthly average as suggested for the production forecast (Fig. 6) for comparison with the actual monthly expenditures.

THE OTHER INCOME FORECAST.—Every business has miscellaneous items of income which arise from sources other than sales of its regular product, for example: interest and dividends on securities owned, interest received from bank deposits and other sources, cash discounts gained (if not classed as a deduction from purchase costs) and profits from the sale of securities and fixed assets.

The treasurer or chief accountant is in the best position to prepare the other income forecast. The form in Fig. 11, with some changes in the headings, will be suitable for its presentation. Usually a forecast of other income which covers the entire budget period without consideration of the expected amounts for each month will serve the purpose.

THE OTHER DEDUCTIONS FORECAST.—This is the converse of other income as described above and covers all items of **extraordinary expense or loss** which cannot be classified with the regular expenses of the business. Interest on borrowed money, losses from bad debts and from the sale of securities and capital assets usually are treated in this classification. Sometimes cash discounts allowed on accounts receivable are included.

THE FINANCIAL FORECAST.—The financial forecast deals with cash receipts and expenditures, loans and repayments, issues and redemptions of bonds and capital stock. The purpose of the financial forecast is to show the financial requirements of the anticipated operations. This forecast when finally determined upon becomes the foundation of any plan for financing additional capital. Completion of the financial forecast may show that the contemplated operations as first planned are beyond the company's present ability to finance and must, therefore, be curtailed.

Cash Receipts.—The main source of cash receipts for a manufacturing business is collection of accounts and notes receivable. Collection of slow accounts should be given special consideration apart from the accounts that may be expected to be collected when due.

Expected sales as shown on the form in Fig. 1 represent amounts which it is

anticipated will be invoiced to customers each month. The problem here is to estimate when collections may be expected for each month's invoicing. Ordinarily a portion will be paid in the month billed and the balance spread over two, three or more months thereafter, depending upon the terms on which the goods are sold. By analysis of the collections of past months, percentages may be set up representing the average portions of a month's billing that have been paid during the same month and in each month thereafter. These percentages, applied to the expected sales of each month of the budget period, will serve to indicate the amounts of cash receipts for each month to be expected from the anticipated sales.

Due dates of notes receivable, of course, indicate in which months payments may be expected, unless renewals are anticipated.

Other anticipated cash receipts will be found in the other income forecast. However, some of these items, especially interest from securities, may represent accrued income not yet received in cash and should be assigned to the months in which the cash will be collected.

Cash Disbursements.—Disbursements will be made principally in payment of accounts and notes payable, payrolls, selling and administrative expenses, interest, funded indebtedness coming due, federal income tax and dividends.

At the beginning of a budget period there will be outstanding **accounts payable** which must be assigned to specific months of the budget period in which payment will be made. Additional accounts payable will arise from the purchasing forecast, but these amounts are those which it is expected will be invoiced in each month of the budget period, and it will be necessary for purposes of the financial forecast to assign these anticipated invoices to the specific months in which they will be paid in accordance with the terms of purchase. Other accounts payable will result from contemplated purchases of advertising space in newspapers and magazines and the like which may not be included in the purchasing forecast.

Disbursements in payment of any **notes payable** falling due within the period should be allotted to the proper months.

Anticipated **wages** will be indicated by the direct labor forecast, but here again the amounts shown for each month will be those which it is expected will be charged to operation and not those which will be paid during the same month. At the beginning of each period there will be an unpaid liability for payroll that was charged to the operations of the previous month and is to be paid within the budget period.

Another class of disbursements is shown on the manufacturing expense forecast. However, not all of the items of **expense** there shown call for cash disbursement. The illustrated form shows three groups of expenses, of which the first represents indirect labor forming a part of the payroll and subject to treatment similar to that described above for direct labor. The second group represents purchases of supplies which were scheduled on the purchasing forecast. Disbursements for this group will be in payment of accounts payable. The first item of the third group, depreciation, has no place in the financial forecast because it represents no cash outlay. Insurance and real estate and personal property taxes, other items of the third group, usually are paid for annually, but insurance premiums may be paid at longer intervals and the amounts shown will represent the accrued expense while what is required for the financial forecast is the expected cash outlay. This grouping of expenses is illustrative; in practice each item should be considered as to whether there will be cash outlay connected with it, when the disbursement is likely to occur and whether

the expected payment already has been provided for in some other section of the forecast.

What has been said above relative to anticipated disbursements on account of manufacturing expense is generally applicable also to the selling and administrative expense forecasts.

Other expected disbursements will be indicated by the other deductions forecast, but as in all the other forecasts, care must be used to distinguish between an expected accrual of an expense and the cash outlay connected with it.

The **federal income tax** is determinable shortly after the close of the calendar year or fiscal year. The amount to be disbursed in each third month of the following year should be provided for in the financial forecast.

Form of Financial Forecast.—Responsibility for preparation of the financial forecast rests upon the executive in charge of finance, either a vice-president or treasurer. The forecast should be presented for consideration of the budget committee on a form as illustrated in Fig. 12, with supporting details of disbursements on a form illustrated in Fig. 13.

The anticipated cash balance at the beginning of a month plus the expected receipts represent the funds that it is believed will be available during that month. Should these be insufficient to cover the expected disbursements and leave a safe margin of cash on hand, it will be necessary to plan for additional funds if the co-ordinated program of sales and production is to be carried out. It may be possible to go back over the various forecasts and in view of the necessity to plan economies which at first were not thought of. In the event that additional funds cannot be secured, it may be essential, as a last resort, to reduce the expected volume of operations in order to avoid financial embarrassment.

Procedure on Completion of Tentative Financial Forecast.—Throughout the preparation of the various forecasts, each being dependent upon the others, numerous conferences between executives will be in order to effect the requisite co-ordination; but when the financial forecast has been completed or tentatively completed, a formal meeting of the budget committee should be held to consider the plans (as yet only tentative plans) which have been developed and to decide upon final action. Several conferences may be required and the financial and other forecasts may undergo several revisions to adjust the programs of sales, production, expense and finance to the course that is practicable of accomplishment.

It is essential that all of the forecasts be prepared and finally approved by the budget committee well in advance of the beginning of the budget period; otherwise the chief benefit of this method of preliminary planning will be partially lost.

Whatever plan is found to be most helpful relative to modification of other parts of the budget as the period advances and new facts become known, the financial forecast should be revised directly after the close of each month. Each monthly revision should be for at least a six-months period in advance, that is, the month just past should be dropped from the forecast and estimates of receipts and expenditures inserted for a new month at the end of the six-months period. Forecasts for the intervening months should be changed in the light of new developments which may point to a substantially different financial program.

MODIFICATION OF THE FORECASTS DURING THE PERIOD.—The budget is a detailed plan for future operations, based upon intelligent estimates. It is to be anticipated that the budget must be constantly modified as the

business of the period develops and new facts are faced. It would be folly, for example, to adhere blindly to capacity production as forecast in the budget when it becomes apparent that the output cannot be sold within a reasonable time. With substantially larger sales in sight than originally were believed possible, production and other dependent forecasts should be adjusted accordingly for the balance of the budget period.

As previously mentioned, good results have been attained through monthly revision of the entire budget, dropping the month just passed, adding a new month at the end of the period and possibly revising the intervening months. **No standard procedure** can be recommended; only experience with the particular conditions of a business can indicate the most useful plan to follow relative to modification of the forecasts. Some kinds of business require less detailed planning for shorter future periods than others and a short budget of, say, three months without modification might serve every purpose. Others will find it necessary to plan ahead for long future periods with a correspondingly long budget period and frequent modifications.

Some enterprises cannot base their financial program on a single forecast of sales. Sales may be subject to many vagaries of trade that cannot be foreseen. The demand for the company's merchandise may fluctuate widely from year to year with fickle changes in fashion. Under such conditions it is advantageous to prepare three budgets based upon different volumes of sales representing highest, lowest and average estimates. Purchases, labor costs, expenses and financial borrowings are estimated separately for three budgets in co-ordination with the respective estimates of sales. As the season progresses it becomes apparent, from the actual sales, which one of the three budgets is being approached and the program for purchases, production, expenses and financial requirements is shifted accordingly. Without a budget an adjustment in program could not be made so quickly even if the need of adjustment should be sensed at all.

THE ESTIMATED BALANCE SHEET AND PROFIT AND LOSS STATEMENT.—These two statements show the expected financial condition of the company at the close of the budget period and the results of the projected operations. After the budget committee has approved the various forecasts described in the foregoing pages, at least tentatively, the estimated balance sheet and profit and loss statement are prepared by the accounting department.

The starting point is the balance sheet as at the beginning of the budget period. The **work sheet** should have several sets of debit and credit columns as in the form shown in Fig. 14.

The balance sheet as at the beginning of the budget period should be entered in columns (a) and (b). The forecasts are then entered, as if they were actual transactions, in columns (c) and (d). For example, the total anticipated sales for the six-months budget period as shown by the sales forecast will be entered in column (c) as a debit to accounts receivable (account A-5), and in column (d) as a credit to Sales (account G-1). Likewise the total of advertising on the selling expense forecast should be entered in column (c) as a debit to that account (account G-25) with a corresponding credit to a liability account, ordinarily Accounts Payable (account D-1). The remainder of the selling expenses will be debited to account G-30 and credited to Accrued Liabilities (account D-10). The setting up of accrued liabilities serves to charge the period with expenses that belong to it and must not be confused with the anticipated cash payments therefor which are taken care of by the estimated disbursements of the financial forecast (see page 278).

The plant and equipment forecast will be treated in a similar manner, also

the purchasing forecast, the debits being respectively to plant assets (accounts B-1, etc.) and to Raw Materials and Supplies (account A-20) and the credits to Accounts Payable (account D-1). The credit for the labor forecast will be to Accrued Liabilities while that for the manufacturing expense forecast will be divided as follows:

1st group representing wages and salaries, to Accrued Liabilities.
2nd group to Accounts Payable.
3rd group:
Depreciation to Reserve for Depreciation (account B-10).
Insurance to Prepaid Expenses (account C-1).
Real estate and personal property taxes to Prepaid Expenses (account C-1) for whatever amount may have been included in that account on the opening balance sheet and to Accrued Liabilities for any excess over that amount.

The other forecasts should be treated in a similar manner including the financial forecast, on which total receipts should be debited and total disbursements credited to Cash with corresponding debits and credits to the various accounts indicated in that forecast.

The next step in the preparation of the estimated statements is to make **adjustments for the anticipated inventories** as at the close of the period. The anticipated inventory of raw materials and supplies will be obtained by adding to the value on hand at the beginning that which it is expected will be purchased during the period as shown on the purchasing forecast and deducting therefrom the anticipated cost value of the production requirements also shown on the purchasing forecast.

The **work in process inventory** will be estimated by adding to the corresponding inventory at the beginning of the period the anticipated cost value of production requirements, as mentioned above, together with the total labor and manufacturing expenses expected for the period as shown by the respective forecasts and deducting the estimated cost of the anticipated output. Quantities for the latter will be found in the production forecast and the cost department should be able to predetermine the costs which should, of course, be in line with the anticipated costs of material, labor and manufacturing expense as shown by the forecasts of those items.

Likewise the **finished goods inventory** will be estimated by adding to the value on hand at the beginning of the period the estimated cost of the anticipated output as mentioned above and deducting the estimated cost of sales. Quantities for the latter will be obtained from the sales forecast and, as in the case of work in process, the cost department will be relied upon for the estimated costs.

The inventories as at the close of the period having been estimated, entries should be made in columns (c) and (d) as follows:

Opening inventories:
Dr. Cost of Sales for the total (account G-5)
Cr. Raw Materials and Supplies (account A-20)
Work in Process (account A-25)
Finished Goods (account A-30)

Closing Inventories:
Dr. Raw Materials (account A-20)
Work in Process (account A-25)
Finished Goods (account A-30)
Cr. Cost of Sales for the total (account G-5)

FIG. 16. Estimated Balance Sheet

Adjustment of the cost of sales account will be completed by closing into that account the purchases of raw materials and supplies, direct labor and manufacturing expense applicable to the period as indicated below:

Dr. Cost of Sales (account G-5)
Cr. Purchases Raw Materials and Supplies (account G-10)
Direct Labor (account G-15)
Manufacturing Expense (account G-20)

Having made all of the necessary adjustments in columns (c) and (d), it remains to carry out into columns (e) and (f) the adjusted profit and loss items, and into columns (g) and (h) the adjusted assets and liabilities, and to bring over from column (e) or (f) the balance of anticipated profit or loss as an adjustment to surplus.

The profit and loss and balance sheet columns will now exhibit all of the figures necessary for the estimated statements which should be set up in a manner similar to that shown on the forms in Figs. 15 and 16.

OPERATION OF THE BUDGET.—All of the forecasts described in the foregoing pages together with the estimated balance sheet and profit and loss statement constitute the budget. The estimated statements are based upon changes in the actual financial condition at the opening of the budget period and should be completed as soon thereafter as possible. A meeting of the budget committee should then be held for reconsideration of the forecast operations and their probable results as shown by the estimated statements. In other words, the budget in its completed form should now be submitted to the committee and approved, provided, of course, no further revision appears to be necessary.

Immediately upon approval, the budget becomes the program designed to govern the activities of the business. The original will be in the possession of budget department representatives, who will prepare copies for distribution to the functional executives for guidance in the operation of their departments. Ordinarily functional heads will be officers of the corporation, partners of the firm or those who are otherwise entitled to a copy of the complete budget. However, additional copies of particular forecasts will be required for subordinate executives, the object being to place in the hands of every person who is responsible in any degree for the carrying out of the budget programs definite information as to what he is expected to accomplish.

Operation of the Budget by Sales Department.—For example, the functional head in charge of sales may be entitled to a copy of the complete budget while his subordinate, the sales manager, may be given only the sales forecast and the selling expense forecast, from which, in connection with the original preliminary estimates on file in the budget department, he will have prepared quotas of sales for each territorial manager and limits upon the amounts to be expended, without special permission, on salesmen's salaries and expenses. Each territorial manager likewise will set quotas of sales for each salesman under his jurisdiction, arrange his compensation and limit his expenses in accordance with the amounts assigned to be expended for these purposes. He should not be permitted to exceed the total budgeted expenditure for his territory without permission from the home office, and if the amount is considerable, the matter should be referred to the budget committee.

As previously explained, the sales forecast represents deliveries, and unless the nature of the business is such that these correspond closely to orders taken from month to month, the quotas set for salesmen should represent the latter.

A column is provided in the sales and selling expense forecasts, respectively,

for actual sales and actual expenses, and as soon as possible after the close of each month the budget department should issue to the functional head in charge of sales a copy of those forecasts for that month, including those for each territory on which should be entered the actual results. After the first month of the budget period, additional reports should be issued to show the cumulative anticipated and actual results. This information should be transmitted by the general sales manager to the territorial managers with appropriate comments. A considerable discrepancy between actual sales and the forecasts may point to modification upward or downward of the entire budget, and the committee should meet to discuss and act upon this situation. Any considerable excess of expenditures over the budgeted amounts should be investigated and dealt with in accordance with the circumstances.

Operation of the Budget by Production Department.—In a similar manner the production head will be furnished with reports comparing actual output, direct labor expenditure and manufacturing expenses with the forecasts. Output which is less than was anticipated may be due to lack of materials, and steps should be taken by the purchasing head to correct the trouble. If prices stand in the way, a smaller loss of anticipated profit might result by paying more than was originally contemplated than would be suffered through loss of business from late deliveries. Likewise, if labor cannot be secured at wages anticipated, it may be better to meet wage demands and support the selling department with the scheduled output and proper deliveries. Perhaps no condition of business operation can result in greater unmeasured loss than nondelivery of orders taken.

All the factors affecting volume of output should be considered, and if it appears that production cannot be increased, in other words, if the original estimate was too high, immediate steps should be taken to adjust the manufacturing expense and the operations of the other departments; that is to say, the entire budget should be revised to accord with the lower volume of production.

Operation of the Budget by Purchasing Department.—The operation of the budget in the purchasing department will be handled in a manner similar to that described for sales and production. The temptation to buy large quantities when that seems to offer a price advantage is great, but ordinarily should not be indulged to the extent of substantially increasing the quantities budgeted originally, or as later revised, without the approval of the committee. The effect would be to increase inventories and possibly to disturb the existing financing plans.

Information on Actual Performance to Each Department.—Each functional head should be furnished at the close of each month with information relative to the actual performance of his department compared with the budgeted operations. He will pass on to subordinates such portions of that information as in his judgment will be helpful; he will take action to bring the operations of his department into line with the established budget unless the committee decides to modify it in view of conditions that cannot be controlled.

Expense Budgets to be Grouped by Functions.—It is important that the expense budgets be grouped according to the individuals responsible for the expenses; for example, the functional head in charge of **sales** will be responsible for selling expenses. He in turn will hold his general sales manager and the territorial managers accountable for those expenses within their control.

Primary responsibility for manufacturing or **factory overhead** expenses naturally will rest upon the functional production head, and the most effective grouping will depend to a considerable extent upon the manufacturing organi-

zation. Assuming that the operation of the plant is in direct charge of a works manager and that the physical property is in the care of a plant engineer, the expenses under the control of the former might be as follows:

Superintendents and foremen	Other indirect labor
Designers and draughtsmen	Manufacturing supplies
Incidental repair labor	Incidental repair supplies
Factory clerks	Small tools

The works manager will be directly responsible for such items as salaries of superintendents, foremen, designers and draughtsmen, but the other items named above should be broken down so that each superintendent or foreman can be charged with the responsibility for those expenditures which may be under his direct control.

The plant engineer would be accountable for the following:

Watchmen	Purchased power
Engineers and firemen	Fuel

Such items as salaries of works manager and plant engineer will be under the direct control of the functional head in charge of production.

Administrative expenses for a business of moderate size will be under the direct control of one or two of the chief executives, but in a large organization, responsibility for expenditures will rest upon several or perhaps upon a considerable number of principal and subordinate executives and expense classification should be arranged accordingly.

Purpose of Classification of Expense.—From a budget standpoint the object of classifying expenses is to control expenditure and to place responsibility where it belongs. The classifications and groupings arranged for these purposes may conflict with ideas of the cost and general accountants. However, with reasonable co-operation among those concerned, it should be possible in every case to develop one classification and grouping which would serve all purposes.

A well planned budget provides many safeguards against loss not otherwise to be found. It should not stop at mere restrictive measures of safety but ought to point out weak places in the structure which must be fortified in order to yield maximum profits.

SECTION 5

CONTROL OF CURRENT OPERATIONS

Control of Receipts and Disbursements

IMPORTANCE OF CASH STATEMENTS.—With the rapid improvement in modern business systems has come an unfortunate tendency on the part of business executives to depend almost exclusively on income statements for information regarding profits and losses and determining important policies.

Weekly, monthly or quarterly reports of sales, costs and expenses are relied upon to show favorable or unfavorable trends in business conditions. Such reports should be available and should be used. But in themselves such reports may fail to convey an adequate picture of certain pressing needs, which if not met promptly may lead to disaster. Indeed, favorable operating statements are sometimes responsible for ultimate unfavorable results, which arise from undue expansion not supported by sufficient cash capital. Operating statements, therefore, are insufficient guides unless supplemented by cash statements, and cash statements are of little value unless they are set up in such a form as to coordinate with operating statements.

Like the business budget, the analysis of cash receipts and disbursements has become an essential part of the modern business system.

SCOPE OF SECTION.—Financial planning should have the foremost consideration in the control of receipts and disbursements. The first portion of this section will, therefore, be devoted to outlining a condensed comprehensive financial control for the use of financial executives. If the cash budget and the other forms therein described and shown are used, daily perspectives of the continually changing conditions will be had, thus enabling such modifications to be made in the financial program from time to time as will assure successful financing. The study of these condensed data will develop ideas in management on the part of an interested executive which cannot be obtained by wading through endless detail.

The planning of the current office routine and of the recording of financial transactions, in such manner as to insure the safeguarding of the cash and the correct accounting therefor, is also vital. The second part of this section will therefore indicate methods and records which should have the consideration of the financial manager in planning for the detailed control of the receipts and disbursements.

While a correct balance sheet will show the financial position of a business at the end of the month, the financial manager ought to know from day to day whether this position is improving or otherwise, and if not improving, he should take immediate steps to control the situation. This he will be in position to do if he has daily data (expressed in unit figures representing thousands of dollars) with respect to the items on the balance sheet which are subject to continual or large fluctuations. These are cash receipts and disbursements, bank balances, outstanding drafts, accounts or other receivables, value of shipments or billings therefor, and incoming invoices payable.

FIG. 1. Monthly Cash Budget and Other Forecasts

Provision is made for subdividing estimates into periods. The classifications of the items and the number of periods may be increased in all of the divisions.

CASH BUDGET.—A simple form of classified **monthly cash budget or forecast,** of the receipts, payments and bank balances is shown in Fig. 1. In cases where an unusual volume of the disbursements are made on fixed days, such as on the 10th, 15th, 20th, or 25th proximo, the budget might well be divided, by using columns so as to show the expected receipts and payments

from the first of the month to each of those dates, as well as for the entire month.

The budget classifications should show all the larger items of expected receipts and payments such as accounts receivable, cash sales, borrowed money to be received and repaid, accounts payable, pay rolls, notes payable, taxes, dividends, etc. This will enable comparison to be made several times a month between this budget and the actual receipts or payments to date as shown by the various cash receipt and payment books if the comparison is desired in detail, or with the daily cash receipt and disbursement controls if totals only are desired.

Data as to shipments will necessarily have to be furnished by the sales department. The advertising and purchasing departments will have to furnish data respecting advertising expenditures and incoming purchase invoices respectively. The factory accounting department can furnish forecasts as to pay rolls required for a given shipping schedule. A good check upon the reasonableness of the more important figures used in the cash budget is to also budget the receivables, payables and inventories in a condensed manner (also shown in Fig. 1).

DAILY CASH RECEIPT CONTROLS.—Cumulative and comparative reports should be kept for each of the major items of receipt and disbursement. Fig. 2 shows a form covering receipts from sight drafts and open accounts receivable. These reports should provide for the days from 1 to 31 to be arranged vertically along the left side of the page and columns to the right for the insertion of the total daily receipts. Subtotals should be shown covering the receipts to date at the close of every subsequent 5th day of the month. At these 5-day periods it will also be helpful to show in different colored ink the total average daily receipts during the period, for regularly each month there are periods of low as well as of high average daily collections. This makes it possible to compare actual current receipts with those included in the cash budget, at least five times before the end of the month.

DAILY CASH DISBURSEMENT CONTROL.—The form of this control should be similar to the daily cash receipt control. The amounts recorded on this control will fluctuate greatly if the company is in the habit of making payments for previous months' purchases on one or more definite days of the subsequent month. Nevertheless, this form is helpful in enabling one to compare the actual with the estimated expenditures for the month to the close of the 5-day periods.

SPECIAL CONSIDERATIONS.—On both the daily cash receipt and disbursement controls the unusual items of borrowed money incoming and outgoing, and dividends, should not be included in the daily totals or in the 5-day subtotals, but should be shown separately in red or green ink, as their inclusion will reduce the value of these controls for comparative purposes from month to month.

DAILY BANK BALANCE CONTROL.—This may be ruled in form similar to the previously mentioned controls, and will show the comparative daily balances. It will be helpful to compare the fluctuations in the balances from month to month on similar days, while surveying the daily cash controls. By such surveys the manager will see the necessity for pushing collections or arranging financing to take care of coming obligations shown by the periodized monthly cash budget.

RECEIVABLE CONTROLS.—Controls for drafts or accounts receivable may be in form similar to that of the daily bank balance control, and should

show the aggregate outstanding drafts or accounts receivable. Some industries are on a sight draft selling basis. In such cases a daily "outstanding

FIG. 2. Cumulative and Comparative Daily Report of Two Classes of Separately Controlled Receipts

NOTE: The "To date" figures should be in green or purple. The "Averages" are those for actual number of collection days only and should be in red. "H" means Holiday; "S" means Sunday. The method of dividing the month into periods of 5 days each will be found helpful in preparing cash budgets.

drafts control" is of help to the financial manager. Any let down in collections or any slowing up in unloading of cars by customers is speedily reflected in the increasing outstanding drafts.

In all industries this control must naturally be based upon figures which take into account the daily billings against customers and payments by them; the principle, however, remains the same, with respect to showing the total outstanding receivables at the close of each day.

A separate columnar working sheet should be kept showing on a line for each day, the total receivables at the beginning, the adding machine total of all outgoing invoices, the collections from customers and credit memos, and the outstandings at the end. The last mentioned figure is the only one used on the receivables control. If the condensed daily financial report is kept, to which reference is hereinafter made, this working sheet for receivables will be unnecessary.

SHIPMENT CONTROL.—This control is similar in form to that of the daily cash receipt controls, with totals of the month's shipments shown to

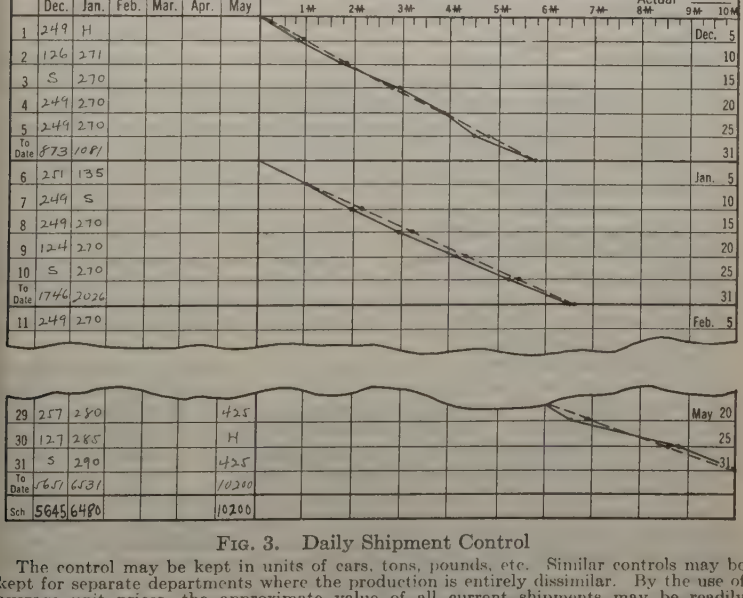

FIG. 3. Daily Shipment Control

The control may be kept in units of cars, tons, pounds, etc. Similar controls may be kept for separate departments where the production is entirely dissimilar. By the use of average unit prices, the approximate value of all current shipments may be readily ascertained.

NOTE: "To date" figures should be in green or purple. "H" means Holiday; "S" means Sunday.

the end of every 5th day. In cases where units can be used, such as cars, tons, pounds, etc., they may be preferable to using the value of the shipments. In other cases, the value of the daily billings against customers may be used. In some cases graphs may be shown on the same block paper and ruled lines

of different colors be used to provide a quick comparison between the estimated shipments used in preparing the cash budget and the actual shipments during every 5-day period. Fig. 3 is a simple form of such control.

It will be helpful to managers to often compare this daily shipment control with the next described Daily Incoming Invoice Control, for the incoming invoices should be immediately cut down, and deliveries on purchase orders rescheduled if shipments are decreasing without reasonable prospect of recovery within a short period.

DAILY INCOMING INVOICE CONTROL.—This control is in the same form as that of the daily shipments, and shows the total of the daily incoming invoices of all kinds, which should be gathered together and totaled on an adding machine immediately after the mail has been opened. It will show the liability for incoming invoices as it accrues.

In sudden changes in the industrial situation it is possible to avoid embarrassment and excessive borrowings by an intelligent readjustment of the incoming material situation by working every day from this control, and investigating the larger incoming invoices when a rescheduling campaign is on.

DEPARTMENTAL PAY ROLL SUMMARIES.—One of the most helpful and important of the condensed controls is a departmental classified summary of the weekly pay roll of which a form is shown in Fig. 4. Before any such summary can be designed, attention must be given to the departmental and sub-departmental organization of the factory, by progressive production units, and the application thereto of a group serial employe numbering scheme. For example, in an automobile factory it would not be sufficient to provide a separate series of employes' numbers for the motor manufacturing department, but that department should in turn be subdivided into minor production units, such as crankshaft, camshaft, piston and other units.

ARRANGEMENT OF PAY ROLL SUMMARIES.—The pay roll itself should so be arranged through the use of subtotals, that it is possible to prepare readily a summary showing the number of employes and total roll for each unit, together with average costs based upon the production of each unit. This summary should also show combined totals for all units of a department with departmental averages.

This **department summary** can be so adapted as to show subtotals of each division of the pay roll, such as productive labor, non-productive labor, overtime bonus, idle time allowances, shop orders for plant extensions, expense orders, foremanship, etc. The figures shown on the departmentalized and classified pay roll summaries should be given weekly to the various department heads for the purpose of controlling their labor expense.

A condensed summary covering the complete factory pay roll of all departments, and showing various averages and percentages, will provide the management weekly with the means of controlling the one expenditure which must be provided for currently—the pay roll. A form of this summary is shown in Fig. 5.

CONTROL OF OTHER ITEMS.—Other items which do not lend themselves to current daily accounting control, but are in reality results of policies decided upon before being carried out by the departmental management, are advertising appropriations, purchase allotments and service expenditures.

Advertising appropriations should be based upon periodical schedules and decisions respecting advertising mediums, space and frequency of insertion. **Purchase allotments** should be decided after adequate data as to current and prospective purchase and sales markets have been prepared. **Service policies**

Scrutiny of actual past experience of this nature when preparing cash budgets may avoid omissions which might prove embarrassing.

are often impossible of control except in a detailed manner by conference with service department management.

CONDENSED DAILY FINANCIAL REPORT.—The data set forth on the forms previously outlined will enable the financial manager to modify his financial program from time to time to suit constantly changing conditions, and to cause steps to be taken by other departments whenever necessary to avoid financial difficulties. Nevertheless, a daily perspective of the cash receivables, payables and shipments on the one form will be found desirable. Such a form of condensed daily financial report is shown in Figs. 6a and 6b.

	Miscellaneous Items	4,646.06	1,878.66
	Total	$4,436,355.37	$8,963,316.56

FIG. 8. Monthly Classified Summary of Cash Received

This summary, by segregating all unusual items, will be a more reliable guide in preparing cash budgets than depending upon total volume of previous cash receipts.

MONTHLY SUMMARIES OF IMPORTANT ORIGINAL ENTRIES.—Cash budgets will be seriously affected if when they are prepared, important items are overlooked, or unusual expenditures for fixed assets are in contemplation and not provided for.

In preparing budgets it will be helpful to have knowledge from actual experience of the average percentages of outgoing shipments which are normally represented by outstanding receivables at the end of the month, and similarly of the average percentages of incoming invoices which are represented by accounts payable at the end of the month.

Monthly comparative classified summaries of the incoming invoices credited to the accounts payable controlling account (Fig. 7), and of the cash received

FIG. 9. Monthly Classified Summary of Check Register

Direct cash payments for pay rolls and for notes, taxes and unusual items not going through accounts payable are here clearly set forth.

Accounts Receivable Controlling Account

	January	February
Balances at Beginning	$ 165,744.38	$2,070,352.24
Sales	5,928,611.82	9,521,338.91
Totals	$6,094,356.20	$11,591,691.15
Collections & Credits	4,024,003.96	7,640,753.27
Balances at End	$2,070,352.24	$ 3,950,937.88
Ratios of balances at end to current month's sales	35%	41%

FIG. 10. Summary of Accounts Receivable Controlling Account

book (Fig. 8) and the check register (Fig. 9) will be of assistance in preparing future estimates.

Condensed summaries of the accounts receivable controlling account (Fig. 10) and accounts payable controlling account (Fig. 11) will furnish average percentages showing the relation between outstandings at the end of the month with the current volume during the month.

Accounts Payable Controlling Account

	January	February
Balances at Beginning	$2,516,504.18	$ 5,066,315.80
Add: Invoices Net of R. M. D.'s, etc.	6,636,054.36	8,190,825.46
	$9,152,558.54	$13,257,141.26
Deduct: Payments, Current Month	4,086,242.74	6,277,286.54
Balances at End	$5,066,315.80	$ 6,979,854.72
Ratios of balances at end to current incoming invoices	76%	85%

FIG. 11. Summary of Accounts Payable Controlling Account

Condensed summaries of controlling accounts similar to the above will furnish ratios of outstandings at the end of monthly periods to the total monthly transactions. These percentages are valuable in preparing cash budgets.

Supervision of Cash Receipts and Disbursements

GENERAL.—Supervision of the current details in connection with the handling and recording of cash receipts and disbursements will be successful only in proportion to the completeness of the safeguards thrown around the handling of the cash, to the efficacy or otherwise of the accounting records in requiring prompt and correct entries and in providing internal check thereon, and to the extent to which the financial manager is in touch currently with the actual conditions, through the filing with him of periodical reports and the following up of unusual or unsatisfactory situations.

Financial managers cannot be successful by holding aloof from detail. Finances and accounts consist of detail, and the financial manager will do well to realize that the **secret of control of details** lies in classification thereof, in providing simple routine methods and records, and requiring current reports in such form that they cannot be prepared unless the work has been done correctly and is up to date. Condensed references to important fundamentals to be borne in mind in connection with the design and use of the records, and with office practice in handling of the cash, will be of assistance to the financial manager.

DAILY REPORTS.—Actual cash receipts and disbursements should be reported daily to the financial manager. They may be covered in one daily financial report (Figs. 6a and 6b) with cash balances, and other financial data, where the items do not vary greatly in nature. Where it is desired to follow daily transactions in more detail, it will be found practicable to use also one or more of the forms described in detail in the preceding pages of this section.

Reports must tell a complete and true story. This can be assured only if the figures used in the reports are practically all summaries or totals of the current transactions shown by the detailed cash records, and if separate general ledger or expense ledger controlling accounts are provided to control such of the receipts and disbursements as can be separately classified because of difference in nature, in method of handling, or in the period of collection or disbursement.

One of the simplest and most practical pieces of office equipment is the ordinary loose leaf I–P binder. Instead of keeping reports in separate folders, if all of them are kept in such a binder, with indexed stiff sheets separating each kind of report, the whole story of the vital elements of financial control will always be at the fingers' ends, and all of such reports will be referred to oftener than if filed away in folders in a cabinet.

CLASSIFICATION OF RECEIPTS.—The nature of various receivables, the methods and times of collection, the geographical location of customers, branches and bank depositories, are the more important items which will affect decisions as to the nature of the cash records and the extent of the classifications of the receipts for which separate ledger controlling accounts should be provided.

In every case where receipts of similar nature aggregate a large percentage of the incoming cash, or consist of a large number of items, or are of importance for other reasons, they should be covered by separate regular reports; separate cash book columns or separate cash entry forms should be used for recording the details, and separate ledger controlling accounts should be provided for each class of receipt. Items usually controlled in this manner are accounts receivable (which may in turn be subdivided and separately controlled with respect to territorial, alphabetical, or other classifications), sight drafts, notes receivable, acceptances receivable and foreign drafts.

Receivables to be paid by officers or employes should be in separate general ledger controlling accounts and not included with those arising during the regular course of business. Inter-company and branch accounts should be covered by separate general ledger accounts for each branch or allied company.

ACCOUNTS RECEIVABLE.—The use of a daily cash receipts control (Fig. 2, page 296) will give the financial manager a good idea of how the current collections are running, while a separate receivables control showing the aggregate receivables outstanding at the close of each day will tell whether or not collections are keeping pace with shipments. The first mentioned form will be found to be particularly helpful in cases where the sales are made on terms of 10 days, 30 days, or other specific time after shipment, as the daily average collections can be readily compared with the daily average sales for the corresponding previous shipment period shown by the shipments control.

Collections Facilitated by Schedule of Balances.—Where the sales terms are 10th proximo or other specific date following an entire month's shipments, collection supervision will be facilitated if the financial manager will have schedules prepared of balances in excess of a specific amount, such as $5,000 for large customers and smaller limits for smaller ones. The use of such schedules, prepared immediately after the close of the month's business, and forming the basis for following up collections during the succeeding month, may often prove to be important in the successful carrying out of a financial program.

Discount Notices.—Some companies make it a practice to send out notices to reach debtors a few days before discount dates reminding them that if they pay their bills by a certain given date they will be entitled to a specific discount named in the notice. This involves a large amount of work where notices are sent to every debtor; where the amounts are large the debtor usually sees to it that he takes the discount. In some businesses, however, this practice may be justified if the amount of working capital is limited.

Schedules of Overdue Accounts.—The financial manager should require schedules of overdue accounts to be submitted to him at least monthly and

oftener if conditions make it practicable. The failure to require these schedules regularly on a fixed date and the neglect to currently supervise the collections of these overdue accounts have embarrassed many companies. It is a mistaken policy to allow collection departments to keep writing indefinitely to customers. If remittance is not forthcoming after three or four letters to customers, it is usually because the latter cannot pay, they will not pay or they have some grievance or offsetting claim; if any of these contingencies obtain, the matter should have executive action. It is well, therefore, if the financial manager will follow these overdue accounts quite closely, after a fixed maximum of letters have gone forth from the collection department, until he can classify his customers, or the reasons for unsatisfactory collections, and then decide on policies which will result in a minimum of losses from accounts receivable, and in better current collection results.

Form of Accounts Receivable Ledgers.—Whether the receivable ledgers should be in loose-leaf or in card form will depend upon how much memoranda need be posted in addition to the figures, how much handling the records will receive and the number of entries during the course of the month. Bound books are practically obsolete and the use of many notations in posting is being discouraged. Machine posting is very desirable where there are a great number of daily entries and the notations can be condensed to a few standard items. Whatever form is used care must be taken to prevent access to the records except by authorized persons in the collection and accounting departments in order to prevent loss of individual ledger sheets or cards. All forms should provide for the notation of any special terms to which the customer may be entitled.

It is of the utmost importance that fireproof cases or vaults be provided for the keeping of all accounting records. It is almost impossible to make collections after a fire, even if the receivable records have been preserved intact, unless the original entry data are also available.

Treatment of Various Classes of Accounts Receivable.—Accounts with the officers and employes should be scrutinized by the financial manager personally at stated periods, but in any event not less than monthly. **Accounts receivable against suppliers or other creditors** should at the close of each month be transferred by journal entry from the accounts receivable to the accounts payable records. **Consigned accounts** should be scrutinized at least monthly by the financial manager and at definite dates the status of the accounts should be checked through the sales or manufacturing departments to ascertain whether any or all of the account has become collectible by reason of the consigned goods having been disposed of or accepted by the customer or whether the consigned goods have been returned, thus necessitating an adjustment in the account.

Accounts Receivable to be Kept at Main Office.—Wherever possible, all accounts receivable ledgers should be kept at the main office and not at branch offices, and statements should be mailed direct from the main office to customers' addresses. Where branches are permitted to carry the details of their own accounts, monthly detailed trial balances should be transmitted to the head office; these should be **"periodized"** (showing in separate columns by months the amounts accrued in each period) at least quarterly. Such trial balances should be carefully scrutinized at the head office. All accounts overdue for 30 days or other definitely fixed period should be transferred to the head office, where they can be kept in a separate "overdue" account for each branch and come under direct supervision of the financial manager; of course, collection efforts even in such cases need not be relaxed by the branches.

It is a good practice to occasionally have traveling or head office auditors compare all monthly statements with the receivable ledgers and mail them direct to both the head office customers and the branch customers with a printed request to notify the financial manager of any discrepancies in the statements or claims not adjusted thereon.

Control of Opening New Accounts Receivable.—Adequate control of accounts receivable includes the prevention of the opening of new accounts except upon proper written authority of the credit department after full credit investigation of new prospective customers. This authority should come through to the accounting department in the shape of card containing proper data signed by the credit manager. It is important, however, that the credit department be advised currently of any unsatisfactory condition of receivable accounts, or exceeding of prearranged credit limits, which limits should appear at the head of every customer's ledger account.

C. O. D. ACCOUNTS.—C. O. D. accounts can best be handled in one of two ways. The first method is to keep one ledger account for all C. O. D. customers; to provide for a separate series of numbers for each debit entry, and to use "opposite posting" for the receipts or credits (posting them on the credit side of the ledger sheet on the same line as the original debit entry). This method is good for hand-posted receivable ledgers only. The second method is to provide a separate series of consecutive numbers for all C. O. D. invoices, and have an extra copy of each prepared on stiff ledger paper or cardboard. These extra copies may then be used to form a numerically or an alphabetically arranged loose leaf subsidiary C. O. D. accounts receivable ledger, from which the accounts may be removed to a transfer file as they are closed. Of course, C. O. D. accounts should be covered by a separate general ledger controlling account.

SIGHT DRAFTS.—The best control over sight drafts can be obtained by the use of a series of consecutive draft numbers, by preparing the drafts in triplicate, with each copy of a different color, and using the copies as follows: Attach all bills of lading or other documents to the original draft (white) and put it through the bank, keep the duplicate (yellow) in the office for filing and follow up purposes, and mail the triplicate (blue) to the customer with the request that he insert on this copy (in a space especially provided) the date on which he pays the original at his bank, and return this copy to the drawer. This practice saves money in interest by speeding up collections from customers and intermediate collecting banks in cases where much of the current business is done through the use of sight drafts; it has been known to prevent actual losses by quick action where collecting banks have made collections from the customers but did not remit promptly to the drawer's bank.

The Federal Reserve System of district and branch banks can be utilized to great advantage by concerns doing a national business. Arrangements can ordinarily be made with a bank which is a member of this system for the immediate transmission by telegram (by credit to the member bank's account at the federal reserve bank nearest the point of origin) of all collections at a distance by branches of the federal reserve bank. As much as 7 days have been saved in elapsed time by this method over previous ordinary bank collection practice.

NOTES AND ACCEPTANCES RECEIVABLE.—Notes are sometimes desirable because they represent a definite settlement with respect to amount and date of payment. Certain creditors take advantage of such settlements, however, by giving a note for 4 or 6 months and then at maturity sending

along a check for an insignificant portion and a renewal note for almost the entire amount thereof. While in some rare cases it may be good business to carry such a customer, it should be recognized that the practice is usually the result of habit. A good way to break it is to insist that notes be given for smaller amounts, maturing currently, either weekly or semi-monthly, with the understanding that they must be met in full at maturity.

Trade acceptances serve the same purpose as notes in that they are definite promises to pay on specified maturity dates. They have some advantage over open accounts in that they provide readily discountable paper and bring the customer right up to the necessity for settling at maturity, which is not necessarily the case with open accounts. Another advantage lies in that a trade acceptance usually is in settlement for but one definite commercial transaction, and thus is free from complications which arise in attempting to secure settlement for an entire series of current transactions.

Desirability of Discounting Notes and Acceptances Receivable.—If possible to do so, notes and acceptances receivable should be discounted. This

NO._____ DUE_____ _____

FIG. 12. Note Receivable

Notice particularly the waiver clause with respect to presentment for payment, demand, notice of dishonor, protest and notice of protest. This is binding upon guarantors of such notes, even though the guaranties are covered by separate instrument.

not only provides immediate liquid funds but avoids the possibility of loss through release of endorsers (and also of guarantors or sureties if covered by separate instrument) if the paper has been inadvertently held over a day longer than should have been the case before presentation. The banks are familiar with all the detailed legal requirements as to notice, demand and protest in connection with makers, acceptors and endorsers on such paper, and by discounting, the responsibility for the fulfilling of those requirements is transferred to the bank. In order to prevent any advantage accruing to the maker or endorser of a note, in case of any clerical oversight or to prevent any unwarranted claim being made that the exact technical legal requirements were not carried out, notes or acceptances should be used containing a specific waiver clause similar to that in the note shown in Fig. 12.

It is good policy to insist that all notes and trade acceptances read so as to be payable at bank and not at an individual or business address.

Records of Notes and Acceptances Receivable.—One register can be used to cover both notes and acceptances receivable, as the entries for accept-

ances may readily be identified by separate series of numbers, or by the use of the prefix "A". This may be a **card register** or it may be in the form of a **bound book** containing the details as to numbers, dates, makers, endorsers, amounts and maturities. A card record of maturities should also be used where great quantities of notes are handled; this record need only show register numbers on separate cards for each maturity date; it is practically a maturity reminder and collection record. Where the quantity of such paper taken currently is not great, the usual form of notes receivable book combining all the above data and classifying it by maturity dates through the use of separate vertical columns for entering the amounts in the months in which the notes mature, will be found satisfactory. It may be found desirable to also keep the notes themselves filed by maturity date as an additional check to insure the presentation at maturity of any undiscounted paper.

NOTES AND ACCEPTANCES PAYABLE.—Irrespective of whether the quantity of notes payable issued for the year is large or small, some sytem of **consecutive numbering** of the notes should be used. Blank notes should be so numbered before they are padded. Where quantities of such notes are sold as commercial paper, it has been found desirable to use a special form of note printed or engraved in multiples of $5,000. In such cases each denomination should have an identifying color and letter prefix to its consecutive numbers. The accounting for the proceeds of commerical paper issued in this systematic manner is comparatively simple.

Acceptances payable are practically notes payable, but they should have a series of numbers entirely separate from those used for notes payable issued for borrowed money.

Records for Notes and Acceptances Payable.—Registers for recording the details of such paper may be similar in form to those hereinbefore mentioned under the heading of Notes and Acceptances Receivable. All entries in cash receipt books (for proceeds of borrowed money) or other records should refer to these register numbers.

Monthly Summaries Desirable.—A summary of all such outstanding paper should be prepared from such registers at least monthly. This summary should disclose the amounts maturing during each of future months, and during even subdivisions of the next coming month, to enable proper provision to be made therefor in the current cash budget or in a financial program for an extended period.

Marking Paid or Renewed Notes.—Paid or renewed notes and acceptances should be marked with date and memorandum to show the nature of the transaction by which the paper was retired. In no event should the notes be destroyed until after the regular audit by public accountants.

CASH SALES.—The fundamentals to be borne in mind in planning for the **control of cash sales** from a record standpoint, are: (1) the purchaser should receive a consecutively numbered cash or counter slip or an invoice in exchange for his cash; (2) a copy of such cash slip should remain in the hands of the selling organization, either with the cashier or the sales clerk, and in some cases, with both; (3) provision should be made for daily summarizing of the sales slips of each clerk and of each department; and (4) internal check or audit should be going on continually between the records of the departmental sales clerks and the cashiers.

Need of Serially Numbered Cash Sales Slips.—Separate serial numbers for departments, for sales clerks, and for cash sales slips are necessary for auditing

and current sales statistical purposes; such numbers should show on all copies of the sales slips. Sales slips bound in sets to form "fillers" for stiff back binders for the use of the sales clerks, are very practical. Card summary forms should also be provided for these binders so that each sales clerk can mark down the total amount of each sales slip in numerical order, and turn in the entire binder (with sales slips and summary) to the auditing department at close of each day. Two binders and series of sales slips for each sales clerk will enable the latter to use one binder and series of slips on alternate days while the other is in the hands of the auditing department; thus each day's cash sales may be audited on the day following the transactions.

Designation of Charge Sales Slips.—If charge sales slips are used in the same binder as cash sales slips, separate identifying features should be used, such as paper and printing of special color, special design of form and separate serial numbers.

Cashiers Summary.—Cashiers should be designated for a specific department or group of departments. Each departmental cashier should prepare a daily summary to be turned over to the head cashier with total cash receipts for the day. This head cashier's summary should, of course, be checked in the auditing department against the recapitulation by departments of the audited summaries of the cash sales turned in by the departmental sales clerks.

Control Where Cash Sales are Infrequent.—In factories or establishments where the number of daily cash sales transactions is comparatively insignificant, there may still be plenty of opportunity for loss through cash sales of scrap, boxes and other containers, as well as through occasional sales of finished product. Wherever practicable to so arrange, deliveries should not be made from stock departments, but through the shipping department, and the latter should require a cash sales ticket from the cashier specifically setting forth what should be delivered to the cash purchaser.

Passes Required for Packages.—The use of passes for packages or trucks going through the factory gate has been found practicable and has prevented the disappearance of assets which might otherwise have been carried off without having been paid for. Receipted invoices for cash sales are sometimes used in place of such passes; when so used, the watchmen should pick up the cash sales slips and turn them over to the auditing department for audit against the cash sales receipts and also to prevent their being again used on a following day to pass wrapped and pilfered articles.

MISCELLANEOUS RECEIPTS.—

Receipts from Subscribers to Security Issues.—Accounts with individual subscribers to stock or other securities disposed of should be treated as are other accounts receivable. If journal entries are made for the sales of the securities, the receipts from the subscribers should be handled in manner similar to remittances from other debtors. If the number of such subscribers is large, or payments are to be made on an instalment basis, separate subsidiary ledgers may be used for the individual accounts and all of them covered by separate controlling general ledger accounts. A separate column in the cash received book would also have to be provided. This method of handling will enable effective collection control to be had over such accounts.

Receipts of Royalties, Rents, Interest and Dividends.—Miscellaneous regular collections such as those on account of royalties, rents, interest and dividends on securities can be controlled (1) through the use of cards which permit of filing by maturity dates, (2) through the use of loose-leaf registers

containing separate sheets for various months on which are vertical columns covering the various days of each month, or (3) through the use of extra copies of invoices or other original notices of demand for payment, which may comprise a subsidiary ledger for items of a specific class of income.

All of such records are, however, collection reminders and not actual collection controls. It is desirable, in addition thereto, to provide records which will at once show whether all the collectible income from each and every source has been received. This may be accomplished through specially designed sheets on which can be kept a regular ledger account with each mine or patent producing royalty, with each property leased to one tenant, (or separate sheets for each tenant, if more than one) or with each mortgage or other security owned. This may be a regular subsidiary ledger account with respect to the principal values of an asset owned, and may be a collection memorandum record with respect to the income therefrom. Below descriptive headings, regular ledger rulings should be used for the posting of transactions affecting the principal and a separate set of ledger rulings for the posting of the income items.

INTER-COMPANY CASH TRANSACTIONS.—Where the cash transactions between affiliated companies are many, it is usually desirable not only to keep a current controlling account with each company on the general ledger, but to also provide **additional detailed accounts for various classes of transactions,** even to the extent of a separate "Cash Remittance" and "Cash Received" account with each company. Transfers of the total of the monthly entries in such classified accounts should be made to a controlling general ledger account summarizing all the transactions with the company.

The controlling company should, of course, receive regularly detailed statements from each allied company, for comparison with the head office ledgers. The use of separate accounts for inter-company outgoing remittances and incoming receipts will simplify the auditing of the general ledger controlling account with the allied company and will enable identification to be made of items in transit at the close of a month. This practice will also enable an auditor to compare elapsed time between original remittances on either side and the dates upon which the funds reached their destination, and should put him quickly upon the trail of any shortages which are being made good from subsequent transactions.

CASH IN TRANSIT.—The policy should be adopted of requiring regular remittances to the head office from all affiliated or controlled sources from which incoming cash is expected, whether these sources are factories, branch sales offices or allied companies and whether located in domestic or foreign territory. Where the amounts involved are of some size, daily remittances will be desirable; in any event, however, remittances should be required at least semi-monthly. The use of a consecutively numbered form of remittance slip will simplify the record work in the offices at both ends of the transactions and make it easier for auditors to verify cash which may be in transit at any audit period.

Cash from Foreign Branches or Affiliated Companies.—In cases where branches or allied companies are located in foreign countries, it should be decided whether the head office should draw drafts on the foreign offices and sell them in the local market, or whether the manager located in the foreign country should remit through the medium of purchasing and cabling of dollars. The latter is usually found to be the more practicable method, since the head

office naturally cannot always be informed as to the latest status of the accumulated cash in the foreign country.

Data on Remittances from Foreign Branches.—All remittance slips covering remittances from foreign countries should set forth at least the total in dollars and their equivalent in foreign currency, so that the head office may check up these slips against the monthly statements of account from the foreign branch or allied company.

Accounts of Foreign Branches in Dollars and in Foreign Currency.—Allied companies or branches located in a foreign country should keep their accounts with the head office in foreign currency and also in dollars. A complete transcript of the account should be sent monthly to the head office setting forth each transaction in both currencies. To simplify **reconciliation** with the head office books, it will be found practicable to provide for regular balancing such accounts on the head office books on a specific day prior to the actual end of a calendar month; the exact date on which such balancing should take place depends upon the average number of days which elapse before mail can pass between the two offices.

CASH HELD IN BRANCHES AND FOREIGN COUNTRIES.—Irrespective of the geographical location of any branch or affiliated company, the policy of depositing all receipts daily in the local bank account should be adhered to. The cash not yet remitted to the head office would thus always be on deposit in the local bank account of the branch or allied company.

Control of Bank Deposits of Branches.—The simplest method of controlling cash at branches making their own local collections is to let each branch have **a separate "operating" bank account** for an imprest fund to be replenished at regular periods by check from the head office to cover branch expense reports; then to require all branch collections to be deposited in a separate "branch collections" bank account against which are drawn only such checks as are remittances to head office. It may even be found desirable in cases where domestic branches are operating under this plan, to provide that only the head office may draw checks against such collection bank account; where this is done, the local bank account at the point where the branch is located becomes in reality a head office bank account, and it will then become necessary to treat all branch deposits in such bank account as if they were direct remittances to the head office, and make entries accordingly on the records both at the branch and at the head office.

Monthly Bank Statements of Branch Accounts to be sent to Head Office.—Certificates of balances from local banks covering the "operating" bank account of branches or allied company offices should be required by the head office at least monthly. In some cases (and always where the separate "branch collections" bank account is used) it is desirable to have the monthly bank statements and checks sent to the head office direct by the local bank.

Withdrawals from Bank Accounts of Branches.—All local bank accounts of branches, both domestic and in foreign countries, should be deposited under arrangements which permit withdrawal by designated executives of the head office as well as by the properly authorized persons of the branch; this arrangement may prevent embarrassment in case of unforeseen circumstances occurring at the branch.

DISCOUNT INCOME FROM ACCOUNTS PAYABLE.—Income from discounts has become an important item in present-day business and if the capital structure of an institution has been properly planned and carried out, and

credit relations with banks satisfactorily established, advantage should be taken of all available discounts on suppliers' invoices. Where a business is highly competitive and dependent for profits principally upon continuous turnover within comparatively short periods of time, the proper control of discounts may mean the difference between a financially successful and a disappointing year.

Control of Discounts on Accounts Payable.—Successful control of discounts on accounts payable consists of two parts: (1) close co-operation between accounting and purchasing departments in deciding upon policies to be carried out by the purchasing department, and (2) effective plans for handling the office detail in connection with incoming invoices, from the time they first arrive in an establishment until they are paid on or prior to the date on which the discount period expires.

Distributing Discount Dates.—It is an almost superhuman task for any large establishment to pay all its invoices within 10 days after invoice date; goods ought to be received and inspected before invoices are paid and quite often more than 10 days elapse between the time of shipment and the receipt of the goods. To pay all invoices on the tenth proximo covering an entire previous month's purchases presents similar difficulties as many of the goods shipped during the latter half of the previous month may not arrive before the tenth proximo. In both cases time must be allowed for the routine auditing of the invoices with respect to actual quantities received, correctness of unit prices, extensions and footings, checking of terms, and the re-charging for shortages and of transportation paid on goods purchased on f.o.b. destination terms.

Where the magnitude of business done with individual suppliers justifies it, it should be arranged that settlements for most of the current purchases be made so as to distribute the work over the entire month. These payments may in some cases be made on the 10th proximo, others on the 15th proximo and still others as late as the 20th and 25th proximo.

Even where suppliers are dependent upon rapid turnover, it has been found practicable to arrange for making settlements on the 10th proximo for purchases during the first half of the preceding month, and on the 20th proximo for purchases during the last half of the previous month, all on a discount basis.

Accounts Payable Ledger Sheets Should Indicate Discount Terms.—All accounts payable ledger sheets should clearly specify the discount terms. Ledger sheets of different color have in some cases been successfully used to insure the examination of the accounts payable ledger just prior to specific dates and the payment of all discountable invoices before the expiration of the discount period.

Use of a "Kicker's Sheet."—Even in cases where arrangements have been made with creditors for paying on a definite date all invoices for previous month's shipments, it has been found that, for various reasons, some suppliers insist on construing the terms to mean that they must actually receive the remittance on or before the last discount date, and they will refuse to allow the discount if the check arrives on the day following. Such suppliers can be readily taken care of by inserting in the front of each accounts payable ledger a "kicker's sheet" setting forth the name and discount date of such suppliers and using this sheet as a guide in sending remittance a day or two previous to the date on which remittance would ordinarily be sent.

Use of "Short Discount" Card.—In addition to those accounts previously referred to as being payable on definite dates following current month's business, a great number of smaller invoices must be paid within a discount period specified

on each invoice. In such cases it is not practicable to use the accounts payable ledger as a basis of control. A "short discount" card has been successfully used for this purpose. Such a card need only refer to the name of the supplier, date and amount of invoice, discount terms, and final discount date; by filing them according to last discount date, or a day or two previous thereto, the invoices themselves can be taken from the files and checks drawn therefor before the expiration of the discount period. In comparatively small establishments it may be feasible to file the invoices themselves according to latest discount dates and dispense with the short discount card.

Discount of Invoices with Unadjusted Items.—If for any reason discountable invoices are not in shape for final payment by the time the discount period is nearing expiration, it is always possible to make payment on account and take discounts on those partial payments. It is usually a mistaken policy, which only results in loss of cash discounts and in creation of ill will, to refuse to pay an invoice of considerable size because there are unadjusted items which may eventually result in a very small recharge, and then to attempt to take the discount when the items have been adjusted long after the expiration of the discount period.

DISCOUNTS ON RECEIVABLES.—Discounts on accounts receivable are of course reductions from income; nevertheless, if not handled correctly, they may affect the income more than should be the case. Serious losses have actually occurred to concerns due to neglect to audit discounts taken by debtors; discounts should be allowed only on the **amount actually paid net** of any recharges or deductions, and not on the gross amount before such deductions.

Policy on Payments Received after Expiration of Discount Period.—A definite policy should also be decided upon and rigidly adhered to with respect to payments arriving after the expiration of the discount period; a maximum of from 1 to 3 days' grace is the usual basis of such a policy, although exceptions might be made in cases where elapsed mailing time is a consideration.

Monthly Statements Should be Mailed Promptly.—Of course, debtors cannot be expected to make prompt remittances if monthly statements are not mailed to them promptly, and any laxity in this regard must be borne in mind. If delay is unavoidable because of the nature of a business, the receivables ledger should be closed a day or two previous to the close of the month.

VERIFICATION OF ALL DISCOUNTS.—The amounts of the discounts taken on both receivables and payables should be verified by comptometer operators or individual clerks checking each supplier's invoice and each incoming remittance. In cases where a supplier's monthly statement forms the basis for the preparation of a creditor's settlement statment to accompany outgoing checks, it is always a good policy to have the discount checked by a party other than the one preparing the settlement, as it is easy to lose considerable sums of money in large statements by an error in proper location of the decimal point or even in subtraction of the discount. It is also a good policy to each day have the cash book entries for the previous day scrutinized with respect to the correctness of the discounts deducted by customers from incoming remittances.

Collecting and Recording of Cash Receipts

GENERAL.—Centralization of responsibility for the making of collections from charge customers, standardization of forms and simplification of methods, whether the collections be made by mail or through office cashiers, are

the more important items to be borne in mind in planning for the making of collections and the recording of cash receipts.

Collections may be divided broadly into **three divisions:** (1) incoming mail remittances, (2) payments to office cashiers, and (3) collections by field representatives. While the various office units handling each division will operate differently, and the record forms will be diversified, the control of collections should come under one department head.

Few businesses have any more complex collection problems than department stores. They carry both current charge accounts and instalment accounts; they handle great quantities of small remittances which come in by mail and through office cashiers; they also use field collectors. For this reason the methods and records used in large metropolitan department stores will furnish the principal basis for this outline. The references will not be limited, however, to department store practice, and suggestions will be included, without specific mention, where practice in other lines of business has brought forth ideas worthy of the consideration.

ORGANIZATION.—All the business and data in connection with the opening of customers' accounts, the current entries thereto and the collection of the balances therein, should be concentrated in one department under a credit and collection manager. This department may be subdivided into: (1) credit unit, (2) accounts receivable unit, and (3) collections unit.

The Credit Unit should be responsible for gathering credit data and authorizing the opening of accounts with proper limitation of credit. The functions of this unit should be so co-ordinated with the sales unit that the credit unit can approve sales orders after ascertaining that such orders, together with the unpaid items, the credit limit of the customers is not exceeded.

The Accounts Receivable Unit should limit its current activities to the preparation of the customers' ledgers and statements and the current postings thereto from the various sales, credit and collection slips. This unit should also be responsible for the balancing of the ledgers against one or more general ledger accounts receivable controlling accounts. The opening of separate customers' accounts each month will enable the accounts receivable unit to turn over to the collection unit the ledgers covering all business done during the preceding month and showing the balances at the end thereof.

The Collections Unit will have possession of the accounts receivable ledgers containing all items prior to the first of the current month. This unit should be located very close to the accounts receivable unit as it must examine the current ledger accounts to keep posted on the continually changing current condition of customers' accounts. All field collectors should form a part of the collections unit.

While the collections unit should be held responsible for the collection of all accounts receivable, it should not exercise any control over the mailing department (through which mail remittances are received) nor over the cashier's department which handles the incoming cash. **The Mailing Department** should report to the office manager, who, of course, should turn over to the cashier's department all incoming remittances and any correspondence accompanying them. In such cases, it is good policy to use a rubber stamp which makes an impression designating the various kinds of remittances such as check, money order, currency, etc., with a space to the right of each designation for the mail clerk to insert in heavy blue pencil the amount of the remittance. The **Cashier's Department** should report direct to the comptroller.

CUSTOMERS' STATEMENTS AND LEDGERS.—In retail merchandising institutions, the form of customer's monthly statement can be so designed as

FIG. 14. Accounts Receivable Ledger, which is a Duplicate of the Customer's Statement

The analysis data is filled in by the bookkeepers in accounts which start the month with balances which are still unpaid at the close thereof.

to be a vital factor in facilitating collections and in keeping the office detail down to a minimum. Fig. 13 is a modern statement form used, with slight modifications, in large department stores. A duplicate thereof, with a 3-inch binding edge to the left, forms the accounts receivable ledger. Current postings are made simultaneously by machines to both statement and ledger forms from the charge sales and credit slips prepared by the various departmental sales clerks and from the cash remittance slips coming through the cashier's office. Particular attention is called to the fact that the top part of the customer's statement is perforated and has instructions printed thereon for the customer to detach and enclose it with the check. In actual practice a majority of the customers send this in with their remittances and they form an important part of the cash receipt record data.

By the use of colors for these forms, separate ledgers may be maintained for isolating instalment accounts or other accounts which might call for special handling because of unusual terms granted to customers.

Separate accounts receivable accounts are opened for each customer monthly. At the end of each month the duplicates are permanently bound to form the accounts receivable ledger for the month just ended, and are then turned over to the collections unit.

A very valuable feature is the use made of the top portion of the duplicate of the form, which becomes the accounts receivable ledger. Since this copy will not have any typing on it, it is so printed as to provide the analysis blocks shown in Fig. 14. If the balance brought over from the previous month has not been settled during the current month, these analysis blocks are filled in by the accounts receivable ledger keepers before the duplicate sheets are bound. Fifty per cent or more of the accounts are usually so settled and require no analysis.

WORK OF A COLLECTIONS UNIT.—Immediately upon receiving the ledgers from the accounts receivable unit, the collections unit should examine the analyses at the head of each overdue ledger account and schedule these accounts on a series of collection follow-up sheets, which form the basis of the collection efforts of this unit. A form of collection sheet is shown in Fig. 15. The headings of the various columns indicate the nature of the information to be scheduled in each. The Remarks column can be used for making current memoranda during the collection process. The reader hereof should catch the idea behind this collection letter scheme and not necessarily be bound by this form. Some credit managers may desire additional columns for inserting the dates on which each of a series of follow-up forms or letters are sent. Others will use a special series of sheets for classifying the overdue accounts, and thus keeping together those which are but one month overdue, those containing items 2 and 3 months overdue, etc.

Customers' Statements and Collection Requests.—Fig. 16 shows the first of a series of condensed customers' statements and collection requests; this is the beginning of the collection work which should follow the preparation of the collection sheets. These should be followed up by other similar forms varying only to the extent of change in the wording below the statement of the account. In all these follow-up forms the top half (in which is inserted the name, address and account number of the customer) is identical with the top half of the customer's original statement in that it provides for the customer returning this portion of the form with his remittance. It is necessary that this idea be continued through all the collection letters or notices where many accounts are handled, as it will simplify the handling of the remittances by the cashiers.

Collection of Instalment Accounts.—In the case of instalment accounts, it is usually desirable that the **whole status of a contract** be shown on the first of these collection notices. Figs. 17 and 18 show the first and second notices to be sent to delinquent customers under instalment contracts. All notices on instalment contracts should be of the special color decided upon for the instalment customers' statements and ledgers. Attention is directed to the fact that also in the instalment collection notices the top half thereof carries through the idea of the remittance slip to be returned by the customer with his remittance.

The consistent carrying out of fixed policies is an important element in proper functioning of a collections unit. The specific time to be allowed to elapse between the sending of the various collection forms should not only be decided upon in advance but the plan should not be departed from.

COLLECTION LETTERS Dated_____ 19_____

Acct No.	Name	No.	Street	Form No.	Total Due	Overdue	Month	Remarks

FIG. 15. Collection Sheet for Listing Overdue Accounts Receivable and Noting Collection Letters and Other Current Efforts of the Collection Unit

Field Collectors.—After the mail efforts at collection have been exhausted without success, resort should be had to the use of the field collectors of this unit. The analyzed data covering these unsatisfactory accounts should at this time be transcribed on a collector's card similar in form to that shown by Figs. 19a and 19b. The numbers along the top of this card represent days of the month for the purpose of affixing metal tabs (two colors to be used alternately for current month and next succeeding month) to indicate the next date on which the collector is to follow up his last previous contact with the customer.

These cards should be filed alphabetically in a file for each collector. Control is had over all the cards by listing on a separate control sheet all of the accounts assigned to the same collector. The office supervisor of these collectors should use such a control sheet for his own guidance; he can get up-to-date information by providing a separate "current" index card in each collector's box behind which the collector can place all the cards which he has used during the day for making calls, and on the rear of which he has noted the results of his visit. The dividing of a metropolitan area into collection districts and the

ingenuity of each collector in arranging his calls for each day are factors in keeping down the collection cost and improving the efficiency of the collectors.

The office supervisor of the field collectors should have considerable latitude in determining how far the collectors' efforts should be continued and when the time has arrived for turning individual accounts over to attorneys; before the latter is done, however, the authority of the credit manager should be secured.

The X. Y. Z. Co.

Detroit

Tear Off This Slip and Enclose with Your Check to Assure Proper Credit Being Given. Your Cancelled Check When Returned by Your Bank Is a Valid Receipt. Accounts Are Due the First of Each Month.

This is a memorandum statement of your account.

Possibly you have sent us a remittance which we have not received, inasmuch as your account shows the above balance unpaid.

Will you kindly let us know if you have made payment of this amount, or, if it has been overlooked, perhaps you will find it convenient to send us a check at this time.

Very truly yours,

The X. Y. Z. Company.

FIG. 16. Customer's Statement and Collection Request

This is the first of a series sent at intervals. While the wording varies on each form, the top half in all cases is identical with the top half of the customer's original statement; it permits the customer to detach this portion and mail it with his remittance.

Co-ordination of Credit and Collection Policies.—It would be a good thing for all organizations whether they use this system or not, to the policy of bringing to the attention of the credit manager all overdue accounts above a fixed maximum amount which show unsatisfactory remittances or none what-

ever after the mailing of a certain number of collection notices or letters. It might be well to make such regulations that at several points during the collection process accounts will come up for decision as to the discontinuance of further credit on current purchases. Customers with debit balances of over

		Total amount of Contract		
		Total amount paid to date		
		Balance		
		To payment due		

PAYMENTS MUST BE MADE IN ACCORDANCE WITH TERMS OF CONTRACT

FIG. 17. First Collection Notice to Instalment Customers

It is desirable in the first of such follow-up collection notices to show the total amount of the contract, the aggregate payments to date and the unpaid contract balance, as well as the instalment which is overdue.

$250 who do not respond to two collection notices may require earlier and different consideration than others with balances of one-tenth of that amount who do answer and request just a little more time.

Not less important than the collection of overdue accounts is the prompt discontinuance of current credit when customers are no longer entitled thereto.

The collection department's co-operation with the credit department by keeping the latter informed currently as to unsatisfactory developments in individual customers' cases is a vital factor in the conduct of a successful business.

Control of Accounts Transferred to Attorney for Collection.—When an account is turned over to an attorney for collection it should be transferred to

a separate controlling account in the general ledger; if more than one attorney or collection agency is used, a separate account should be maintained for each such agency; if there are many of them (which may be the case in concerns doing a national business) a separate subsidiary ledger for all such accounts might be useful, keeping the customers' ledger sheets for the same collection house arranged alphabetically between indexed separator leaves. A properly indexed card ledger might also answer this purpose.

FIGS. 19a and 19b. Field Collector's Card

Metal tabs of different color are attached to the top of the card to indicate the day on which the collector should make his next visit. The analysis of the account gives the collector full information. Pertinent data is entered currently on the reverse side. After each visit the card is returned to the office by the collector.

Collection of Out-of-Town Delinquent Accounts.—Out-of-town delinquent accounts can be handled along the same general lines as city accounts, as in both cases alphabetically arranged customers' correspondence files must be kept in the collections unit. The use of traveling salesmen for calling on customers while out in their territories and of out-of-town collection agencies need not change the general method, as copies of all data in connection therewith can be kept in the correspondence files. For follow-up purposes the collectors' cards may be used and kept in a separate out-of-town file; if this is done, the clipping of the left-hand top corner of each card will prevent their being filed in any city collector's box.

Collectors' Receipt Forms.—If consecutively numbered receipt forms are used by collectors, they should be so designed that blank numbered sheets will serve as duplicates and remain in a bound book for retention by the collector until after a book of receipts has been completely used, when the duplicates should be left with the collections unit as a permanent reference record. A Daily Collection Report scheduling the collections in detail should be prepared by each collector which should be turned in to the office cashier with the cash collected. In some cases it might be advisable to provide that all of the collector's receipt duplicates also be turned in to the office cashier daily with the cash, so as to simplify subsequent posting to the customers' accounts. In such cases, the receipt forms should be as similar as possible to the top half of the customer's original statement; the reason for this will be obvious when reading the outline of the cashier's procedure.

INCOMING MAIL RECEIPTS.—The incoming mail usually brings with it checks, currency and post office and express money orders for open account, for payment of C. O. D.'s and for orders paid for in advance of shipment.

Procedure for Identifying C. O. D. Remittances.—In the case of C. O. D. remittances through express companies, the data with respect to the origin of remittance, C. O. D. serial number, etc., will usually appear on the rear of the envelope. Since these data are important in current bookkeeping, it will be necessary for the mailing room to securely fasten the C. O. D. express envelopes to the back of the express money orders. It is also good practice to securely attach to correspondence and remittances all envelopes sent by registered mail. In every case where a remittance slip, letter or other enclosure accompanies a remittance, the enclosure and the remittance should be securely fastened together.

Subdividing Types of Remittances.—When arranging for orderly opening and sorting of mail, provision should be made for sorting into separate piles: (1) express orders in C. O. D. envelopes, (2) money orders bearing C. O. D. serial numbers, (3) remittances accompanied by the regular remittance form at the top of the monthly statement, (4) those not accompanied by the remittance form but by other data, and (5) those not accompanied by either statement or letter. Group (3) may in turn be subdivided into express orders, money orders and other forms of remittances. This plan will facilitate the separate handling of each of these groups.

Receipts Without Regular Remittance Slips.—Wherever correspondence or data other than the regular remittance slips accompany remittances, the amount of the remittance should be shown in heavy blue pencil on the letter or other data in a place provided by a rubber stamp impression setting forth the various kinds of remittances with a line for inserting an amount to the right of each designation.

Delivery of Mail Receipts to Cashier's Department.—All of the remittances and accompanying remittance slips and correspondence should, after having gone through the mailing department as above set forth, be delivered to the cashier's department. Where the quantity of work justifies it, one or more mail cashiers may be designated to handle these remittances to the exclusion of other work. In some cases the practice has been adopted of scheduling the remittances in the mailing department, but in actual practice it has been found that this very materially interferes with the quick handling of the current business and does not actually prevent theft.

Treatment of Remittances with Orders.—If a business is not conducted entirely on a cash in advance basis, remittances with orders can best be handled by treating them in the same manner as remittances from regular charge customers and opening up ledger accounts with such customers. Care should be taken, however, not to overlook the importance of having the credit department pass upon such new accounts notwithstanding the fact that the original business done may have been on a cash in advance basis.

In the case of entirely cash in advance merchandising businesses, such as mail order houses, it will not be necessary to keep accounts receivable ledgers. Provision, however, must be made for giving consecutive order numbers to all incoming orders as soon as received and prior to the handling of the remittances. The records in all departments of the institution, including the accounting, will thereafter refer to the remittances and shipments by order number and not by customer's names.

OFFICE CASHIERS—LARGE CONCERNS.—

C. O. D. Return Envelopes Receipts and Orders.—The handling of C. O. D. express remittances will be simplified if at the time of making a C. O. D. shipment a self-addressed return envelope accompanies the C. O. D. papers on which has been previously typewritten the invoice number, amount of C. O. D. and the consignee's name and address. The majority of the incoming C. O. D. express orders will be received in such return envelopes. Where such remittances are enclosed in other envelopes, the reference data will have to be supplied by the collections unit.

Recording C. O. D. Receipt Sheets.—All C. O. D. express orders and C. O. D. money orders should be delivered by the mailing room to the cashier's department where they should be scheduled on two separate series of consecutively numbered sheets used solely for this purpose. These sheets will form a subsidiary cash receipt book in so far as concerns C. O. D. express orders and C. O. D. money orders; they should show the number of the express or money order, the C. O. D. number and the amount of each remittance. The total of the sheets used for each day's collections of this nature should be entered in the general cash receipt book to the credit of the C. O. D. Accounts Receivable controlling account.

Use of Duplicate C. O. D. Receipt Sheets.—If the subsidiary C. O. D. express and money order cash receipt sheets are written up in duplicate, a great deal of clerical labor can be saved by using the duplicates as detailed bank deposit slips.

Posting C. O. D. Receipts.—The detailed C. O. D. subsidiary cash sheets should then go to the accounts receivable unit for posting to the credit of the individual accounts in the C. O. D. ledger consisting of the previously alphabetically arranged duplicates of the C. O. D. invoices. If, to enable distribution of sales to be made to various classified sales accounts, a **Columnar Sales Sum-**

mary is maintained separately for C. O. D. sales, it may be found convenient to dispense with using the duplicate C. O. D. invoices as a C. O. D. ledger and to use this C. O. D. sale summary as such C. O. D. ledger. This can be accomplished if the C. O. D. invoices are listed in consecutive order on such summary and the column covering the total of each invoice is immediately followed by another column for posting the dates on which the C. O. D. remittances are received.

Use of Cash Register in C. O. D. Receipts.—If a system is in use whereby the office cashiers use a cash register machine through which all receipts must be put, the total of these detailed C. O. D. subsidiary cash receipt sheets can be put through the cashier's machine at the end of each day as separate items, instead of being entered directly in the general cash receipt book.

Use of Cash Register to Control Miscellaneous Receipts.—Where large quantities of receipt items are handled through office cashiers, a simple and practical method of handling them is to require all remittance

data to pass through cash registering machines with which each cashier is equipped. Such cash registers can be provided as will stamp each remittance memorandum with the date of receipt, a consecutive receipt number, an identifying abbreviation setting forth whether the remittance is cheque, cash, money order, etc., customer's account number, a cashier's letter and the amount of the remittance. A sample of the impression of such a cash register in actual use is shown at the top of Fig. 20. Such a register should, of course, have provision not only for recording the individual receipt items but also for registering the aggregate of the daily receipts; this total will form the basis for a daily general cash receipt book entry covering the total receipts of each cashier. The consecutively numbered individual remittance slips then go to the accounts receivable unit for posting to the credit of the individual customers' accounts.

Advantages of Using Duplicate Roll in Cash Register.—In this connection, it is important to bear in mind that a duplicate roll on the registers can be provided on which is shown all of the data stamped on each remittance slip; this roll will form a consecutive detailed register of the receipts (practically a

subsidiary cash receipt record) setting forth each customer's account number and the amount received. If posting machines are used in the accounts receivable unit for posting the individual remittance slips to the credit of the customers' accounts, and if the totals of such postings as set forth on the posting machines' adding mechanism are proved currently (once or oftener each day) against the totals shown by each cashier's register, the necessity for checking back the individual account postings against the duplicate register rolls will be entirely eliminated.

Address 222 - 2nd St.

Please present your monthly statement when making payments. It will save time for you and assist us to keep your account accurately.

FIG. 20b. Customer's Receipt for Office Collection Applying to Customer's Charge Account

Figs. 20a and 20b are put through the cashier's cash register which stamps the data shown at the top of both forms. Fig. 20a goes to the accounts receivable unit for posting to credit of the customer's account. These forms are printed on one sheet with perforated separator line. Both forms are filled out in one writing by the use of carbon paper.

Handling Regular Remittances.—In cases where the mail receipts are accompanied by the regular remittance forms which comprise the top of the customers' monthly statements, the checks and the remittance forms should be at once delivered by the mailing department to the cashiers who should take charge of the cash and put the remittance forms through the registers prior to sending them to the bookkeepers in the accounts receivable unit.

Remittance Slips.—Remittance slips in form exactly similar to the top of the customer's monthly statement should be prepared for remittances from

customers which were not accompanied by such forms. Because of absence of sufficient data, accompanying the remittances, it may be necessary to send the checks to the accounts receivable unit or collections unit for the preparation of these slips; the slips should be already prepared, however, at the time the checks are handed to the cashiers.

Remittance slips must be similarly prepared for receipts accompanied solely by letters; after the preparation of such slips the letters and other data can be sent to the various departments interested in the matters referred to in the correspondence.

Cashier's Voucher.—A cashier's voucher for office collections is shown in Figs. 20a and 20b, the latter being prepared at the same time as Fig. 20a by the use of a carbon sheet. These forms cover payments in the office by charge customers; they may be prepared in the collections unit or by the cashier at the time of receiving the remittance; after they both are passed through the cashiers' machines Fig. 20b is handed to the customer while Fig. 20a goes to the accounts receivable unit for posting to the credit of the customer's account.

Receipts from Sources other than Customers.—What has been said above refers almost entirely to receipts from customers. In cases where all other receipts go through the same cashiers, it will be necessary for the subsequent guidance of the bookkeepers to make out register remittance slips setting forth in detail the nature of the items and the ledger accounts to which they should be credited. Since such slips must be posted directly to the proper accounts, it will necessary to distribute them separately on the general cash receipt book and deduct them from the total of the cashiers' receipts before crediting the latter to the Accounts Receivable controlling account.

In most cases it will probably be found undesirable to have the office cashiers who take in customers' remittances also handle proceeds from loans, payments of notes receivable and other miscellaneous receipts. Where this is the case such sundry receipts should go direct to the general accounting department for entry in the general cash receipt book.

Definite Hour for Closing Business Day in Cashier's Unit.—A specific time should be decided upon for the arbitrary closing of each day's business in the cashier's unit. Such a time might be set as will permit all receipts prior thereto to be deposited in bank. All the cash register machines should then be set to stamp all subsequent receipts as applying on the next day's business. **Internal check on the cashiers** should be provided by a representative of the general accounting department taking a daily record of the accumulated receipt totals on each cashier's register at the time he takes the checks and cash and gives the cashier a receipt therefor in a bound receipt book in the custody of each cashier. The general accounting department (or auditing department if a separate one is maintained) alone should have the key to the cashiers' registers with which the totaling mechanism can be cleared. The clearing of the registers should be done at the time of daily settlement; if inconvenient to have the auditing department clear all registers daily, the accounting department can make daily cash settlements with each cashier only by providing for daily readings of the total collections to the close of each day from the date of the last previous clearance.

OFFICE CASHIERS—SMALLER CONCERNS.—

Use of Cash Receipt Books.—Where the size of the business does not warrant expenditure for cash registering machines, all remittances will go direct to an office cashier (whose duties may involve keeping of other records also) who must keep a cash received book and enter all items therein in detail. There

is no reason why such a cash received book should not be in loose-leaf form, as it will facilitate keeping the work up to date by sending the consecutively numbered sheets to the ledger posting clerks as fast as they are filled with receipt entries.

Control of Various Types of Receipts.—Where the volume of entries justifies it, one or more series of subsidiary cash receipt sheets may be used for separate entry of one or more classes of customers' accounts, such as cash sales, C. O. D.'s, instalment accounts and regular charge accounts. Columnar distribution columns for each controlling account may be used on the cash receipt sheets if it is desired to use only one consecutively numbered series of such sheets.

CASH SALES.—Pages 311 to 312, dealing with "Cash Sales," should be carefully read as they outline the detailed procedure of handling sales of this nature in large mercantile establishments.

Disposition of Daily Receipts from Cash Sales.—At the close of each day the various departmental cashiers assigned solely to the handling of proceeds from cash sales should turn over their cash and summaries to the head cashier or direct to the general accounting department; if to a head cashier, the latter will of course make daily settlement with the general accounting department. The totals shown on the summaries should then be entered on the general cash receipt book and the cash included in the daily bank deposit. The various cashiers' summaries will, of course, be checked by the auditing department in the manner set forth in the outline of procedure previously referred to.

Use of Cash Registers for Cash Sales.—In comparatively small organizations, the use of cash registers with a change drawer beneath may provide the most satisfactory and simplest method for handling over-the-counter cash sales. Such registers may be provided as will dispense cash tickets from a tape or as will imprint the sales figures on separate sales slips prepared by sales clerks. The totaling mechanism on such a register will show the total cash sales for which cash must be turned in to the accounting department at the close of each day. A representative of the general accounting department, or the auditor, should have sole possession of the key with which to clear the machine after each settlement period.

Use of Autograph Registers for Cash and Charge Sales.—Autograph registers for the preparation of sales slips are sometimes used in medium-sized or small establishments where there are several salesmen and one separate cashier. Sales forms for use on autograph registers may be had in duplicate, triplicate or even quadruplicate. Some registers provide for the last copy rolling up inside the machine to form a current daily sales register, while the other copies may be torn off and one copy delivered to the customer, another sent with the cash to the cashier and still a third used for any other internal general or cost accounting purpose which may be desired. It is usually desirable to have at least two of such registers, one for cash sales and the other for charge sales; in the case of charge sales, the copy which would ordinarily go to the cashier with cash should go to the accounting department for charge against the customers' accounts.

Cashier's Receipts in Places of Amusement.—Supervision may be had over cashiers in places of amusement where tickets are sold for one price from rolls, by noting the consecutive numbers of the first tickets on the rolls at the beginning of each day's business and requiring the cashiers to settle daily in cash in an amount equivalent to the sales value of the number of tickets sold off the rolls during the day. In amusement houses where seats are sold at varying prices, the ticket cashiers should be required to account in cash or unsold tickets

or proper authorizations for complimentary passes (with detached portion of tickets covering seats used) for the cash value of all of the seats at each performance; while this entails some detailed checking it is not really a complex procedure as the number of seats in each section and the sales value thereof for each performance is a known factor. Receipts can be entered one or more times daily in a cashier's settlement book and audit made at longer intervals, if desired.

Cashier's Receipts in Restaurants.—In restaurants the use of customers' consecutively numbered price tickets all emanating from one source or various series of consecutively numbered waiters' orders, form the basis of control over the cash receipts. Audit should be provided so that each day all of the consecutively numbered checks are accounted for by the cashier covering the numbers issued since the record made at the beginning of each day of the first unused number in each series. Audit of the waiters' individual detailed orders, to prevent minor peculations, may also be provided. Of course, the daily summarizing of all tickets on adding machines is necessary as a check upon the correctness of the total cash settlement by the cashier.

EDUCATIONAL AND CHARITABLE INSTITUTIONS.—The business of educational institutions may be handled in much the same manner as that of mercantile houses; that is, the rendering of bills for tuition, books, etc., and the

FIG. 21. Receipt for Charity Donation

Note the consecutive receipt number, which should be used in making cash receipt book entries, and which indicates to the donor that donations are being handled in a systematic manner.

treating of debtors' accounts as regular accounts receivable. The same thing is true with respect to bills actually rendered by hospitals. Such handling of the business of these institutions also enables an invoice summary to be used as the medium for distributing the various classes of income.

The confidence of donors to charitable organizations is strengthened if instead of acknowledging remittances solely by letter or correspondenec card,

consecutively numbered receipts are used. These should be prepared in duplicate and the latter filed numerically for reference, while the receipt number itself suffices for identifying the daily cash receipt book entries covering donations.

Fig. 21 shows a suggested form of such consecutively numbered receipts for use by charities. If desired, a list of the various funds can be printed on the form in cases where one charitable organization handles more than one fund. In such cases, a columnar cash receipt book should be used for classifying the receipts.

Handling the Cash

GENERAL CONSIDERATIONS.—Checks, express orders, money orders, currency, stamps, notes and acceptances receivable, sight drafts and time drafts are all in the nature of receipts; they are not all, however, cash receipts nor equally available as current funds.

Items Treated as Cash Receipts.—Checks, express and money orders, currency and stamps should all be handled as cash receipts through office cashiers.

Stamps.—Stamps should be exchanged by office cashiers for currency through the medium of the imprest petty cash fund. The cashier of the latter fund can from time to time deliver the stamps to the mailing department and secure that department's receipt on an imprest petty cash voucher for the cash value of the stamps turned over. If the amount of stamps received daily is large, a check can be drawn reimbursing the office cashier for the amount of the stamps or they can be handled by a daily charging of the postage account in a separate column on the general cash receipt book.

Procedure in Handling Notes and Acceptances Receivable.—Notes and acceptances receivable should not be handled through cashiers but should first go to the credit department for approval and then to the general accounting department, where they should be immediately entered on the notes and acceptances receivable records and credited to the customers' accounts.

Procedure in Handling Sight Drafts and Time Drafts Receivable.—Sight drafts and time drafts receivable will originate in the general accounting or collections department; they will not be handled by the office cashiers at the time of issuance, but be placed with banks for collection. The proceeds from the sight drafts or any discounted time drafts may be entered in the general cash receipt book by the general accounting department if they are handled directly with the banks and the proceeds entered on the bank deposit book as separate deposits from the regular current receipts through the office cashiers' unit.

If, however, the practice is adopted of requiring all incoming funds to be handled through office cashiers along the lines hereinbefore detailed, it will be necessary to prepare separate remittance slips showing the details of the proceeds from sight drafts and time drafts, as they come under the head of miscellaneous receipts, of which the bookkeepers must have details in order to make proper postings.

If the major portion of the business is done on a sight draft basis, the simplest method of handling this business is to treat the debtors' accounts as ordinary accounts receivable until the sight drafts are actually paid, and when recording the payments of the drafts in the general cash receipt book (or separate subsidiary sight draft cash receipt sheets) to make a memorandum for reference

purposes of the numbers of the drafts paid. The copies of the unpaid drafts may be arranged alphabetically to form the office record of the drafts still in process of collection.

CASHIER.—The decision as to whether a cashier's position should be filled by a man or a woman will naturally be based upon the volume of work and the extent of the exposure to possible hold-ups. Women cashiers may be desirable for handling mail receipts, but it will probably be found more practicable to use men where the public has access to the cashiers' windows either for making remittances or for securing disbursements. There are, however, exceptions to all rules.

Cashier's Qualifications.—Cashiers must be careful and accurate; therefore, in examining applicants for a cashier's position, no one should be considered who is slovenly in dress or apparently nervous in disposition. Let the applicant write a letter in his own handwriting and do not employ applicants whose handwriting is not clear and readily legible, as errors in the bookkeeping departments are often due to poor figures made by a cashier.

In mercantile establishments and public service corporations particularly, an office cashier is often the most important point of contact between the institution and the public. If the cashier is impatient or discourteous much good will is lost. A little more attention than usual should therefore be given to investigating applicants with regard to their ability to get along with others at previous places of employment and to their general disposition.

References and Bonds.—Letters of recommendation are often given to permit an old but unsatisfactory employe to make a new connection. Too much weight, therefore, should not be attached to such letters, and references should be required from others than previous employers of an applicant. Without exception, every applicant who is accepted for a cashier's position should be placed under bond, even though the amount of the bond be nominal, as the investigation made by bonding companies has often disclosed facts not brought out by individual efforts.

Understanding of Double Entry Bookkeeping.—Since at times customers not only take discounts but deduct contra accounts and claims not yet allowed, a cashier who understands something about double entry bookkeeping will be in much better position to handle such settlements intelligently than one who does not have that knowledge. Except in public service corporations, theatres, department stores and such institutions as have cashiers solely to take care of customers making payments on account or in full, it is almost imperative that cashiers understand double entry bookkeeping.

THE CASHIER'S DUTIES.—The financial manager should have absolute knowledge of the nature of the transactions to be handled by the cashiers and should see to it that the cashiers' duties are properly laid out and covered by written instructions and that appropriate forms are used where records are necessary. Detailed reference has hereinbefore been made covering the methods of recording the receipts by cashiers.

One of the greatest helps to the cashier is **proper equipment.** Where currency alone is received, a properly partitioned cash drawer will facilitate the making of change. Where the incoming receipts consist of items other than cash, additional divided drawer space will be desirable for separating the checks, money orders, etc.: this will simplify the preparation of the bank deposit slip.

Department stores and other very large establishments usually have **adjustment departments** to which cashiers can send customers to adjust com-

plaints over differences in their accounts. Such an adjustment department will enable cashiers to confine their duties solely to receiving cash and recording it as a credit to the customer's account without noting any other complicating features in connection therewith.

Except in very small organizations where the cashier is also the bookkeepers, a cashier should not have access to any of the accounting records of the company. He should not be permitted to make any journal entries or in fact any bookkeeping entries other than those on his own current cashier's detailed receipt records. He should send customers to the adjustment department or the accounts receivable unit when questions arise with respect to their accounts.

The **cashier's records and duties** should be so planned by the financial manager that at a specific time each day the cashier can turn over his records to the general accounting department and deliver to the latter the checks and currency with bank deposit slips ready to make the deposit covering the daily receipts up to the settlement time. The cashier is entitled to have a receipt book in which a representative of the general accounting department receipts each day for the amount turned over.

INTERNAL CHECK ON CASHIERS.—Where cash register machines are used by cashiers handling incoming receipts and where posting machines are used for posting to the accounts receivable accounts, all as hereinbefore outlined, the daily checking of the total of the postings to the customers' accounts against the cash register totals, and the checking of the bank deposits against the total of the cash registers, will comprise a good internal check upon the correctness of the cashiers' work. Where such cash registers are not used, or posting to customers' accounts is done by hand, it will be desirable each day for the bookkeepers to verify the correctness of the footings of the cashiers' detailed cash receipt sheets turned over to them for posting and for a specially designated clerk in the general accounting department to compare the totals thereof with the daily bank deposits.

Cashiers Should Not Have Access to Customers' Statements.—No cashier should have anything to do with the preparation or mailing of the customers' statements and he should not be permitted to scrutinize them or to recommend that any be delayed, that any be not sent or be sent to a different address. If he should make any such suggestions it would be well to have the financial manager or auditor investigate and verify by direct contact with the customer the correctness of the accounts covered by such statements in which the cashier appears to be particularly interested.

Independent Investigation of Customers' Complaints.—It is important also that all customers' **complaints as to overcharges or errors in statements,** particularly those forming the subject of correspondence, be handled in the first instance in the general accounting department either through an adjustment unit, accounts receivable unit or collections unit, in such manner as to permit investigation without the cashier's knowledge; thefts by dishonest cashiers have been unearthed by the investigation of outside complaints proceeding without knowledge thereof on the part of the cashier.

HANDLING OF SECURITY DEPOSITS.—Gas, electric light and other public service corporations nearly always require security deposits from their customers. A good control can be had over such deposits by providing for the issuance of a special form of consecutively numbered **deposit receipt** to cover them and to record this receipt number in the client's ledger account for reference. (It may also follow the customer's name on an addressograph stencil where such stencils are used for the preparation of ledger headings and

invoices.) This plan does away with the necessity for keeping a separate alphabetical index of such deposits; it also enables a separate subsidiary deposit ledger to be kept in the form of a columnar register in which each deposit receipt is consecutively recorded showing the name of the customer, the date and amount of deposit and the date repaid; such separate deposit ledger should of course be covered by its own controlling account.

Cash Deposits against Purchases, Rentals and Similar Items.—Deposits on account of merchandise purchased under contracts, rentals paid in advance and items of similar nature, should either be treaded as **credits direct** to accounts receivable against which deliveries are subsequently charged, or should be credited to separate deposit accounts with these customers. The determining factor as to which method should be used should be the length of time which is expected to elapse between the time of the deposit and the dates on which purchases are made which should absorb part or all of such deposit.

Cash Deposits Against Instalment Deliveries under Contract.—If deposits are made on account of contracts which require current delivery of merchandise or securities in instalments over a long period of time, separate deposit accounts should be carried and transfers made to the current accounts receivable account for the proper share of such deposits as actual deliveries are made and charged currently to the customer.

Deposits under Building Contracts.—In cases of building contracts where customers make payments on account at specific intervals during the progress of construction, such receipts should be credited direct to the customers' accounts. It is good practice to actually bill the customer at various times during the construction period for the share of the work completed up to the time of billing in accordance with the contract, and at inventory periods to take into inventory only such value of the work which has been performed in excess of the portion already billed.

In the case of **securities purchased on margin or instalment payment basis,** the customer's deposit should be credited directly to his account and the customer charged for the securities purchased for his account.

Deposits on account of **building and loan association shares** should be treated exactly the same as savings fund deposits, viz., credited direct to accounts with each shareholder or savings fund deposit account. Separate accounts will, of course, be necessary for shares of each series, and for each savings account.

RECEIPTS NOT DEPOSITED IN BANKS.—It has been previously suggested that a fixed time be decided upon when the cashiers should settle daily for their receipts and make bank deposits. There will be other receipts for the balance of each day which will be treated as receipts for the following day; notwithstanding this, however, it is good practise at the actual closing of each day to require cashiers to turn over to the head cashier or the general accounting department all such actual receipts not deposited. This will enable all of the undeposited receipts to be gathered together and put into one place in the vault for safe keeping over night and will also enable a deposit to be made early the next morning covering such subsequent receipts, in cases where the volume of business is better handled by making two daily deposits than one.

Control of Undeposited Receipts.—A good check upon the undeposited receipts at the close of each day would be for a representative of the general accounting department to read the cashier's register counter figures, and, if the machines were cleared at the time of settlement earlier in the day, to compare the new figures with the undeposited receipts turned over; in cases where

the cash register was not cleared earlier in the day the difference between the register reading at such settlement period and the reading at the actual close of the day would represent the amount of the undeposited receipts which should be turned over by the cashier.

Daily Report to Treasurer of Undeposited Receipts.—Report to the treasurer at the close of each day of the amount of such undeposited receipts will give him some idea as to the amount of cash which he can count on in addition to the actual bank balances; this could be accomplished by the use of a single line memorandum added to the daily financial report (Fig. 6, pages 301, 302).

BANK ACCOUNTS.—

Authority for Opening Bank Accounts and for Signing Checks and Notes Payable.—Resolutions by the board of directors should be the authority in the case of corporations for the opening of bank accounts. Such resolutions should not only name the bank, but should also specify the number of signatures to be required on checks and on endorsements of notes and other negotiable paper which may be handled through the bank. They should specify the names and positions of the parties whose signatures should be required on each kind of paper. Thus, while the financial manager and auditor might suffice for the signing of checks on regular bank accounts, the signature of the treasurer, or another executive officer, should always be one of those required on all notes payable for borrowed money. The signature of the financial manager should be one of those required upon all notes payable, to insure their being entered upon the books at time of issuance. In certain cases, paymasters' signatures alone might be quite sufficient for individual pay roll checks which are limited to a maximum amount engraved on the face of each check, provided proper internal check is had on methods of time keeping and pay roll preparation.

Special Bank Accounts for Signed Blank Checks for Special Purposes.—Occasionally in actual experience it has been found that certain customers doing a large business on a sight draft with bill of lading basis have, by reason of short distances and mail delays, preferred to leave with manufactuers signed checks drawn to the order of the manufacturer but blank as to amount; the purpose was to insure the bills of lading for the shipments reaching the short distance customer coincident with the arrival of the goods, which might not be the case when the usual methods of bank collections by mail were used; another reason was to enable the customer to order the manufacturer to deliver merchandise at the factory to his representative upon presentation of written order. Wherever such a practice is in use, it would be wise for the customer to open a special account with his bank and require the manufacturer's financial manager to countersign such blank checks.

All Receipts Should be Deposited Daily.—Irrespective of amount, all receipts should be deposited in bank daily. Under no consideration should any portion of the receipts be paid out in cash, as one of the best checks upon the correctness of the cashiers is the checking of the bank deposits against the cashiers' records. To accomplish this, however, it will be necessary to treat each day as finished, in so far as concerns the cashiers' records, at the time the daily deposit slip is prepared.

Local Receipts to be Deposited in One Local Bank.—It will simplify actual banking practice if all local receipts are deposited in one local bank daily and transfers made to other banks as may be desired to equalize bank balances. It will also simplify the work if all of one day's checks are drawn on one out-

of-town bank and one local bank; exceptions can be made, however, in cases where unusually large payments are necessary to single creditors.

BANK ACCOUNTS IN CASH BOOKS.—A separate column for each bank account may be kept in both cash receipt book and check register. Where only one or two bank accounts are kept, this is a simple matter, but where a considerable number of bank accounts are kept, one bank column will suffice on both the cash receipt book and check register for recording all bank transactions. The allocation of the actual deposits and checks to each bank should then be kept on the back of the condensed daily financial report shown in Fig. 6b (page 302). Where this is done, the total of the day's checks and deposits as shown on this report must agree with the totals entered in the single bank column in the cash receipt book and check register.

Another suggestion would be to use separate series of check register sheets for each bank with memorandum columns for entering the daily deposits, the total checks drawn and the bank balances.

TRANSFERS BETWEEN BANKS.—In order that the cash receipt book and check register totals do not show inflated receipts and payments, due to transfers being made from one bank to another, all such transactions should be entered in the cash receipt book only, in black ink in the column for the bank in which the deposit is made and in red ink in the column for the bank from which the funds are withdrawn. In the check register, the check number can be recorded and a memorandum made to the effect that the check has been used for transfer.

In cases where the transfer is between banks in different cities, it is not sufficient simply to make the transfer in the cash receipt book, but the requirement should be set that the acknowledgment of the receipt of the remittance by the depository bank should be noted alongside each cash book entry with the date of the acknowledgment and initials of the clerk delegated to follow these up. The cash receipt book should be scrutinized every few days by a separately delegated party, or the auditor, to check up to see that no unusual length of time elapses between the actual remittance and the bank acknowledgment.

In cases where the back of the daily financial report only is used for keeping the totals of each bank's transactions, the transfers need not be entered in the cash receipt book or check register; entry on the financial report and follow-up of acknowledgment therefrom will suffice.

VERIFICATION OF DEPOSITS.—The auditing department, or if none exists, a party specially designated for the purpose in the general accounting department who does not keep the cash receipt book, should check the deposits recorded in the various bank pass books against the receipts entered in the cash receipt book as having been so deposited. In cases where collections are reported by banks, detailed schedules of such collections will be issued by the banks. It is good practice for the auditing department or such other specially designated person to check these bank collection reports against the cash receipt book, in which the collections by each bank should be recorded separately, and the total extended to the bank deposit column.

RECONCILING BANK BALANCES.—Where only one or two bank accounts are kept and the bank balances are carried on the cash receipt book after closing each month's business, each bank's monthly statements should be reconciled with such cash receipt book balances. Usually, however, separate general ledger accounts are opened with each bank, and where this is done the balances as shown by the monthly bank statements should be reconciled with

such ledger balances immediately after the close of each month. Such a reconciliation should not be entrusted to any of the persons responsible for the keeping of the cash receipt book or the check register; this work should be performed either by a member of the auditing department or a specially designated clerk in the general accounting department.

Verification of Bank Reconciliations.—Banks usually send with their monthly statements a verification request covering the balances shown by their statements; such verification forms should be signed only **by the auditor or the financial manager.** If signed by the financial manager, he should require the production of the bank statements on which should be noted in ink the details of the reconciliation of such statement with the ledger account, which reconciliation in turn has been certified to by the specially designated clerk responsible for this work; it would not be objectionable for the financial manager to occasionally require another disinterested clerk to recheck such reconciliations.

SAFEGUARDING THE CASH.—Where contact is had with the public in large numbers, it not only reduces the risk of loss through hold-up, but facilitates the current work of the cashiers, if railings are installed in such a way as to require "one way traffic" to the cashier's cage. It is now possible to purchase unbreakable glass for cashiers' windows which cannot be penetrated by bullets. Systems of call bells and alarms operated by the cashier's toe or knee are also becoming more common.

Deposits should not only be kept in leather bags while en route to the bank but should be attached to the person of the clerk making the deposit by means of a leather-covered metal chain and deposits of any size should never be made by an unaccompanied clerk. Where the deposits are unusually large or consist of a good percentage of currency, the deposit clerk may be followed by an armed guard a short distance behind. If there is not much bulk to the combined currency and checks to be deposited it may be of some value in avoiding conspicuousness if the use of the leather covered bag is dispensed with.

All cashiers having petty cash funds or any quantities of stamps or any undeposited funds should be provided with **strong metal boxes** to which they alone have the key and arrangements should be made for their safe keeping overnight in a locked compartment in a vault.

Insurance Policies Covering Loss of Cash.—Insurance policies can be obtained indemnifying the assured against loss of cash. Great care should be exercised in the procuring of such policies, however, as insurance companies divide the risk into many classifications and insure against no class not specifically mentioned in the policy form. Some of these risk classifications are fidelity bonds (protection against employes' thefts) hold-up (usually covers pay roll or other robbery outside of assured's place of business only, unless specifically worded to also cover while cash is inside the plant) and burglary (which usually covers only while the cash is inside the office either during or after office hours). Many policies specify that the assured must provide certain protection with respect to number of armed guards, etc., and must limit transactions to certain hours; it therefore behooves each assured to read his policy carefully and to check up at least monthly to see that actual conditions and methods pertaining to the handling of the cash conform to the policy requirements.

DAILY REPORTS TO TREASURER.—Whether an institution is large or small, a **summary of all the receipts, payments and bank balances** should be in the hands of the treasurer daily. As the general accounting department is the one in which are concentrated all of the financial records, that department

should prepare this daily report. It should be the province of the financial manager to supervise the detailed handling of the receipts and disbursements and the banking in connection therewith, conforming, however, to the desires of the treasurer with respect to division of bank balances among the various banks.

The treasurer should be kept informed currently of the changing financial situation and receive copies of all cash budgets for future periods. Figs. 6a and 6b (pages 301, 302) show a condensed daily financial report form which may be used for reporting to the treasurer. The data on this report pertaining to cash transactions should be prepared from the general cash receipt book and the check registers.

Petty Cash

IMPREST PETTY CASH FUND.—A certain amount of actual currency is necessary in every office for the purpose of making change, cashing checks, advancing funds for traveling expenses, meeting express and C. O. D. charges and making urgent purchases of minor amount from concerns with whom current accounts have not yet been opened. The best way of meeting these requirement is to provide an imprest petty cash fund, and under no circumstances to permit the use of incoming receipts as petty cash; all incoming funds should be deposited in bank.

An imprest petty cash fund is a fund in the possession of the cashier which is always maintained at a fixed amount, expenditures from which are from time to time covered by check from the general funds upon the presentation of a summary of the expenditures accompanied by **proper vouchers** therefor.

Starting the Fund.—The fund is started by drawing a check to the order of the cashier for the predetermined amount of the fund and charging it to an "Imprest Petty Cash Fund" account which is allowed to remain open permanently on the general ledger. This account will, of course, be adjusted through cash book or check register entries for any increases or decreases in the fixed amount of the fund; reimbursements for expenditures from the fund should not be posted to this fund account, but direct to expense, asset or personal accounts, according to the nature of the individual items of payment. The cashier's signature should be secured to a special form of receipt for this fund, which clearly acknowledges his responsibility to account therefor. The proceeds of this check comprise the petty cash fund to be carried by the cashier.

The Amount of the Fund.—The **average currency requirements** should determine the amount at which the fund shall be fixed. It should be equivalent to a little in excess of the maximum amount of currency which may be required weekly. If that amount seems large compared with the risk of theft, the fund should be smaller, even to the point of being a trifle over each day's requirements. In actual practice, if the fund is too large, the misuse thereof is encouraged. If it is found that from 30 to 50% of the fund is never used, the amount of the fund should be cut down. In no case should it be used for any purpose where the firm's check in the regular course of business will answer.

HANDLING OF THE IMPREST FUND.—After becoming responsible for the fixed amount of currency represented by the imprest fund, the cashier to whom the fund is entrusted should be careful to make payments therefrom only upon proper authority and to secure a proper voucher for each payment. He should arrange for securing periodical reimbursement for such expenditures

from the fund upon delivering to the general accounting department a summary of the expenditures together with the vouchers therefor.

Written Authority for Every Payment.—In large organizations with many departments there will be many demands for currency. A good general rule to follow is to require a written authority for each payment, setting forth the amount and the reason therefor, signed by the head or assistant of the department in which the cause for the payment arises. There may be a few exceptions to this from time to time where a department head is absent temporarily and the circumstances of a payment are such as to make it clear to the cashier that the payment is in order. Even in such cases the petty cash voucher (Fig. 22) should later be approved by the department head. In small concerns it may be found more practicable to have some executive directly approve the petty cash vouchers at the time payment is made and thus dispense with the necessity for the written memoranda to the fund cashier.

FIG. 22. Petty Cash Voucher

These vouchers should be signed by the recipients of the cash disbursed. All instructions to the cashier, or other authoritative data upon which payments are based, should be attached to the voucher.

Standardizing Petty Cash Transactions.—A cashier with ideas and initiative can standardize petty cash transactions and lighten his own work where he finds many items of the same nature going through his hands during comparatively short periods. He can design a small printed ticket for use by all departments in authorizing him to pay supper monies to specific employes; this ticket, of course, should be signed by the department head. Similarly, standard forms instructing the cashier to make advances for traveling expenses, to be signed by the department heads, may also be used. Standard forms, to be signed by the accounts payable unit head, instructing the cashier to make payments to creditors who collect bills of amounts too small to justify the issuing of checks, will also be helpful. As a general rule, however, it is more desirable to issue the company's checks to all creditors with claims in excess of five dollars.

Handling Transportation Expenses.—Where there is a **traffic department** and much traveling is done, it is practicable to have the necessary railroad tickets for all parties purchased through the traffic department and to have the **traffic manager** sign a requisition on the cashier each day setting forth the

FIG. 23a. Imprest Cash Summary

This summary is made in envelope form to permit the placing therein of all petty cash vouchers for payments made during the reimbursement period. The face of this summary sets forth the accounts to which the individual items of payments should be charged.

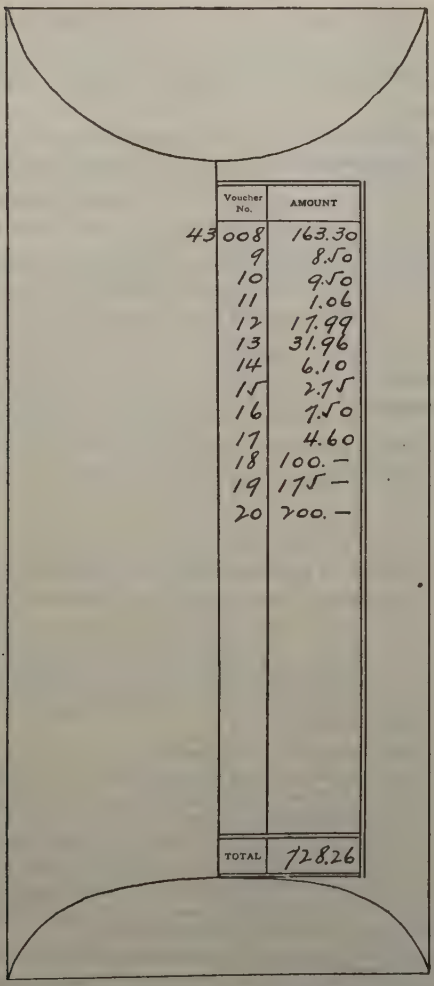

FIG. 23b. Reverse of Imprest Cash Summary Envelope

The total of the individual imprest cash vouchers listed hereon in consecutive order should agree with the total of the charges to the various accounts shown on the face of the summary.

cash required, and noting thereon the cost of the transportation purchased for each employe. The destination should also be shown in each case. All such items should be charged to the individual accounts with the employes and the cost thereof should be shown on the employe's expense reports covering the cost of the entire trip.

PETTY CASH VOUCHERS.—All memoranda showing authority for payments by the cashier should be attached by him to the imprest cash voucher. The vouchers should be numbered consecutively and be released by the cashier only at the time he is reimbursed for the expenditures represented thereby.

Individuals should be required to receipt the cash voucher when it covers advances chargeable to personal ledger accounts.

REIMBURSEMENT FOR EXPENDITURES FROM IMPREST FUND.—As the unexpended portion of the imprest fund becomes low, the fund cashier can be reimbursed by presenting the **imprest cash vouchers,** together with a summary thereof, to the general accounting department and receiving the company's check for the total amount of the summary. Such reimbursement should take place in any event at the end of each month before the closing of the general books, even though reimbursement may have become necessary only the day previous. It may be found practicable to require such reimbursement to be made weekly. If the amount of the fund is in excess of $500 and replenishment is not required oftener than weekly, it would reduce the risk of loss if the amount of the fund were cut in half and reimbursement made semi-weekly.

Proper control over the imprest cash can be had only if the fund cashier's summary and vouchers are first submitted to the auditor and **audit** thereof immediately follows prior to the drawing of the reimbursement check.

Imprest Cash Summary.—Figs. 23a and 23b show the front and reverse sides of a form of envelope which has been found practicable for the purpose of the imprest cash summary. The imprest cash vouchers, with the authority for payment attached thereto, are inserted in the envelope in numerical order when the summary is submitted to the auditor. Where there is no auditor, the financial manager, the treasurer, or even the general manager in small concerns, may audit the summary.

Distribution of Charges.—The distribution of the charges is shown on the face of the envelope summary while the vouchers are scheduled on the rear thereof. Obviously, the total of the distribution and of the vouchers must be identical in amount. The auditor should examine the vouchers and the authority for each payment, check them against the summary and verify the footings of the latter before approving it. After such audit, the approved summary containing the vouchers should be handed by the auditor to the general accounting department for preparation of the reimbursement check, which check in turn should be delivered to the fund cashier.

The cashier should have **a chart of both general ledger and expense ledger accounts,** and he should show on each voucher the account number to which it should be charged. The imprest cash summary envelopes should show a recapitulation of all the charges covered by the summary. The entry on the check register covering the reimbursement check should show the distribution to the various accounts as set forth on the imprest cash summary envelope.

By using the above method for reimbursing him for payments from the fund, the fund cashier at all times should have on hand the amount of the imprest fund, either in the form of currency or currency plus vouchers cover-

ing unreimbursed expenditures made since the last reimbursement summary was prepared.

The envelopes covering the imprest cash summaries should be numbered by the fund cashier in consecutive series; thus consecutive reference data will appear on the general check register from which can be followed a chronological history of all petty cash fund expenditures.

ADVANTAGES OF THE IMPREST PETTY CASH FUND.—The imprest fund method of handling petty cash has many advantages over any other. Among them are the following:

1. The fund cashier has **always a fixed amount** for which he is responsible and the audit thereof can be conducted at any time without notice, simply by examination of the contents of the cash drawer. No examination of any records is necessary other than of the cash and the unreimbursed vouchers in the cash drawer.
2. **A consecutively numbered voucher** is required for each payment by the fund cashier and the authority for such expenditure is attached thereto. Thus a definite method can be consistently followed, authoritative control can be exercised over payments and audit thereof can be readily made.
3. The fund cashier can be **reimbursed as often as desirable** by the simple method of preparing imprest cash summaries and submitting his vouchers, with summaries, to the auditor. He is not dependent for such reimbursement upon any outside factor whatever. He has no books to keep and with each reimbursement his accounts are cleared entirely and he starts anew.
4. The **audit** of the currency payments from imprest funds is **made before reimbursement** instead of waiting for monthly audit of all the cash transactions of an institution.

OTHER PETTY CASH METHODS.—

Petty Cash Payments from Receipts.—In concerns where the petty cash transactions are few, payments are often made from currency included in the daily receipts. It is not good practice to do this as the daily bank deposits will then be less than the current entries shown in the cash received book, and offsetting entries must be made on the check register or cash payment book which are not actually represented by checks. All receipts should be deposited in bank and no part thereof used for petty cash disbursements.

Petty Cash Books.—Still other establishments in which currency payments are not large, believe it burdensome to require a voucher for every small item of disbursement. They draw checks for round amounts from time to time for currency requirements and charge them to a "Petty Cash" account on the general ledger; a petty cash book with provision for entering the proceeds of such checks in one column and the disbursements in another, is the extent of accounting therefor. At the end of each month a journal entry is made crediting the "Petty Cash" account on the general ledger for all of the current month's disbursements as shown by this petty cash book. The balance in the fund as shown by the adjusted balance in this general ledger account should agree with the petty cash book balance. When this method of handling petty cash is used, vouchers may be dispensed with in cases where the amounts disbursed are small and the entries are so explanatory as to clearly indicate that proper payments have been made.

Where it is desired to substitute the use of such a petty cash book for the imprest fund voucher and summary, the fund should be a fixed amount and

the petty cash book should be used only for recording payments therefrom. These entries may be totaled, and reimbursement checks drawn from time to time to bring the fund up to its original amount; at such times the amounts of the reimbursement checks should be distributed on the check register to the various expense and other accounts properly chargeable, as set forth by the petty cash book. If this practice is followed, its effect will be that of having an imprest fund, including all the advantages thereof, but substituting the detailed explanation of each expenditure in a petty cash payment book for the formal imprest voucher summary.

CASHING OF CHECKS BY PETTY CASH FUND CASHIER.—All checks cashed by the petty cash fund cashier should be **drawn to the order of cash,** not to the order of the company, as it is not good practice to permit any cashier to endorse and cash checks drawn to the company's order. Such checks should in turn be cashed daily at bank by the cashier and not kept in the drawer.

Auditors become suspicious if they discover checks deposited in the current bank account which are not represented by entries for corresponding amounts on the cash received book. For this reason, it is desirable that petty cash fund cashiers keep a memorandum reference book for recording consecutively the data with respect to any checks which may happen to have been drawn to the order of the company and are cashed by them for customers, and for which the petty cash fund cashier in turn receives reimbursement from the currency portion of the regular daily collections.

BORROWING FROM PETTY CASH, I. O. U.'S, ETC.—Under no circumstances should a fund cashier carry any I. O. U.'s, uncashed checks, receipts for temporary loans, or any miscellaneous memoranda as part of his fund. If anyone is entitled to cash, let him get proper written authorization for delivery to the cashier at the time the cash is handed over. That authority should be immediately attached to the petty cash voucher and be handled in the regular way.

All advances for traveling, welfare, and even loans, after having been properly authorized, should be handled in the manner outlined and in due course find their way as a charge to the personal accounts of the parties receiving them. It then becomes the business of the accounts receivable unit at the proper time to make collection of the amounts advanced, or to require approved expense reports for credit to such individual accounts.

OVERAGES AND SHORTAGES.—A fund cashier will do well to balance his fund every night; in any event, he should again balance it each time he prepares an imprest cash summary for the purpose of securing reimbursement. If, at either time, there should be a discrepancy between the aggregate of the cash and unreimbursed vouchers on hand, as compared with the proper amount of the imprest fund, the cashier should at once report the matter to the auditor with the request to have an audit made of the fund, and an imprest voucher approved by the auditor for the amount of any shortage. If there is an **overage,** the fund cashier should take an equivalent amount of the cash from his fund and turn it over with a memorandum to the head cashier with the request that it be credited to a "Short and Over" account on the general ledger. Thus reference can always be had to facts which subsequent developments may emphasize the importance of.

Shortages Not to be Made Good by Cashier.—Under no circumstances should any cashier attempt to make good any shortage from his own pocket in order to cover it up. Such a practice might lead to the conclusion that the

cashier is pocketing any overages and if he should do so and it is later discovered, the cashier will be placed in a very embarrassing position.

BRANCH OFFICE PETTY CASH.—Petty cash funds at branch offices can be treated in exactly the same manner as imprest petty cash funds at the head office. In such cases, however, a separate general ledger account should be carried in the head office for each branch fund, or if there are many branches, one such account may be carried in which the amount of the fund at each branch is shown. All branches should mail to the head office at least weekly for reimbursement, their imprest petty cash summary envelopes containing the consecutively numbered disbursement vouchers.

Notwithstanding the number of reimbursements made during the month, all branches should be required to send in a final imprest petty cash summary with vouchers at the close of each month.

PETTY CASH FOR UNCLAIMED WAGES AND LABOR PAY OFFS.—Irrespective of whether it is the practice to pay factory employes by check or in currency, it is often necessary to pay off between pay roll periods such employes as may quit or be discharged or laid off; thus, it is usually necessary for the pay roll department to have an imprest cash fund from which to make such payments, as well as to pay out wages on previous rolls which were unclaimed.

Fund to be Under Control of Paymaster.—Such a fund should be in the custody, or under the immediate supervision, of the paymaster. It should be handled in the same manner as hereinbefore described for the operation of a regular imprest cash fund. The procedure with respect to the origin of the payments, however, is somewhat different.

Making Wage Pay Off from Petty Cash.—Employes demanding previously **unclaimed wages** should be required to present to the fund cashier their individual **clock card stubs** which were prepared on the addressograph in the regular course of business for the week for which the wages were unclaimed; these stubs will show the employe's name, weekly period and employe number. The cashier should then communicate with the pay roll department to ascertain whether the amount claimed by the employe is shown as due him on the pay roll department records. In most cases it will be found practicable for the pay roll department to send a weekly list of unclaimed wages to the fund cashier and to credit the "Unclaimed Wages" account on the general ledger with the total thereof at the time the funds are turned back into the general accounting department. After ascertaining that the employe is entitled to the wages previously unpaid, the fund cashier, upon delivery to him of the proper clock card stub duly receipted by the employe (after it has been validated as to return of tools as hereinafter set forth), may make payment, for which the clock card stub will then act as authority. On his imprest fund summary, the fund cashier will, of course, charge such payment to the "Unclaimed Wages" account.

In the case of employes who are **discharged or laid off,** the receipted validated clock card stubs will also act as a voucher for the payment to the employe. The cashier, however, can secure the data as to the amount to be paid such employe only from the pay roll department, which department should already have received from the proper factory timekeeper the clock card and a pay off slip containing all necessary data from which to prepare a memorandum of the earnings of such employes. Payments of such items should be charged to "Accrued Wages" account on the imprest fund summary.

Reimbursement of Petty Cash Fund for Wages.—It is not necessary for the fund cashier to prepare consecutively numbered petty cash vouchers for the payment to each individual employe, but when he wishes reimbursement, he can sort the various clock card stubs and make out one voucher for all payments on stubs chargeable to the same account, listing on the back of the voucher the clock numbers, names and amounts paid to each employe.

TOOL DEDUCTIONS BEFORE FINAL PAY OFF.—The validation of the clock card stubs previously referred to is merely a check to prevent paying off any employe until he has turned back to the tool crib any tools belonging to the company. Before an employe receives his final payment he should take his clock card to the tool crib clerk of the department in which he works, who will stamp it on the back with an "O" or a "T" and in addition punch the card through the stamped impression with a punch of different design for each tool crib. The "O" indicates that the man has no tools out and is clear in so far as tools are concerned, while a punch through the "T" indicates that the man has borrowed tools and the cashier must make no final pay off until those tools are returned or he has received a written memorandum of the amount to be deducted for the tools not accounted for.

OTHER DEDUCTIONS BEFORE FINAL PAY OFF.—If it is the practice of an organization to make welfare loans, or to sell employes wood, coal or other supplies, a further validation on clock card stubs before final pay off is necessary. Such validation may be in the form of another identifying stamped impression and punch to be applied in the accounts receivable or other departmental unit keeping accounts with employes to whom such advances are made or goods sold. If a **pay off slip** or similar notification from the time clerk is used for notifying the pay roll department as soon as a man has been laid off or discharged, it will be a simple matter to have the validation with respect to welfare and other advances show on this pay off slip, by providing that the pay roll department consult the accounts receivable unit immediately upon the receipt of such notice, which will be before the man appears at the cashier's cage for pay off.

Authorization and Accounting for Cash Disbursements

GENERAL.—All cash disbursements fall within one of **five general classifications:** (1) accounts payable; (2) notes and acceptances payable; (3) pay rolls covering wages and salaries; (4) petty cash currency disbursements; and (5) miscellaneous, such as taxes, dividends, investments, advances for traveling expenses and other direct charges to general ledger, expense ledger or individual accounts.

The financial manager should have absolute control over all disbursements. He should decide the extent of the authority or approval which should be required before disbursements are made; this authority may vary with each class of disbursement. He should issue all instructions covering the method of making the disbursements, the recording thereof and accounting in connection therewith.

In view of the great difference in methods of handling, each class of disbursement will be hereinafter treated separately.

Accounts Payable

CONTROL OF BUYING.—An important consideration in controlling accounts payable is the concentration of authority for their creation. While

operating department heads should usually have a voice in determining the nature, specifications and quantity of purchases for use in their departments, their desires should not be considered as final. Engineering and inventory policies are matters for managerial decision and have a bearing upon purchasing. Financial responsibility, adequacy of equipment and ability to deliver both quantity and quality within desired periods and at proper prices are all items which the purchasing department must consider. For these reasons, deviations from the rule of having the purchasing department actually do all the purchasing, have been usually found to work out unsatisfactorily.

Control of Purchases and Delivery of Materials.—Such methods should be in use by every organization as will insure careful checking of purchase requisitions against the storekeeper's records to prevent excess buying. Even in the matter of nonproductive items, such as factory and office supplies, all purchase requisitions therefor should pass through the hands of one authorized party so as to control expenses. Standardization of supplies, and limitation of selection to a few grades will help to reduce investment in all supplies. To distribute the handling of materials and their financing, special attention must be given to scheduling deliveries over an entire month in conformity with production requirements; otherwise, suppliers in need of funds may ship an entire month's requirements during the first few days of the month.

The purchasing department should receive from the financial manager monthly or weekly limitations as to **maximum purchases** so as to conform to a prearranged financial program. A maximum purchase order limitation may also be set which will require the financial manager's approval of orders in excess of such amount. Much depends upon co-operation between the buying and financial departments of a business. The paragraph on "Daily Incoming Invoice Control" (page 298) should be read. The daily and accumulated monthly totals of the incoming invoices shown by this control might well be communicated to the purchasing department daily by the accounting department.

PURCHASE ORDERS.—The **form** of the purchase order should be as simple as possible to allow wide divergence in its preparation because of the difference in specifications covering the various items purchased. From an accounting viewpont the essentials which must be shown are the **settlement terms, the quantities, the unit prices** and **the f. o. b. basis.**

Purchases from One Concern on Same Transportation Basis.—Wherever possible, purchasing departments should make arrangements with suppliers with respect to transportation charges in a consistent way in much the same manner as they make arrangements for terms of financial settlement. Thus, if goods are purchased from a supplier f. o. b. delivered, all business done with that supplier should, if possible, be done on that basis. A card file kept in the traffic department of such bases will facilitate the proper handling of the transportation items when the bills therefor arrive. In any event, the traffic department will have copies of all purchase orders which should clearly show the f. o. b. terms.

Copies of Purchase Orders.—The originals of the purchase orders should, of course, be sent to the supplier. In large organizations, copies are also necessary for the inspection department, the receiving department, the material tracing unit of the purchasing department, and the cost unit of the factory accounting department. A reference copy for the purchasing department's own files is also necessary.

Purchase Order Change Notice.—Instead of changing purchase orders after issuance, a separate form of numbered purchase order change notice should be used, and copies sent to all parties receiving copies of the original order. Such change notices are really supplements to the original orders and should first refer to the number of the order to be changed and simply record the nature of the modification.

RECEIVING REPORTS AND PACKING SLIPS.—In comparatively small organizations, the receipt of the material may be noted in a place provided therefor by a rubber-stamp impression on the back of the suppliers' invoices.

FIG. 24. Receiving Department Report

Covers incoming materials and is prepared in triplicate on roller autograph register. First copy is used for checking suppliers' invoices, second copy for tracing material en route, and third copy for stock record keeping.

The storeroom's copy of the purchase order may be used as a receiving report by noting the receipt of the material thereon and sending the order to the accounting department.

Receiving Slips.—In larger organizations, receiving reports should be prepared in the receiving room. An effective form of **receiving slip** is shown in Fig. 24. These slips are prepared in triplicate on roller autograph registers; the original goes to the invoice checking division of the accounts payable unit for attaching to suppliers' invoices; the duplicate goes to the material tracing division of the purchasing department for posting on the back of the purchase order to follow-up the fulfillment of the order; the triplicate goes

to the stock record division of the stores department for posting to the stock records and for numerical reference filing.

Receiving Tags.—In practice it has been found impracticable to have a copy of the receiving slip follow the material and a separate stiff cardboard ticket similar to Fig. 25 is prepared in the receiving department to accompany the material from the receiving room to the inspection department and finally

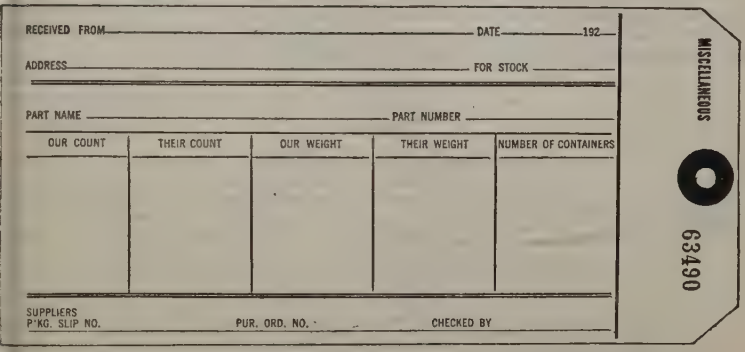

Fig. 25. Receiving Department's Stock Identification Tag

This stiff cardboard tag, prepared coincident with the receiving slips, accompanies the material through the receiving and inspection departments to the stores department. The tag is attached to the material container with wire.

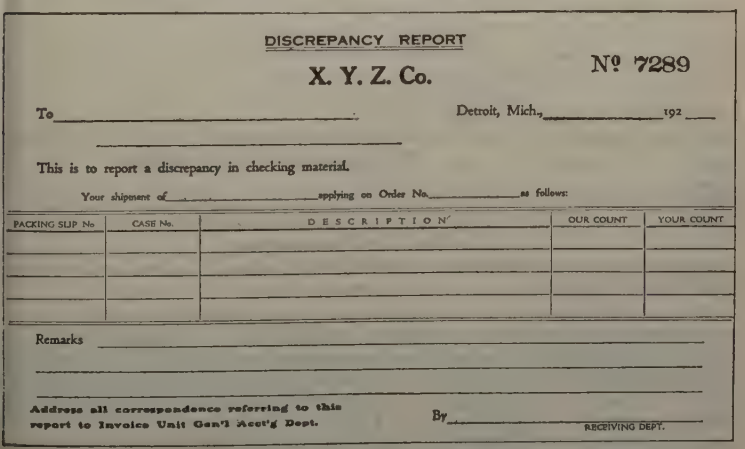

Fig. 26. Discrepancy Report

Prepared in receiving department. Copies are sent to the supplier and to the accounting department, for the issuing, by the latter, of debit or credit memos.

to the stores department. This ticket is attached to the material container with wire; the data thereon are similar to that shown by the receiving slip.

Discrepancy Report.—It should be noted that the number of containers and the supplier's count, as well as the receiving room count, are shown on the receiving slips. These data have often been valuable in settling disputes with suppliers as to shortages. Copies of **discrepancy reports,** Fig. 26, covering differences in count, are sent to suppliers, are attached to receiving slips at the time they go to the invoice division of the accounts payable unit, and are also filed for reference in the receiving room Discrepancy report numbers are noted on receiving slips to which they may be attached.

FIG. 27. Packing Slip

Prepared in receiving department where supplier's packing slip does not accompany the incoming material.

Suppliers' Packing Slips.—Suppliers' packing slips accompanying the incoming materials should be kept in the receiving room and filed for reference alphabetically in monthly envelopes for each supplier; all of the envelopes for each month should be kept together. In cases where no packing slip is received with the material, a form similar to Fig. 27, to be prepared in the receiving room, will supply the deficiency. The receiving slip numbers should be noted on all packing slips, and vice versa.

AUDIT OF SUPPLIERS' INVOICES.—All incoming invoices should be stamped on the back to provide space for noting audit data covering the pur-

chase order and terms, transportation, receipt of material, approval of unit prices, verification of extensions and accounting distribution, and for noting the posting thereof to the creditors' accounts. Fig. 28 shows the audit data for which provision is made by the use of a rubber stamp such as has been suggested. In the factory where this form is in use, a copy of the purchase order goes to the cost department which checks the account distribution and records on alphabetically filed price cards the quantities purchased and unit prices of production material and the more important factory supplies; if any changes are made in the account distribution which the purchasing department puts on the orders, the cost department immediately notifies the accounts payable unit of such change. These price cards are not only valuable for cost accounting purposes, but also for calling attention to notably large increases in purchase prices of various lots.

FIG. 28. Audit Data Stamp

Placed on all incoming suppliers' invoices immediately upon arrival in the accounting department. All of the data must be filled in and examined by the invoice unit before an invoice is considered audited and finally approved.

Audit Should be Made by Invoice Unit.—All of the auditing of suppliers' invoices, including the matching of receiving slips therewith, should be done in an invoice which in turn should form part of the accounts payable unit of the general accounting department. This unit should insert on the back of the invoice all of the audit data called for by the form with the exception that the "Final O. K. for payment" should be initialed in the purchasing department; this last provision is to give the purchasing department a final opportunity to hold up the bill in case anything has occurred in the relations with the supplier, the inspection or metallurgical test of the material which warrants such action, and of which the invoice unit might not have knowledge.

Transportation Costs.—In the third audit data block, the amount of the freight or express is copied from the receiving reports on which latter form provision has been made for inserting that data. In case articles come in by express, the invoices are sent to the purchasing department for indicating in the right

half of the third block whether the express cost is to be borne by the factory or by the supplier.

RETURNED MATERIAL DEBITS.—When materials or supplies do not pass inspection, or for any other reason should be returned to the suppliers who have invoiced them, it is important that a means be found which will prevent material being returned to the supplier without proper accounting

IMPORTANT—This R. M. D. has been charged against you

If material is to be corrected and returned, ISSUE NEW INVOICES as shipments are made, and show R. M. D. Number thereon.

(An unpriced copy of this R. M. D. is packed with returned material)

This number must appear on all invoices, packing slips and packages **RMD A 7280 A**

FIG. 29. Returned Material Debit

This form is prepared in the inspection department to cover sub-standard materials to be returned to suppliers.

record thereof being made and which will insure that all of such returns are recharged to the creditors.

This can be accomplished by having the inspection department issue consecutively numbered **returned material debit forms** similar to Fig. 29, setting forth not only the quantity and description of the material, but also the reason for the return, and the instructions as to method of shipment.

Distribution of Copies of Returned Material Debits.—By the use of very thin paper, quite a number of copies can be made at one writing. A sufficient number must be provided for use as follows:

Packing slip, to accompany the material when returned.
Shipping department instructions, after which this copy should go to the record unit of the stores department.
Supplier's notice, advising him of the rejection even before returning the material so that he will not continue to send unsatisfactory material. The printing on this form, above and below the details of the typed quantities, should be so planned as to make this copy a letter of advice.
Tracing unit of purchasing department, for use in keeping its quantity records up to date and following up the supplier to insure his replacing the rejected material.
Inspection department, for current filing for reference purposes.
Two copies for the **invoice unit of the accounts payable unit.**

One of these two copies should reach the invoice unit immediately after rejection and before the material is returned, so that payment can be stopped on current invoices from suppliers in cases where the value of the rejected material is of sufficient amount to justify it. After the material has been actually shipped, the first copy should be mailed as an invoice to the supplier. Both first and second copies should be priced and completed as to the amount of the charge after getting the shipping charge data from the traffic department. The second copy should then be turned over to the accounts payable unit where it is filed numerically and used as the basis for charges to the suppliers' accounts. Monthly summaries of these R. M. D.'s furnish the amounts to be posted to the debit of the accounts payable controlling accounts in the general ledger and to the credit of inventory or other nominal accounts.

Goods to Replace Returned Material Debits.—In order not to complicate the record keeping in connection with the fulfillment of purchase orders for definite quantities of material on a contract basis, orders to suppliers are typed on the lower half of the R. M. D. form with respect to the performance of such work on the material as will bring it up to specifications; and the supplier is instructed in the lower left-hand corner of the form that when the complaint covering the material is corrected, or the material is replaced, new invoices are to be issued showing the R. M. D. numbers on which the material was originally returned to him.

DEBIT AND CREDIT MEMORANDA.—Suppliers should be charged or credited for differences between receiving room count of material received and the supplier's packing slips without waiting to secure the suppliers own credit memoranda or additional invoices. Suppliers will automatically receive a copy of the discrepancy report hereinbefore mentioned and correspondence will develop therefrom. Any policy of delay in making adjusting bookkeeping entries may, however, result in actual loss.

Memoranda to be Issued by Invoice Division.—Debit and credit memoranda in connection with suppliers' accounts should be issued by the invoice unit

of the accounts payable unit. Most of these will be automatically issued as a result of the data set forth by the discrepancy reports (Fig. 26, page 351) attached to the receiving slips sent to the invoice division by the receiving room. The invoice division will notice these discrepancies when matching the receiving slips with the suppliers' invoices.

The inspection, purchasing and other departments may from time to time find other reasons for sending written instructions to the invoice division for the issuance of such debit or credit memoranda.

Both debit and credit memoranda are prepared in duplicate; the original for mailing to the supplier and the duplicate for numerical filing as the basis for monthly summaries thereof which provide the medium for posting to the supplier's account in the accounts payable unit and to the proper inventory or other nominal accounts.

OUTSIDE OPERATION ORDERS.—It often becomes desirable to send out material to suppliers to have machine operations performed on it or to have damaged material repaired. In such cases most suppliers object to being charged for the material, and the record keeping in connection therewith must be entirely independent of the usual purchasing and invoicing records.

The outside operation order form (Fig. 30) has been successfully used for this purpose. These orders are prepared in the inspection department, which must specify in detail the work to be performed. The inspection department should co-operate with the purchasing department, inasmuch as the latter must negotiate for the price at which the work is to be performed.

How Copies of Outside Operation Orders Should be Distributed.—A copy of the O. O. O. form should go with the material as a packing slip; one should remain with the inspection department for current numerical reference; one should go to the record unit of the stores department; one to the supplier direct; one to the accounts payable unit of the general accounting department for ascertaining the account distribution of the expense which is incurred; and one to the material tracing unit of the purchasing department. The last mentioned copy should be on heavy ledger paper and the back of it so ruled vertically that the tracing department can record thereon the dates and quantities invoiced back by the supplier as the material is received and thus insure all of the material being accounted for. These O. O. O.'s take cognizance of quantities only.

When Purchase Orders are Issued with Outside Operation Orders.—If production material in quantities is to be sent out for machining, the purchasing department first issues a blanket purchase order in the regular way covering the value of the labor to be performed by the supplier on a definite quantity of material. This material may be covered by one or more O. O. O's depending upon whether it is shipped to suppliers in one or more lots; in every such case, all the O. O. O's make reference to the blanket purchase order. The suppliers' invoices for the value of the work also refer to the purchase order number. The purchase order covering the labor may quote a price for the work on the whole lot of material or may quote a unit price.

When Purchase Orders are Not Issued with Outside Operation Orders.—In many cases repair work to individual pieces or small lots of material must be done for which no advance contract price can be satisfactorily arranged and the suppliers must be allowed some latitude as to the proper charge. In such instances, no separate purchase order need be issued; the supplier's invoice must then refer to the O. O. O. number and the invoices be submitted to the purchasing department for approval of the price charged.

OOO No. 30848

RENDER ALL INVOICES IN DUPLICATE

FIG. 30. Outside Operation Order

Used in connection with material sent to outside plants for operations to be performed thereon or for repairs.

PURCHASE INVOICE RECORD.—Either currently or monthly a medium must be provided for summarizing all suppliers' invoices under classifications permitting of posting the charges in total to the various general ledger and expense accounts, and of crediting the aggregate of the invoices to the controlling Accounts Payable account. The purchase invoice record is such a medium.

Form of Purchase Invoice Record.—This columnar record provides for recording suppliers' names, the dates and amounts of each invoice, and distribution columns for the various general ledger or expense accounts to which the invoices are chargeable. The record is totaled monthly, after which the total of the invoice column is credited to the controlling Accounts Payable account in the general ledger and the totals of the various distribution columns are charged to their respective general or expense ledger accounts. The detailed invoices themselves must be posted to the credit of each supplier's account in the accounts payable ledger.

Total Monthly Purchases Handled in One Posting.—It will be found practicable and labor saving to file all **incoming invoices** alphabetically during the month and to write up the purchase record at the end thereof after sorting the invoices so that those for each supplier can be entered together chronologically. Where this plan is followed, an extra column must be provided in the purchase record to permit of summarizing the invoices for each supplier; this will enable one posting to be made to each supplier's account for the total monthly purchases. In other cases, however, it may be found that the extra labor in posting each invoice to the supplier's account will be more than justified because of the fact that the suppliers' statements may be reconciled with detailed accounts payable ledger accounts without reference to the purchase record. If the invoices are filed in envelopes for each supplier, after notations are made thereon of the purchase invoice record entry, detailed postings to the suppliers' ledger accounts will be unnecessary, as the invoice file will be available for checking statements.

Accounts Payable Control.—A purchase invoice record, combined with the ordinary debit, credit and balance ledger form for keeping accounts with each creditor, comprise a simple and effective system for use by small concerns in controlling their accounts payable.

VOUCHER REGISTER.—The desire to eliminate the keeping of accounts with each creditor has led to the use of the voucher register and of the so-called "voucher" method of handling creditors' invoices.

Form of Voucher Register.—The form of the voucher register is identical with that of the purchase invoice record, with the exception that a column is added just prior to that provided for the entering of the suppliers' names and another column immediately following that in which the total of all of one supplier's monthly invoices are extended. The first of these extra columns is used for inserting a serial voucher number, while the other is used for posting from the check registers the dates on which the vouchers are paid.

Treatment of Vouchers Payable.—Each voucher consists of a summary sheet to which the monthly invoices of one supplier are attached and on which the dates and amounts of the invoices are shown together with the distribution thereof. When folded, the voucher acts as a protecting cover for the invoices; it is given a voucher number and filed consecutively. Envelopes for the invoices, with distribution thereof on the front, are sometimes used instead of these covers. Usually a new series of voucher numbers is started with each year and the numbers are continued without interruption. In some cases, however, where the quantity of invoices permits, it has been found helpful to start a new series of vouchers each month but preceding each series with the number of the month. The entries in the register are usually for the total only of the invoices covered by each voucher.

Accounts Payable Ledger not Necessary with Voucher Register.—No accounts payable ledger is necessary under this plan; the postings for the payments are made directly from the check registers to the voucher register. The open items at the end of each month in the voucher register form the trail balance of unpaid accounts payable, which should agree with the balance in the controlling account in the general ledger.

Advantages of Voucher Register.—To the extent that the accounts payable ledger is eliminated, the voucher register system is desirable; accounts with each supplier should be paid monthly in full, however, in order make its use satisfactory.

Disadvantages of Voucher Register.—One of the disadvantages of the plan is that because the vouchers are filed numerically, an index must be kept so that reference can be had to supplier's invoices covered by vouchers entered during previous months. Another disadvantage is the fact that creditors' statements cannot be readily checked without recourse to the index and to the invoices, which may be scattered all through the voucher files.

Some concerns who still prefer the voucher and voucher register system have overcome some of the above objections by preparing the voucher itself in triplicate. One of these copies is then filed alphabetically by suppliers, the second is sent to the creditor with the check as a remittance advice and the third copy is filed numerically. The invoices themselves are attached to the first copy.

Summary Sheets for Distribution.—In some cases the number of distribution columns which can be provided in a voucher register of ordinary size is found to be too small for practical purposes. Where this has been the case and it was desired to retain the voucher register method, the plan was introduced of preparing monthly summary sheets (or "analysis ledgers") for each general or expense ledger account and posting thereto the voucher numbers and the amounts, and using one summary sheet for gathering the total of the charges to each of these so-called "analysis ledger" or distribution sheets. This summary was then used as the posting medium to the credit of the Accounts Payable controlling account and to the debit of the various general and expense ledger accounts.

ACCOUNTS PAYABLE LEDGER.—In large organizations where large quantities of suppliers' invoices are received daily, and considerable routine clerical work is necessary before invoices can be approved, loss of cash discounts and even embarrassment may result if entries of the invoices in the accounts payable ledger are deferred until the purchasing department has approved them. The creditors' accounts will be kept up to date and the entire liabilities more readily known if the invoices are entered on the accounts payable ledger as soon as they come in and before they go through the routine of matching with receiving slips and purchase orders, and getting the purchasing department's approval. Thus suppliers' statements may always be checked and payments on account may be safely made.

Posting Approval of Each Invoice.—It is necessary, however, that the approval of each invoice should be again posted to the suppliers' accounts. While this at first thought may appear to be useless and double work, practice has shown that it is amply justified by the control this plan gives at all times over each creditor's account and over the entire financial program; the failure to know the entire amount of the liabilities at all times and to make adequate financial provision therefor has resulted in the failure of many companies. Deductions may thus also be readily made from future remittances for items

previously paid to get the short discount but approval of which may have been subsequently refused by other departments for proper reasons.

Ledger Account which Eliminates Purchase Record.—An unusual form of accounts payable ledger in successful use is shown in Fig. 31, which permits the entering of all invoices as soon as they arrive and of posting their subsequent approval after audit. The distribution columns on this form eliminate the necessity for keeping a detailed purchase invoice record or a voucher register. A separate columnar accounts payable summary for entering the total and the distribution of all the invoices for the month entered in each supplier's account, is all that is necessary. The invoice and distribution columns on the ledger form are memorandum columns only, for entering the invoices immediately upon their arrival. At the end of each month, all these columns on each supplier's account are totaled and the amounts transferred to the columnar accounts payable summary. From the summary, postings are made in total to the credit of the accounts payable controlling account and to the debit of the various general and expense ledger accounts. Postings are also made from this summary to the credit of the suppliers' accounts; the columns to the left of the invoice column on the ledger sheets comprise the suppliers' ledger accounts.

Treatment of Contra Accounts and Payments.—It is important that at least monthly transfers be made from the accounts receivable to the accounts payable ledgers, through the medium of a journal entry, of contra accounts against suppliers. Payments on account need no special treatment, being charged directly from the check register against the suppliers' accounts. To prevent overpayment, however, it is necessary that all cash payments be posted daily to the various ledger accounts.

Advantages of This Form.—The use of this kind of a ledger enables the invoices to be filed in envelopes for each creditor. Suppliers' statements may be checked directly against the ledger without referring to the invoices. Of course, trial balances of the suppliers' accounts in this, as in all other forms of accounts payable ledgers, should be taken and proved with the general ledger controlling account.

ACCOUNTS PAYABLE MACHINE METHODS.—

Disadvantages of Hand Methods.—All of the above records pertaining to purchase invoices and accounts payable ledgers are subject to the possible objection that the entries therein must be made by hand and thus be subject to clerical error and illegibility. Under the plans referred to, the distribution of the invoices to the various general and expense ledger accounts cannot be summarized until the end of the month. In the special accounts payable ledger and invoice distribution form just described, the last mentioned objection is not vital as in actual practice it has been found that such a ledger can be kept with less clerical help than the other systems hereinbefore mentioned and that the distribution of the invoices in the accounts payable ledgers can be summarized and transferred to the accounts payable summary within a day after the close of each month.

Distribution of Invoice Charges by Tabulating Machines.—Nevertheless, the distribution of creditors' invoices to the various general and expense ledger accounts and the summarizing thereof with mathematical correctness has proved to be the expensive and retarding problem in all accounts payable accounting. To overcome this, the making of the distribution by tabulating machines (with the punching of cards for each distribution item or invoice) or cash register

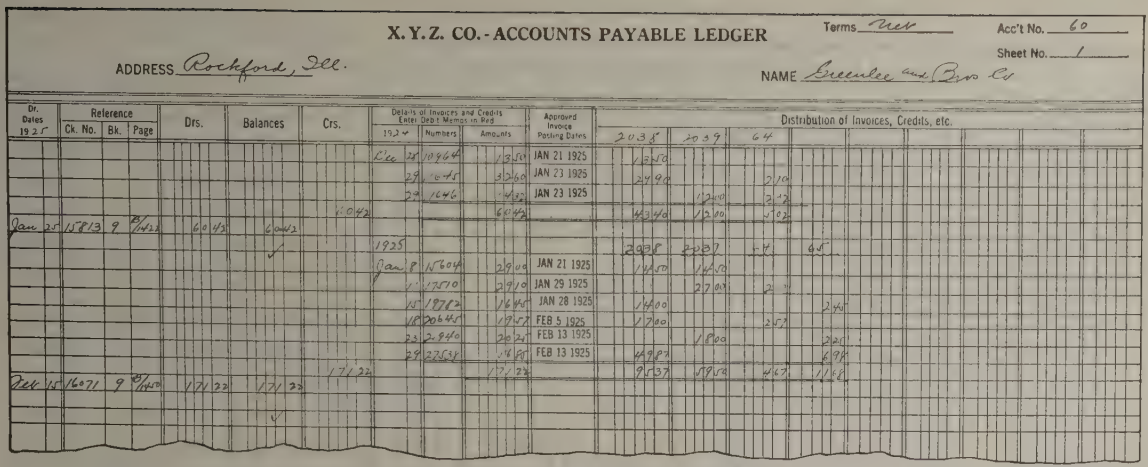

FIG. 31. Accounts Payable Ledger

Invoices are entered and distributed hereon daily, but are really only memoranda until the end of each month; then the entries are ruled and footed and the totals of the invoice and distribution columns transferred from all creditors' accounts to an accounts payable summary; this summary furnishes the monthly totals for credit to the accounts payable controlling accounts and debit to the various distribution accounts.

Coincident with the monthly transfers to the accounts payable summary, the total of the invoices entered currently in each creditor's account is transferred to the credit side of the first three amount columns on the ledger sheet; these three columns comprise the formal accounts payable ledger account with the creditor.

FIG. 32. Accounts Payable Invoice Register

Used in machine bookkeeping system; for registering and distributing all daily incoming invoices, and for following up purchasing department's final approval of the invoices.

machines (with the stamping of the amounts on individual tickets) has been recommended, and systems providing therefor have been installed in some large institutions. The use of such machines appears unsatisfactory from an accounting viewpoint, since no continuous record is made which permits direct and quick analysis of the general and expense ledger accounts in such manner that reference can readily be had back to the accounts of the creditors with whom the charges originated. In an endeavor to gain the obvious advantages of machine work without sacrificing reference data, the following system was developed; in actual practice it has proven itself to be so speedy as to be more economical than any system heretofore mentioned, while it provides the continuous record so desirable for analysis and reference purposes.

Accounts Payable Invoice Register.—The forms used in the system are an accounts payable invoice register, an invoice register recapitulation and an accounts payable ledger. The invoice and distribution data are entered in the accounts payable invoice register (Fig. 32), daily on a typewriter, from the incoming invoices, after each one has been given a consecutive register number and been compared with the purchase order by the invoice unit. The distribution is copied from the purchase order to the invoices. It should be noted that the second column of the register is used for following up the purchasing department to secure the prompt return of invoices sent to them for final O.K. after the audit data has been inserted on the back of each invoice.

Invoice Register Recapitulation.—Each day comptometer operators summarize on working sheets the total of the charges in the accounts payable register to each of the general and expense ledger accounts; the total of such daily distribution is entered in the invoice register recapitulation (Fig. 33). It should be noted that on the recapitulation form the accounts are listed perpendicularly and that each day's date is entered horizontally over the various distribution columns. Thus, each day's invoices are distributed and the distribution summarized, and at the end of each month the distribution of all the invoices, irrespective of how large the quantity, may be known within half an hour after the close of the month. In actual practice, however, the month is not closed until the second or third day of the succeeding month to allow for entering the invoices of the previous month which do not arrive until a day or two later. Further, the total of the charges to any one general or expense ledger account from the beginning of the month to date may be known almost instantly; where there is any considerable classification of inventory or operating accounts the ability to assertain this is very desirable. Postings are of course made monthly from these recapitulation sheets to the credit of the Accounts Payable controlling account and to the debit of the various general and expense ledger accounts.

Treatment of Debit and Credit Memos.—Credit memos in favor of suppliers and debit memos against suppliers are each given **separate series of consecutive numbers** and are summarized daily on the accounts payable invoice register form and the distribution thereof combined with the distribution of the accounts payable invoices in arriving at the daily figures to be entered on the invoice register recapitulation. In actual practice, the register sheets covering the debit memos are typed in red ink to emphasize the fact that these are charges against the suppliers' accounts. The register sheets covering the credit memos are typed in black ink, the same as are the register sheets covering the invoices.

From the above description it will be obvious that the analysis of any general or expense ledger account simply involves reference to the recapitulation, and

FIG. 33. Invoice Register Recapitulation

Used for summarizing daily the account distribution of all incoming invoices. As many sheets are kept as are necessary to cover all the account distributions.

in turn to the register sheets for the days on which entries appear in the recapitulation.

Accounts Payable Ledger Sheet in Machine Bookkeeping.—Fig. 34 shows the accounts payable ledger sheet, the entries on which are made by a Burroughs #6700 bookkeeping machine with shutter bar and return feature. Postings to the creditors' accounts are made from the invoices immediately after they are registered; these postings are limited to the date, the register number and the amount of each invoice. The small date just previous to the register number on the ledger sheet, should be noticed. This indicates the month in which the invoice is audited and finally approved; this posting of the approval of the invoice is necessary because the suppliers' accounts are credited before the invoices have passed through the routine of audit and approval. The invoice unit inquires into the reason for non-approval of any invoices within 30 days

after their date. Because postings are made from invoices and not from the register it admits of great flexibility in distribution of the work. Postings are also made to the ledger accounts from the debit and credit memos and from the check registers.

Daily Balancing of All Records.—An important element in controlling accounts payable by the system just outlined is the daily balancing of all of the records. The invoice register and the debit and credit memo summaries are added daily by comptometer operators and the total of each of these registers are checked against the totals shown by the adding machine registers immediately after postings to the ledger accounts have been made from each of these sources. Postings from the check registers are checked against the accounts payable columns in the latter immediately after the completion of each day's postings therefrom. The totals of the entries on the invoice recapitulation

sheets are checked daily against the aggregate of the invoice register and the debit and credit memo summaries.

Accounts Payable Ledger Trial Balance.—In actual practice, it has been found very simple to take accounts payable ledger trial balances twice a month with much less work than under the old system of doing this once a month. If the daily balancing has been properly carried out, it will invariably be found that the trial balances will be correct the first time they are prepared.

FIG. 35a. Creditor's Settlement Advice

Prepared in the accounts payable unit. Tnis form is sent with the remittance to the supplier, and, starting with the amount of the creditor's statement, sets forth detailed data respecting the deductions therefrom to arrive at the amount actually remitted. Carbon copy is retained by the accounts payable unit.

CREDITORS' SETTLEMENT AND RECONCILIATION.—One of the most important items in adequately controlling accounts payable and in maintaining satisfactory relations with suppliers is the **prompt settlement of accounts** and full advice with respect to unsettled items. Figs. 35a and 35b show a form of creditor's settlement advice and reconciliation statement which has been found very practicable in this connection. It will be noted that Fig. 35a, the creditor's

settlement advice, starts with the balance shown by the creditor's statement and finishes with the amount of the remittance, while Fig. 35b starts with the balance shown by the supplier's account in the accounts payable ledger, and by the use of the amount approved for payment (item J on Fig. 35b which must be identical in amount with item I on Fig. 35a), a complete reconciliation is provided between the creditor's account in the accounts payable ledger, the creditor's statement and the amount of the remittance.

FIG. 35b. Creditor's Reconciliation

This comprises the reverse side of the carbon copy of Fig. 35a, and is a reconciliation of the balance shown on the accounts payable ledger with the amount remitted to the creditor. Figs. 35a, and 35b thus comprise a complete reconciliation between the creditor's statement, his account in the accounts payable ledger and the amount remitted to him.

It should be noted that vertical blank columns are provided on the form for detailing under separate classifications such items as are deducted from the suppliers' statements to arrive at the amounts of the remittances.

If these forms (Figs. 35a and 35b) are properly used, the manufacturer will know what items are not on his accounts payable ledger and be in position to gather the necessary data and make adjusting entries, while both the manufacturer and the supplier will know what items are unsettled and the reasons therefor.

Handling of Freight, Express, and Parcel Post Expenditures

The following description of the method of handling freight and express expense bills and parcel post expenditure, in actual operation in a large manufacturing establishment, should be helpful to those who may be called upon to plan for the auditing of such bills and the controlling of such expenses in other establishments. The Interstate Commerce Commission regulations give the transportation companies the right to insist that all bills be paid as rendered within 24 hours; errors must be made the subject of claims to be filed by consignees in a stipulated manner.

INCOMING FREIGHT EXPENSE BILLS.—Bills of lading covering inbound material are sent daily to the traffic department to be filed alphabetically by suppliers' names to await the arrival of the corresponding freight expense bills. The freight expense bills are rendered in duplicate, known as a "delivery ticket," and are usually received coincident with the arrival of the shipments.

Freight Record Book.—Freight bills are entered by the receiving department in a columnar "freight record" which provides for showing the freight expense bill date, the shipper's name, the railroad pro number, the quantity of boxes or other containers, the weight and the freight charges. This record is kept to permit the immediate forwarding of both copies of the freight expense bills to the traffic department and yet have data in the receiving department against which the goods themselves can be checked upon arrival, and from which the amount of the freight charges are transferred to the receiving slips for information of the invoice division of the accounts payable unit of the accounting department in the auditing of suppliers' invoices. The freight expense bills are then stamped by the traffic department to the effect that the goods are "received subject to weight, count and correction," before the railroad's copy is delivered.

Recording Weight and Count.—The weights and count recorded in the freight record are then checked by the receiving department against the actual deliveries by the railroad company; differences are reported to the traffic department for preparation of claims and making of a notation on the freight bills.

Audit of Freight Bills.—A competent man in the traffic department, experienced in railroad shipping matters and familiar with rate classifications, then audits the freight expense bills with respect to the rates charged. The audit of the classification of the shipment is sometimes more important than the rate.

Schedules of the audited freight expense bills are then prepared for each railroad by the traffic department, showing the dates of the bills and the pro numbers. These schedules are prepared in triplicate; one copy is retained by the traffic department and two copies are sent daily to the accounts payable unit of the accounting department, where the freight expense bills are further verified as to extensions and totals, the two copies of the schedule are completed with respect to the amounts of the invoices, and one of those copies is completed with respect to the account distribution. Thereafter, the copy with amounts but with no distribution, is sent to the transportation company as a remittance advice.

The originals of the freight expense bills are subsequently stamped paid in the railroad office and returned to the traffic department where they are compared with the suppliers' bills of lading and then filed in monthly envelopes for each supplier.

INCOMING CARLOAD SHIPMENTS.—In the case of carload lot shipments, the procedure is similar to that above described except that in the traffic depart-

ment an additional record, called the "**incoming carload lot register,**" is maintained for the recording of data pertaining to the railroad car initials and number, the shipper, date of receipt of the car, weight and the amount of any "collect" freight charges, which data are necessary for later reference purposes. This register is arranged according to railroad car number, the last two figures of which comprise the register page index, independent of how many digits precede such figures or of the initials of the railroad owning the car. Entries in this register are made immediately upon receipt of the bills of lading in the traffic department with respect to all of the above data with the exception of the amount of the collection charges; the freight expense bill is the source from which the latter information is posted to the register.

Reports of Incoming Carload Lots.—A yard man, the direct representative of the traffic department in the placing of incoming cars and in the dispatching of outgoing cars, sends several times daily to the traffic department, lists of the various incoming railroad cars, from which lists the traffic department completes the data required by the incoming carload lot register.

The collect freight expense bills are from this point on handled in the same manner as described in the preceding paragraphs covering the ordinary incoming freight expense bills for less-than-carload lot shipments.

INBOUND EXPRESS CHARGES.—Express receipts arriving with the suppliers' invoices are sent directly to the traffic department to await arrival of the goods. Upon the arrival of express shipments in the receiving department, the data pertaining thereto, and the amount of the express charges thereon, are entered in a separate "**incoming express book,**" similar to the "freight record" previously mentioned, which permits the later transferring of the amounts of the charges to the receiving slips covering the material.

As each shipment arrives, entry thereof is made from the express bills to a daily **"inbound express register"** kept by the traffic department. The express companies' weekly statements are checked against this register by the traffic department after its verification of the express classifications and rates. The statements are then sent to the accounting department, where the extensions and totals are verified before the usual remittance advice is authorized, and the account distribution set forth alongside the individual items.

INBOUND PARCEL POST.—Since all incoming parcel post charges are prepaid, it merely becomes necessary for the receiving department to note the amount of these **charges on the receiving slips** covering the material, to provide the accounting department with data from which to check the correctness of the suppliers' billing of these charges on their invoices, covering material purchased f.o.b. shipping point.

OUTBOUND FREIGHT.—Bills of lading covering outbound material are prepared in duplicate in the shipping department from that department's copies of the sales orders or returned material debits; the numbers of the latter forms are noted on the bills of lading. The originals of the bills of lading are sent to the accounting department and the duplicates to the traffic department.

When material is sent "collect," that fact noted on the bills of lading is the only reference made thereto. Where freight is prepaid, but properly chargeable to consignees, the amounts of the prepaid charges are noted on the bills of lading.

The **original bills of lading** sent to the accounting department are held until the arrival of the suppliers' and accounting department copies of the R. M. D.'s or of the billing copy of the sales order, when the amounts of the prepaid charges

are added (prior to mailing the bills of lading) to the said R. M. D. copies or the sales order before billing. This operation is simple, as the R. M. D. or sales order numbers always appear on the face of the bills of lading. The original bills of lading are then mailed out with the suppliers' copies of the R. M. D.'s or the customers' copies of the sales invoices.

The traffic department's copies of the bills of lading covering outbound material are filed for reference in an "outbound shipments" file.

OUTBOUND EXPRESS.—If the material is sent out on an "express collect" basis, the shipping department merely attaches the express receipt to the copy of the returned material debit or sales order going forward to the consignee. In the event of prepaid shipments, however, a copy of the express bill is sent to the traffic department for entry record in its **"outbound express register"** for use in verification of the express companies' weekly statements. The shipping department copy of the sales order or returned material debit also carries proper notation as to the routing, date of shipment and amount of prepaid charges, which the accounting department in turn uses as the basis for the billing thereof against the consignees.

OUTBOUND PARCEL POST.—The shipping department makes note upon the face of the sales order or the R. M. D. of the amount of the parcel post expenditure as well as of the mailing date, the weight of the shipment and the serial numbers of any insurance coupons. This notation permits the accounting department to bill the consignee for the parcel post and insurance charges.

FREIGHT CLAIMS.—In the event of a shipment being received in damaged condition or noticeably short from the quantities called for by the bills of lading or freight and express expense bills, the receiving department endeavors to obtain the signature of one of the transportation company's employes to the notation of damage or shortage made on the face of the expense bills. This department also sends to the traffic department an **"exception report,"** shown in Fig. 36, which is a consecutively numbered form of report setting forth the data as to the shipment and the shortage or damage to which exception is taken, and which forms the basis for the traffic department filing a claim with the transportation company.

Notation is also made on the receiving slip covering damaged or short shipments, of the number borne by such "exception reports." This is of considerable assistance to the accounting department when matching the receiving slips with the suppliers' invoices, as in such cases a positive recheck is made before the suppliers' invoices are passed, to see that claim has actually been filed by the traffic department and to ascertain whether or not such claim appears to be collectible. The accounting department is notified when the claims are discharged by the transportation company; those paid are covered by remittance which is turned over to the accounting department upon receipt.

FREIGHT AND EXPRESS CHARGEABLE TO SHIPPERS.—At the time the "audit data" is placed on suppliers' invoices by the invoice division of the accounts payable unit, as referred to under the heading of "audit of suppliers' invoices," such invoices as cover merchandise **on an f.o.b. destination basis** are retained in separate folders in the invoice division until the receiving slips are matched therewith. Special attention is given in matching the invoices with these receiving slips to see whether the latter have a notation as to payment of any collect freight or express charges; in every case where any such collect transportation charges were paid, a **transportation debit request** similar

Notes and Acceptances Payable

SEPARATE CONTROL FOR EACH CLASS OF OBLIGATION.—Notes payable for borrowed money, those issued in payment of current accounts, and trade acceptances, represent three separate and well defined financial obligations. The financial manager will not only want to know the amount of each class of liability outstanding, but will want to have for reference and for future planning a classified record of past practice. It will, therefore, be found desirable to keep **separate general ledger controlling accounts** for each of these classes of obligations, and to use a separate series of consecutive numbers in each case. The notes, of course, should be numbered at time of issue; the acceptances payable may be numbered at the time of acceptance.

SIGNATURES REQUIRED.—The signatures to be required upon notes and acceptances should be specified by directors' resolution. The signature of the financial manager should appear on all notes payable and acceptances. In addition to such signature, all notes payable for borrowed money should require the signature of the treasurer or another executive officer while notes in

payment of current accounts and acceptances payable may require the additional signature of an executive officer or of the auditor. The advantage of having the financial manager's signature on all of these obligations is to ensure his supervision over the incurrence of the indebtedness and to make sure that the notes and the acceptances are regular and in proper form and that the accounting thereof has been taken care of before they leave the office. The financial manager should issue instructions covering the detailed handling and recording of these instruments and require the initials of his chief clerk on each of the notes for borrowed money, and the initials of the accounts payable unit head on the acceptances and notes for current obligations, before affixing his signature thereto, as indicators that such instructions have been carried out.

NUMBERING OF NOTES AND ACCEPTANCES.—Notes should be consecutively numbered as they are issued. Acceptances payable should be given a series of numbers entirely separate from those used for identifying notes payable. Where financing is done through the sale of commercial paper, the issuance of and the accounting for such commerical paper may be simplified by printing or engraving notes of a special form in multiples of $5,000.

REGISTERS TO RECORD OBLIGATIONS.—Registers should be provided for recording each class of obligation separately by consecutive number, and showing the maturities in classified monthly columns. Where the number of pieces of paper of this nature is very large, consecutively filed cards with monthly index tabs may be used as a register. Payments of the notes or acceptances should be posted in the registers. The open items in the latter should be listed monthly and proved against the balances in the general ledger controlling accounts.

If the registers covering notes and acceptances payable to creditors are in book form, either loose-leaf or permanently bound, they may be **summarized monthly** and used as the basis for journal entries to the controlling subsidiary ledger accounts. The notes payable for borrowed money should find their way to the credit of the liability account through the cash receipts book, as the proceeds of the notes will appear therein as the instruments are issued.

DISPOSITION OF PAID INSTRUMENTS.—Payment of the notes and acceptances will of course be entered in the check registers. The paid documents should not be destroyed until after the regular audit by public accountants. If the notes or acceptances are retired in any other manner than by payment, they should be marked with the date and a memorandum showing the nature of such transaction, and the accounting thereof covered by journal entry.

Payment Methods and Records

CASHIERS.—Originally the title of "cashier" was generally understood as applying to the chief executive officer of a bank, or other financial institution, charged with the practical management of its property and business in the usual and ordinary way. Today, the term has no such limited application, but it is pretty generally understood to also apply to those persons who are directly responsible for the actual receiving and paying out of funds in mercantile and manufacturing establishments. This is the proper designation for persons performing such functions, irrespective of whether or not their transactions are "over the counter" or entirely by mail.

Various Functions of Cashiers.—Small organizations may have but one cashier whose function includes both the receiving and the paying out of funds. In

large organizations these functions will be distributed among many cashiers. Thus, one organization may have cashiers for the handling of office receipts and still others for the mail receipts. Likewise, there may be a number of disbursement cashiers performing widely divergent functions; thus, there may be check disbursement cashiers in the accounts payable unit, office currency disbursement cashiers, one or more petty cash cashiers, pay-off cashiers who will disburse funds to men who may be discharged or quit between regular pay roll periods, and the regular paymasters.

Methods and Records Prescribed by Financial Manager.—The methods of disbursement and the records to be kept by the cashiers should in every case be prescribed by the financial manager. Provision should be made for daily summarized reports to the general accounting department by all the various cashiers and the facts set forth by those reports should be entered in the daily general cash receipt books and check registers.

For details with respect to the methods and records covering the collecting and recording of cash receipts through office cashiers and by mail, the reader is referred to pages 316 to 333, under the heading, "Collecting and Recording of Cash Receipts." The preparation and disbursements of pay rolls will be covered in detail later.

AUTHORITY FOR DISBURSEMENTS.—Authority for disbursements covering accounts payable should originate in the accounts payable unit with the preparation of creditors' settlement statements, as hereinbefore set forth under the caption, "Creditors' Settlement and Reconciliation." The amount of the remittance called for by such statements should be approved by the accounts payable unit head and the forms then passed on to the accounts payable cashier, who should be responsible for the preparation of the checks and their entry in the check registers.

If the business is large enough, separate check registers may be assigned to the accounts payable unit. If not, a general cashier can be made responsible for the issuance of all checks. In any event, checks in payment of creditors' accounts should be issued only upon the authority of the accounts payable unit head.

A **"request for check"** form, requiring the approval of the financial manager may be used to authorize disbursement cashiers to draw checks for other purposes, such as notes and acceptances payable, pay rolls, dividends, investments, advances for traveling expenses, petty cash reimbursements, etc. Such requests may be in memo form, but should be prepared and signed in the first instance by departmental chief clerks, chief paymasters, general ledger bookkeepers, and even officials whose position, knowledge of, and responsibility for, the correctness and propriety of such payments justifies the requirement that they sign such requests before being sent to the financial manager for the latter's approval and issuance of the checks. These requests should be specific and give ample details in addition to the name of the payee and the amount. Requests for checks covering notes or acceptances payable should specify the numbers and maturities of the instruments; those covering pay rolls should be certified to by the chief paymaster; those covering petty cash reimbursements should require the signature of the auditor or designated clerk who has audited the vouchers and the summary entered on envelopes containing them; those authorizing large traveling expense advances to be made by check should be signed by the various department heads and those issued in connection with dividend and investment disbursements should be signed by the treasurer. The financial manager should, of course, exercise discretion in han-

dling these requests, not hesitating to demand further information in cases of doubt, and even requiring copies of directors' resolutions, certified to by the secretary, or even the production of the minute book itself, where the nature of the transactions indicate the desirability of such action.

Currency disbursements should be made only from petty cash funds. Full details with respect to the establishment and operation of such funds, the authority for payments therefrom, and the records and reports to be made in connection therewith, are hereinbefore set forth under the caption of "Petty Cash" (pages 340 to 348).

Where practically all payments are made by check, the office and record work can be better systematized, there is less danger of inside peculation and the risk of loss through bandits is almost negligible due to the small amount of petty cash currency which need be carried on hand.

ADVANTAGES OF CHECKS.—When a check is used there is more assurance that the funds will reach their proper destination than when currency is paid to creditors' representatives. The use of the check also eliminates the necessity for inquiry into the authority of collecting agents if the checks are drawn to the order of the creditor. Checks provide direct evidence of payments, and permit tracing of the disposition of funds, which is not the case in connection with currency payments.

FORM OF CHECKS.—So-called **"voucher checks"** are quite widely used which provide for an itemized statement either on the back or on the face of the check. Sometimes this statement is separated from the main body of the check only by a perforated line, which permits the detaching of the statement before the check is used. Creditors are entitled to a detailed record of the items covered by checks; but to put those details on the back of a check makes it necessary for the creditor to copy those details in his own records or do without the data. There is no reason why the banks that subsequently handle the checks should know the details of the creditor's business. All statements, either attached to or on the back of the checks, become unnecessary if the creditor's settlement and reconciliation form (Figs. 35a and 35b) is used in preparing the necessary data prior to the issuance of the check.

Carbon Copies.—Some concerns still use carbon copies of checks as a check register. In few cases does this practice really save time, as usually it is still necessary to have a columnar check register summary to distribute the items chargeable to the same controlling accounts and to cover allowances, discounts and other deductions.

Checks for Wages.—Where checks are used for the payment of wages, or are issued by various cashiers subject to prescribed limitations, it is well to carry separate bank accounts and to have the check form engraved or printed with the **legend on the face** "Not good if over $200—"; of course the amount of the limitation may be fixed at any desired figure. In the case of wage checks, it might be wise also to have a legend appear on the check to the effect that it is "Void thirty days from date." This provision on the face of such checks will cause them to be used more quickly than might otherwise be the case.

Form of Checks to Facilitate Mailing.—The checks can be so designed that the written amount of the payment appears on the first full horizontal line of the check and the name of the payee and address in the lower left-hand corner of the check. Such a form will permit the check to be used in a look-out envelope and thus eliminate the necessity for addressing the envelopes.

Protection Against Forgery and Alteration of Checks.—Typewriters with "Protectograph type" for use in drawing checks and Protectograph machines of many kinds are on the market, all of which doubtless contribute something toward discouraging check alterations. Surety companies, however, claim that there is no such thing as absolute check alteration prevention and that an indemnity policy against loss therefore is most desirable. Certain it is, that a check forgery (of drawer's signature or that of endorser) and alteration policy in a reputable surety company will simplify settlement, eliminate legal costs and avoid serious loss in cases of forgery or "raising" of a check.

Special forms of checks and the use of special paper also tend to reduce the risk of loss through check alterations. Water-marked paper, safety coatings which will show the action of acids, and the use of various colors of paper and of ink should be given consideration. Special colors and letter prefixes to check numbers will identify the various bank accounts and assist clerks in their entries.

CHECK REGISTERS.—A check register is the most satisfactory book of original entry in which to record checks. By the use of properly headed columns, the total of the monthly charges to the various nominal accounts and the credits to the banks can be readily obtained and detailed posting to subsidiary ledgers also provided for. A column for recording the check numbers will eliminate any excuse for using check stubs.

Where more than **one bank account** is kept, a separate column on the check register will have to be provided for each account; or, a separate series of register sheets may be assigned to recording the checks on each bank. Where the latter practice is used, a general check register summary is necessary in which to record the aggregate of the daily entries in each register. In large institutions where there are a number of different cash receipt books and check registers, a general cash book can be used to summarize both the receipts and disbursements, and also show therein the aggregate of the daily balances in all the banks.

Where a number of different controlling accounts are kept covering not only assets and liabilities, but also various groupings of expense accounts in subsidiary ledgers such as "manufacturing expenses" as distinguished from "commercial expenses," the number of columns in the check registers can be reduced. As few charges as possible should be made direct from the check registers to expense accounts, and if the methods of handling the accounts payable and petty cash have been carefully outlined and properly followed, the number of direct expense charges in the check registers will be very small, as most of the checks will be charged either to accounts payable controlling account, to the petty cash reimbursement account or to accrued pay rolls.

DAILY FINANCIAL REPORT.—Daily and cumulative summaries of disbursements are necessary for use in the daily comprehensive financial report which should come to the treasurer from the financial manager. (See Figs. 6a and 6b, pages 301, 302, for a form of such condensed daily financial report.) All data in such reports as pertain to cash receipts and cash disbursements should be prepared from the cash receipt books and check registers, or from the general cash book previously referred to.

Preparation and Payment of Pay Rolls

GENERAL.—Fundamental to the control of payments to employes, whether for salaries, wages or welfare, are a departmentalized plant organization, a

systematic plan of assigning numbers to employes, a concentration of the responsibility for the hiring and discharging of employes, and the preparation of such original records in connection therewith as will insure the addition to the pay rolls of the names of only such persons as are bona fide employes, as well as their removal from the roll upon the discontinuance of their service.

Not less important, however, are the effective planning of methods covering timekeeping, and the preparing of wage payment data (the hours or the production in cases of piecework, or individual or gang premium or bonus) and the reporting of these data to the pay roll unit for the subsequent classification thereof and the preparation of the pay rolls.

Another consideration in the control of pay rolls is the securing and proper filing of data covering the personal history of each employe, the authority for his engagement and discharge, the original basis of remuneration for his services and any later changes therein.

EMPLOYMENT DEPARTMENT.—In all establishments of any size an employment department is essential; the head of such a department is the **employment manager.** He should be charged with all responsibilities in connection with the engagement and discharge of employes and the communicating of those facts to the pay roll unit of the factory accounting department. The employment manager may also supervise the safety first, firs aid or hospital, workmen's compensation and welfare activities of a plant.

Because of technical requirements of engineering or office departments, office managers or even office department heads may have similar duties assigned to them with respect to employes in their departments. In such cases, however, all the data with respect to such office employes, except the salary rates, should be duplicated in the employment department for reference purposes.

NUMBERING SHOP EMPLOYES.—It will greatly simplify the later work of the **pay roll unit** if a scheme for the numbering of shop employes is planned by the financial manager in conjunction with the factory manager (or divisional shop superintendents) in such manner that not only are separate series assigned to employes in the same department but also to the subdivisions of such departments. Thus, for example, in the motor department of an automobile factory not only would a series of numbers apply to all the employes therein, but the series would be divided into groups assigned to employes on machining operations as distinguished from those on assembly operations; each of these groups of numbers in turn would be further subdivided so that all employes on crankshaft operations would have a designated series of numbers, those on camshaft operations another series, those on cylinder block operations still another series, etc.

Such a plan will permit the subdividing of the pay rolls themselves into small sub-departmental labor groups and simplify the gathering of data in the pay roll unit. Where so-called "**gang**" **or group premium bonus plans** are used, such a systematized method of assigning numbers to employes in relation to factory operations is indispensable. Another decided advantage of adopting such a plan of numbering employes lies in the fact that it is easy for a representative of the auditing department to readily check the men on the jobs in the shop in any one department or portion of a department, and thus identify those on the pay rolls as actual workmen.

HIRING OF SHOP EMPLOYES.—The need for help is naturally first felt in the various operating departments of a factory. This need should find expression in a foreman's "**requisition for help**" (Fig. 38) on the employment department. The provision that the factory manager or the divisional shop

superintendents first approve all such requisitions should prevent the excessive hiring of men. The making of a separate requisition for each new employe is of help to the employment department in handling applicants, as it must deal separately with each man.

Classification of Requisitions for Help.—The requisitions should be classified in the employment department as to nature of work and index cards used to separate the various classifications. With this file as a guide, a "**first interview**" **clerk** should be at the applicants' entrance to the employment department to see as many applicants as he can within a short period of time; from his file he can instantly ascertain whether or not there is any demand for labor of the nature applied for; if so, he should remove the requisition from the file and give it to the applicant with instructions to pass on and interview one of a group of "detailed interview" men, whose business it should be to go into the

history of each man and ascertain his qualifications. If not hired, a detailed interview clerk should lift the requisition and return it to the first interview clerk. If the man is engaged, his name should be inserted on both copies of the requisition by the detailed interview clerk and the man and the requisition immediately turned over to one of the typists in the same office for the preparation of the employe's employment record card (Fig. 39), three copies of the employe's rate card (Figs. 40a and 40b) and the employe's clock card (Fig. 41).

Procedure in Handling Employe Records.—The employe should be required to affix his signature to the employment record card and to the back of the third copy of the rate card, and then be given the duplicate of the foreman's requisition and the clock card and instructed to report to the foreman for work, after "ringing in" his clock card on a time clock located in the employment

department; this time clock should be equipped with a specially colored ribbon for identification purposes. The duplicate of the requisition is notice to the foreman that the man is reporting in response to his request for help; this duplicate should then be destroyed and the clock card handed over to the department timekeeper by the foreman.

The top part or stub of the clock card should be detached by the employe immediately upon reporting to the foreman and by all employes at the beginning of each week from the new clock cards. This stub may be used as an employe's factory pass and as a receipt for wage payments by collecting them at the time of paying the wages after the stubs have been signed by the employes.

FIG. 39. Employe's Record Card
To be kept in the employment department.

EMPLOYE'S EMPLOYMENT RECORD CARD.—The employe's employment record card (Fig. 39) is the employment department's historical record of each employe and will enable detailed interview clerks to consider re-applications of former employes in connection with their past records.

The form shows the data which should be kept on the record card. The back of the card should provide for a continuation of the department and occupation data after the face of the card has been filled. The printed consecutive numbers along the lower border may be used as an index number in connection with any nationality or other classification which the employment department may desire. The design of the card shown in Fig. 39, with the name and current clock numbers at the extreme lower end, enables its use in modern visible filing systems, such as the Kardex or Rand.

The **master number** appearing at the top of the record card refers to a series

of numbers which should be assigned to all new employes to assist the pay roll unit in scheduling on its own cards the detailed current earnings of each employee; the total annual earnings of each employe must be known to enable compliance with the federal government's present requirements that report be made to it of the total of the payments to employes who receive in excess of $1,000 per annum. In the pay roll unit the employes' cards can be kept by master

To be used for "ringing in" on time clocks the time of beginning and departure of employes. The stub at the top is detached by the employe and used as a factory pass; is receipted and surrendered at time of wage payments.

numbers during the periods in which constantly changing employes are not on the pay roll; while employed, the employes' earnings cards in the pay roll unit should be kept by current clock numbers to facilitate posting thereon from the pay rolls, which latter are arranged in clock number order.

The employment record cards should be kept in the employment department in a "live" file by current clock numbers during the employe's period of service and thereafter transferred to an alphabetically arranged "dead" file. For quick reference purposes, an alphabetical index of current employes showing clock numbers is also necessary.

EMPLOYE'S RATE CARD.—The original and triplicate of the employe's rate card (Fig. 40) should be of thin cardboard and the duplicate of thin paper, so as to permit all three copies to be made at one typing. The originals should be sent by the employment department directly to the departmental time clerks where they should be filed by clock numbers and used as vouchers from which to transfer the rates weekly to the clock cards for the purpose of calculating the earnings of those employes who are paid on an hourly wage rate basis. The hourly rates should also be used on the clock cards of employes who may be paid under the "gang bonus" plan, to which reference will hereinafter be made. All employes should have hourly rates, notwithstanding the fact that they may be paid solely on a piecework basis, because there may be times when every employe will for short periods be paid on an hourly basis, because of stock shortage, waiting for machinery repairs, etc.

Duplicate of Rate Card As Notification of Hire.—The duplicate of the rate card acts as a notification of hire and should be sent to the addressograph unit supervised by the chief factory accountant. This unit should prepare an addressograph stencil of each employe's name and his master and current clock numbers. The stencil should also be used in the preparation of clock cards for subsequent pay periods, of envelopes for currency wage payments or of checks where employes are not paid in currency, and also in the preparation of the pay roll lists. The filing of the addressograph stencils by current clock numbers will enable the operators to readily prepare the pay roll lists by departments and sub-departments in such manner that separate totals can be made for each of such groups of employes.

Triplicate of Rate Card to Pay Roll Unit.—The third copy of the employe's rate card should have on the back the details of any definite understanding with the employe as to his rates, methods of payment, length of service, responsibility for tools, etc., and such a card should be signed each time an employe is hired (Fig. 40b). This triplicate should be sent directly by the employment department to the pay roll unit of the factory accounting department, for filing by current clock number and for use in checking the rates which form the basis for the calculation of the hourly earnings entered on the employes' clock cards. The actual calculating of the earnings may be done by comptometer or multiplying machine operators after the time and rate data on the clock cards have been furnished by the shop timekeepers. All timekeepers should be under the direct supervision of the chief factory accountant.

DEPARTMENTAL TRANSFERS OF EMPLOYES.—Preliminary verbal arrangements for transfers of employes from one factory department to another may be conducted between the various foremen or upon instructions of the divisional superintendents. It may also happen that the labor requirements of one department can be met by transferring employes who are being laid off in other departments. In any event, transfers of employes between departments should not take place independent of the employment department.

Instructions To Employes

1- Have foreman of your present dept. sign transfer and insert reason for same.
2- Have foreman of dept. to which you are being transferred sign and fill in new day rate on transfer.
3- Turn in all tools and tool checks into your tool crib and secure release.
4- Take this copy of transfer to Employment Office for new clock number.
5- Report to your new timekeeper for clock card.

You Must Report to Employment Within Five Hours After Receiving Transfer.

FIG. 42b. Duplicate of Departmental Transfer

Showing the instructions to employes which must be observed before transfer can be accomplished.

The actual transfer should be covered by a form of departmental transfer (Fig. 42a), prepared by the foreman's shop clerk, or by the timekeeper in such departments as have no shop clerk. Even in cases where the transfer originates upon the suggestion of the employment department, the transfer form should be prepared in the shop department in which the employe is engaged at the time of transfer.

Data Required on Duplicate of Transfer Form.—The form itself indicates the data required before a transfer can be made. Fig. 42b shows the duplicate of the form. Both original and duplicate contain various instructions pertaining to their use. It should be noted that with respect to the department which an employe leaves, he is treated as one who is leaving the service, and that with respect to the new department, he is treated as if he had been re-hired after a period of unemployment. Thus, the employment record card, the employe's rate card and the clock card should be completed with respect to the old and new jobs, and the employe's name automatically taken from the pay roll in the old department and added to the roll in the new department.

CHANGE OF HOURLY RATE.—The employment manager should prepare **wage lists** from time to time, as changing conditions may warrant, showing the **classifications of the labor** in the shop and the **minimum and maximum hourly rates** which must be adhered to by the divisional superintendents.

FIG. 43. Change of Rate Slip
Being authority for changing of employe's wage rates.

Foremen should be allowed some discretion as to the changes in rates within the limits specified for the various classes of labor, subject, however, to the supervision of the divisional superintendents. When a change is in order, a change of rate slip (Fig. 43) should be prepared by the foreman, submitted to the divisional superintendent for approval and then sent directly to the employment department, where it should be checked against the maximum rate shown on the last previously issued rating list, approved by the employment manager, used as a basis for changing the employment department

records and then sent to the pay roll unit of the factory accounting department. The latter unit should use the change of rate slip as authority for changing the rate cards and for notifying the departmental time clerks of the change; thereafter the change of rate slips should be filed as vouchers in the pay roll unit according to current clock number.

DISCONTINUANCE OF EMPLOYMENT.—Irrespective of whether shop employes quit voluntarily, are discharged or laid off, the information should first be communicated to the departmental time clerks. The latter should then prepare **pay off slips** in duplicate, similar to the form shown in Fig. 44. The original gives the data pertaining to the employe, a record of his ability, character and deportment and a memo as to whether or not he is recommended for later re-hire. The reason for the discontinuance of service and the signature of the foreman is desirable so that the latter can insert any confidential data he may wish pertaining to the employe. In some shops it is the practice to have the divisional superintendent also sign these slips, so that he may know just what is going on in his various departments.

Handling Employe Records on Discontinuance of Employment.—After being properly filled out, the original of the pay off slips should be sent directly to the employment department where the employe's record card should be removed from the live file and held until the duplicate of the pay off slips is received from the pay roll unit, after which the record card should be transferred to the dead file and the original pay off slip filed in the employe's record envelope (later reference will be made to this envelope). The employment department should act as a check on the pay roll unit if the duplicates of the pay off slips are not received in due course. The duplicate of the pay off slip need not show the shop record and confidential data called for by the original, as the pay roll unit is not interested in the shop record of an employe or the reasons for his leaving.

Time Clerks Function.—The time clerks should send the duplicate of the pay off slip directly to the pay roll unit together with the employe's clock card and any job tickets covering the time of the employe for the current week. The time clerk's copy of the employe's rate card should be sent directly to the addressograph department so that stencil of the employe's name and number may be removed from current pay roll stencil files after the close of the pay period in which the employe was last in service. Thus, when the next pay roll sheets are printed, the paid-off employe's name will not appear.

Pay Roll Unit's Function.—In the pay roll unit the earnings of the employe should then be calculated on the clock card, the pay roll unit's copy of the employe's rate card stamped with the date and the fact that the employe has been "Paid Off" and similar stamp impression made on the duplicate of the pay off slip. The employe's clock card, together with duplicate copy of pay off slip, should then be sent to the paymaster. The employe's rate card should be sent to the addressograph department to be checked against the copy of the employe's rate card previously sent in by the time clerk, to be sure that employe's name is removed from the pay roll.

The paymaster, after receiving the "tool clearance" should pay off the employe and lift the latter's receipted clock card stub. Thereafter, the duplicate of the pay off slips should be sent to the employment department. If it is the practice to pay all employes by check the paymaster will doubtless have a bank account of a stipulated amount on which to draw checks. If payments are made in currency, an imprest petty cash fund in the hands of the paymaster should be used.

FIG. 44. Pay Off Slip

Comprising instructions to employment department and paymaster and furnishing data to be considered in connection with later re-hire application.

Filing Records of Employes.—An employe's record envelope, of heavy manila stock, may be kept for filing the pay off slips and any other data relating to the employe which the employment department feels it desirable to retain. Any size of envelope can be used which will be large enough to hold the data to be filed therein. The employe's name should appear on front at the top of the envelope, as this will necessarily be filed alphabetically when the employe has discontinued his services. Inasmuch, however, as it is often necessary to refer to the data while employes are still in service, it desirable to provide space on the face of the envelopes for listing the current clock numbers of the employe. Envelopes of current employes may then be filed by clock number.

PAY ROLL ORGANIZATION.—The financial manager of a corporation should be charged with full responsibility for the planning and carrying out of the methods to be used in gathering the basic pay roll data in the shop, in reporting it to the Pay Roll Unit, in preparing the pay rolls and in paying off the men. Obviously, he must have under his direct control not only the pay roll clerks and addressograph operators who actually prepare the rolls, and the check writers if the men are paid by check, but also all shop timekeepers and operation counters who must be depended upon to supply the data from which the employes' earnings are to be calculated.

In large organizations the financial manager will find it desirable to maintain a **separate factory accounting department** in charge of a **chief factory accountant** with separate units for material costs, labor costs, pay roll and timekeeping.

Responsibility of Various Units.—Responsibility for the work of the pay roll unit should be concentrated in a chief paymaster. That for the timekeeping and piece work or other production data upon which earnings are based should be concentrated in a **chief timekeeper.** This would include principally the departmental shop timekeepers and operation counters. Even in cases where clerical work is required to be done for shop foremen, shop clerks who spend any portion of their time on timekeeping or production data for wage purposes should come under the direct supervision of the chief timekeeper.

Time Study and Rate Setting Departments.—Where piece work rates, production premiums or gang rates obtain, it is usually necessary to maintain a time study or rate setting department, which should report directly to the factory manager. This department will be found to be a distinct asset or a very active liability depending upon its efficiency and fairness in its time studies, in its setting of the rates and its co-operation with the planning department of the factory and the pay roll unit. A time study and rate setting department cannot function independently of the timekeeping and pay roll units.

Timekeepers.—The timekeepers are the departmental shop clerks who receive from the employment department the employes' rate cards and data with respect to the engagement and discontinuance of employes, and who either keep time records of the employes or see that the clock cards are stamped by each employe when entering or leaving the building. It should be their business to see that they receive from the addressograph department new clock cards for each pay period and that these cards are inserted in the racks adjacent to the time clocks for the employes to ring when coming in or leaving the plant. At the end of each pay period the timekeepers should gather all the clock cards, insert the hourly rates thereon and send them to the comptometer operators in the pay roll unit for the purpose of calculating the earnings of those employes whose earnings are based upon an hourly rate. The timekeepers should also gather from operation counters and other shop employes

all production and other data necessary for calculating the wages to be paid to employes working on bases other than hourly rates.

Addressograph Operators.—Addressograph operators are indispensable to the smooth working of the pay roll unit in large factories. Through the medium of duplicates of rate cards from the employment department covering new employes and the stamped triplicate of the rate cards from timekeepers covering the employes who are leaving, the addressograph operators are put into possession currently of complete data for maintaining a departmentalized file of metal stencils covering the name and clock number of all current employes. From these stencils the addressograph operators can prepare the weekly pay roll lists and the wage currency envelopes or checks, as the case may be; they can also run off at any time lists of the employes in any one factory department or division, for the use of the auditor in checking men actually on the jobs.

WAGE PAYMENT PLANS.—Even if each employe were to deliver, "an honest day's work for an honest day's pay" there would still be wide divergences between individual production. Variations in physical ability and endurance as well as in individual skill, would affect production. Management will always remain a vital factor in production; often it is a retarding factor due to its neglect to provide proper and complete instructions, modern machinery and efficient supervision. Wasteful plant lay-outs and the failure to develop various parts of the organization so as to insure a constant flow of materials in such quantities as to permit uninterrupted production might also be classed as poor management. It seems to be a pretty generally accepted fact, however, that even if management were perfect, labor needs incentives of some kind to bring out the best in each individual workman and as a result the bases for payments to employes have never ceased to furnish interesting study, and many plans have been developed. It is not the purpose to describe in detail various wage bases, as they form a part of shop management rather than of financial control; nevertheless, an understanding of a few of the more important fundamental considerations may serve to stimulate further research.

Hour Wage Rate.—Irrespective of the wage payment plan which is finally adopted, an hourly rate must be given each employe so that he may be paid upon the hourly rate basis during periods in which he may be waiting for stock or machine repairs, or in which he may be performing some special service for which the time study department has not yet provided a rate. The variation in hourly rates should give expression to the diversified skill of employes or to the relative values of the work to be performed.

Piece Rates.—The term "piece rate" is usually applied to the unit rate to be paid an employe for the performance of a specified amount of work on a unit or number of units of production. Since piece rates are usually fixed with the idea of enabling a normal employe at average speed to earn an average weekly wage (varied according to the skill required) there is no material difference between hourly rates and piece rates as the basic wage.

Both hourly rates and piece rates are the result of attempts to establish the same ultimate weekly reward for an expected amount of work and either of these rates may have premiums or bonuses for production in excess of a specified daily minimum or standard.

Bonus Plans.—Bonus plans are many and varied. Their object is to hold forth rewards which will act as incentives for employes to produce various results above the average. Thus, there may be bonuses for production in excess of a standard requirement within a given period; these may apply to production by an individual, by a small group or "gang" of individuals on

like or allied work, or by an entire department. In other cases individuals or groups of employes might be treated as sub-contractors and receive bonuses for the performance of given tasks in a shorter space of time than a pre-determined allowance period. **Premium plans** laying special emphasis upon the quality of production and upon the economical use of tools and supplies have also been tried. **Profit sharing bonuses** based partly upon length of service and partly on other production bases are used with the object of keeping labor turn-over down to a minimum.

All of these plans are incentives for the purpose of encouraging employes to do more or better than average work and with less loss of material and supplies, than would be expected from average employes without such incentives. In many cases labor has been suspicious of such incentives because too often has their co-operation been met by cuts in wages and bonuses. Where, however, the management has treated the employes according to the "golden rule" and the incentive plans have not been changed so as to result in abuse thereof, the result has been that employes have earned more and co-operated better, while the mangement has had its production increased and produced at less cost than before the introduction of such plans.

"GANG" OR GROUP BONUSES.—As there are many technical books on shop management which can be read with interest and profit by those wishing to pursue further study of the various methods of wage payments, it is not the purpose to enlarge thereon here. However, inasmuch as the reading of a number of such works has failed to reveal a description of a modern "gang" or group bonus plan, such as is now actually in successful use in some large continuous standardized production factories, detailed reference will be made thereto.

Where group bonuses are mentioned in other works, it would appear that the thought in mind was to provide bonuses of equal amount to be paid to each of the employes in a department, or subdivision thereof (known as a "group" and doing related work), according to the efficiency of the group as a whole, and no mention is made of certain important factors without which a "gang" bonus plan cannot be satisfactorily operated for an extended period, and will in time only cause dissatisfaction among the employes.

Variance Between Members Under Group Bonus Plan.—In every group there is bound to be a variance between the hours of attendance of the employes, as well as between the skill required of each. The clock cards of each employe showing the actual attendance will give expression to the varying hours worked by each group member. Varied basic hourly rates should express the difference in skill required; thus, in the final assembly department of an automobile manufacturing plant, for example, men who attach enameled and highly finished fenders should have a higher hourly rate than women who assemble small parts. The consistently productive work, however, of all classes of employes in a group is vital to the success of the "gang" bonus plan. Working foremen of small gangs can be given a higher hourly rate and participate in the gang earnings; where this is done, foremanship ceases to be an expense and is practically productive labor.

Basis of Group Bonus.—Where a group plan is applied to a sub-department in which all of the employes perform the same operation on the same kind of product on similar machines, the principles are the same, although this condition simplifies the use of the plan because the hourly rates should be identical. In such cases, the plan is valuable principally in encouraging co-operation

among the gang members and in providing an incentive for all to turn out maximum production with minimum spoilage.

Basis of Gang Bonus.—The gang bonus, instead of being a definite allowance to each employe of the same amount for excess production, should be applied on the basis of a percentage bonus of the earnings as calculated on the hourly rate basis, as it is only by the distribution of the bonus on such a basis that that bonus will be so paid out as to give expression in individual cases to the differentiation between the hours of attendance and the skill required.

An important element in the gang bonus plan is the setting of a labor rate to be allowed as a wage basis for each unit of good final production turned out by the entire gang. Thus, no labor expense is involved for spoilage during any operation performed by any member of the gang, while under an individual piece work plan payment would be made for labor on operations prior to that in which the material was spoiled.

It should be noted that the wage allowance is for each unit of production by the entire group and not merely for an excess of production over a specified minimum. The rate setting department should, of course, decide upon the wage allowance. It is interesting to note, however, that where the gang system is in use, the rate itself automatically expresses the unit cost and this simplifies the work of the labor cost unit. Furthermore it is less expensive inasmuch as no individual operation counters need be employed and no individual piece work data kept.

The calculation of the individual earnings of gang members is much simpler than would at first seem possible, as all that is necessary is to prepare a pay roll sheet for each gang on the basis of the actual attendance and basic hourly rates and then calculate the labor allowance to the whole group for all of the production during the pay period. The excess of the aggregate allowance over the total hourly earnings of the group is the basis for determining the percentage of bonus earned by the entire gang; this rate of bonus is then applied to the previously calculated hourly earnings of each member of the group.

Typical Gang Report.—Fig. 45 is a typical gang report. The daily hours of labor on the gang work and the hourly rates are filled in by the departmental timekeepers. The earnings on the hourly basis, the total earnings of the gang, the percentage of gang bonus to be applied to the gang members, and the earnings of each member of the group after applying the bonus, are all calculated in the pay roll unit. The gang report which is shown indicates that thirteen men comprised Gang No. 410G on crank shaft machining operations and that one man (No. 41034) was a beginner and entitled to receive his pay on an hourly rate basis only for the first week. It should be noted that the pay of such workers on the hourly basis is first deducted from the total gang earnings before the bonus is distributed to the other gang members. The first man on the gang report is a foreman, at a comparatively higher hourly rate, and since he shares in the gang earnings, his services are practically productive labor and not overhead expense.

Gang Production Report.—The gang production report at the bottom of the form is the basis for ascertaining the amount of the total earnings; the report shown indicates that the gang produced 1,204 units for which the rate setting department had fixed a rate of $40.85 per 100 units, thus making the total gang earnings $491.83. As a result of the operations of the gang, the twelve men sharing in the bonus, who ordinarily would have received an average rate of 46.5 cents per hour, actually earned 92.2 cents per hour, and the ratio of

Showing method of calculating and distributing bonus to a group of employes working on a group bonus plan which is flexible enough to allow for differences between hours of attendance and skill of the individuals.

actual gang earnings to the hourly earnings was 1.9843, which is equivalent to a bonus of 98.43%.

Summarized Schedules of Gang Reports.—Summarized schedules of all gang reports should be prepared weekly in the pay roll unit for submission to the divisional superintendents and factory manager, setting forth the number of employes in each gang, the average hourly rate, the actual gang rate paid and the percentage of gang bonus. In the actual operation of the gang bonus plan, especially in cases of interruption to production or the development of a new kind of production, the men on the gangs may not actually earn a bonus but will have to be paid an arbitrary bonus in order to compensate them for failure to earn the bonus through no fault of their own; in no event should any employe be paid less than his earnings at the hourly rate. Arbitrary allowances of this kind should be treated as overhead expense. Such unusual circumstances should be specifically earmarked and covered by notations on the summarized gang report schedules sent to the management.

CALCULATION OF WAGE EARNINGS.—

On Hourly Basis.—The calculation of individual wages on an hourly rate basis is comparatively simple; the clock cards will show the attendance of each employe and the rates inserted thereon by the timekeepers furnish the data for the comptometer operators in the pay roll unit to calculate each employe's earnings. In organizations where supplemental time reports (hereinafter referred to) are required from every employe, a **"Pay Period Summary"** similar to Fig. 46 will be found helpful in summarizing all the time chargeable to each job or shop order. This summary may be used for calculating each employe's earnings on an hourly basis and because it summarizes all the time spent by the employe on each order during the week, it will reduce the work involved in clerical distribution of the pay roll to the various orders.

On Piece Work or Bonus Basis.—Where piece work or any bonus plan is in use, production records must be kept by the various timekeepers or operation counters who in turn should send their data weekly to the chief timekeeper. In the latter's office these data should be checked and verified in so far as possible and calculations made of the earnings or bonuses of individuals or groups to whom those special rates apply. The plans for checking the data will of course vary with the basis of payment, but all plans should provide for the keeping of checking sheets covering consecutive numbers of large units of production and the posting thereto under various columns for each operation of the dates on which the operations were performed by employes paid at individual piece rates. Where possible, reports of production transferred from one department to another, inspectors' reports of quantities or weights, and similar data with respect to production reported from sources other than departmental timekeepers should also be considered in planning for testing the correctness of the production used as the bases for wage payments or bonuses to individuals, groups or departments.

Methods of Facilitating Reports on Piece Work Basis.—To facilitate the reporting of production in cases of operations paid for on an individual piece work basis, systems of consecutively numbered coupon strips have been used. The coupons strips are printed so that coupons describe the operations in routine order and refer to them by number; they may be filled in by the employes as to their clock number and date of performance and retained in an envelope to be turned over to the timekeeper either daily or weekly. Such coupons, which may be used to represent work done on one unit or on any specified multiple of units, can be readily sorted and checked in the timekeeping office,

FIG. 46. Pay Period Summary

Showing method of summarizing daily supplemental time reports of individual employes and of calculating wages for entire week chargeable to each job or shop order.

before preparing the earnings of each employe. Other systems provide for weekly cards to be issued to each employe on which inspectors can punch the production in spaces provided therefor; these cards may then be turned over weekly to the timekeeping department for preparation of the employes' earnings.

The use of containers designed to carry a specified quantity of production units as they move from one operation to another will be found helpful in assisting operation counters in preparing their reports to the timekeeping department of work performed on a piece work basis in cases where no coupon system is practicable. Where machine work is performed of a continuous nature, automatic counters can be placed on the machines.

SUPPLEMENTAL TIME REPORTS.—Individual supplemental time reports must be prepared by the timekeepers for employes who perform work chargeable to individual job or shop expense orders for which they are to be paid on an hourly rate basis and the departmental timekeepers should turn in to the chief timekeeper time reports distributing to job or **shop orders** all of the time each employe has shown on his clock card for the same pay period. This may apply to entire plants operating on a job work basis and even to departments in factories whose principal production is of a continuous and standardized nature. In plants using **job orders** for production work, such supplemental reports are necessary for all the time of all the shop employes.

Individual supplemental time reports for each employe must also be prepared by the departmental timekeepers, and approved by the foreman, for hourly rate allowances which may be made to men who ordinarily are on piece work or gang work, but who, because of shortage of stock, breakdown of machinery, or for other reasons, may be temporarily idle, or who may be assigned to temporary special work on an hourly rate basis. The special work should be covered by shop or job orders and the time reports so specify. With the use of a numbered classification schedule of the reasons for special allowances, it can be required that the time reports specify one of such reasons; weekly summaries of the allowances can then be prepared in the chief timekeeper's office and checked in the pay roll unit, after which the summaries can be sent to the divisional superintendents and factory manager for the purpose of controlling such expense.

However these plans may be worked out in individual cases, it is important that there always be present a provision that the pay roll unit also receive first hand production reports from the various factory departments and that the data used and calculations made in the chief timekeeper's office be audited and checked in the pay roll unit before the earnings of individual employes are transferred to the clock cards prior to preparation of the pay roll itself.

OVERTIME BONUSES.—The requirement should be set that overtime bonuses will be paid only after approval of special time reports by foremen in the case of each employe for each day and subject to blanket written authority by the divisional superintendents to the foremen. All factory gates should be closed at regular closing time, with the exception of one through which all employes who work overtime should be required to pass out and ring their clock cards on a time clock with a ribbon of special color and leave them in an immediately adjoining locked box, from which the night timekeepers should later remove the cards and replace them in the regular racks. This is a check upon the actual attendance of the man after regular hours.

PREPARATION OF PAY ROLL.—If the employes have been assigned consecutive numbers according to departments and sub-departments, the pay roll lists of those paid on an hourly, daily or weekly basis can be prepared from

time records even though the amounts of the wages may be actually determined by the hourly attendance or the quantity of production. Each employe should be issued a clock card upon being hired and a new clock card each week thereafter, so that the time of beginning and discontinuing work each day may be recorded thereon, either by insertion in a registering time clock, or by a timekeeper or foreman in cases of construction work where no other method is practicable. A mechanical method of recording the time is less expensive, more accurate and less subject to abuse and fraud than a purely clerical timekeeping plan.

If the basis of payment is other than a flat hourly attendance rate, a separate record of the data upon which the earnings are based must be kept currently by the timekeepers. In order to simplify the preparation of the pay roll, however, the total earnings of each employe should be transferred to the clock card at the end of each pay period in the pay roll unit from the production and earnings data received from the shop clerks, operation counters or timekeepers. The total wages of each employe as shown by the clock cards should then be posted to the previously prepared pay roll sheets after the calculations of the earnings have been checked.

In organizations employing a large number of men, the pay rolls may be prepared by mechanical devices. Addressograph stencils giving the employe's number and name, should be made at the time of original hire and the pay roll sheets for each period printed from such stencils.

Verifying Computations of Pay Rolls.—All employes' earnings and the pay roll lists should be checked by clerks or comptometer operators other than those who make the original calculations. It is also advisable to make a triple check of the entire pay roll by totaling each of the three computations, viz., the clock cards from which the pay roll is prepared, the pay roll sheets and the pay envelopes or checks, and proving one against the others.

PAY ROLL CONTROL.—Proper methods and records with respect to the **hire, attendance and discharge of employes** are partial insurance that the names of only such employes are added to the rolls as are regularly engaged and are in attendance during working hours, and that upon discharge the names are promptly removed from the rolls.

Another control is furnished through a comprehensive study of a **departmentalized pay roll summary,** with subdivisions of the departments so arranged that the foremen, the divisional superintendents and the factory manager can "size up" the actual condition therefrom and investigate whenever anything appears to be radically wrong or "out of line" as compared with previous rolls, or with the actual factory or departmental performance as a whole.

The extent to which such a summary is really valuable as a "control" depends upon the number of subdivisions shown on the summary and the extent to which the distribution classifications and other data are shown thereon.

A summary is more valuable if in addition to being merely a list of the departments and the wages paid to all the employes therein, it be arranged to show the number of employes and the average earnings; also, a classified distribution of the earnings, such as direct labor, overtime bonus, idle time allowances, plant extensions, foremanship, special shop orders, expense orders, etc. If totals of approximate production during pay roll periods can be applied to the rolls to show broadly the average costs (either with or without any of the items other than direct labor) an index figure may be obtained which may be helpful in furnishing comparisons between rolls. In plants,

departments or groups conducting operations of continuous and similar nature, such data has been found valuable in controlling pay rolls. (See Figs. 4 and 5.)

Pay Roll Audit.—The auditor, or a representative of the financial manager, is also vital to adequate control of pay rolls. From time to time he should take the clock cards covering the current pay roll and check the men while actually at work in one or more departments and investigate absentees to make sure that bogus names are not carried on the roll. The entire roll should be covered in this manner not less than once per annum and departments which change frequently should be checked oftener. Test audits should also be made, without notice, of petty cash pay-offs and of the various bases for wage payments used by the timekeepers and pay roll unit.

PAY ROLL DISTRIBUTION.—

Productive Labor.—All wage payments covering work done on production material come under the head of direct labor on the pay roll summaries. Where such labor is paid for on the basis of piece work, gang bonus or other rates based upon quantities produced, the unit cost of production is a known factor. Where payments for direct labor are on an hourly basis, unit costs can only be ascertained in the cost department by applying the actual production to the wages classified according to operations, groups or departments performing the same work.

Non-Productive Labor.—In all factories a certain portion of the labor is of a constantly recurring non-productive or expense nature. One of the most practicable and simple methods of controlling this expense currently is to provide that supplemental time reports of the employes engaged in such work be charged to one or more of a series of numbered standing expense orders issued to the shop timekeepers for this purpose. Where certain of these expenses are common to all departments, the time reports of the men charging their time to such expense orders will show the same expense order number. The pay roll summary should be classified departmentally and a special column provided for "Expense Orders."

Special Shop Orders.—Special shop orders to which have been assigned a series of numbers not conflicting with expense orders may be used for the manufacture of tools and for other special work in the factory in connection with the construction or installation of machinery and equipment. Even in a job shop it is well not to issue production job orders for this purpose, as such expenditures can be better controlled if the time reports of the men working thereon are charged to such special shop orders and all pay roll summaries provide a separate column therefor. The timekeeping department will in its distribution have to furnish the cost department with the total charges during each pay period to each of these special orders.

Overtime Bonus.—The excess payments over regular wage rates as overtime bonus should be treated separately on all records and be shown in a separate column on the pay roll summaries. Where work is done for customers on job production orders, it is important that provision be made that all job tickets, time reports and job costs sheets provide separate colums for posting overtime bonus, so that the charges to the customers can be calculated accordingly.

Entire Pay Roll Charged to "Accrued Pay Roll."—The entire pay roll should be charged to an accrued pay roll account on the general ledger. The pay roll unit should prepare a weekly distribution of the entire roll at the end of each pay period according to the various controlling accounts kept in the factory ledger in the cost department, such as "Direct Labor," "Standing Ex-

pense Orders," "Special Shop Orders," etc. By the use of columnar schedules, flexible time report files, subsidiary order ledgers, or card punching and tabulating machines, the pay roll unit should gather currently under individual shop orders or subsidiary expense orders, all labor chargeable to each of the subsidiary accounts. At the end of each month these data, arranged on separate schedules for the orders covered by each controlling account kept in the factory ledger, should be sent to the cost department where it should be used for detailed posting to the various production job orders, standing expense orders and special shop orders and also used as the basis for preparing monthly skeleton journal entries for the general accounting department to distribute the pay roll by crediting the accrued pay roll account and debiting the various asset accounts, expense accounts or factory ledger controlling accounts.

PAYMENT OF WAGES.—

By Paymaster if at One Place.—Irrespective of whether cash or checks are used, payment of wages should be made by a paymaster who has had no connection with the preparation of the pay roll and who is responsible directly to the comptroller or treasurer. This is practicable only where all the wages can be paid out at one disbursing point.

By Pay Clerks at Different Places.—If many employes must be paid off in a short space of time on a specified pay day, the establishment of a number of departmental pay stations throughout the plant may be found desirable. Where this practice is adopted, two pay-off clerks should be assigned to each station, both for protection and for speeding up the work. The departmental foremen should require the men to "line up" in clock number order; then one clerk can collect the receipted clock card stubs and call out the numbers as a guide to the other to disburse the wage envelopes or checks.

Frequent Changes in Assignments of Pay Roll Clerks.—It is important, however, if pay roll clerks are used for this work, that they be assigned to pay employes in departments whose wages they have not prepared, and that frequent changes be made in assigning the clerks to the pay stations, so that no one knows his assignment until just before the actual pay-off time. Wages should not be delivered to foremen for distribution to employes.

Audit Immediately After Pay Off.—The auditing department, or in the absence of an auditing department, a representative of the financial manager, should require the paymaster to account for the distribtuion of the cash or checks immediately after the expiration of the limited time specified for the paying of wages, and the paymaster should turn over either the receipted clock card stubs or undistributed envelopes or checks which the auditor can check against the pay roll. In cases where the pay roll is distributed through a number of pay stations, the time of distribution is usually very short and upon completion of the work at each station the pay-off clerks should be required to report at once to the auditor's office and similarly account in receipted clock card stubs or undistributed wages for all the envelopes or checks originally delivered to them.

Payment of Employes not in the Plant.—Provision should be made so that employes who are not in the plant during regular pay roll periods can within twenty-four hours thereafter receive their wages at the auditor's office in exchange for their clock card stubs and satisfactory explanation of their absence. Wages not called for after such period of grace should be listed and redeposited in the current bank account and applied to an "Unclaimed Wages" account. Employes subsequently making demand for such unpaid wages can be referred

to the paymaster and paid from a petty cash fund upon production of the proper credentials.

PAYMENTS IN CASH.—Many plants still prefer to pay in currency on account of the difficulties sometimes encountered by employes in cashing their checks. Where the number of men employed is too small to justify the use of check printing, check writing and signature machines, the cash payment plan is simpler. From the completed pay roll sheets a calculation can readily be made of the exact number of bills and coins of each denomination which will be required and for which the pay roll check will be drawn on the bank.

If the pay roll covers a large number of men, it is well to have the roll divided into several sections, so that a separate currency and coin list may be prepared for each, thus facilitating the location of any errors which may be made when filling the pay envelopes.

Pay roll robbery insurance should be carried to cover the total amount of the pay roll while being transported from the bank to the factory and while being distributed to the employes.

PAYMENTS BY CHECK.—Many corporations now pay all employes by check instead of in cash as the check payment plan relieves paymasters from the hazardous duties of transporting large sums of cash from the bank and handling it while almost surrounded by many men when paying off. The use of checks also furnishes employes with a point of contact which enables progressive banks to encourage them to open savings accounts. It is a generally accepted fact that thrifty employes make more dependable workmen.

If a system of payment by check is properly planned, it will be found to be more economical than the cash payment method. Where addressograph stencils are used in the preparation of the pay roll sheets, the checks can also be prepared therefrom. Check writing and signing machines reduce very materially the time required for completing the checks.

Reconciliation of Pay Roll Bank Account.—Reconciliation of bank accounts covering wage payments may be simplified if the checks are written in order corresponding to the names on the pay roll sheets and the employes' numbers are shown after their names on the checks, as the need for posting check numbers to the pay roll is thus eliminated; the outstanding checks may easily be identified by referring to the clock number of the employe whose name appears on the check preceding or following the missing number.

Pay Checks Stamped "Void thirty days from date."—It will be found desirable to have a printed provision on the checks that they will be "Void 30 days from date." This will encourage their prompt use and will enable the opening of a separate bank account for the checks of each pay period; thus, if weekly payments are made, the bank accounts may be numbered to correspond with the number of the week commencing with No. 1 for the first week in January and continuing through to No. 52 for the last week in December. These account numbers can be printed in large type upon the face of each check from the same addressograph stencil as is used for inserting the date.

SALARY ROLLS.—

Executives and Office Employes on Salary Rolls.—Executive and office employes, and in some cases shop foremen also, are ordinarily engaged on a monthly rate basis and paid by check. When this practice obtains, the roll covering their salaries is usually kept in the general accounting department under the direct supervision of the financial manager.

In some cases it has been found desirable to have the financial manager

himself keep a special small salary roll covering department heads and executives only.

Additions to Salary Rolls.—Additions to salary rolls should be covered by a Notice of Employment form, setting forth the name and address of new employes, their department, salary rate and time of starting. Such form should be signed by the department head and approved by the general manager in the case of office employes and by the divisional superintendent and the factory manager in the case of shop foremen.

Change of Rates on Salary Roll.—Separate forms covering change of rate and salary roll clearance should be provided to give pertinent data with respect to the amounts and dates of change or the discontinuance of employes. These forms, which should require the same signatures and approvals as the notice of employment form, will furnish the accounting department with authority for changing the rate and for removing employes from the roll.

Record Cards.—A record card for each person on the salary roll may also be kept for posting thereto all data with respect to employment and rate changes. These cards will be found valuable for reference, even after an employe's name has been taken from the roll.

Audit of Salary Rolls.—Since it is usually the case that persons on the salary roll are not required to use clock cards to record their attendance, it is desirable for the auditor or a direct representative of the financial manager to occasionally check up the parties on the salary rolls while at their work, or pay them at their desks, in addition to having the department heads approve quarterly lists of the department employes and their rates; otherwise it might be possible for employes to be dismissed, and through oversight or collusion, their names be continued on the rolls.

When Clock Cards Are Used to Check Employes on Salary Basis.—If clock cards should be used for checking the attendance of employes on a monthly salary basis, the cards should be of a different color, or should have a corner clipped or otherwise bear an identifying feature so as to automatically cause them to be rejected by the timekeeping department or the pay roll unit when preparing pay rolls.

A more desirable plan for handling the salaries of foremen or others to whom clock cards are issued, would be to assign to them numbers in the series alloted to their department and to give them a weekly rate and pay them on the regular weekly pay rolls. If office employes are handled in this manner, a separate series of clock numbers should be assigned to each office department, thus insuring separate grouping on the weekly pay rolls.

SECTION 6

BUSINESS LAW

Law of Contracts

DEFINITION.—A contract is "an agreement upon sufficient consideration to do or not to do a particular thing." (2 Blackstone Commentaries, p. 442.) A more complete definition is: "A bargain or agreement voluntarily made upon good consideration, between two or more persons capable of contracting to do, or forbear to do some lawful act." (*Justice* v. *Lang*, 42 N. Y. 493.)

THE ESSENTIALS OF A CONTRACT.—The essential elements required to make a contract enforcible at law are (1) agreement, (2) consideration, (3) parties legally competent, and (4) lawful subject matter.

1. AGREEMENT.—Agreement or mutual assent, which is the result of an offer and acceptance, is necessary for every contract. "Mutual assent is assent to the same thing in the same sense and under a common understanding of the stipulations agreed to." (*Martin* v. *Thrower*, 3 Ga. A. 784; also *Fire Ins. Assn.* v. *Wickham*, 141 U. S. 564; *Harper* v. *Goldschmitt*, 156 Cal. 245; *Harlow* v. *Curtis*, 121 Mass. 320; *Emerson* v. *Pacific Coast etc. Packing Co.*, 96 Minn. 1; *Livingston* v. *Livingston*, 173 N. Y. 377; *Teesdale* v. *Bennett*, 123 Wis. 355.)

Agreement Involves Meeting of Minds.—The meeting of the minds of the contracting parties is one of the essential elements in a contract. (*Hooley* v. *Talcolt*, 129 App. Div. [N. Y.] 233.)

What Constitutes Agreement.—To constitute an agreement there must be **a proposition by one party and an acceptance by the other,** which must be manifested by some appropriate act. (*White* v. *Allen etc.*, 126 N. Y. S. 150.)

OFFER.—Must be made with intent to create a contract on acceptance and be certain and free from ambiguity. The extent of the obligation is governed by the terms of the offer, for an acceptance is required to be identical with the offer made.

Offer Must be Communicated.—An offer must be communicated by word or conduct. The mode or manner is immaterial. (*The Palo Alto*, 18 Fed. Cases 10,700; *College Mill Co.* v. *Fidler*, 58 S. W. [Tenn.] 382.)

Revocation of Offer.—An offer may be withdrawn any time before it is accepted or the acceptance put in course of communication. (*Moffet* v. *Rochester*, 178 U. S. 373; *Martin* v. *Hudson*, 81 Cal. 42; *Corbett* v. *Cronkhite*, 239 Ill. 9; *Benton* v. *Springfield Y. M. C. A.*, 170 Mass. 534.) Where time for acceptance is given, it may still be withdrawn before the expiration of that time unless the agreement to hold it open for that time is supported by a separate consideration. (*Minneapolis etc. R. Co.* v. *Columbia Rolling Mills Co.*, 119 U. S. 149; *Schenectady Stove Co.* v. *Holbrook*, 101 N. Y. 45.)

Lapse of Offer.—An offer lapses so that subsequent acceptance will have no effect by

1. Expiration of the time for acceptance.
2. Expiration of a reasonable length of time where no time is specified.
3. Death or insanity of the parties before acceptance.
4. Dissolution of partnership before acceptance where one of the parties is a partnership.

ACCEPTANCE.—A contract results from the acceptance of an offer. "To accept a contract is to admit it and agree to it; to accede to it; to assent to it; the ordinary meaning embodies assent and agreement." (*State* v. *Columbus Public Service Board*, 81 Oh. 218; also *Laprade* v. *Fitchburg etc. R. Co.*, 205 Mass. 77; *Graff* v. *Buchanan*, 46 Minn. 24; *Chicago etc. R. Co.* v. *Dane*, 43 N. Y. 240; *Hall* v. *Wilson*, 6 Wis. 433.)

Who May Accept.—An offer can be accepted only by the person to whom it is made and is not transferable to another.

Public Offers.—Public offers of rewards, etc., from their nature cannot be made to a definite person and cannot become binding contracts until accepted, within the scope of the offer by some person. (*Schoestene* v. *Iselin*, 69 Hun 250; *Crowell* v. *Hopkinson*, 45 N. H. 9.)

Sufficiency of Acceptance.—"An acceptance must correspond to the offer at every point, and must conclude the agreement." (*U. S.* v. *P. J. Carlin Const. Co.*, 224 Fed. 859.) "An acceptance, to be good, must, of course, be such as to conclude an agreement or contract between the parties. And to do this, it must in every respect meet and correspond with the offer, neither falling within nor going beyond the terms proposed, but exactly meeting them at all points and closing with them just as they stand." (*Potts* v. *Whitehead*, 23 N. J. Eq. 512; also *Kincaid* v. *Eaton*, 98 Mass. 139; *Poel* v. *Brunswick-Balke-Collender Co.*, 216 N. Y. 310; *Baker* v. *Holt*, 56 Wis. 100.)

Communication of Acceptance.—An acceptance to consummate a contract must be communicated to the offerer or must be put in the course of communication by the acceptor. (*Cleveland etc. R. Co.* v. *Shea*, 174 Ind. 303; *Busher* v. *N. Y. Life Ins. Co.*, 72 N. H. 551.)

Revocation of Acceptance.—An acceptance can be revoked only by a communication to that effect before the acceptance is consummated. (*Commercial Ins. Co.* v. *Hallock*, 2 N. J. L. 645.)

OFFER AND ACCEPTANCE—METHODS OF COMMUNICATION.—An acceptance becomes an enforcible contract from the moment it is put in the same course of communication followed by the offerer. The fact that the offerer fails to receive the acceptance so communicated has no effect. If, however, a different mode of communication is followed by the acceptor, his acceptance does not become a binding contract until it is received by the offerer.

Mail and Telegraph.—An offer sent by mail or telegraph is of no effect until it reaches the offeree. The acceptance of the offer becomes a contract only when it is mailed, i.e., a properly addressed letter of acceptance with sufficient postage put in a United States post box or a prepaid telegram is given to the telegraph company. Failure of the offerer to receive such notification of acceptance does not affect the binding force of the contract.

Where an offer is made by mail, and an acceptance is posted, properly addressed, the contract is complete. A withdrawal of the offer thereafter is ineffective. (*Stein-Gray Drug Co.* v. *H. Michelson Co.*, 116 N. Y. S. 789.)

Withdrawal of Offer by Mail.—An effort to withdraw from or revoke an offer submitted by correspondence is not effectual unless the notice of withdrawal is received by the other party before his acceptance. (*Webster* v. *Casein Co. of America*, 206 N. Y. 506.)

Conditional Acceptance.—A person making an offer is not bound by a conditional acceptance of the offer. (*Cameron* v. *Wright*, 21 App. Div. [N. Y.] 395.)

2. CONSIDERATION.—

Definition.—Consideration may be described generally as some matter accepted or agreed to as a return or equivalent for the promise made, showing that the promise is not made gratuitously. (*Donahue* v. *Rich*, 2 Ind. A. 540.)

What Constitutes Consideration.—A **consideration** consists of some right, interest, profit, or benefit accruing to the party who makes the promise, or some forbearance, detriment, loss, responsibility, act, labor, or service given, secured, suffered or undertaken by the other, to whom it is made. (*Ward* v. *Erie R. R. Co.*, 149 N. Y. S. 717.)

Necessity of Consideration.—A promise to be enforcible, must be based on a consideration, and it must be put in such form as to be available under the rules relating to contracts. (*Adams* v. *Gillig*, 131 App. Div. [N. Y.] 494.)

Good and Valuable Consideration Distinguished.—A **good consideration** is love or natural affection by reason of the relation of the parties by blood, marriage, or family. A **valuable consideration** is a benefit or a detriment as set forth in the definition of consideration.

MUTUAL PROMISES.—Mutual promises concurrently made are considerations for one another. The one promise, and not performance, constitutes the consideration for the other. (*A. B. Dick Co.* v. *Fuller*, 213 Fed. 08; *Morrill* v. *Colehour*, 82 Ill. 618; *Price* v. *Muriat*, 107 Mass. 49; *Bayne* v. *Freiner Est.* 118 Minn. 350.)

LEGAL LIABILITY.—The promise, to constitute a good consideration for a promise, must impose some legal liability on the person making it. A promise to do what the promisor is legally bound to do is not a consideration. The promise must be lawful, definite, and certain.

WAIVER OF A LEGAL RIGHT.—The relinquishment of a legal right is a sufficient consideration. (*In re All Star Feature Corp.*, 232 Fed. 1004; *Hanchett* v. *Ives*, 171 Ill. 122; *Hammer* v. *Sidney*, 124 N. Y. 538.) A promise to refrain from doing something which the promisor has no legal right to do, **is not a consideration for a promise.** (*Sheppey* v. *Stevens*, 177 Fed. 484; *Crosby* v. *Ward*, 6 N. Y. 369; *Everingham* v. *Meighan*, 55 Wis. 354.) The relinquishment of rights may be those under contract generally, the right to sue for damages, claims of a beneficiary in an estate, dower, courtesy, liens, etc. As a general rule a promise to perform an existing legal obligation is not a valid consideration. (*Harris* v. *Cassidy*, 107 Ind. 158; *Parrott* v. *Mexican Cent. R. R. Co.*, 207 Mass. 184; *Carpenter* v. *Taylor*, 164 N. Y. 171.)

FORBEARANCE.—Forbearance by a person having a legal right to do a certain thing from taking action is a sufficient consideration to support a contract. (*Sickles* v. *Harold*, 149, N. Y. 332.) Forbearance to assert either a legal or an equitable claim is sufficient consideration for a contract. If however, the claim is not even doubtful, or plausible and there is no honest belief that it has some foundation in law or in equity the forbearance is not a good consideration.. (*Springstead* v. *Nees*, 125 App. Div. [N. Y.] 230.)

Agreement to Forbear.—An agreement by one to withhold from sale merchandise or securities held by him to secure claims due him is a sufficient consideration for a contract. (*Bean* v. *Trust Co. of Amercia*, 136 App. Div. [N. Y.] 69.)

PAST CONSIDERATION.—A past consideration will not support a promise except where the past consideration was based on a previous request. (*Moore* v. *Elmer*, 180 Mass. 15; *Aultman* v. *Kennedy*, 33 Minn. 339; *Arend* v. *Smith*, 151 N. Y. 502.)

A promise to pay for past services rendered without request, is void for want of consideration. (*Myers* v. *Dean*, 32 N. Y. S. 237.)

A LEGAL OBLIGATION NOT A CONSIDERATION.—A promise to do what one is already under a legal obligation to do is not a sufficient consideration for another contract. (*Carpenter* v. *Taylor*, 164 N. Y. 171.)

WHEN NATURAL AFFECTION IS NOT A CONSIDERATION.—Natural love and affection is an insufficient consideration to support an **executory** contract. (*Hadley* v. *Reed*, 106 App. Div. [N. Y.] 334.)

THIRD PARTY BENEFICIARY.—A consideration is necessary to support a contract for the benefit of third parties. A promise to pay the debt of another, without some new benefit to the obligor or injury to the obligee as a promise to forbear, or the like, is without consideration and is void. (*Bogardus* v. *Young*, 19 N. Y. S. 885.)

An extension of time for payment of a claim by a creditor of a corporation at the request of a stockholder is sufficient consideration for a promise by such a stockholder to pay the debt. (*Honsinger* v. *Mulford*, 35 N. Y. S. 986.)

3. PARTIES.—All persons are competent to enter upon enforcible contracts except those partially or totally disqualified under the law.

TOTAL DISQUALIFICATION.—One legally declared incompetent by a court having juridiction and having a guardian appointed to administer his affairs, has no power to make an enforcible contract in the state in which he was judicially declared incompetent. Such persons include insane persons and spendthrifts.

PARTIALLY DISQUALIFIED—MINORS.—At common law and in most states by statute, an infant is a person under 21 years of age. Contracts of an infant may be valid or voidable at his option.

Valid contracts are for necessities furnished in accordance with station in life. One is liable for such at their reasonable value, not at the agreed price. Strictly speaking, the liability is on *quantum meruit*, i.e., quasi-contract, and not on contract. The items must fall under the classification of necessities required for physical, mental, or spiritual welfare, such as food, clothing, medical attendance, shelter and ordinary education, but does not include articles of pleasure, ornament, or luxury.

Voidable contracts.—Contracts of an infant, exclusive of those for necessities, are voidable at his option during his infancy, and on becoming of age he may avoid or ratify them.

Disaffirmance of Contract.—This may be done by an infant at any time but must be completed within a reasonable time after he becomes of age, except that deeds to land cannot be disaffirmed until he reaches his majority.

Return of Value Received.—The courts of the various states are in conflict on this subject. Some courts hold that an infant, although he has received the benefits under an executed contract, may recover from the other party

what he has paid even though he cannot return what he has received. (*MacGreal* v. *Taylor*, 167 U. S. 688; *Reynolds* v. *McCurry*, 100 Ill. 356, *Gillis* v. *Goodwin*, 180 Mass. 140.) This rule is followed in New York. Other jurisdictions hold that an infant who has received a benefit under an executed contract cannot recover the consideration on repudiation by him without returning what he received. (*Johnson* v. *Ins. Co.*, 56 Minn. 365.)

Personal Defense.—Infancy is a personal defense available to the infant only and cannot be pleaded by the other party to the contract.

Torts.—Infants are liable for their torts, i.e., wrongs such as frauds, trespass, etc.

Minor's Representation of Full Age.—A minor who, fraudulently representing himself or leading others to think him of full age, enters upon a contract, will be held liable in a court of equity on his contract. The other party on discovery of the fraud may rescind and recover from the infant what he has parted with. The liability of the infant is for his fraud (*Studwell* v. *Shapter*, 54 N. Y. 249; *Burnett* v. *Williams*, 30 Fed. Rep. 697) and not on contract (*Badger* v. *Phinney*, 15 Mass. 359).

INSANE PERSONS.—

Legally Declared.—Contracts of a person judicially declared insane and placed under a guardian are absolutely void.

Not Legally Declared.—The general rule is that the law presumes every person sane until the contrary is established; hence a contract of a person of unsound mind is voidable only on establishing his insanity. The burden of proof is upon the person alleging insanity.

Degree of Insanity.—An insane person's contract is voidable where his infirmity is such as to render him incapable of understanding the nature of the contract and its probable consequence. (*Perry* v. *Pearson*, 135 Ill. 218; *Brown* v. *Brown*, 108 Mass. 386.) It need not be entire want of reason or permanent insanity; yet it must be something more than mere weakness of intellect. (*Guild* v. *Hull*, 127 Ill. 523.)

Executed Contracts.—The rule followed by most states is that an executed contract of an insane person is not voidable. These courts follow the leading English case of *Moton* v. *Camroux*, 2 Exch. 489, which states: "The modern cases show that when that state of mind was unknown to the other party, and no advantage was taken of the lunatic the defense cannot prevail, especially where the contract is not merely executory, but executed in whole or in part, and the parties cannot be restored to their original positions." Followed in: *Mutual Life Ins. Co.* v. *Hunt*, 79 N. Y. 541; *Burnham* v. *Kidwell*, 113 Ill. 425. Contra principle followed in: *Seaver* v. *Phelps*, 11 Pick. 304; *Rogers* v. *Blackwell*, 49 Mich. 192.

ALIENS.—In practically all the states aliens have the same rights as subjects to make and enforce contracts regarding personal property. In a few states restrictions are imposed in regard to real estate.

Alien Enemies.—An alien enemy cannot make a new contract or enforce existing contracts during the continuance of hostilities. Existing contracts are as a rule suspended during hostilities. (*U. S.* v. *Grossmayer*, 9 Wall. 72.)

MARRIED WOMEN.—In most states married women have full rights to enter into enforcible contracts.

CORPORATIONS.—Corporations have full authority to enter into contracts within their express or implied corporate powers.

Ultra Vires Contracts.—An executory contract beyond its corporate powers is said to be *ultra vires* and is void. A corporation, however, is liable on its *ultra vires* contracts where it has accepted benefits under the contract.

OLD AGE AND PHYSICIAL INFIRMITY.—The mere fact that a man is old and feeble, and of less active mind than formerly, does not render him incompetent to manage his own affairs and does not incapacitate him from making a valid contract. (*Jennings* v. *Hennessy*, 40 App. Div. [N. Y.] 633.)

4. **SUBJECT MATTER.**—The subject matter or object of a contract is that which the agreement is about and may be anything concerning the affairs of mankind not forbidden by law or in derogation to human welfare.

Must be lawful.—Unlawful agreements are those in violation of positive law and those which, although not contravening the law, are against the welfare of mankind and are not enforcible on the ground of public policy.

In Violation of the Positive Law.—If the object of an agreement is illegal, a contract does not result. (*U. S. Bank* v. *Owens*, 2 Pet. 527; *Harvey* v. *Merrill*, 150 Mass. 1; *Debbit* v. *Lander*, 72 Wis. 120.) Agreements to violate the law are illegal. (*U. S.* v. *Trans Missouri Freight Assn.*, 166 U. S. 290; *Coat* v. *Phillip*, 56 N. Y. 31.)

Fraud Against Third Persons.—An agreement to commit a fraud against a third person (*Douglas State Bank* v. *Lewinson*, 192 Ill. A. 364; *Sprague* v. *Webb*, 168 App. Div. 292), or the public in general (*Clinch* v. *Proctor*, 66 Fed. 240; *Nickerson* v. *English*, 142 Mass. 267; *Matesne* v. *Horwitz*, 101 N. Y. 469), or the commission of a civil wrong (*Randal* v. *Howard*, 2 Black, 585; *Adams* v. *Outhouse*, 45 N. Y. 318; *Rice* v. *Wood*, 113 Mass. 133) against a third person, is illegal and void even though the wrong itself may not be a crime or an indictable offense.

AGREEMENTS AGAINST PUBLIC POLICY.—Agreements opposed to public policy are illegal and void. (*Teal* v. *Walker*, 111 U. S. 242; *Palmbaum* v. *Magulsky*, 217 Mass. 306; *Richardson* v. *Crandall*, 48 N. Y. 348; *Roch* v. *Ekern*, 162 Wis. 291.) In order to declare a contract invalid because it contravenes public policy, it should appear that the agreement contemplated an illegal or immoral act, and it is not sufficient that the condemnable acts were done thereunder if they were not contemplated by the agreement. (*Drake* v. *Lauer*, 182 N. Y. 533.)

Public Policy Defined.—"The term 'public policy' as applied to contracts embraces all acts or contracts which tend clearly to injure the public health, the public morals, or confidence in the purity of the administration of the law, or to undermine that sense of security for individual rights, whether of personal liberty or private property which every citizen has a right to feel." (13 C. J. Contracts 425; *Holland* v. *Sheehan*, 108 Minn. 362.)

Test of Public Policy.—The test of public policy is the evil tendency of a contract rather than the actual injury. Just what public policy is in a given jurisdiction is for the courts to decide, as it varies with time and place. The public policy of the state is to be ascertained from the established law as found in the constitution, statutes or judicial records, being the principle of law that no one can lawfully do that which tends to injure the public or to be against the public good.

If the act contracted for is against public policy the contract is unenforcible regardless of whether the act itself is criminal or not. (*Cahill* v. *Gillman*, 146 N. Y. S. 224.)

General Classification of Agreements Against Public Policy.—

Against good morals such as,

1. Agreements of an immoral nature.
2. Gambling and wagering transactions.
3. Agreements to commit a fraud, breach of trust or confidence.

Against marital relations

1. Absolute restraint of marriage.
2. In derogation of the marital relation.

Against public service

1. Interfering with legislative actions.
2. Influencing by corrupt means operations of a political subdivision of the nation.
3. Traffic in public office.
4. Influencing courts of justice by corrupt means.

Agreements in Restraint of Trade.—Agreements in unreasonable restraint of trade are illegal (*Addyston Pipe etc. Co.*, 85 Fed. 271), but agreements in reasonable restraint of trade are valid (*Carter* v. *Alling*, 43 Fed. 208). Modern authorities gauge the validity of contracts on the reasonableness of the restraint imposed as necessary to protect the parties in whose favor it was imposed. Leading cases are: *Gibbs* v. *Consolidated Gas Co.*, 130 U. S. 369; *Diamond Match Co.* v. *Roever*, 106, N. Y. 473.

Total Restraint of Trade.—A contract not to engage in a business absolutely unlimited as to time and place is void as against public policy. (*Von Bremen* v. *McMonnies*, 138 App. Div. [N. Y.] 319.)

Partial Restraint of Trade.—A valid contract in partial restraint of trade may be made where the operation of the agreement is partial and limited under reasonable conditions and where there is a good consideration. (*A. Booth & Co.* v. *Seibold*, 74 N. Y. S. 776.)

Agreements Tending to Violate Confidence.—Any contract, the object or tendency of which is to place a person owing duties to third persons in a position where he is under obligations to two parties having antagonistic interests, is void even though in fact the contract has no bad effect. (*Bolton* v. *Amsler*, 95 N. Y. S. 481.)

Contracts for Political "Influence."—An agreement for services to secure contracts by favoritism from state officers by reason of social and political relations with such officers is void as against public policy. (*Drake* v. *Lauer*, 182 N. Y. 533.)

Lobbying Contracts.—A contract to do lobbying is illegal. But it is not illegal to draft legislative bills, explain them to the members of the legislature and request their introduction. (*Chesebrough* v. *Conover*, 140 N. Y. 382.)

Contracts against Public Policy Not Enforcible.—Where a contract is void because of public policy, the courts will not enforce it, even if the parties did not raise the question of public policy as an objection against the contract. (*Baird* v. *Sheehan*, 166 N. Y. 631.)

CLASSIFICATION OF CONTRACTS.—There are various classifications of contracts, such as:

1. Express and implied contracts
2. Executed and executory contracts
3. Contracts of record

4. Specialties or contracts under seal
5. Void, voidable, and valid contracts

Express Contracts.—"A contract is express when the agreement is formal, and stated either verbally or in writing." (*Gillan* v. *O'Leary*, 124 App. Div. [N. Y.] 498.)

Contracts Implied in Fact.—"A contract may be implied where an agreement in fact is presumed from the acts of the parties and this is the proper meaning of an implied contract." (*People* v. *Dummer*, 274 Ill. 637; also *People* v. *Spier*, 77 N. Y. 144; *Baker* v. *Stoutmeyer*, 2 McG. [La.] 61.)

Contracts Implied in Law.—Generally called **constructive** or **quasi-contracts.** "Constructive contracts, which are fictions of law adopted to enforce legal duties by actions of contract, where no proper contract exists, express or implied." (*Hertzog* v. *Hertzog*, 29 Pa. 465.) "The term 'implied contract' has also been applied to a class of obligations which are created by law without the assent of the party upon whom the obligation is imposed, on the ground that they are dictated by reason and justice. They are not contract obligations in the true sense because there is no agreement of the parties, but they are constructive contracts created by law." (*People* v. *Dummer*, 274 Ill. 737; also *Navada Co.* v. *Farnsworth*, 89 Fed. 164; *Gutta Percha etc. Mfg. Co.* v. *Houston*, 108 N. Y. 276.)

Executed Contracts.—"One in which the object of the contract is performed. (*Fletcher* v. *Peck*, 6 Cranch [U. S.] 87.)

Executory Contracts.—"A contract to do some future act." (*Hale* v. *Sharpe*, 6 Caldw. [Tenn.] 275.) "Whilst any act remains to be done the contract is understood to be executory." (*Farrington* v. *Tennessee*, 95 U. S. 679; also *Fox* v. *Kitton*, 19 Ill. 519; *Justice* v. *Lang*, 42 N. Y. 493.)

Contracts of Record.—These are judgments and recognizances. "A judgment is a contract of the highest nature known to the law." (*Taylor* v. *Root*, 4 Keyes [N. Y.] 344.) A recognizance is an obligation entered into before a court of record, undertaking to do or not to do a certain thing. Generally referred to as a bond to keep the peace, appear as a witness, pay a debt, etc.

Specialties or Contracts under Seal.—Contracts under seal derive their legal effect from the formality of the instrument, the essential elements of which are the seal and delivery. (Leake Digest, pp. 134–146.) Under the common law consideration was not necessary in sealed contracts, but most of the states have adopted statutes to the effect that a seal is only presumptive evidence of a consideration (*Home Ins. Co.* v. *Watson*, 59 N. Y. 390) which may be rebutted. "In contracts made by deed under seal, a consideration is not essential to give validity to the promise, as it is in the case of simple contracts." (Leake Digest, pp. 134–146.)

Parol or Simple Contracts.—These include all contracts in writing not under seal nor of record, and also all oral contracts.

Void Contracts.—An agreement in which one of the four necessary elements of a contract is absent, has no legal effect, and is not binding on either party. In reality it is no contract at all. The expression "void contract," although used, is a misuse of terms.

Voidable Contracts.—A contract which is binding on one of the parties but is capable of being rejected or accepted at the will of the other.

Valid Contracts.—One binding on the parties and of full legal effect.

FORM OF CONTRACT.—

Oral.—Parol or simple contracts, except where required by statute to be written, may be made by word of mouth and are enforcible as such except for the difficulty of proving the contract.

Written.—In practically all of the states certain parol contracts must be in writing and sometimes follow prescribed forms. The foundation of most of the state laws in this respect is the Statute of Frauds mentioned hereinafter. Aside from the contracts under that statute there are a number of others not so general which must be in writing, such as insurance contracts which under the common law could be oral and are now generally required to be in writing and in some states in statutory form; contracts for the recovery of debt barred by the statute of limitations; promise of an infant on becoming of age to pay for debts contracted during minority; assignments of patents and copyrights.

See "Statute of Frauds," page 420.

EFFECT OF CONTRACT—REALITY OF CONSENT.—As stated, one of the requisites of a valid contract is agreement. This is not obtained without real consent of both parties, which cannot be said to exist where there is mistake, fraud, duress, undue influence, or misrepresentation. (For further comment see page 403.)

MISTAKE.—Is occasioned by a misconception of some matter and may be a mistake of fact or a mistake of law.

Mistake of Fact Defined.—Mistake of fact is a mistake not caused by the neglect of a legal duty on the part of the person making the mistake and consisting in:

1. An unconscious ignorance or forgetfulness of a fact, past or present, material to the contract, or
2. Belief in the present existence of a thing material to the contract, which does not exist, or in the past existence of such a thing, which has not existed. (South Dakota Civil Code No. 1206.)

Mistake Affecting Validity.—"Mistake does not of itself affect the validity of contracts at all. But the mistake may be such as to prevent any real agreement being formed in which case the contract is absolutely void both at law and in equity." (*Kyle* v. *Kavanaugh*, 103 Mass. 356.)

Mistake as to Parties—Subject Matter.—A mutual mistake as to the subject matter, that is, what the contract is about or what is to be done under the contract, or the identity of the persons with whom the contract was made, avoids the contract as there is no meeting of the minds.

As to Legal Effect and Value of Subject Matter.—A mistake regarding the legal effect or the value of the subject matter does not affect the validity of a contract.

Mistake of One of the Parties.—A mistake of one of the parties only and not known to the other, does not affect a valid contract. (*Elliott Mach. Co.* v. *U. S.*, 44 Ct. Cl. 127; *Monks* v. *West Street Imp. Co.*, 149 App. Div. [N. Y.] 504; *Bostwick* v. *Mutual Ins. Co.*, 116 Wis. 392.)

Mistake—Mutual Mistake.—One of material facts will avoid the agreement. (*Allen* v. *Hammond*, 11 Pet. 63; *Flynn* v. *Smith*, 111 App. Div. [N. Y.] 870; *Hoops* v. *Fitzgerald*. 204 Ill. 325.) "Mutual mistake consists of a clear showing of a misunderstanding, reciprocal and common to both parties, in respect to the terms and subject matter of the contract, or some substantial

part thereof." (13 C. J. Contracts 375; *C. H. Young Co.* v. *Springer*, 113 Minn. 382.)

Mistake of Law.—This does not avoid the contract. The rule is well established that a mistake of law or the legal effect of a contract will not affect the enforcibility of the agreement. (*Lamborn* v. *Dickinson County*, 97 U. S. 181; *Soley* v. *Jones*, 208 Mass. 561.) Mistake as to the law of other states is regarded as mistake of fact and may under certain circumstances avoid the contract.

Mistake of Fact—Remedies.—Remedies are both equitable and legal where contracts are entered under mistake of fact. **In equity,** where specific performance is prayed for, the defense of mistake may be interposed or a bill may be filed to have the contract declared void. In case of mistake of form or expression, the instrument may be reformed in accordance with the real intent of the parties.

At Law.—The contract may be repudiated and all values paid thereunder recovered.

Mistake—When Basis for Relief.—The rule that mistakes to be the ground for relief must be mutual applies only where one party to a contract seeks relief against the other. (*Lumber Exchange Bank* v. *Miller*, 40 N. Y. S. 1073.)

To rescind a contract on the ground of mistake the mistake must be honest and excusable, and a party may not obtain relief on the ground that he erred in construing a plain and unambiguous contract, the terms of which he knew before entering into it. (*Hayward* v. *Wemple*, 152 App. Div. [N. Y.] 195.)

A contract will be rescinded for mutual mistake as to material facts, where the party relied absolutely on the statement of the other who knew or should have known that the other party was acting in reliance of such facts as the truth. (*L. D. Garrett Co.* v. *Halsey*, 77 N. Y. S. 989.)

WRITTEN CONTRACTS—CONTENTS UNREAD AND UNKNOWN.—The general rule is that a person cannot avoid his written contract on the ground that he did not know its contents, did not read it, or that he supposed it was different in its terms or mere form. (*Black* v. *Wabash etc. R. Co.*, 111 Ill. 351; *Wood* v. *Mass. Mutual Acc. Assn.*, 174 Mass. 217; *Peo* v. *Dunbar Contracting Co.*, 215 N. Y. 416.) "It will not do for a man to enter into a contract; and, when called upon to respond to its obligations, to say that he did not read it when he signed it, or did not know what it contained. If this were permitted, contracts would not be worth the paper on which they were written. But such is not the law. A contractor must stand by the words of his contract, and, if he will not read what he signs, he alone is responsible for his omission." (*Upton* v. *Tribilcock*, 91 U. S. 45.)

EXPRESSED INTENTIONS ARE BINDING.—A person is bound on his contracts in accordance with the reasonable meaning of his expressed intention regardless of what his secret intentions were. "The rule of law is stated in *Freeman* v. *Cooke*, 2 Exchange 654. . . . . If, whatever a man's real intention may be, he so conducts himself that a reasonable man would believe that he was assenting to the terms proposed by the other party, and the other party upon that belief enters into the contract with him, the man thus conducting himself would be equally bound as if he had intended to agree to the other party's terms." (*Smith* v. *Hughes*, L. R. 2 Q. B. 597; also *Dybarg* v. *Minneapolis Sanitarium*, 128 Minn. 292.)

FRAUD.—Fraud is a false statement of a material fact made with knowledge of its falsehood or reckless disregard as to whether it is true or false,

with the intention that it shall be acted upon by another and which is relied and acted upon by the other party to his injury.

Remedies of Defrauded Party.—The party so deceived in entering upon a contract, upon discovery of the deception can avoid the contract or maintain an action for the damages he sustained. (*Cooper* v. *Schlesinger*, 111 U. S. 148; *Krankowski* v. *Knapp*, 268 Ill. 183; *Adams* v. *Gillig*, 199 N. Y. 314; *Lee* v. *Burnham*, 82 Wis. 209.)

Must Be a Statement or Representation.—Mere non-disclosure does not constitute fraud unless there is a duty to disclose all facts to the other party or unless active steps are taken to conceal the truth.

Opinion.—Mere expression of opinion, although erroneous, is not fraud. (*John* v. *Stephenson*, 154 U. S. 625; *Bryant* v. *Ocean Ins. Co.*, 22 Pick. 200; *Swanson* v. *Fisher*, 148 Ill. A. 104.)

Expectation of Future Act.—An expectation, representation, or promise as to some future act or performance which may have brought about the agreement, will not constitute fraud where the expectation is not realized. (*Southern Dev. Co.* v. *Silver*, 125 U. S. 247; *Miller* v. *Sutliff*, 241 Ill. 521; *Dave* v. *Morris*, 149 Mass. 188; *Adams* v. *Gillig*, 199 N. Y. 314.)

Representation of Law.—An erroneous representation of law is not fraud. (*Brink* v. *Johnson*, 146 Fed. 209; *Hooker* v. *Midland Steel Co.*, 215 Ill. 444; *Gormely* v. *South Side Gym. Assn.*, 55 Wis. 350.)

Trade Talk.—Commendable expressions as to value, appearance, quality, prospects, etc., are not sufficient to constitute fraud.

Effect of Fraud.—An agreement procured by fraud is voidable, but not void. The defrauded party has the right to elect whether he will treat the contract as binding or refuse to be bound by it. (*Foreman* v. *Bigelow*, 9 F. Case No. 4934, 4 Cliff 508; *Wallace* v. *Pierce*, 97 Mass. 46; *Elmer* v. *Loper*, 66 N. J. L. 50; *Adams* v. *Gillig*, 199 N. Y. 314.)

Remedies of Party Defrauded.—He may either:

1. Affirm the contract, keeping what he has under it and sue for the damages he sustained by reason of the fraud. The affirmance of the contract is not a waiver of the fraud and does not bar the right to recover damages (*Hecksher* v. *Edenborn*, 203 N. Y. 210; *Gibson* v. *Nelson*, 111 Minn. 183; *Bumbs* v. *Burns*, 137 Fed. 781); or,

2. Rescind the contract and sue to recover what he has parted with. To rescind the contract he must return the consideration he received. If he retains the benefits under the contract his right to rescind is gone.

Fraud Affirmed.—A person cannot rescind a contract either at law or in equity on the ground of fraud when after knowledge of the fraud he affirms it. (*Mc Naught* v. *Equitable Life Assn. Society of U. S.*, 136 App. Div. 774.)

Delay in Rescinding Fraudulent Contract.—An innocent party induced to make a contract by fraud cannot after discovering the fraud delay in rescinding until he receives the benefits.

Prompt Recession Necessary in Fraudulent Contract.—The right to rescind a contract because of fraud or fraudulent representation must be asserted promptly. (*Railway Advertising Co.* v. *Standard Rock Candy Co.*, 53 N. Y. S. 790.)

Evidence of Fraud.—The burden of proof is on the party alleging fraud (*Eppley* v. *Kennedy*, 131 App. Div. [N. Y.] 1.)

Action on Fraud.—In an action on contract fraud is an affirmative defense and must be proved. (*Prahar* v. *Tousey*, 93 App. Div. 507.)

DURESS.—Duress is a threatened or actual violence or imprisonment reasonably sufficient to cause such apprehension that a person will enter into a contract against his own free will. "Duress exists where one is induced, by another's unlawful act, to make a contract or perform some act under circumstances which prevent his exercising his free will." (*Hackley* v. *Headley*, 45 Mich. 569.) "Duress is a species of fraud in which compulsion in some form takes the place of deception in accomplishing the injury." (*Kans* v. *Gracey*, 162 Iowa 671.)

Effect of Duress.—A contract entered into by a person under duress is voidable at his option, but not void. As in fraud, the contract may be disaffirmed or ratified.

Remedies.—"One who by duress is compelled to sign a contract whereby he parts with his property may proceed in equity for a recession, may rescind by his own act and sue at law, or may allow the contract to stand and sue for damages." (*Neibuhr* v. *Gaye*, 99 Minn. 149.) "Unlawful duress is a good defense to a contract if it includes such degree of constraint or danger, either actually inflicted or threatened and impending, as is sufficient in severity or apprehension to overcome the mind and will of a person of ordinary firmness." (*U. S.* v. *Huckabee*, 16 Wall. [U. S.] 414.)

Prompt Action Necessary to Rescind for Duress.—One entitled to disaffirm a contract for duress must act promptly. A contract or deed given under duress may be ratified by acquiescing therein for a reasonable time. (*Myers* v. *Grey*, 146 App. Div. [N. Y.] 923.)

Duress Must Be Pleaded.—The allegation of duress is an affirmative defense, which must be pleaded. (*Sternback* v. *Friedman*, 34 App. Div. [N. Y.] 534.)

UNDUE INFLUENCE.—"Undue influence is a kind of mental coercion, which destroys the free agency of one and constrains him to do that which is against his will and what he would not have done if left to his own judgment and volition, so that his act becomes the act of the one exerting the influence, rather than his own act, such act being one to his own injury, or to the injury of some one upon whom he would if left to his own free will, have bestowed a benefit." (*Beard* v. *Beard*, 173 Ky. 131.)

What It Consists of.—"Undue influence . . . consists in acts which though not fraudulent, amount to an abuse of the power which circumstances have given to the will of one individual over that of another." (Holland Jr., page 264.) Undue influence is a form of fraud and consists of taking unfair advantage of another's weakness of mind, necessities, and distress, or by reason of the confidential relations or family relations existing between the parties.

Effect of Undue Influence.—A contract entered into under undue influence is voidable at the option of the injured party. To affect a contract on the ground of undue influence it must be shown to be such an influence as the law condemns. (*Bowdoin College* v. *Merritt*, 75 Fed. 480; *Roberts* v. *Little*, 9 Misc. 497; *Batavia Bank* v. *North*, 114 Wis. 637.)

ILLEGAL CONTRACTS.—

Effect of Illegality—General Rule.—The law leaves the parties where it finds them and will afford no relief. (*Sage* v. *Hampe*, 235 U. S. 99; *Pelosi* v. *Bugbee*, 217 Mass. 579; *Hart* v. *City Theatres Co.*, 215 N. Y. 322.)

Exception to General Rule—Parties Equally Guilty.—Where parties to an illegal contract are in *pari delicto*—equally guilty—but public policy requires the intervention of the courts, relief may be obtained. (*Western Union Tel. Co.* v. *Burlington etc. R. Co.*, 11 Fed. 1.) But: "Courts are and should be cautious in affording relief to a fraudulent debtor or other violator of the law under this exception, and should act only where it is evident that some greater public good can be subserved by action than by inaction." (*O'Connor* v. *Ward*, 60 Miss. 1025.)

Exception—One Party Guilty.—Where parties are not equally guilty and where it is in the interest of public policy to allow one of the parties to obtain relief from the transaction, the courts have granted relief. (*Logan County Nat. Bank* v. *Townsend*, 139 U. S. 67; *Duval* v. *Wellman*, 124 N. Y. 156.)

Exception—Object not Consummated.—Where the illegal purpose is not consummated, the agreement may be repudiated and the consideration paid thereunder recovered. (*Nat. Bank* v. *Carr*, 189 U. S. 426; *Fisher* v. *Hildreth*, 117 Mass. 558; *Donville* v. *Merrick*, 25 Wis. 688.)

Illegality Must Be Pleaded as a Defense.—Illegality must be pleaded as a defense where the illegality is not shown either by the complaint or by the evidence. (*Rabinowitz* v. *Cunard S. S. Co.*, 119 N. Y. S. 625.)

INTERPRETATION OF CONTRACTS.—The courts in interpreting contracts apply broad principles to arrive at the intent of the parties. "The rules of interpretation ought not to be subtle; they are designed for people of common understanding; not as an act of logic but as the plain reason of a father of a family." (*Gathright* v. *Callaway County*, 10 Mo. 663.)

Intention of the Parties.—"The purpose of all interpretation is to ascertain and give effect to the intention of the parties to the contract as expressed by their writing." (*Alf. Bennett Lumber Co.* v. *Walnut Lake Cypress Co.*, 105 Ark. 421; also *Chesapeake etc. Canal Co.* v. *Hill*, 15 Wall. 94; *Smith* v. *Kerr*, 108 N. Y. 31; *Kluster* v. *Joseph Schlitz Brewing Co.*, 143 Wis. 347.)

The cardinal principle to be followed in the interpretation of contracts is that the intention of the parties shall be carried out. (*Anderson* v. *New York and H. R. R. Co.*, 132 App. Div. [N. Y.] 183.)

Ambiguous Contracts.—Where a contract is ambiguous the practical construction placed thereon by the parties may be considered in determining their intent. (*Jarvie* v. *Arbuckle*, 173 App. Div. [N. Y.] 199.)

Construction as a Whole.—The intention of the parties must be gathered from the entire contract, not a portion of it. (*Koles* v. *Borough Park Co.*, 142 App. Div. [N. Y.] 765.)

Separate Writings.—Where separate letters or instruments relate to one transaction or separate papers referred to, they will be read with reference to one another to interpret the contract. (*Pittsburgh etc. R. Co.* v. *Keokuk etc. Bridge Co.*, 155 U. S. 156; *Illinois Match Co.* v. *Chicago etc. R. Co.*, 250 Ill. 396; *Poel* v. *Brunswick-Balke-Collender Co.*, 216 N. Y. 310; *Hunt* v. *Frost*, 4 Cush. 54.)

Meaning of Words.—"The language employed is given its natural and commonly understood meaning." (*U. S. Fidelity etc. Co.* v. *French Mut. Gen. Soc.*, 212 Fed. 620.)

Technical Words.—Technical words will be interpreted in the sense in which they are generally used in the business to which the contract relates. (*Potter* v. *Phoenix Ins. Co.*, 63 Fed. 382.)

Writing and Printing.—Where both are used in a contract and are in conflict, the writing will prevail. (*United Surety Co.* v. *Summers*, 110 Md. 95.)

Words and Figures.—If in conflict, words govern. (*United Surety Co.* v. *Summers*, 110 Md. 95.)

Implied Terms.—In addition to words used, a contract also includes what is necessarily to be implied from the language used. (*Du Pont de Nemours Powder Co.* v. *Schlotterman*, 218 Fed. 353; *Senior* v. *Etger*, 213 N. Y. 589.)

Laws of the State.—The law of the state where the contract was made becomes part of it. (*Southern Surety Co.* v. *Oklahoma*, 241 U. S. 582; *People* v. *Metropolitan Surety Co.*, 211 N. Y. 107.)

Place.—"A contract as a rule is considered as entered into at the place where the offer was accepted (*Compagnie Générale etc.* v. *Simon Hertzig etc. Cie.*, 89 Misc. [N. Y.] 573; *In re Kahn*, 55 Minn. 509) or where the last act necessary to complete it is performed (*Clark* v. *Bell*, 223 Fed. 573).

Time.—If limited, the time runs from the date of the contract.

Addition of Words.—Words will not be added to a contract to aid a doubtful construction where the contract is open to a more natural meaning without such addition. (*Klauder* v. *C. V. G. Import Co.*, 113 N. Y. S. 716.)

Conflicting Clauses.—Where two clauses of a contract are repugnant and cannot stand together, the first will stand and the second will be rejected. (*Pittsburgh 2 S. R. Co.* v. *Central Trust Co. of N. Y.*, 156 App. Div. [N. Y.] 182.) Written or typewritten provisions would control over uncertain or repugnant printed provisions. (*Heyn* v. *N. Y. Life Ins. Co.*, 192 N. Y. 1.)

Surrounding Circumstances Considered.—"The circumstances surrounding the parties when the contract was made form a sort of context that may be resorted to in doubtful cases to aid in arriving at the meaning of the contract." (*Singer* v. *Brenner*, 19 Pa. Dist.)

Circumstances at Time Contract Was Made.—A contract must be construed in the light of the circumstances surrounding it at the time of its making and not in the light of subsequent events. (*Davin* v. *City of Syracuse*, 145 App. Div. [N. Y.] 904.)

Existing Laws Become a Part of a Contract.—Laws existing at the time and place of making a contract become a part of it as if incorporated with it (*Trustees etc. of Town of Brookhaven* v. *Smith*, 98 App. Div. [N. Y.] 212.)

Time Essence of Contract.—Where the parties make time of the essence of a contract, they must perform it within the time limit. (*Moot* v. *Business Men's Investment Assn.*, 90 Hun. N. Y. 155.)

Time is the essence of a building contract requiring completion of the building on or before a specified date where a delay means a loss of rents. (*Mikalajewski* v. *Pugell*, 114 N. Y. S. 1084.)

Time Not Expressed.—Where time for performance of a contract otherwise complete is not specified, the presumed intention is that performance shall be within a reasonable time under the circumstances which will be construed as if originally expressed in the contract. (*Northrup* v. *Scott*, 148 N. Y. S. 846.)

Matters of Fact Decided by Jury.—It is for a jury to decide what an oral contract is, where the evidence is conflicting as to the intent of the parties and as to its terms. (*Patten* v. *Pancoast*, 109 N. Y. 625.)

Matters of Law Decided by Court.—A contract being complete and not ambiguous, its interpretation is a matter of law for the court. (*McNally* v. *Georgia-Florida Lumber Co.*, 210 N. Y. 588.)

LIQUIDATED DAMAGES OR PENALTY.—Where a contract provides for the payment of a sum of money as liquidated damages in the event of a breach, whereas in fact the sum agreed upon is in the nature of a penalty, the courts will not enforce the contract. On the other hand, if the parties call it a penalty where it is in fact liquidated damages, the courts will interpret it as liquidated damages. (*War* v. *Building Co.*, 125 N. Y. 230.)

WHAT LAW GOVERNS.—In general, the law of the place where the contract was made governs as to execution, authentication, and construction. As to performance, satisfaction, or discharge, the law of the place where the object of the contract is carried out governs. "As to mere personal contracts the law thereof as to their validity and interpretation, is that of the place where they were made; the *lex loci contractus*, unless the parties thereto intended that they should be governed by the law of the place of performance: the *lex loci solutionis*, or of some other place. That is, the place of the contract is, generally speaking, a matter of mutual intention, but the intended place, as determined by legal presumption in some cases and evidentiary circumstances in others, settles all questions as to the legal test of validity and interpretation. Such presumption, in the absence of evidence to the contrary, is that the place of making and performance, in a physical sense, is the place in a legal sense, but the place of performance when different from that of the actual making, is the place in such legal sense, subject to the presumption being rebutted by clear evidence of intention, this being again subject to some exceptions in case of intention to commit fraud on the law." (*International Harvester Co.* v. *McAdam*, 142, Wis. 114.)

DISCHARGE OF CONTRACTS.—Contracts may be discharged by

1. Performance
2. Agreement
3. Breach
4. Operation of law
5. Impossibility of performance

1. DISCHARGE BY PERFORMANCE.—In order that performance may discharge a contract, each party must have completed his part. In an executory contract performance by one discharges his obligations but not the contract. Where a promise is given for an executed consideration the performance of the promise discharges the contract.

Sufficiency of Performance.—Under the common law, performance must be strictly in accordance with the terms of the contract. The modern rule interprets sufficiency of performance to the effect that where one party has substantially completed his part he may recover his contract price less the amount the other party would have to pay for the completion of any minor, unintentional, and immaterial omission or deviation. This rule holds true, particularly in construction and building contracts. (*Heckmann* v. *Pinkney*, 81 N. Y. 211.)

Substantial Performance.—Substantial performance of a contract is performance, except as to unsubstantial omissions with compensation therefor, and when the omissions are slight and unintentional, compensation is substituted *pro tanto* for performance to prevent the hardship of a failure to recover for that which was well done. (*Dickinson* v. *Sheldon*, 146, App. Div. 144.)

Renunciation.—Where one party of an executory contract renounces it, the other party may sue for a breach, although the time for performance has not arrived. (*Berstein* v. *Meech*, 130 N. Y. 354.)

Minor Unintentional Omissions and Deviations.—The courts construe minor, unintentional omissions and deviations as those that are "slight or susceptible of remedy, so that an allowance out of the contract price will give the other party substantially what he contracted for." (*Elliott* v. *Caldwell*, 43 Minn. 357.)

Time for Performance.—Where time is of the essence of a contract and so stated therein, it is strictly construed and the contract to be discharged by performance must be finished within the time limit. If completed after that time it is not performance and is not binding on the other party unless he waives the breach.

Satisfaction of One of the Parties.—Contracts which must be performed to the satisfaction of one of the parties can be discharged by performance only when the party is satisfied. Interpretation of such contracts depends on the subject matter. If it relates to personal tastes or judgment of one of the parties, he is the sole judge. The only requirement is that he be honest about his dissatisfaction.

Payment in Substantial Performance.—No action will be on a contract to furnish materials and work of a specific character to be paid for on performance unless it is done substantially in the manner stipulated. (*Lewis* v. *Yagel*, 28 N. Y. S. 833.)

Payment Conditional on Architects Certificate.—Where a building contract makes an architect's certificate a condition of payment, payment is not due without such certificate unless it is unreasonably withheld. (*Beecher* v. *Schuback*, 23 N. Y. S. 604.)

Payment when Due.—In the absence of evidence as to the terms of a contract, the price expressed therein is presumed to be payable only on the completion of the work. (*Smith* v. *Sheltering Arms* 35 N. Y. S. 62.)

Part Payment—Where Party Prevented from Completing Contract.—The general rule is that, where one who hires a contractor prevents him from completing his contract, the contractor may recover for the work already done according to the contract. (*Thacke* v. *Hensheim*, 115 N. Y. S. 216.)

Tender of Payment.—A tender made after suit is brought is available only in mitigation of damages. (*Brand* v. *Weir*, 57 N. Y. S. 731.)

Burden of Proof in Performance.—The burden of proof that performance is in accordance with the contract is on the plaintiff not on the defendant to show non-performance. (*McElraevy & Hauck* v. *St. Joseph's Home for Girls*, 143 N. Y. S. 235.)

Action on Partly Performed Contract.—Where one who partly performs a contract is prevented from complete performance by the act of the other party, his redress is by an action for damages for breach of the contract, alleging defendant's prevention of performance, or on *quantum meruit* for so much of the work as is done, and not by an action on the contract itself. (*Toher* v. *Schaefer*, 91 N. Y. S. 3.)

2. DISCHARGE BY AGREEMENT.—Contracts may be discharged by mutual agreement. This may be done by

1. A new agreement to supersede the original one, or
2. The original contract may provide for discharge on the happening of a condition subsequent.

Such agreements must possess all the elements necessary to support a contract.

New Agreement.—This is in effect a new contract if expressly substituted for the old one, or where the new contract is inconsistent with the old one. In either case the original contract is discharged by agreement.

New Agreement—Novation.—Where a third person is brought into the substituted agreement to take the place of one of the original parties, with the consent of all three, the new substituted agreement is called a **novation.** The consideration of each party for the new contract consists of the creation of new rights and liabilities and the extinction of the old ones. (*Ford* v. *Adams*, 2 Barb. [N. Y.] 349.)

Contracts Which Cannot be Discharged by Agreement.—Contracts for the benefit of third parties cannot be discharged by agreement of the original parties where the third party has been notified and has accepted it. To obtain the discharge of such contracts the consent of the third party is necessary.

3. DISCHARGE BY BREACH.—A breach of contract gives the injured party a right of action and generally discharges the contract. Such breach may be by

1. Failure of one of the parties to perform.
2. Refusal of one of the parties to perform.
3. One of the parties doing something which renders performance impossible.
4. Denial of the contract

Failure to Perform.—To entitle a person to bring an action for failure to perform, he must have done all that can be done. Where time is of the essence, failure to complete within the time is a breach. If the contract is divisible, the failure to perform one part does not excuse the other party from performing the rest.

Refusal to Perform.—Refusal to perform by one party within the time for performance relieves the other party from further obligation, and he has the right to sue at once for the damages he has sustained.

Denial of Contract.—There must be an unqualified and definite renunciation, not a mere expression of intention not to perform. (*Drugley* v. *Olen*, 117 U. S.)

Burden of Proof.—In an action for breach of contract the burden of proving the breach is on the plaintiff. (*Devlin* v. *City of New York*, 124 App. Div. 184.)

Anticipatory Breach.—Where a contract, wholly executory, is rendered impossible of performance by a voluntary act by one of the parties the act constitutes an anticipatory breach for which an action will lie. (*Ga Nun* v. *Palmer*, 202 N. Y. 483.)

Breach by Renunciation.—Where one party of an executory contract renounces it, the other party may sue for a breach, although the time for performance has not arrived. (*Berstein* v. *Meech*, 130 N. Y. 354.)

4. DISCHARGE BY OPERATION OF LAW.—Contracts may be discharged by operation of law. This may be bankruptcy, alteration of the written instrument, or merger.

Bankruptcy.—Under the bankruptcy law the debtor is released of debts and liabilities provable under the statute where the bankrupt has obtained his discharge.

Alteration of Written Instrument.—Alteration means some erasure or addition which changes the meaning of the contract. It must relate to a material part and must have been intentionally made by one of the parties to the contract without the consent of the other party.

Merger.—The acceptance of a higher security for a lower one, where the parties are the same and the subject matter of the two securities is identical, results in the discharge of the original contract. This refers to cases where a judgment is recovered by one of the parties suing on a contract, or a sealed contract made by the parties covering the same transaction in an existing written instrument.

Modification.—A written contract may be modified before performance by parol agreement or understanding. (*Solomon* v. *Vallette*, 152 N. Y. 147.)

5. DISCHARGE BY IMPOSSIBILITY OF PERFORMANCE.—Impossibility of performance does not discharge a contract except where there is a legal impossibility or a physical inability in certain cases.

Legal Impossibility.—Where a statute enacted subsequent to the making of the contract renders the performance impossible without a violation of the law, the contract is discharged.

Physical Inability.—Destruction of the subject matter where the contract relates to a specific article or incapacity of the party where the contract was for personal service discharges the contract on the ground of impossibility of performance.

Statutes of Fraud

GENERAL.—Practically all states have statutes of fraud, modelled after the **old English law of 1676** called "an act for Prevention of Frauds and Perjuries," which requires **written evidence** of certain transactions.

PURPOSE.—The purpose of these laws, as the name implies, is to prevent fraud and perjury in contractual obligations by requiring certain transactions to be evidenced by writing.

"Its purpose is to prevent the assertion of fictitious and fraudulent contractual obligations and rights by requiring that, to be enforceable, certain classes of contracts must either be reduced to a written agreement signed by the party to be charged therewith or, at least, be supported by a written admission by the party to be charged of all the essential elements of the oral contract." (*Truskett* v. *Rice Bros. Line Stock Comm. Co.*, 180 S. W. [Mo.] 1048.)

SUMMARY OF THE STATUTES.—The statutes of the several states vary somewhat in their wording and minor details but agree in the essentials.

CONTRACTS REQUIRED TO BE IN WRITING.—Under the statute the following contracts to be enforcible must be in writing and signed by the person to be charged:

1. Promises or contracts of executors and administrators to pay out of their personal estate debts due from the estate they are administering.
2. Contracts not to be performed within one year from the making thereof. This refers to contracts which cannot be completed within the year.

The statute does not apply to contracts which may be performed within a year but may possibly extend beyond the year. The general interpretation of the rule to bring contracts under the statute is that it must appear by their terms that performance cannot be completed within a year from the time the contract is made.

3. Promises to answer for the debt, default or miscarriage of another. This refers to suretyship and guaranty. The promise must be made to the creditor and there must be a present and prospective liability. To be within the statute the liability of the original debtor must continue and the promisor's liability become collateral. A release of the original debtor is a novation and takes it out of the statute, hence it need not be in writing.
4. Promises made in consideration of marriage, except mutual promises. This refers to promises to pay money, transfer property, make a marriage settlement or other act in consideration of a marriage taking place, but does not refer to the promise to marry. (*Lloyd* v. *Fulton*, 91 U. S. 479.)
5. A promise to pay a debt discharged in bankruptcy.
6. A contract for the sale of personal property over a fixed amount, which varies in the different states. (Explained more fully under "Sales.")
7. A contract for the sale of lands, tenements and hereditaments or any interest in them. This refers to the contract to sell and not the deed conveying title, which must be in writing and generally sealed. The natural growth and product of land are an interest in land, and contracts to sell or buy such must be in writing. Crops or other products of the land raised by cultivation and labor are not an interest in land, their sale need not be in writing. A lease or rental agreement for more than one year must be in writing. An easement (*Mumford* v. *Whitney*, 15 Wend. [N. Y.] 380) and right of way (*Bonelli* v. *Blackmore*, 66 Miss. 136) are interest in land and must be in writing.

1. PROMISES BY EXECUTORS OR ADMINISTRATORS.—Promises or contracts of executors and administrators to pay out personally from their own property debts due from the estate they are administering must be in writing, otherwise they are not enforcible at law.

The statutes of California, Colorado, Minnesota, Nevada and Wisconsin omit this section. In Rhode Island this section applies also to trustees of express trusts as well as to executors and administrators. In Georgia the promises of a guardian or trustee are included in this section. In Delaware promises to pay five dollars or less are not within the statute and promises to pay up to $25 may be proved on oath or affirmation of one or more credible witnesses.

2. AGREEMENTS NOT TO BE PERFORMED WITHIN ONE YEAR.—Any agreement that is not to be performed within the space of one year from the making thereof must be in writing to be enforcible. This refers to contracts which cannot be completed within a year. The general interpretation of the rule to bring contracts under the statute is that it must appear by their terms that performance cannot be completed within a year from the time the contract is made.

In Pennsylvania and North Carolina this provision is omitted from the statute.

An oral agreement not to be performed within a year is invalid under the statute of frauds. (*Goldberg* v. *Cohen*, 110 N. Y. S. 185.) An oral contract of

employment for three years comes under the statute and is void. (*Roen* v. *M. Philipsborn Co.*, 135 App. Div. [N. Y.] 499.)

A contract of employment in which no definite time is agreed to when the term of service should terminate or how long it should continue is not an agreement which by its terms cannot be performed within a year. (*Jagan* v. *Goetz*, 32 N. Y. S. 144.)

A contract to employ another for a year, the service to commence at a future date, is void under the statute of frauds if not in writing. (*Baker* v. *Codding*, 21 N. Y. S. 1131.) Where, however, the service begins the next day, it is held in New York to be enforcible although not in writing. (*Prokop* v. *Bedford Waist & Dress Co.*, 187 App. Div. 662.)

Partial Deliveries.—A contract for the manufacture of goods to be delivered as required is not within the statute if there is nothing in its terms inconsistent with complete performance within a year even though the completion of the contract may extend beyond a year. (*Warren Chemical & Manufacturing Co.* v. *Holbrook*, 118 N. Y. 586.)

Instalment Contracts.—Contracts on instalments, either payments or deliveries, which from their terms extend beyond one year for their completion, are within the statute and must be in writing.

3. DEBT OF THIRD PERSON.—Promises to answer for the debt, default or miscarriage of another must be in writing. To be within the statute the promise must be made to the creditor and there must be a present or prospective liability. The obligation of the original debtor must continue and the promisor's liability becomes collateral.

A guaranty of payment if the debtor does not pay must be in writing and if not is void under the statute. (*Byrne* v. *Wheeler*, 147 N. Y. S. 82.)

Original and Collateral Promises.—Where the liability is collateral and not primary, in order to hold the promisor liable for payment the promise must be in writing. (*Higley* v. *Bergholz*, 44 App. Div. [N. Y.] 638.)

Where a stockholder of a corporation who was not individually liable for the debts of the company promises to make good what the company failed to pay a third person, there is placed on the promisor a collateral liability which is not enforcible if not in writing. (*Winne* v. *Mehrbach*, 130 App. Div. [N. Y.] 329.)

A promise by the officers of a corporation, for whom a building was being erected, to answer for the purchase price of material sold to the contractor for the construction of the building, was a promise to answer for the debt of a third person and under the statute of frauds must be in writing in order to hold the officers individually liable. (*Roscoe Lumber Co.* v. *Reynolds*, 124 App. Div. [N. Y.] 539.)

An agreement made by a person for whom a building was being constructed, to see that the workmen of a contractor were paid, was a promise to pay for the debt of another and if not in writing was void under the statute. (*Dirringer* v. *Moynihan*, 10 N. Y. S. 540.)

In purchasing a business where a promise is made to assume a debt of the seller for goods delivered this is not a promise to pay for the debt of another but an original undertaking and need not be in writing to become binding on the purchaser. (*Ackley* v. *Shirmer*, 120 N. Y. S. 1105.)

Where a member of a firm agrees to pay out of his own personal funds additional compensation to an employe as an inducement to continue his services is not a promise to answer for the debt of another but is an original promise and need not be in writing to be binding on the promisor. (*Barrett* v. *Johnson*, 28 N. Y. S. 892.)

When a partner retires from a firm and a new incoming partner forms a new partnership which assumes the old firm's debts, the obligation is original and not one to pay for the default of another. Such a promise does not come within the statute and need not be in writing. The agreement is not to pay on default of the old firm but to pay at all events. (*Wright* v. *Carman*, 19 N. Y. S. 696.)

Original Promises not Under the Statute.—Original promises are not within the statute, for if there is an original promise it is a liability of the promisor and not of a third person. **In Pennsylvania,** oral promises to pay for the default of third persons are valid when the amount does not exceed $20.

4. CONSIDERATION OF MARRIAGE.—Under this section promises to transfer property or pay money in case of marriage must be in writing. An oral ante-nuptial agreement is void. (*McCartney* v. *Titsworth*, 142 App. Div. [N. Y.] 292.) This provision is omitted in Pennsylvania and North Carolina.

5. A PROMISE TO PAY A DEBT DISCHARGED IN BANKRUPTCY.—In order to hold a promisor on a debt previously discharged in bankruptcy, the promise must be in writing. Oral promises are not enforcible as they do not comply with the requirements of the Statute of Frauds.

6. SALE OF GOODS.—Contracts for the sale of personal property for more than a fixed amount, which varies in different states, must be in writing unless part of the property is delivered or part of the price is paid.

Specified Value in Different States.—The statutes of the various states apply in the sale of personal property as follows:

Alaska	$ 50	Maryland	$ 50	North Dakota	$ 500
Arizona	500	Massachusetts	500	Ohio	2,500
Arkansas	30	Michigan	50	Oklahoma	50
California	200	Minnesota	50	Oregon	50
Colorado	50	Mississippi	50	Pennsylvania	500
Connecticut	100	Missouri	30	Rhode Island	500
District of Columbia	50	Montana	200	South Carolina	50
Georgia	50	Nebraska	500	South Dakota	50
Hawaii	100	Nevada	50	Utah	500
Idaho	200	New Hampshire	33	Vermont	50
Illinois	500	New Jersey	500	Washington	50
Indiana	50	New Mexico	50	Wisconsin	50
Maine	30	New York	50	Wyoming	50

Goods to be Manufactured.—A contract for the sale of articles to be manufactured and delivered, which are not suitable for sale in the ordinary course of the seller's business, does not come within the statute but is a contract for work and labor. (*Goldowitz* v. *Henry Kupfer & Co.*, 141 N. Y. S. 531.) The foregoing principle is applied in the following states:

Alaska	Maryland	New York
Arizona	Massachusetts	Ohio
Connecticut	Michigan	Oregon
Illinois	Nevada	Pennsylvania
Indiana	New Jersey	Rhode Island
Iowa		Wisconsin

Partial Delivery and Acceptance.—The receipt and acceptance by the buyer of part of the goods takes the case out of the statute and written memorandum is not required. (*MacEvoy* v. *Aronson*, 92 N. Y. S. 724.) To satisfy the statute of frauds delivery by the seller is not sufficient but there must be an actual acceptance by the purchaser with the intention of taking possession of the property as owner. (*Drake Hardware Co.* v. *De Witt*, 126 N. Y. S. 868.)

Partial Payment.—The statute of frauds is satisfied where there is a partial payment of the sales price. (*Reilly* v. *Steinhardt*, 111 N. Y. S. 472.)

7. SALE OF AN INTEREST IN LAND.—Contracts for the sale of lands, tenements, hereditaments or any interest in them must be in writing to be enforcible.

Real Estate.—A contract for the purchase or sale of real estate must be in writing. This should be distinguished from the deed conveying title which must be in writing and in some states under seal. The purpose of this section of the statute of frauds is to accurately and definitely settle terms and conditions of sales of real estate. (*Reisterer* v. *Reisterer*, 143 N. Y. S. 307.)

An agreement to purchase old buildings and to remove them from the land on which they stood was a contract for the sale of an interest in land within the statute and must be in writing to be enforcible. (*Volk* v. *Olsen*, 104 N. Y. S. 415.)

Mortgages.—Under this section, mortgages being an interest in land must be in writing.

Leases.—Leases are an interest in lands and to be enforcible must be in writing if they extend beyond the statutory limit.

Leases not exceeding one year which are not in writing are valid in the following states and territories:

Alabama	Kansas	Oregon
Alaska	Kentucky	Rhode Island
Arizona	Maine	South Carolina
Arkansas	Massachusetts	South Dakota
California	Michigan	Tennessee
Colorado	Minnesota	Texas
Connecticut	Mississippi	Utah
Delaware	Missouri	Vermont
District of Columbia	Montana	Virginia
Georgia	Nebraska	Washington
Idaho	Nevada	West Virginia
Illinois	New York	Wisconsin
Iowa	North Dakota	Wyoming
	Oklahoma	

Oral leases not exceeding three years are valid in the following states:

Indiana	New Jersey	North Carolina
Maryland	New Mexico	Ohio
New Hampshire		Pennsylvania

Assignment of Leases.—An assignment of a lease for more than one year to be valid must be in writing under the statute. (*Moskowitz* v. *Eastern Brewing Co.*, 117 N. Y. S. 1017.)

Assignments of Rents.—An assignment of rent must be in writing under the statute of frauds because rent is an incident of ownership of real estate. (*King* v. *Kaiser*, 23 N. Y. S. 21.)

Authority of Agent.—An agent making a contract for the purchase or sale of an interest in land must have authority in writing in the following states:

Alabama	Illinois	North Dakota
Alaska	Kansas	Ohio
Arizona	Kentucky	Oklahoma
California	Michigan	Oregon
Colorado	Minnesota	Pennsylvania
Delaware	Missouri	South Carolina
Florida	Montana	South Dakota
Idaho	Nebraska	Washington
	New York	

Employment of Real Estate Agent or Broker.—Agreements employing real estate agents or brokers for the purchase or sale of real estate must be in writing in the following states:

California	Montana
Idaho	Oregon
Michigan	Washington

REQUISITES OF WRITING.—Contracts to be enforcible under the statutes of frauds must be in writing and **signed** by the person to be charged.

Need Not be the Contract.—The memorandum required in writing under the statute need not of itself constitute the contract. Any writing signed by the person to be charged in which he admits that he entered into an agreement is sufficient. (*Spiegel* v. *Lowenstein*, 147 N. Y. S. 655.)

Writing Must Contain Essentials.—The memorandum must contain all the essential terms of the contract and cannot be eked out by oral proof. (*Leach* v. *Weil*, 114 N. Y. S. 234.) The terms must be set forth with reasonable certainty either in the memorandum itself or in some other writing referred to therein, without the aid of parol evidence. (*Poel* v. *Brunswick-Balke-Collender Co. of N. Y.*, 159 App. Div. [N. Y.] 365.)

Separate Writings.—To satisfy the statute of frauds it is not necessary that terms of the contract of sale shall be contained in a single document but compliance with the statute may be found in several instruments and may also be derived from letters to third persons connected with the sale.

Signature.—Must be signed by the person to be charged. Where the memorandum of sale is signed by the vendor only it is insufficient (*Reilly* v. *Steinhardt*, 126 App. Div. [N. Y.] 909.) The actual signature at the end of the agreement will be sufficient under the statute of frauds where the signature is made by a rubber stamp or by the use of a printed name when it is intended to be used as a signature. (*Reilly* v. *Steinhardt*, 126 App. Div. [N. Y.] 909.)

Pleadings.—The statute of frauds must be pleaded if it is to be relied on as a defense. When it is not pleaded and no objections raised at the trial the statute is waived. (*Simis* v. *Wissel*, 10 App. Div. [N. Y.] 323.)

A Personal Defense.—The statute of frauds is a personal defense which cannot be availed of by a third person to avoid the contract. (*Stitt* v. *Ward*, 142 App. Div. 626.)

Negotiable Instruments

DEFINITION.—"An instrument is called negotiable when the legal title to the instrument itself, and the whole amount of money expressed upon its face, may be transferred from one to another by indorsement and delivered by the holder or by delivery only." (Daniels on Negotiable Instruments.)

Presumption of Consideration.—Consideration in negotiable instruments is presumed conclusively between remote parties but subject to rebuttal between immediate parties.

Negotiability.—Negotiability is that quality whereby, (1) the legal title is transferrred by indorsement and delivery or by delivery only; and (2) the transferee obtains a good title provided he is a purchaser for value without any notice of the infirmity of the instrument (*Evertson* v. *Bank*, 66 N. Y. 14) even though the title of his transferor was defective. Ordinary contracts pass by assignment, the assignee being subject to all the defenses that may exist between the original parties.

IMPORTANCE OF NEGOTIABILITY.—The rights of holders of negotiable instruments who are bona fide purchasers in due course are more protected against defenses by the maker than in the case of non-negotiable instruments.

Non-negotiable instruments are merely contracts in one form or another wherein title passes only by assignment, the assignee being subject to all the defenses that may exist between the original parties.

REQUISITES OF NEGOTIABILITY.—An instrument to be negotiable must be in writing, signed by the maker or drawer, and must contain an unconditional order or promise to pay a sum certain in money on demand or at a fixed or determinable future time. **Delivery** is an important element but delivery is presumed if the instrument is in the hands of a holder in due course.

Negotiability is not affected by:

1. Want of **date.**
2. Failure to specify **consideration.**
3. Failure to specify **place** where it is drawn or is payable.
4. Presence or lack of a **seal.**
5. Designation of **a particular kind of current money** in which payment is to be made.
6. **Ante-dating** or **post-dating** an instrument unless done for a fraudulent purpose.

Negotiation—How Accomplished.—An instrument payable to bearer may be negotiated by delivery; if payable to order, by indorsement and delivery.

INDORSEMENT must be written on the instrument or on a paper attached to it called an **"allonge."**

Indorsement may be:

In blank—by signature of the indorser without additional words.
Qualified—by addition of the words "without recourse."
Restrictive—by indorsing to a given person; further negotiation requires that person's indorsement.

Where payable to two or more persons all must indorse, unless they are partners or one has authority to act for the others.

Accommodation Indorser.—A person who signs an instrument without receiving a consideration and for the purpose of lending his name to another is deemed an accommodation indorser.

Liability of accommodation indorser to a holder for value is the same as that of any other indorser, even though the holder knew him to be only an accommodation party.

PERSONS LIABLE ON NEGOTIABLE INSTRUMENTS.—The only persons directly liable on negotiable instruments are those whose names appear thereon as maker, drawer, acceptor or indorser. But blanket guaranties are sometimes lodged with bankers, under which someone in interest promises to pay all promissory notes discounted by parties named in the guarantee, if not paid by the makers.

WARRANTEES.—All indorsers and persons negotiating an instrument by delivery impliedly warrant:

1. That the instrument is genuine,
2. That their title is good, and
3. That prior parties had capacity to contract.

Holder in due course is a bona fide holder for value before maturity without notice of possible defenses.

CLASSIFICATION OF NEGOTIABLE INSTRUMENTS.—Although there are many kinds of negotiable instruments, they may be broadly classified as: (1) promissory notes, and (2) bills of exchange.

Promissory Notes.—A promissory note is an unconditional written promise signed by the maker, to pay a sum certain in money, at a fixed or definite future time, either to the bearer or to the order of a person designated therein. (Daniels Neg. Inst., § 28; Neg. Inst. Law, N. Y., § 320; Chalmers Bills and Notes, § 291.)

Bills of Exchange.—"A bill of exchange is an unconditional order in writing upon one person by another for the payment of a sum of money absolutely and at all events." (Chalmers Bills and Notes, § 1; Neg. Inst. Law, N. Y., § 210.) "A **check** is a bill of exchange drawn on a bank payable on demand." (Neg. Inst. Law, N. Y., § 321.)

Foreign Bill of Exchange.—A foreign bill of exchange is one drawn by a person residing in a foreign country or one of the states of the United States and payable in another state or foreign country.

Inland Bill of Exchange.—An inland bill of exchange is a bill payable within the state in which it is drawn. Unless the contrary appears on the face of the bill, the holder may treat it as an inland bill. (See Neg. Inst. Law, N. Y., § 213, page 33.)

PRESENTATION AND DEMAND FOR PAYMENT.—This must be made in accordance with the terms of the instrument in order to charge the drawer and indorsers. In time bills this must be done on the day of maturity, or, if that is a holiday, the first business day thereafter. Instruments payable on demand must be presented within a reasonable time after issue.

Presentation must also be made within reasonable business hours which, if the instrument is payable at a bank, must be before the bank closes.

Protest.—In order to hold indorsers, it is necessary to protest foreign bills of exchange in the event of non-payment. Protest is not necessary on inland bills of exchange.

Desirability of Protest.—Although not required as to inland bills of exchange, should there be a possibility of legal action, the use of a certificate of protest is prima facie evidence of presentation, demand and non-payment.

Time of Payment.—The time of payment is computed by excluding the day of issue and including the day of payment. When the day of maturity falls on a Sunday or legal holiday, the instrument is payable on the next business day.

Discharge of Instrument.—Negotiable instruments may be discharged by payment, intentional cancellation by the holder, by the maker or principal debtor becoming the holder, or such other act as would discharge a contract for the payment of money.

Discharge of Indorser.—Indorsers are discharged from liability by any act which discharges a prior party on the instrument; by a valid tender of payment by a prior party; by release of the principal debtor unless the right of recourse is expressly reserved; and by extension of the time the instrument runs without the consent of the indorsers.

RULES OF CONSTRUCTION AND INTERPRETATION.—Where words and figures are in conflict, the **words govern.** Where **instrument is undated,** the date it is issued is considered its true date. Where writing and printing are at variance, the **written provisions control.**

Ambiguous instruments when there is question as to whether the instrument is a bill or a note, the holder may treat it as either.

If capacity of signer is not clear, he is deemed **an indorser.** Instruments signed by two or more persons containing the words **"I promise to pay"** makes them jointly and severally liable.

ESSENTIALS AND DETAILS.—Up to this point only some of the more important essentials of the law on Negotiable Instruments were mentioned. In view, however, of the importance of the subject to the financial manager, it is deemed best to present the law practically in its entirety with such annotations as the various subdivisions warranted. For this purpose permission has been obtained from the Ronald Press to reprint parts of the law on Negotiable Instruments as it appeared in the Accountants' Handbook (pages 33 to 53) supplemented by additional annotations which appear on pages 448 to 457 herein.

UNIFORM NEGOTIABLE INSTRUMENTS LAW.—The law governing negotiable instruments developed from the custom of merchants and was gradually incorporated into the common law of the land and referred to as the **Law Merchant.** During the past century the common law on negotiable instruments has been codified from time to time in nearly every jurisdiction founded on Anglo-Saxon jurisprudence. At present all the states of the United States, with the exception of Georgia, have adopted the Uniform Negotiable Instruments Law as devised by the commissioners appointed for that purpose.

"The Negotiable Instrument Act was adopted by the several states for the purpose of establishing uniformity in the law regulating negotiable instruments. Where the act speaks, it controls and its meaning should be ascertained by interpreting the language used, and not by assuming that the common law on the subject should remain unaltered." (*First State Bank* v. *Williams*, 164, Ky. 143.) Although the statute generally known as "The Negotiable Instruments Law" supersedes the common law, it is at times necessary to refer to the common law for a correct interpretation of the statute.

The New York Negotiable Instruments Law is followed with reference to the numbering of sections. Sections of the law are quoted in their entirety in some instances; in others a comprehensive digest adhering as close to the statute as possible is set forth. Court decisions and comments interpreting the statute are given immediately after a number of sections of the law.

GENERAL REQUIREMENTS—FORM OF INSTRUMENT.—

§ 20. *Form of negotiable instrument.*—An instrument to be negotiable must conform to the following requirements:

1. It must be in writing and signed by the maker or drawer.
2. Must contain an unconditional promise or order to pay a sum certain in money.
3. Must be payable on demand, or at a fixed or determinable future time.
4. Must be payable to order or to bearer; and
5. Where the instrument is addressed to a drawee, he must be named or otherwise indicated therein with reasonable certainty.

Writing.—May be with pencil, ink, crayon, or any means to record a signature (*Brayley* v. *Kelly*, 25 Minn. 160.)

Signature.—May be any mark, initial, name, code or designation a party may chose to adopt and intend to bind himself. (*Palmer* v. *Stephens*, 1 Denio [N. Y.] 471; *Merchants Bank* v. *Spicer*, 6 Wend. [N. Y.] 443.)

Order.—The words **to order, to bearer,** or equivalent words must be used to make an instrument negotiable. (*Wettlaufer* v. *Baxter*, 137 Ky. 362.) An

instrument payable to a named person and not payable to order is not negotiable. (*Owens* v. *Blackburn*, 161 App. Div. [N. Y.] 827.) A note payable to the estate of a certain person on his death is not payable to order and is not negotiable. (*Kerr* v. *Smith*, 156 App. Div. [N. Y.] 807.) An instrument wherein either bearer or order of a named **person is not indicated,** is not a negotiable instrument. (*St. Lawrence Co. Bank* v. *Watkins*, 153 App. Div. [N. Y.] 551.)

CERTAINTY AS TO SUM.—

§ 21. *Certainty as to sum; what constitutes.*—The sum payable is a sum certain within the meaning of this act, although it is to be paid:

1. With interest; or
2. By stated instalments; or
3. By stated instalments, with a provision that upon default in payment of any instalment or of interest, the whole shall become due; or
4. With exchange, whether at a fixed rate or at the current rate; or
5. With costs of collection or an attorney's fee, in case payment shall not be made at maturity.

Sum Certain.—A sum which can be rendered certain by computation.

Instalments.—Negotiability is not affected by instalment payments. (*Riker* v. *Manufacturing Co.*, 14 R. I. 402; *Hodge* v. *Wallace*, 129 Wis. 84.)

Exchange.—Most of the courts have passed on the subject. (*Second Nat. Bank of Aurora* v. *Basnier*, 165 Fed. Rep. 58.)

Attorney's Fees.—A provision in a note to pay attorney's fees in case of non-payment, suit, or after maturity does not destroy its negotiability. (*Valparaiso Farmers Nat. Bank* v. *Sultan Mfg. Co.*, 52 Fed. 191; *Mechanics American Nat. Bank* v. *Coleman*, 204 Fed Rep. 24.)

"Upon a careful review of the authorities, we can perceive no reason why a note otherwise imbued with all the attributes of negotiability is rendered non-negotiable by a stipulation which is entirely inoperative until after the maturity of the note and its dishonor by the maker. The amount to be paid is certain during the currency of the note as a negotiable instrument and it only becomes uncertain after it ceases to be negotiable by default of the maker in its payment. It is just that the creditor who has incurred an expense in the collection of the debt should be reimbursed by the debtor by whom the action was rendered necessary and the expenses entailed. (*Oppenheimer* v. *Farmers & Mechanics Bank*, 97 Tenn. 19.)

PROMISE TO PAY UNCONDITIONAL.—

§ 22. *When promise is unconditional.*—An unqualified order or promise to pay is unconditional within the meaning of this act, though coupled with:

1. An indication of a particular fund out of which reimbursement is to be made, or a particular account to be debited with the amount; or
2. A statement of the transaction which gives rise to the instrument.

But an order or promise to pay out of a particular fund is not unconditional.

Particular Fund Indicated.—Payment out of a particular fund destroys the negotiability of an instrument. (*Munger* v. *Shannon*, 61 N. Y. 251.)

Reimbursement out of a particular fund does not destroy negotiability. (*Smittler* v. *Simon*, 101 N. Y. 554)

The Test.—The determining factor is whether the drawee is limited to a particular fund or whether he can charge the amount of the bill against the general account of the drawer when the specific fund named in the instrument is insufficient to satisfy the instrument. (*Munger* v. *Shannon*, 61 N. Y. 251.)

Statement of transaction in the instrument does not affect negotiability. Such provisions are generally found in railway equipment notes. (*Chicago Ry. Equip. Co.* v. *Mechanics Nat. Bank*, 136 U. S. 268.)

Contingency in Statement of Transaction.—A note issued containing a statement of the transaction on which it was issued and where the contents of the note are dependent on the outcome of a contract referred to therein is not a negotiable instrument under the law. (*Pope* v. *Lumber Co.*, 162 N. C. 206.)

TIME OF PAYMENT.—

§ 23. *Determinable future time; what constitutes.*—An instrument is payable at a determinable future time, within the meaning of this act, which is expressed to be payable:

1. At a fixed period after date or sight; or

2. On or before a fixed or determinable future time specified therein; or

3. On or at a fixed period after the occurrence of a specified event, which is certain to happen, though the time of happening be uncertain.

An instrument payable upon a contingency is not negotiable, and the happening of the event does not cure the defect.

Certainty of Time.—There must be a fixed or ascertainable future time or a time which can be computed after the occurrence of an event certain to happen although the time of happening may be uncertain.

Fixed Time.—Must be indicated in the instrument. (*Citizens Nat. Bank* v. *Piolett*, 126 Pa. St. 194; *Akley School District* v. *Hall*, 113 U. S. 135.)

Future Time—Events Certain to Happen.—A note payable **at death** or a given number of days or months after death of the maker is a promissory note under the statute, because death is certain although the time is uncertain. (*Crider* v. *Shelby*, 95 Fed. 212; *Hegeman* v. *Moon*, 131 N. Y. 462.)

Contingent Time—Marriage, Age, etc.—Notes payable when a person marries, becomes of age, or when his ship comes in, are not within the statute, as the time depends on a contingency which may never happen. (*Husband* v. *Epling*, 81 Ill. 172; *Sloan* v. *McCarty*, 134 Mass. 245; *Rice* v. *Rice*, 43 App. Div. [N. Y.] 458.)

ADDITIONAL PROVISIONS IN INSTRUMENT.—

§ 24. *Additional provisions not affecting negotiability.*—An instrument which contains an order or promise to do any act in addition to the payment of money is not negotiable. But the negotiable character of an instrument otherwise negotiable is not affected by a provision which:

1. Authorizes the sale of collateral securities in case the instrument be not paid at maturity; or

2. Authorizes a confession of judgment if the instrument be not paid at maturity; or

3. Waives the benefit of any law intended for the advantage or protection of the obligor; or

4. Gives the holder an election to require something to be done in lieu of payment of money.

But nothing in this section shall validate any provision or stipulation otherwise illegal.

Collateral Security.—Negotiability is not affected by a recital in the note that collateral security has been deposited for the security of the note which is to be sold if the note is not paid at maturity. (*Perry* v. *Bigelow*, 128 Mass. 129.)

Judgment Notes.—Are in use in some states. In others, as New York, they are unknown. Confession of judgment is effective only at maturity.

Where a note authorizes confession of judgment before maturity, it is not a negotiable instrument under the statute. (*First Nat. Bank of Elgin* v. *Russell*, 124 Tenn. 618.)

Holders' Election.—Where the holder has the election the instrument is within the law. If, however, the maker has the alternative of paying money or something else, the instrument is not negotiable. (*Hosstatter* v. *Wilson*, 36 Barb. [N. Y.] 307.)

OMISSIONS; SEAL; PARTICULAR MONEY; SPECIAL CONSIDERATION.—

§ 25. *Omissions; seal; particular money.*—The validity and negotiable character of an instrument are not affected by the fact that:

1. It is not dated; or
2. Does not specify the value given, or that any value has been given therefor; or
3. Does not specify the place where it is drawn or the place where it is payable; or
4. Bears a seal; or
5. Designates a particular kind of current money in which payment is to be made.

But nothing in this section shall alter or repeal any statute requiring in certain cases the nature of the consideration to be stated in the instrument.

Absence of Date.—See § 32 of the law. (*Church* v. *Stevens*, 107 N. Y. Supp. 310.)

Value Not Stated.—Value presumed. (See Daniels Neg. Inst., § 108.) (*McLeod* v. *Hunter*, 29 Misc. [N. Y.] 558.)

Seal.—Seal is surplusage. Negotiability not affected. (*Chase Nat. Bank* v. *Faurot*, 149 N. Y. 532; *Weeks* v. *Esler*, 143 N. Y. 374.)

Particular Kind of Money.—Negotiability not affected if the instrument is to be paid in gold, or bank notes, or other current money. (*Chrysler* v. *Renais*, 43 N. Y. 209.)

Nature of Consideration in Certain Cases.—Some states require that where an instrument is given for a patent right or a speculative consideration, it shall be so stated in the note. (See Neg. Inst. Law, § 330–332.)

WHEN PAYABLE ON DEMAND.—

§ 26. *When payable on demand.*—An instrument is payable on demand:

1. Where it is expressed to be payable on demand, or at sight, or on presentation; or
2. In which no time for payment is expressed.

Where an instrument is issued, accepted or indorsed when overdue, it is, as regards the person so issuing, accepting or indorsing it, payable on demand.

Where No Time Is Expressed.—The words **on demand** may be added without affecting the instrument. (Byles on Bills and Notes, § 210.)

Overdue Instruments.—A holder of overdue instruments which were negotiated before maturity can sue thereon in his own name. (*French* v. *Jarvis*, 29 Conn. 353.)

WHEN PAYABLE TO ORDER.—

§ 27. *When payable to order.*—The instrument is payable to order where it is drawn payable to the order of a specified person or to him or his order. It may be drawn payable to the order of:

1. A payee who is not maker, drawer or drawee; or
2. The drawer or maker; or
3. The drawee; or
4. Two or more payees jointly; or
5. One or some of several payees; or
6. The holder of an office for the time being.

Where the instrument is payable to order the payee must be named or otherwise indicated therein with reasonable certainty.

Specified Person Only.—An instrument payable to a specified person only without the word **order** is not negotiable. (Byles on Bills and Notes, page 83.)

Payable to Maker.—Is not complete without indorsement and delivery.

Indorsement in the Alternative.—A note payable to either of two persons may be indorsed by either. (*Passut* v. *Heubner*, 81 Misc. [N. Y.] 14.)

Holder of an Office.—A note payable to a holder of an office or his successor is negotiable. (*Davis* v. *Gorr*, 6 N. Y. 124.)

Payee Indicated.—Need not be by name but may be done in any way to indicate his identity. (*U. S.* v. *White*, 2 Hill 59.)

WHEN PAYABLE TO BEARER.—

§ 28. *When payable to bearer.*—The instrument is payable to bearer:
1. When it is expressed to be so payable; or
2. When it is payable to a person named therein or bearer; or
3. When it is payable to the order of a fictitious or non-existing person, and such fact was known to the person making it so payable; or
4. When the name of the payee does not purport to be the name of any person; or
5. When the only or last indorsement is an indorsement in blank.

Fictitious or Non-existing Persons.—Must be known as such to the maker. A fraudulent representation as to the identity of the payee is not a fictitious person. (*Hartford* v. *Greenwich Bank*, 215 N. Y. 726.) If drawn to an existing person but the maker did not intend that it should be delivered, or indorsed by that person, the instrument is deemed to be payable to a fictitious person and therefore to the bearer. (*Trust Co. of America* v. *Hamilton Bank*, 127 App. Div. [N. Y.] 515.)

Last Indorsement in Blank.—An indorsement in blank on a non-negotiable instrument does not render it negotiable under the law. (*Johnson* v. *Lassiter*, 155 N. C. 47.)

LANGUAGE USED.—

§ 29. *Terms when sufficient.*—The instrument need not follow the language of this act, but any terms are sufficient which clearly indicate an intention to conform to the requirements hereof.

Foreign Language.—An instrument, otherwise sufficient, drawn in a foreign language is within the statute. (*Debebian* v. *Gala*, 64 Md. 262.)

DATE.—

§ 30. *Date, presumption as to.*—Where the instrument or an acceptance or any indorsement thereon is dated, such date is deemed *prima facie* to be the true date of the making, drawing, acceptance or indorsement, as the case may be.

§ 31. *Ante-dated and post-dated.*—The instrument is not invalid for the reason only that it is ante-dated or post-dated, provided this is not done for an illegal or fraudulent purpose. The person to whom an instrument so dated is delivered acquires the title thereto as of the date of delivery.

An instrument **post-dated** or **ante-dated** for **an illegal purpose** is void to all persons having knowledge of it, otherwise it is good. (*Triphonoff* v. *Sweeney*, 65 Oregon 209; *Brewster* v. *McCardle*, 8 Wend. [N. Y.] 478.)

§ 32. *When date may be inserted.*—Where an instrument expressed to be payable at a fixed period after date is issued undated, or where the acceptance of an instrument payable at a fixed period after sight is undated, any holder may insert therein the true date of issue or acceptance, and the instrument shall be payable accordingly. The insertion of a wrong date does not avoid the instrument in the hands of a subse-

quent holder in due course; but as to him, the date so inserted is to be regarded as the true date.

Any holder may insert the true date of issue or acceptance of a valid undated instrument. The insertion of the wrong date does not avoid the instrument but the date so inserted is regarded as the true date to subsequent holders in due course. (*Redlich* v. *Doll*, 54 N. Y. 238; *Bank of Houston* v. *Day*, 145 Mo. App. 410.)

PLACE.—A negotiable instrument is presumed to be made at the place it is dated. (*Mfrs. Commercial Co.* v. *Blitz*, 131 App. Div. [N. Y.] 17.)

FILLING BLANKS AFTER DELIVERY.—

§ 33. *Blanks; when may be filled.*—Where the instrument is wanting in any material particular, the person in possession thereof has a *prima facie* authority to complete it by filling up the blanks therein. And a signature on a blank paper delivered by the person making the signature in order that the paper may be converted into a negotiable instrument operates as a *prima facie* authority to fill it up as such for any amount. In order, however, that any such instrument, when completed, may be enforced against any person who became a party thereto prior to its completion, it must be filled up strictly in accordance with the authority given and within a reasonable time. But if any such instrument, after completion, is negotiated to a holder in due course, it is valid and effectual for all purposes in his hands, and he may enforce it as if it had been filled up strictly in accordance with the authority given and within a reasonable time.

There are two different kinds of omissions or blank spaces in negotiable instruments which should be distinguished:

1. Blank spaces of such a nature that the instrument is incomplete until they are filled in.
2. Instruments apparently complete in context but with blank spaces which do not fill the paper.

The statute applies only to omissions indicated of the first kind. As to the second kind the decisions are in conflict. (*Nat. Exchange Bank* v. *Lester*, 194 N. Y. 461; *Yocum* v. *Smith*, 63 Ill. 321, *contra*.)

What, When and How Insertion Is to be Made.—Blanks must be filled up strictly in accordance with authority to complete the instruments in full, which must be done within a reasonable time. (*Weyerhauser* v. *Dunn*, 100 N. Y. 150.) As to a holder in due course an instrument is valid for all purposes where blanks are **filled up** but not in cases where there have been **alterations.** (*First Nat. Bank of Wilkes-Barre* v. *Barnum*, 160 Fed. Rep. 245.)

INCOMPLETE INSTRUMENT AND UNDELIVERED.—

§ 34. *Incomplete instrument not delivered.*—Where an incomplete instrument has not been delivered it will not, if completed and negotiated, without authority, be a valid contract in the hands of any holder, as against any person whose signature was placed thereon before delivery.

Stolen Instruments.—An instrument never actually delivered is not negotiated and there can be no recovery on it even in the hands of an innocent purchaser for value. Where an instrument is stolen before delivery, as where a blank check is stolen and then filled out and passed to a holder for value, no recovery can be had on it. (*Linick* v. *Nutting*, 140 App. Div. [N. Y.] 265.)

DELIVERY.—

§ 35. *Delivery; when effectual; when presumed.*—Every contract on a negotiable instrument is incomplete and revocable until delivery of the instrument for the purpose of giving effect thereto. As between immediate parties, and as regards a remote party other than a holder in due course, the delivery, in order to be effectual, must be made either by or under the authority of the party making, drawing, accepting or

indorsing, as the case may be; and in such case the delivery may be shown to have been conditional, or for a special purpose only, and not for the purpose of transferring the property in the instrument. But where the instrument is in the hands of a holder in due course, a valid delivery thereof by all parties prior to him so as to make them liable to him is conclusively presumed. And where the instrument is no longer in the possession of a party whose signature appears thereon, a valid and intentional delivery by him is presumed until the contrary is proved.

An instrument has no valid existence until delivered in accordance with the intent of the parties and takes effect from the time of delivery only. (*Grannis* v. *Stevens*, 216 N. Y. 583; *Burr* v. *Beekler*, 264 Ill. 230.)

Conditional Delivery.—Parol evidence between original parties regarding conditional delivery of instruments is admitted and is not considered as an attempt to modify a written instrument. (*Reynolds* v. *Robinson*, 110 N. Y. 654; *Hill* v. *Hall*, 191 Mass. 253.)

Holder in Due Course.—In the hands of a holder in due course delivery is conclusively presumed. (*Hibbs* v. *Brown*, 190 N. Y. 167.)

AMBIGUOUS CONSTRUCTION.—

§ 36. *Construction where instrument is ambiguous.*—Where the language of the instrument is ambiguous, or there are omissions therein, the following rules of construction apply:

1. Where the sum payable is expressed in words and also in figures and there is a discrepancy between the two, the sum denoted by the words is the sum payable; but if the words are ambiguous or uncertain, references may be had to the figures to fix the amount;

2. Where the instrument provides for the payment of interest, without specifying the date from which interest is to run, the interest runs from the date of the instrument, and if the instrument is undated, from the issue thereof;

3. Where the instrument is not dated, it will be considered to be dated as of the time it was issued;

4. Where there is a conflict between the written and printed provisions of the instrument, the written provisions prevail;

5. Where the instrument is so ambiguous that there is doubt whether it is a bill or note, the holder may treat it as either at his election;

6. Where a signature is so placed upon the instrument that it is not clear in what capacity the person making the same intended to sign, he is to be deemed an indorser;

7. Where an instrument containing the words "I promise to pay" is signed by two or more persons, they are deemed to be jointly and severally liable thereon.

Marginal Notes.—On an instrument do not form part of it. (*Schreyer* v. *Hawkes*, 22 Ohio St. 308.)

Interest Rate.—An instrument payable with interest and the rate not specified, the legal rate is presumed. (*Hornstein* v. *Cifuno*, 86 Neb. 103.)

Written and Printed Parts.—Any part of the printed matter necessary for the construction of the written part so as to arrive at a reasonable construction of the instrument as a whole cannot be rejected. (*Miller* v. *Hannibal & St. J. R. R. Co.*, 90 N. Y. 430.) If typewritten and handwritten, the handwriting governs. (*Acme Coal Co.* v. *Northrop Nat. Bank*, 146 Pac. Rep. [Wyo.] 593.)

SIGNATURE AND LIABILITY.—

Trade or Assumed Name.—

§ 37. *Liability of person signing in trade or assumed name.*—No person is liable on the instrument whose signature does not appear thereon, except as herein otherwise expressly provided. But one who signs in a trade or assumed name will be liable to the same extent as if he had signed in his own name.

"A person may become a party to a bill or note by any mark or designation he chooses to adopt, provided it be used as a substitute for his name and he intends to be bound by it." (*De Witt* v. *Walton*, 9 N. Y. 571.)

Agent's Signature.—

§ 38. *Signature by agent; authority; how shown.*—The signature of any party may be made by a duly authorized agent. No particular form of appointment is necessary for this purpose; and the authority of the agent may be established as in other cases of agency.

§ 39. *Liability of person signing as agent, etc.*—Where the instrument contains or a person adds to his signature words indicating that he signs for or on behalf of a principal, or in a representative capacity, he is not liable on the instrument if he was duly authorized; but the mere addition of words describing him as an agent, or as filling a representative character, without disclosing his principal, does not exempt him from personal liability.

A duly authorized agent binds his principal on a negotiable instrument and he is not personally liable if he discloses his principal. A failure to disclose his principal makes him personally liable.

Descriptive Term.—A person signing an instrument by merely adding a descriptive term such as **trustee, agent,** etc., does not relieve himself from personal liability. (*Casco Nat. Bank* v. *Clarke*, 139 N. Y. 307.)

Corporate Officer.—An officer of a corporation signing a negotiable instrument of the corporation in his own name without a description of his official title or without qualifications is personally liable on the instrument. (*Brooklyn First Nat. Bank* v. *Wallis*, 150 N. Y. 455.)

Procuration.—

§ 40. *Signature by procuration; effect of.*—A signature by "procuration" operates as notice that the agent has but a limited authority to sign, and the principal is bound only in case the agent in so signing acted within the actual limits of his authority.

Such signature is not used much in the United States.

Indorsement by Infant or Corporation.—

§ 41. *Effect of indorsement by infant or corporation.*—The indorsement or assignment of the instrument by a corporation or by an infant passes the property therein, notwithstanding that from want of capacity the corporation or infant may incur no liability thereon.

Forged Signature.—

§ 42. *Forged signature; effect of.*—Where a signature is forged or made without authority of the person whose signature it purports to be, it is wholly inoperative, and no right to retain the instrument, or to give a discharge therefor, or to enforce payment thereof against any party thereto, can be acquired through or under such signature, unless the party against whom it is sought to enforce such right is precluded from setting up the forgery or want of authority.

Case under the statute. (*Seaboard Nat. Bank* v. *Bank of America*, 193 N. Y. 26.)

Consideration.—

§ 50. *Presumption of consideration.*—Every negotiable instrument is deemed *prima facie* to have been issued for a valuable consideration; and every person whose signature appears thereon to have become a party thereto for value.

Words **value received** are surplusage. Their omission does not impair negotiability. (*McLeod* v. *Hunter*, 29 Misc. [N. Y.] 559.) These words are important in non-negotiable instruments as they amount to an admission that the instrument was issued for a consideration. (*Owen* v. *Blackburn*, 161 App. Div. [N. Y.] 827.)

§ 51. *Consideration, what constitutes.*—Value is any consideration sufficient to support a simple contract. An antecedent or pre-existing debt constitutes value; and is deemed such whether the instrument is payable on demand or at a future time.

"A valuable consideration may consist of some right, interest, profit or benefit accruing to one party, or some forbearance, detriment, loss or responsibility given, suffered or undertaken by the other." (*St. Mark's Church* v. *Teed*, 120 N. Y. 583.)

Exchange of Notes.—One promissory note constitutes a good consideration for the other. (*Mehlinger* v. *Harriman*, 185 Mass. 245; *State Bank* v. *Smith*, 155 N. Y. 185.)

HOLDER FOR VALUE.—

§ 52. *What constitutes holder for value.*—Where value has at any time been given for the instrument, the holder is deemed a holder for value in respect to all parties who became such prior to that time.

§ 53. *When lien on instrument constitutes holder for value.*—Where the holder has a lien on the instrument, arising either from contract or by implication of law, he is deemed a holder for value to the extent of his lien.

§ 54. *Effect of want of consideration.*—Absence or failure of consideration is matter of defense as against any person not a holder in due course; and partial failure of consideration is a defense *pro tanto*, whether the failure is an ascertained and liquidated amount or otherwise.

Want of consideration does not affect negotiability. (*Dingman* v. *Amsink*, 77 Pa. St. 114.)

Exchange of Notes.—In an exchange of notes, one note is a consideration for the other and neither party is regarded as an accommodation party. (*State Bank* v. *Smith*, 155 N. Y. 185.)

LIABILITY OF ACCOMMODATION PARTY.—

§ 55. *Liability of accommodation party.*—An accommodation party is one who has signed the instrument as maker, drawer acceptor or indorser without receiving value therefor and for the purpose of lending his name to some other person. Such a person is liable on the instrument to a holder for value, notwithstanding such holder at the time of taking the instrument knew him to be only an accommodation party.

"A mutual exchange of notes will amount to a sufficient consideration so that the notes will not be regarded as accommodation paper." (*Rice* v. *Grange*, 131 N. Y. 149.)

Corporations.—Corporations are without power to become accommodation parties. (*Nat. Bank of Commerce* v. *Atkinson*, 55 Fed. Rep. 465; *Jacobus* v. *Jamestown Mantel Co.*, 211 N. Y. 154.;

WHAT CONSTITUTES NEGOTIATION.—

§ 60. *What constitutes negotiation.*—An instrument is negotiated when it is transferred from one person to another in such manner as to constitute the transferee the holder thereof. If payable to bearer it is negotiated by delivery; if payable to order it is negotiated by the indorsement of the holder completed by delivery.

Necessity for Delivery.—Indorsement without delivery conveys no title. (*Middleton* v. *Griffith*, 57 N. J. L. 442.)

INDORSEMENT.—

§ 61. *Indorsement; how made.*—The indorsement must be written on the instrument itself or upon a paper attached thereto. The signature of the indorser, without additional words, is a sufficient indorsement.

Place of indorsement is usually on the back of an instrument but may be anywhere on it. (*Hains* v. *Dubois*, 29 N. J. L. 259; Neg. Ins. Law, N. Y., § 36.)

Indorsement made by **rubber stamp signature,** by one having authority with intent to indorse the instrument, is a valid indorsement. (*Evans* v. *Freeman*, 142. N. C. 61.)

The holder has the burden of proving the genuiness of each indorsement necessary to support his **title.** (*Hathaway* v. *County of Delaware*, 185 N. Y. 374.)

§ 62. *Indorsement must be of entire instrument.*—The indorsement must be an indorsement of the entire instrument. An indorsement, which purports to transfer to the indorsee a part only of the amount payable, or which purports to transfer the instrument to two or more indorsees severally, does not operate as a negotiation of the instrument. But where the instrument has been paid in part, it may be indorsed as to the residue.

§ 63. *Kinds of indorsement.*—An indorsement may be either special or in blank; and it may also be either restrictive or qualified, or conditional.

§ 64. *Special indorsement; indorsement in blank.*—A special indorsement specifies the person to whom, or to whose order the instrument is to be payable; and the indorsement of such indorsee is necessary to the further negotiation of the instrument. An indorsement in blank specifies no indorsee, and an instrument so indorsed is payable to bearer, and may be negotiated by delivery.

§ 65. *Blank indorsement; how changed to special indorsement.*—The holder may convert a blank indorsement into a special indorsement by writing over the signature of the indorser in blank any contract consistent with the character of the indorsement.

§ 66. *When indorsement restrictive.*—An indorsement is restrictive, which either:

1. Prohibits the further negotiation of the instrument; or
2. Constitutes the indorsee the agent of the indorser; or
3. Vests the title in the indorsee in trust for or to the use of some other person.

But the mere absence of words implying power to negotiate does not make an indorsement restrictive.

Checks and drafts deposited with banks for collection are generally indorsed under § 66–2.

An illustration of **restrictive indorsement** under § 66–3 is: "Pay X for account of Y." Title passes to X but the indorsement is limited to the extent that it gives notice that the instrument cannot be negotiated by X for his own benefit. (*Hook* v. *Pratt*, 78 N. Y. 371.)

§ 67. *Effect of restrictive indorsement; rights of indorsee.*—A restrictive indorsement confers upon the indorsee the right:

1. To receive payment of the instrument;
2. To bring any action thereon that the indorser could bring;
3. To transfer his rights as such indorsee, where the form of the indorsement authorizes him to do so.

But all subsequent indorsees acquire only the title of the first indorsee under the restrictive indorsement.

§ 68. *Qualified indorsement.*—A qualified indorsement constitutes the indorser a mere assignor of the title to the instrument. It may be made by adding to the indorser's signature the words "without recourse" or any words of similar import. Such an indorsement does not impair the negotiable character of the instrument.

Qualified indorsement may be made by adding to the indorsement **"without recourse"** or words of similar import. (*Schmidt* v. *Pegg*, 172 Mich. 160.) A qualified or restrictive indorsement does not impair the **negotiable character** of the instrument. (*Page* v. *Ford*, 65 Ore. 450.)

§ 69. *Conditional indorsement.*—Where an indorsement is conditional, a party required to pay the instrument may disregard the condition and make payment to the indorsee or his transferee, whether the condition has been fulfilled or not. But any person to whom an instrument so indorsed is negotiated will hold the same, or the proceeds thereof subject to the rights of the person indorsing conditionally.

§ 70. *Indorsement of instrument payable to bearer.*—Where an instrument, payable

to bearer, is indorsed specially, it may nevertheless be further negotiated by delivery; but the person indorsing specially is liable as indorser to only such holders as make title through his indorsement.

§ 71. *Indorsement where payable to two or more persons.*—Where an instrument is payable to the order of two or more payees or indorsees who are not partners, all must indorse, unless the one indorsing has authority to indorse for the others.

(*Mart* v. *State Nat. Bank* 147 App. Div. [N. Y.] 250.)

§ 72. *Effect of instrument drawn or indorsed to a person as cashier.*—Where an instrument is drawn or indorsed to a person as "cashier" or other fiscal officer of a bank or corporation, it is deemed *prima facie* to be payable to the bank or corporation of which he is such officer; and may be negotiated by either the indorsement of the bank or corporation, or the indorsement of the officer.

(*Quincy Mut. Fire Ins. Co.* v. *Int. Trust Co.*, 217 Mass. 370; *Johnson* v. *Buffalo Center State Bank*, 134 Iowa 731.)

§ 73. *Indorsement where name is misspelled, et cetera.*—Where the name of a payee or indorsee is wrongly designated or misspelled, he may indorse the instrument as therein described, adding, if he think fit, his proper signature.

§ 74. *Indorsement in representative capacity.*—Where any person is under obligation to indorse in a representative capacity, he may indorse in such terms as to negative personal liability.

As to **executor or administrator,** see *Smittler* v. *Simon*, 101 N. Y. 554. As to others, see *Chelsea Exchange Bank* v. *First U. P. Church*, 89 Misc. [N. Y.] 616.

§ 75. *Time of indorsement; presumption.*—Except where an indorsement bears date after the maturity of the instrument, every negotiation is deemed *prima facie* to have been effected before the instrument was overdue.

§ 76. *Place of indorsement; presumption.*—Except where the contrary appears every indorsement is presumed *prima facie* to have been made at the place where the instrument is dated.

The importance of this section is realized when it is recalled that an indorsement not alone transfers the instrument but is also a new contract embodying the contents of the instrument. As, for instance, a note made in one state and subsequently indorsed in another becomes a contract governed by the laws of the latter state. (*Chemical Nat. Bank* v. *Kellogg*, 183 N. Y. 92; *Glidden* v. *Chamberlin*, 167 Mass. 486.)

§ 77. *Continuation of negotiable character.*—An instrument negotiable in its origin continues to be negotiable until it has been restrictively indorsed or discharged by payment or otherwise.

§ 78. *Striking out indorsement.*—The holder may at any time strike out any indorsement which is not necessary to his title. The indorser whose indorsement is struck out, and all indorsers subsequent to him, are thereby relieved from liability on the instrument.

§ 79. *Transfer without indorsement; effect of.*—Where the holder of an instrument payable to his order transfers it for value without indorsing it, the transfer vests in the transferee such title as the transferrer had therein, and the transferee acquires, in addition, the right to have the indorsement of the transferrer. But for the purpose of determining whether the transferee is a holder in due course, the negotiation takes effect as of the time when the indorsement is actually made.

§ 80. *When prior party may negotiate instrument.*—Where an instrument is negotiated back to a prior party, such party may, subject to the provisions of this act, reissue and further negotiate the same. But he is not entitled to enforce payment thereof against any intervening party to whom he was personally liable.

RIGHTS OF HOLDER.—

§ 90. *Right of holder to sue; payment.*—The holder of a negotiable instrument may sue thereon in his own name; and payment to him in due course discharges the instrument.

(*Lowell* v. *Brickford*, 201 Mass. 543; *Hathaway* v. *County of Delaware*, 185 N. Y. 374.)

HOLDER IN DUE COURSE.—

§ 91. *What constitutes a holder in due course.*—A holder in due course is a holder who has taken the instrument under the following conditions:

1. That it is complete and regular upon its face;
2. That he became the holder of it before it was overdue, and without notice that it has been previously dishonored, if such were the fact;
3. That he took it in good faith and for value;
4. That at the time it was negotiated to him he had no notice of any infirmity in the instrument or defect in the title of the person negotiating it.

As to completeness and regularity see *Hunter* v. *Allen*, 127 App. Div. [N.Y.] 572.

Negotiable instruments acquired **after maturity** become subject to the same defenses as if non-negotiable. (*Cole* v. *Stearns*, 162 N. Y. 637.)

A **bank discounting paper** and merely placing amount to the credit of customer does not become a holder in due course. (*Citizens State Bank* v. *Cowles*, 180 N. Y. 346.) But if the sum so credited is drawn on and checked out, the bank becomes a holder in due course. (*Merchants Bank* v. *Santa Maria Sugar Co.*, 162 App. Div. [N. Y.] 248.)

A **gift** of a negotiable instrument does not make the donee a holder in due course. (*Greer* v. *Orchard*, 175 Mo. App. 494.)

§ 92. *When person not deemed holder in due course.*—Where an instrument payable on demand is negotiated an unreasonable length of time after its issue, the holder is not deemed a holder in due course.

What constitutes a **reasonable time** depends on the facts in each case. (*Commercial Nat. Bank* v. *Zimmermann*, 185 N. Y. 310.)

§ 93. *Notice before full amount paid.*—Where the transferee receives notice of any infirmity in the instrument or defect in the title of the person negotiating the same before he has paid the full amount agreed to be paid therefor, he will be deemed a holder in due course only to the extent of the amount theretofore paid by him.

§ 94. *When title defective.*—The title of a person who negotiates an instrument is defective within the meaning of this act when he obtained the instrument, or any signature thereto, by fraud, duress, or force and fear, or other unlawful means, or for an illegal consideration, or when he negotiates it in breach of faith, or under such circumstances as amount to a fraud.

§ 95. *What constitutes notice of defect.*—To constitute notice of an infirmity in the instrument or defect in the title of the person negotiating the same, the person to whom it is negotiated must have had actual knowledge of the infirmity or defect, or knowledge of such facts that his action in taking the instrument amounted to bad faith.

For **actual notice,** see cases: *Swift* v. *Smith*, 102 U. S. 442; *Jarvis* v. *Manhattan Beach Co.*, 148 N. Y. 652; *Interboro Brewing Co.* v. *Doyle*, 165 App. Div. [N. Y.] 646.

Inquiry.—The transferee is not required to make inquiry. (*Cheever* v. *Pittsburgh etc. R. Co.*, 150 N. Y. 59.)

A holder's knowledge of the poor **financial condition of the maker** is not sufficient to put him on notice of a defect, as he has a right to rely on the indorsements. (*Baruch* v. *Buckley*, 167 App. Div. [N. Y.] 113.)

A **purchase at discount,** even though it is large, is not sufficient to deprive the holder of rights of a holder in due course. (*Ham* v. *Merrett*, 150 Ky. 11.) If the discount is very large and there are other factors, they may be considered together to determine if he became a holder for value in good faith. (*Sabine* v. *Paine*, 166 App. Div. [N. Y.] 10.)

Negotiable instrument issued **by a corporate officer** for his personal benefit or use is *prima facie* unlawful and unless authorized the person taking such paper does so at his peril. (*Wilson* v. *Metropolitan Ry. Co.*, 120 N. Y. 145.)

Duress.—Negotiable instrument issued under **duress** is void. (*Magoon* v. *Reber*, 76 Wis. 392.)

RIGHTS OF HOLDER IN DUE COURSE.—

§ 96. *Rights of holder in due course.*—A holder in due course holds the instrument free from any defect of title of prior parties and free from defenses available to prior parties among themselves, and may enforce payment of the instrument for the full amount thereof against all parties liable thereon.

Stolen Securities.—An incomplete instrument stolen before negotiated is not valid in the hands of a holder. (*Limmick* v. *Nutting*, 140 App. Div. [N. Y.] 265.) Where, however, the instrument has been negotiated, an innocent purchaser for value becomes a holder in due course even if his title is derived from one who has stolen the instrument after issue. (*Mass. Nat. Bank* v. *Snow*, 187 Mass. 160.) (See note under § 34.) Burden of proof is on the holder that he obtained the instrument from a holder in due course. (*Lawyers Title etc. Co.* v. *Jones*, 113 App. Div. [N. Y.] 105.)

Instruments Issued in Violation of Law.—The decisions of the courts interpreting this section are in conflict. The predominating rule seems to hold that a negotiable instrument issued in violation of some statute and void between original parties is, however, good and enforcible against the maker if in the hands of a holder in due course. (*Wirt* v. *Stubblefield*, 17 App. Case [D. C.] 283.)

Probably the weight of authority is to construe this section to meet the requirements of commerce as expressed by Judge Van: "The business of the country is done so largely by means of commercial paper that the interests of commerce require that a promissory note, fair on its face, should be as negotiable as a government bond. Every restriction upon the circulation of negotiable papers is an injury to the state, for it tends to derange trade and hinders the transaction of business." (*Chemical Nat. Bank* v. *Kellogg*, 183 N. Y. 92.) Courts of other states hold that a negotiable instrument issued in violation of law is invalid against the maker even in the hands of innocent purchasers on the ground of public policy. (*Alexander* v. *Hazelrigg* 123 Ky. 677.)

Instruments Purchased Under Par.—"We are of opinion that a purchaser of a negotiable security before maturity, in a case where he is not personally chargeable with fraud, is entitled to recover its full amount against its maker, though he may have paid less than par value whatever may have been the original infirmity." (*Cromwell* v. *County of Sac.*, 96 U. S. 51.)

When Subject to Original Defenses.—

§ 97. *When subject to original defenses.*—In the hands of any holder other than a holder in due course, a negotiable instrument is subject to the same defenses as if it were non-negotiable. But a holder who derives his title through a holder in due course; and who is not himself a party to any fraud or illegality affecting the instrument, has all the rights of such former holder in respect of all parties prior to the latter.

Who is Deemed Holder in Due Course.—

§ 98. *Who deemed holder in due course.*—Every holder is deemed *prima facie* to be a holder in due course; but when it is shown that the title of any person who has negotiated the instrument was defective, the burden is on the holder to prove that he or some person under whom he claims acquired the title as a holder in due course. But

the last-mentioned rule does not apply in favor of a party who became bound on the instrument prior to the acquisition of such defective title.

LIABILITY OF MAKER.—

§ 110. *Liability of maker.*—The maker of a negotiable instrument by making it engages that he will pay it according to its tenor; and admits the existence of the payee and his then capacity to indorse.

The maker is primarily liable even if he signed only for **accommodation.** (*Richards* v. *Market Exchange Bank*, 81 Ohio State 348.)

Where an indorser deposited security for the payment of the instrument, this is not a defense for the maker. (*People's Nat. Bank* v. *Rice*, 149 App. Div. [N. Y.] 18.)

If an assumed or trade name is used for an existing payee, the maker is estopped from setting up that the payee is fictitious. (*Jones* v. *Home Furn. Co.*, 9 App. Div. [N. Y.] 103.)

LIABILITY OF DRAWER.—

§ 111. *Liability of drawer.*—The drawer by drawing the instrument admits the existence of the payee and his then capacity to indorse; and engages that on due presentment the instrument will be accepted and paid, or both, according to its tenor, and that if it be dishonored and the necessary proceedings on dishonor be duly taken, he will pay the amount thereof to the holder, or to any subsequent indorser who may be compelled to pay it. But the drawer may insert in the instrument an express stipulation negativing or limiting his own liability to the holder.

LIABILITY OF ACCEPTOR.—

§ 112. *Liability of acceptor.*—The acceptor by accepting the instrument engages that he will pay it according to the tenor of his acceptance; and admits:

1. The existence of the drawer, the genuineness of his signature, and his capacity and authority to draw the instrument; and
2. The existence of the payee and his then capacity to indorse.

The acceptor is estopped from setting up **incapacity of drawer** where the instrument is drawn by an infant, married woman, or a corporation without such power. (*Cowton* v. *Wickersham*, 54 Pa. St. 302; *Jones* v. *Darch*, 4 Price 300.)

Drawee cannot hold the drawer where acceptance was for **accommodation** until he (the drawee) has paid the instrument. (*Christian* v. *Keen*, 80 Va. 369.)

WHO IS DEEMED INDORSER?—

§ 113. *When person deemed indorser.*—A person placing his signature upon an instrument otherwise than as maker, drawer or acceptor is deemed to be an indorser, unless he clearly indicates by appropriate words his intention to be bound in some other capacity.

Intention to be bound otherwise must be clear and distinct by appropriate language and cannot be inferred by equivocal language or conduct. (*McDonald* v. *Luckenbach*, 170 Fed. Rep. 434.)

Individual liability is not incurred by an **officer** indorsing as an officer of the corporation. (*McDonald* v. *Luckenbach*, 170 Fed. Rep. 434.)

The rule is that a **partner** indorsing in his individual capacity, different than or in addition to his partnership indorsement, incurs a double liability from the two separate and distinct indorsements made by him. (*Fourth Nat. Bank* v. *Mead*, 216 Mass. 521.)

IRREGULAR INDORSER.—

§ 114. *Liability of irregular indorser.*—Where a person, not otherwise a party to an instrument, places thereon his signature in blank before delivery, he is liable as indorser in accordance with the following rules:

1. If the instrument is payable to the order of a third person, he is liable to the payee and to all subsequent parties.

2. If the instrument is payable to the order of the maker or drawer, or is payable to bearer, he is liable to all parties subsequent to the maker or drawer.

3. If he signs for the accommodations of the payee he is liable to all parties subsequent to the payee.

WARRANTY WHERE NEGOTIATION BY DELIVERY.—

§ 115. *Warranty where negotiation by delivery, et cetera.*—Every person negotiating an instrument by delivery or by a qualified indorsement, warrants:

1. That the instrument is genuine and in all respects what it purports to be;

2. That he has a good title to it;

3. That all prior parties had capacity to contract;

4. That he has no knowledge of any fact which would impair the validity of the instrument or render it valueless.

But when the negotiation is by delivery only, the warranty extends in favor of no holder other than the immediate transferee. The provisions of subdivision three of this section do not apply to persons negotiating public or corporate securities, other than bills and notes.

Implied and Express Warranties.—"It has long been the settled law of this State, and now been made law by statute, that every person negotiating a negotiable instrument by delivery or by qualified indorsement, warrants that the instrument is genuine and in all respects what it purports to be." (*Gaboy* v. *Doane*, 66 App. Div. [N. Y.] 507.) The warranties referred to in the statute are implied warranties. The parties may draw such express warranties as they may choose. (*Bell* v. *Dagg*, 60 N. Y. 528.)

Knowledge of Defect.—If an indorser knows an instrument is void he will be liable to the purchaser. (*Littauer* v. *Goldman*, 72 N. Y. 506.)

GENERAL INDORSER.—

§ 116. *Liability of general indorser.*—Every indorser who indorses without qualification warrants to all subsequent holders in due course:

1. The matter and things mentioned in subdivisions one, two and three of the next preceding section; and

2. That the instrument is at the time of his indorsement valid and subsisting.

And, in addition, he engages that on due presentment, it shall be accepted or paid, or both, as the case may be, according to its tenor, and that if it be dishonored, and the necessary proceedings on dishonor be duly taken, he will pay the amount thereof to the holder, or to any subsequent indorser who may be compelled to pay it.

The warranties are in favor of subsequent holders only.

Indorsement guaranteed on back of an instrument guarantees the entire instrument and all indorsements except the signature of the drawer. (*N. Y. Produce Ex. Bank* v. *Twelfth Ward Bank*, 135 App. Div. [N. Y.] 52.)

It is beyond the power of an **executor** to bind the estate of which he is executor by a contract of indorsement. (*Schmittler* v. *Simon*, 101 N. Y. 554.)

LIABILITY OF INDORSERS.—

§ 117. *Liability of indorser where paper negotiable by delivery.*—Where a person places his indorsement on an instrument negotiable by delivery he incurs all the liabilities of an indorser.

§ 118. *Order in which indorsers are liable.*—As respects one another, indorsers are liable *prima facie* in the order in which they indorse; but evidence is admissible to show that as between or among themselves they have agreed otherwise. Joint payees or joint indorsees who indorse are deemed to indorse jointly and severally.

The rule applies to **accommodation indorsers** as well as others.

LIABILITY OF AGENT.—

§ 119. *Liability of agent or broker.*—Where a broker or other agent negotiates an instrument without indorsement, he incurs all the liabilities prescribed by section one hundred and fifteen of this act, unless he discloses the name of his principal, and the fact that he is acting only as agent.

PRESENTMENT FOR PAYMENT.—

§ 130. *Effect of want of demand on principal debtor.*—Presentment for payment is not necessary in order to charge the person primarily liable on the instrument; but if the instrument is, by its terms, payable at a special place, and he is able and willing to pay it there at maturity and has funds there available for that purpose, such ability and willingness are equivalent to a tender of payment upon his part. But except as herein otherwise provided, presentment for payment is necessary in order to charge the drawer and indorsers.

The rule in the United States is that although the instrument is payable at a particular place, it is not necessary, to recover from the maker, to prove presentment or demand for payment at such a place. However, failure to present at that place relieves the party primarily liable from costs or damages if he was ready, able, and willing to make payment at that place.

PRESENTMENT WHERE NOT PAYABLE ON DEMAND.—

§ 131. *Presentment where instrument is not payable on demand.*—Where the instrument is not payable on demand, presentment must be made on the day it falls due. Where it is payable on demand, presentment must be made within a reasonable time after its issue, except that in case of a bill of exchange, presentment for payment will be sufficient if made within a reasonable time after the last negotiation thereof.

Reasonable time depends on circumstances in each case. No definite rule laid down by the courts. Usage of trade seems to govern. As banks generally make paper payable within 4 months, this is deemed a reasonable time to present paper payable on demand. (*Frazee* v. *Phoenix Nat. Bank*, 161 Ky. 175.) In Massachusetts, in the absence of usage of trade a reasonable time to present demand instruments in order to hold indorsers is 60 days. (*Merritt* v. *Jackson*, 181 Mass. 67.)

WHAT CONSTITUTES SUFFICIENT PRESENTMENT.—

§ 132. *What constitutes a sufficient presentment.*—Presentment for payment, to be sufficient, must be made:

1. By the holder, or by some person authorized to receive payment on his behalf;
2. At a reasonable hour on a business day;
3. At a proper place as herein defined;
4. To the person primarily liable on the instrument, or if he is absent or inaccessible, to any person found at the place where the presentment is made.

Time of Day.—Instruments payable at a bank must be presented within banking hours; at a place of business within usual business hours; at a residence before the usual hours of rest, as late as 9 P.M. having been held a reasonable hour. (*Farnsworth* v. *Allen*, 4 Gray 453.)

PLACE OF PRESENTMENT.—

§ 133. *Place of presentment.*—Presentment for payment is made at the proper place:

1. Where a place of payment is specified in the instrument and it is there presented;
2. Where no place of payment is specified, but the address of the person to make payment is given in the instrument and it is there presented;
3. Where no place of payment is specified and no address is given and the instrument is presented at the usual place of business or residence of the person to make payment.
4. In any other case if presented to the person to make payment wherever he can be found, or if presented at his last known place of business or residence.

Where No Place Specified.—The maker's usual place of business is sufficient even if no one is there to answer, as the maker is bound to have a person there to answer and pay his note if presented. (*Baumgardner* v. *Rieves*, 35 Pa. St. 250.)

INSTRUMENT TO BE EXHIBITED.—

§ 134. *Instrument must be exhibited.*—The instrument must be exhibited to the person from whom payment is demanded, and when it is paid must be delivered up to the party paying it.

Demand over telephone is not sufficient as it does not comply with the statute. (*Gilpin* v. *Savage*, 201 N. Y. 167.)

Request for payment in an informal manner not intended as presentment is insufficient. (*State of N. Y. Nat. Bank* v. *Kennedy*, 145 App. Div. [N. Y.] 669.)

PRESENTMENT WHEN PAYABLE AT BANK.—

§ 135. *Presentment where instrument payable at bank.*—Where the instrument is payable at a bank, presentment for payment must be made during banking hours, unless the person to make payment has no funds there to meet it at any time during the day, in which case presentment at any hour before the bank is closed on that day is sufficient.

Where bank is closed and in hands of receiver, demand on receiver personally is not necessary. Instruments, however, may be presented at the bank (*Schlesinger* v. *Schultz*, 110 App. Div. [N. Y.] 356) or as set forth in § 133.

PRESENTMENT WHERE PRINCIPAL DEBTOR IS DEAD.—

§ 136. *Presentment where principal debtor is dead.*—Where the person primarily liable on the instrument is dead, and no place of payment is specified, presentment for payment must be made to his personal representative, if such there be, and if with the exercise of reasonable diligence, he can be found.

As to **reasonable diligence** see *Reed* v. *Spear*, 107 App. Div. [N. Y.] 144.

Although the holder is relieved from making presentment under this section, it does not relieve him from giving notice of dishonor to the **indorsers** to hold them. (*Reed* v. *Spear*, 107 App. Div. [N. Y.] 144.)

PRESENTMENT TO PARTNERS OR JOINT DEBTORS.—

§ 137. *Presentment to persons liable as partners.*—Where the persons primarily liable on the instrument are liable as partners, and no place of payment is specified presentment for payment may be made to any one of them, even though there has been a dissolution of the firm.

§ 138. *Presentment to joint debtors.*—Where there are several persons not partners primarily liable on the instrument, and no place of payment is specified, presentment must be made to them all.

WHEN PRESENTMENT NOT REQUIRED TO CHARGE DRAWER.—

§ 139. *When presentment not required to charge the drawer.*—Presentment for payment is not required in order to charge the drawer where he has no right to expect or require that the drawee or acceptor will pay the instrument.

Although the drawer has no funds in the hands of the drawee, presentment is not dispensed with. (*Life Ins. Co.* v. *Pendleton*, 112 U. S. 708.)

WHEN PRESENTMENT NOT REQUIRED TO CHARGE INDORSER.—

§ 140. *When presentment not required to charge the indorser.*—Presentment for payment is not required in order to charge an indorser where the instrument was made or accepted for his accommodation, and he has no reason to expect that the instrument will be paid if presented.

DELAY IN PRESENTMENT.—

§ 141. *When delay in making presentment is excused.*—Delay in making presentment for payment is excused when the delay is caused by circumstances beyond the control of the holder and not imputable to his default, misconduct or negligence. When the cause of delay ceases to operate presentment must be made with reasonable diligence.

Sickness is not an excuse for failure to present a note for payment at the proper time, unless the illness is so severe that the holder cannot direct another to present it. In that case presentment must be made as soon as the disability is removed. (*Wilson* v. *Senier*, 14 Wis. 380.)

WHEN PRESENTMENT IS DISPENSED WITH.—

§ 142. *When presentment may be dispensed with.*—Presentment for payment is dispensed with:

1. Where, after the exercise of reasonable diligence presentment as required by this act cannot be made;
2. Where the drawee is a fictitious person;
3. By waiver of presentment express or implied.

Insolvency of maker or acceptor does not dispense with the necessity for presentment. (*J. W. O'Bannan Co.* v. *Curran*, 129 App. Div. [N. Y.] 90.)

DISHONOR BY NON-PAYMENT.—

§ 143. *When instrument dishonored by non-payment.*—The instrument is dishonored by non-payment when:

1. It is duly presented for payment and payment is refused or cannot be obtained; or
2. Presentment is excused and the instrument is overdue and unpaid.

§ 144. *Liability of person secondarily liable, when instrument dishonored.*—Subject to the provisions of this act, when the instrument is dishonored by non-payment, an immediate right of recourse to all parties secondarily liable thereon, accrues to the holder.

TIME OF MATURITY.—

§ 145. *Time of maturity.*—Every negotiable instrument is payable at the time fixed therein without grace. When the day of maturity falls upon Sunday or a holiday, the instrument is payable on the next succeeding business day. Instruments falling due or becoming payable on Saturday are to be presented for payment on the next succeeding business day, except that instruments payable on demand may, at the option of the holder, be presented for payment before twelve o'clock noon on Saturday when that entire day is not a holiday.

§ 146. *Time; how computed.*—Where the instrument is payable at a fixed period after date, after sight or after the happening of a specified event, the time of payment is determined by excluding the day from which the time is to begin to run, and by including the date of payment.

PAYABLE AT BANK.—

§ 147. *Rule where instrument payable at bank.*—Where the instrument is made payable at a bank it is equivalent to an order to the bank to pay the same for the account of the principal debtor thereon.

PAYABLE IN DUE COURSE.—

§ 148. *What constitutes payment in due course.*—Payment is made in due course when it is made at or after the maturity of the instrument to the holder thereof in good faith and without notice that his title is defective.

Possession of the instrument is *prima facie* authority to demand payment. The maker or drawer has a duty to demand the production of the instrument before paying it. (*Loizeaux* v. *Fremder*, 123 Wis. 193.)

NOTICE OF DISHONOR.—

§ 160. *To whom notice of dishonor must be given.*—Except as herein otherwise provided, when a negotiable instrument has been dishonored by non-acceptance or non-payment notice of dishonor must be given to the drawer and to each indorser, and any drawer or indorser to whom such notice is not given is discharged.

To hold an **accommodation indorser** he must be given notice of dishonor the same as any other indorser. (*Perry* v. *Taylor*, 148 N. C. 362.)

Where a note given to a **bank** for collection is dishonored, it is the duty of the bank to give notice to its customer. (*Shea* v. *Vahey*, 215 Mass. 80.)

Guarantors do not come under the rule requiring notice. (*Brown* v. *Curtiss*, 2 N. Y. 225.)

§ 161. *By whom given.*—The notice may be given by or on behalf of the holder, or by or on behalf of any party to the instrument who might be compelled to pay it to the holder, and who, upon taking it up, would have a right to reimbursement from the party to whom the notice is given.

"A notice by a **stranger** to the instrument is not sufficient." (*Lawrence* v. *Miller*, 16 N. Y. 235.)

§ 162. *Notice given by agent.*—Notice of dishonor may be given by an agent either in his own name or in the name of any party entitled to give notice, whether that party be his principal or not.

Banks having instruments for collection act as agents and have authority to receive and give notice on behalf of the holders of the instruments. (*Kelly* v. *Theiss*, 78 N. Y. S. 1050; *West River Bank* v. *Taylor*, 34 N. Y. 128.)

A **notary** who is an agent for the owner of a negotiable instrument may give notice even though acting in his official capacity. (*Lawrence* v. *Miller*, 16 N. Y. 235.)

§ 163. *Effect of notice given on behalf of holder.*—Where notice is given by or on behalf of the holder, it enures for the benefit of all subsequent holders and all prior parties who have a right of recourse against the party to whom it is given.

A **holder** need not give notice to anyone but his immediate indorser. (*West River Bank* v. *Taylor*, 34 N. Y. 128.)

§ 164. *Effect where notice is given by party entitled thereto.*— Where notice is given by or on behalf of a party entitled to give notice, it enures for the benefit of the holder and all parties subsequent to the party to whom notice is given.

§ 165. *When agent may give notice.*—Where the instrument has been dishonored in the hands of an agent he may either himself give notice to the parties liable thereon, or he may give notice to his principal. If he give notice to his principal he must do so within the same time as if he were the holder, and the principal, upon the receipt of such notice, has himself the same time for giving notice as if the agent had been an independent holder.

Undue delay by an agent in giving notice to his principal discharges prior indorsers. (*Rosson* v. *Carroll*, 90 Tenn. 90.)

A **bank** receiving an instrument for collection fulfils its duty to the depositor by giving proper notice of dishonor in time to enable its customer to give notice to prior indorsers. (*Brill* v. *Jefferson Bank*, 159 App. Div. [N. Y.] 461.)

§ 166. *When notice sufficient.*—A written notice need not be signed, and an insufficient written notice may be supplemented and validated by verbal communication. A misdescription of the instrument does not vitiate the notice unless the party to whom the notice is given is in fact misled thereby.

§ 167. *Form of notice.*—The notice may be in writing or merely oral, and may be given in any terms which sufficiently identify the instrument, and indicate that it has been dishonored by non-acceptance or non-payment. It may in all cases be given by delivering it personally or through the mails.

Sufficient description generally is name of maker, date, amount, when and where payable.

Notice over telephone is sufficient. (*Am. Nat. Bank* v. *Nat. Fertilizer Co.*, 125 Tenn. 328.)

§ 168. *To whom notice may be given.*—Notice of dishonor may be given either to the party himself or to his agent in that behalf.

§ 169. *Notice where party is dead.*—When any party is dead, and his death is known to the party giving notice, the notice must be given to a personal representative, if there be one, and if with reasonable diligence he can be found. If there be no personal representative, notice may be sent to the last residence or last place of business of the deceased.

§ 170. *Notice to partners.*—Where the parties to be notified are partners, notice to any one partner is notice to the firm, even though there has been a dissolution.

§ 171. *Notice to persons jointly liable.*—Notice to joint parties who are not partners must be given to each of them, unless one of them has authority to receive such notice for the others.

§ 172. *Notice to bankrupt.*—Where a party has been adjudged a bankrupt or an insolvent, or has made an assignment for the benefit of creditors, notice may be given either to the party himself or to his trustee or assignee.

§ 173. *Time within which notice must be given.*—Notice may be given as soon as the instrument is dishonored; and unless delay is excused as hereinafter provided, must be given within the times fixed by this act.

§ 174. *Where parties reside in same place.*—Where the person giving and the person to receive notice reside in the same place, notice must be given within the following times:

1. If given at the place of business of the person to receive notice, it must be given before the close of business hours on the day following;

2. If given at his residence, it must be given before the usual hours of rest on the day following;

3. If sent by mail, it must be deposited in the post-office in time to reach him in usual course on the day following.

§ 175. *Where parties reside in different places.*—Where the person giving and the person to receive notice reside in different places, the notice must be given within the following times:

1. If sent by mail, it must be deposited in the post-office in time to go by mail the day following the day of dishonor, or if there be no mail at a convenient hour on that day, by the next mail thereafter.

2. If given otherwise than through the post-office, then within the time that notice would have been received in due course of mail, if it had been deposited in the post-office within the time specified in the last subdivision.

Notice is not good where there is delay due to **insufficient postage.** (*First Nat. Bank* v. *Miller*, 139 Wis. 126.)

§ 176. *When sender deemed to have given due notice.*—Where notice of dishonor is duly addressed and deposited in the post-office, the sender is deemed to have given due notice, notwithstanding any miscarriage in the mails.

§ 177. *Deposit in post-office; what constitutes.*—Notice is deemed to have been deposited in the post-office when deposited in any branch post-office or in any letter-box under the control of the Post-Office Department.

§ 178. *Notice to subsequent party; time of.*—Where a party receives notice of dishonor, he has, after the receipt of such notice, the same time for giving notice to antecedent parties that the holder has after the dishonor.

§ 179. *Where notice must be sent.*—Where a party has added an address to his signature, notice of dishonor must be sent to that address; but if he has not given such address, then the notice must be sent as follows:

1. Either to the post-office nearest to his place of residence, or to the post-office where he is accustomed to receive his letters; or

2. If he live in one place, and have his place of business in another, notice may be sent to either place; or

3. If he is sojourning in another place, notice may be sent to the place where he is so sojourning.

But where the notice is actually received by the party within the time specified in this act, it will be sufficient, though not sent in accordance with the requirements of this section.

§ 180. *Waiver of notice.*—Notice of dishonor may be waived, either before the time of giving notice has arrived or after the omission to give due notice, and the waiver may be express or implied.

§ 181. *Whom affected by waiver.*—Where the waiver is embodied in the instrument itself, it is binding upon all parties; but where it is written above the signature of an indorser, it binds him only.

§ 182. *Waiver of protest.*—A waiver of protest, whether in the case of a foreign bill of exchange or other negotiable instrument, is deemed to be a waiver not only of a formal protest, but also of presentment and notice of dishonor.

§ 183. *When notice is dispensed with.*—Notice of dishonor is dispensed with when, after the exercise of reasonable diligence, it cannot be given to or does not reach the parties sought to be charged.

Reasonable diligence is all that is required under the law, which does not demand unusual effort to give notice of dishonor. (*Bank of Port Jefferson* v. *Darling*, 91 Hun 236.) Reliance on directory only is not sufficient to constitute due diligence. (*Bacon* v. *Harms*, 137 N. Y. 379.) Where a holder does not know or cannot find the address of the maker, it is his duty to inquire of the other parties to an instrument. (*University Press* v. *Williams*, 48 App. Div. [N. Y.] 190.)

§ 184. *Delay in giving notice; how excused.*—Delay in giving notice of dishonor is excused when the delay is caused by circumstances beyond the control of the holder and not imputable to his default, misconduct or negligence. When the cause of delay ceases to operate, notice must be given with reasonable diligence.

§ 185. *When notice need not be given to drawer.*—Notice of dishonor is not required to be given to the drawer in either of the following cases:

1. Where the drawer and drawee are the same person;

2. Where the drawee is a fictitious person or a person not having capacity to contract;

3. Where the drawer is the person to whom the instrument is presented for payment;

4. Where the drawer has no right to expect or require that the drawee or acceptor will honor the instrument;

5. Where the drawer has countermanded payment.

§ 186. *When notice need not be given to indorser.*—Notice of dishonor is not required to be given to an indorser in either of the following cases:

1. Where the drawee is a fictitious person or a person not having capacity to contract, and the indorser was aware of the fact at the time he indorsed the instrument;

2. Where the indorser is the person to whom the instrument is presented for payment;

3. Where the instrument was made or accepted for his accommodation.

Where the Instrument Is Made for the Indorser's Benefit.—An indorser obtaining the note of another which he had discounted for his benefit at the bank, at which time he makes a distinct promise to pay the note at maturity, is not entitled to notice of non-payment as his liability is absolute and not secondary. (*Sieger* v. *Second Nat. Bank*, 132 Pa. St. 307.)

§ 187. *Notice of non-payment where acceptance refused.*—Where due notice of dishonor by non-acceptance has been given, notice of a subsequent dishonor by nonpayment is not necessary, unless in the meantime the instrument has been accepted.

§ 188. *Effect of omission to give notice of non-acceptance.*—An omission to give notice of dishonor by non-acceptance does not prejudice the rights of a holder in due course subsequent to the omission.

PROTEST.—

§ 189. *When protest need not be made; when must be made.*—Where any negotiable instrument has been dishonored it may be protested for non-acceptance or non-payment, as the case may be; but protest is not required, except in the case of foreign bills of exchange.

Protest—When Desirable Although not Necessary.—Although protest is not legally required in the case of non-payment of inland bills of exchange, it is desirable to have a certificate of a notary setting forth presentation and demand for payment where it is necessary to bring legal action. Such certificates are accepted in most states as *prima facie* evidence of such presentation, demand for payment, and notice to indorsers in case of dishonor. Without such certificates it is sometimes difficult to prove these facts in court. (See *Scott* v. *Brown*, 240 Pa. St. 328.)

DISCHARGE.—

§ 200. *Instrument; how discharged.*—A negotiable instrument is discharged:

1. By payment in due course by or on behalf of the principal debtor;
2. By payment in due course by the party accommodated, where the instrument is made or accepted for accommodation;
3. By the intentional cancellation thereof by the holder;
4. By any other act which will discharge a simple contract for the payment of money;
5. When the principal debtor becomes the holder of the instrument at or after maturity in his own right.

Proof of Payment.—A person admitting the making of an instrument has the burden of proof of showing that payment was made and that the instrument is discharged as to him. (*Swan* v. *Caravan*, 168 N. C. 472.)

Accommodation Paper.—An accommodation instrument made for the benefit of one of several makers, which is paid by one of them, is discharged as to all of the other makers. (*Comstock* v. *Buckley*, 141 Wis. 228.)

DISCHARGE OF PERSONS SECONDARILY LIABLE:—

§ 201. *When persons secondarily liable on, discharged.*—A person secondarily liable on the instrument is discharged:

1. By any act which discharges the instrument;
2. By the intentional cancellation of his signature by the holder;
3. By the discharge of a prior party;
4. By a valid tender of payment made by a prior party;
5. By a release of the principal debtor, unless the holder's right of recourse against the party secondarily liable is expressly reserved;
6. By any agreement binding upon the holder to extend the time of payment or to postpone the holder's right to enforce the instrument, unless the right of recourse against such party is expressly reserved.

Discharge of Prior Party.—Any act which discharges a prior indorser discharges all subsequent indorsers for the reason that on making payment each indorser had recourse to the one ahead of him, but through such discharge the subsequent indorsers are precluded from such rights. (*Spies* v. *Nat. City Bank*, 174 N. Y. 222.)

Security Given by Prior Party.—The giving of security by the maker or prior indorser for payment is not payment nor does it discharge subsequent indorsers. (*First Nat. Bank* v. *Peltz*, 176 Pa. St. 513.)

Extension of Time.—There must be an enforcible agreement binding on the holder to discharge the indorsers. A mere acquiescence, letting the instrument stand, will not discharge the maker or indorsers. (*Smith* v. *Erwin*, 7 N. Y. 466.)

§ 202. *Right of party who discharges instrument.*—Where the instrument is paid by a party secondarily liable thereon, it is not discharged; but the party so paying it is remitted to his former rights as regards all prior parties, and he may strike out his own and all subsequent indorsements, and again negotiate the instrument, except:

1. Where it is payable to the order of a third person, and has been paid by the drawer; and

2. Where it was made or accepted for accommodation, and has been paid by the party accommodated.

§ 203. *Renunciation by holder.*—The holder may expressly renounce his rights against any party to the instrument, before, at or after its maturity. An absolute and unconditional renunciation of his rights against the principal debtor made at or after the maturity of the instrument, discharges the instrument. But a renunciation does not affect the rights of a holder in due course without notice. A renunciation must be in writing, unless the instrument is delivered up to the person primarily liable thereon.

§ 204. *Cancellation; unintentional; burden of proof.*—A cancellation made unintentionally, or under a mistake, or without the authority of the holder, is inoperative; but where an instrument or any signature thereon appears to have been canceled the burden of proof lies on the party who alleges that the cancellation was made unintentionally, or under a mistake or without authority.

ALTERATION.—

§ 205. *Alteration of instrument; effect of.*—Where a negotiable instrument is materially altered without the assent of all parties liable thereon, it is avoided, except as against a party who has himself made, authorized or assented to the alteration and subsequent indorsers. But when an instrument has been materially altered and is in the hands of a holder in due course, not a party to the alteration, he may enforce payment thereof according to its original tenor.

§ 206. *What constitutes a material alteration.*—Any alteration which changes:

1. The date;
2. The sum payable, either for principal or interest;
3. The time or place of payment;
4. The number or the relations of the parties;
5. The medium or currency in which payment is to be made;

Or which adds a place of payment where no place of payment is specified, or any other change or addition which alters the effect of the instrument in any respect, is a material alteration.

Amount of Principal.—Although the amount may be reduced from $500 to $400, such alteration is material. (*Hewins* v. *Cargill*, 67 Me. 554.)

Interest.—Adding the words "with interest at six per cent" is a material alteration. (*Broadway Nat. Bank* v. *Hefferman*, 220 Mass. 247.)

Medium of Payment.—Adding the words "in gold coin" is a material alteration. (*Wills* v. *Wilson*, 3 Ore. 308.)

"To Order" Changed to "To Bearer."—Striking out the words "to order" and inserting "to bearer" on an instrument made payable to order is a material alteration. (*Builder's Lime & Cement Co.* v. *Weiner*, 151 N. W. Rep. [Iowa] 100.)

BILLS OF EXCHANGE.—

§ 210. *Bill of exchange defined.*—A bill of exchange is an unconditional order in writing addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand or at a fixed or determinable future time a sum certain in money to order or to bearer.

§ 211. *Bill not an assignment of funds in hands of drawee.*—A bill of itself does not operate as an assignment of the funds in the hands of the drawee available for the payment thereof, and the drawee is not liable on the bill unless and until he accepts the same.

§ 212. *Bill addressed to more than one drawee.*—A bill may be addressed to two or more drawees jointly, whether they are partners or not; but not to two or more drawees in the alternative or in succession.

§ 213. *Inland and foreign bills of exchange.*—An inland bill of exchange is a bill which is, or on its face purports to be, both drawn and payable within the State. Any other bill is a foreign bill. Unless the contrary appears on the face of the bill, the holder may treat it as an inland bill.

Foreign Bills.—A check drawn in one state and payable at a bank in another state is a foreign bill of exchange. (*Mankey* v. *Hoyt*, 27 S. D. 561.)

§ 214. *When bill may be treated as promissory note.*—Where in a bill the drawer and drawee are the same person, or where the drawee is a fictitious person, or a person not having capacity to contract, the holder may treat the instrument, at his option, either as a bill of exchange or a promissory note.

§ 215. *Referee in case of need.*—The drawer of a bill and any indorser may insert thereon the name of a person to whom the holder may resort in case of need, that is to say, in case the bill is dishonored by non-acceptance or non-payment. Such person is called the referee in case of need. It is in the option of the holder to resort to the referee in case of need or not, as he may see fit.

ACCEPTANCE.—

§ 220. *Acceptance; how made, et cetera.*—The acceptance of a bill is the signification by the drawee of his assent to the order of the drawer. The acceptance must be in writing and signed by the drawee. It must not express that the drawee will perform his promise by any other means than the payment of money.

Usual Method.—The usual method of accepting a bill is to write the word "Accepted" subscribed by the drawee's signature on the face of the bill.

Acceptance Must Be in Writing.—Oral acceptance although good at common law is not good under the statute which prescribes that acceptance must be in writing.

Acceptance by Telegraph.—Held to be sufficient acceptance under the statute. (*Oil Well Supply Co.* v. *MacMurphy*, 119 Minn. 500; *Johnson* v. *Clark*, 39 N. Y. 216.)

§ 221. *Holder entitled to acceptance on face of bill.*—The holder of a bill presenting the same for acceptance may require that the acceptance be written on the bill, and if such request is refused, may treat the bill as dishonored.

§ 222. *Acceptance by separate instrument.*—Where an acceptance is written on a paper other than the bill itself, it does not bind the acceptor, except in favor of a person to whom it was shown and who, on the faith thereof, receives the bill for value.

§ 223. *Promise to accept; when equivalent to acceptance.*—An unconditional promise in writing to accept a bill before it is drawn is deemed an actual acceptance in favor of every person who, upon the faith thereof, receives the bill for value.

RIGHTS OF PARTIES AS TO QUALIFIED ACCEPTANCE.—

§ 224. *Time allowed drawee to accept.*—The drawee is allowed twenty-four hours after presentment in which to decide whether or not he will accept the bill; but the acceptance, if given, dates as of the day of presentation.

§ 225. *Liability of drawee retaining or destroying bill.*—Where a drawee to whom a bill is delivered for acceptance destroys the same or refuses within twenty-four hours after such delivery, or within such other period as the holder may allow, to return the bill accepted or non-accepted to the holder, he will be deemed to have accepted the same.

§ 226. *Acceptance of incomplete bill.*—A bill may be accepted before it has been signed by the drawer, or while otherwise incomplete, or when it is overdue, or after it has been dishonored by a previous refusal to accept, or by non-payment. But when a bill payable after sight is dishonored by non-acceptance and the drawee subsequently accepts it, the holder, in the absence of any different agreement, is entitled to have the bill accepted as of the date of the first presentment.

§ 227. *Kinds of acceptances.*—An acceptance is either general or qualified. A general acceptance assents without qualification to the order of the drawer. A qualified acceptance in express terms varies the effect of the bill as drawn.

§ 228. *What constitutes a general acceptancy.*—An acceptance to pay at a particular place is a general acceptance unless it expressly states that the bill is to be paid there only and not elsewhere.

§ 229. *Qualified acceptance.*—An acceptance is qualified which is:

1. Conditional, that is to say, which makes payment by the acceptor dependent on the fulfillment of a condition therein stated:

2. Partial, that is to say, an acceptance to pay part only of the amount for which the bill is drawn;

3. Local, that is to say, an acceptance to pay only at a particular place;

4. Qualified as to time;

5. The acceptance of some one or more of the drawees, but not of all.

§ 230. *Rights of parties as to qualified acceptance.*—The holder may refuse to take a qualified acceptance, and if he does not obtain an unqualified acceptance, he may treat the bill as dishonored by non-acceptance. Where a qualified acceptance is taken, the drawer and indorsers are discharged from liability on the bill, unless they have expressly or impliedly authorized the holder to take a qualified acceptance, or subsequently assent thereto. When the drawer or an indorser receives notice of a qualified acceptance, he must within a reasonable time express his dissent to the holder, or he will be deemed to have assented thereto.

Duty of Collecting Bank.—A bank acting as collecting agent has no authority to receive anything less than an unqualified acceptance. (*Walker* v. *N. Y. State Bank*, 9 N. Y. 582.)

PRESENTMENT FOR ACCEPTANCE.—

§ 240. *When presentment for acceptance must be made.*—Presentment for acceptance must be made:

1. Where the bill is payable after sight or in any other case where presentment for acceptance is necessary in order to fix the maturity of the instrument; or

2. Where the bill expressly stipulates that it shall be presented for acceptance; or

3. Where the bill is drawn payable elsewhere than at the residence or place of business of the drawee.

In no other case is presentment for acceptance necessary in order to render any party to the bill liable.

§ 241. *When failure to present releases drawer and indorser.*—Except as herein otherwise provided, the holder of a bill which is required by the next preceding section to be presented for acceptance must either present it for acceptance or negotiate it within a reasonable time. If he fails to do so, the drawer and all indorsers are discharged.

§ 242. *Presentment; how made.*—Presentment for acceptance must be made by or on behalf of the holder at a reasonable hour, on a business day, and before the bill is overdue, to the drawee or some person authorized to accept or refuse acceptance on his behalf; and

1. Where a bill is addressed to two or more drawees who are not partners, presentment must be made to them all, unless one has authority to accept or refuse acceptance for all, in which case presentment may be made to him only;

2. Where the drawee is dead, presentment may be made to his personal representative;

3. Where the drawee has been adjudged a bankrupt or an insolvent, or has made an assignment for the benefit of creditors, presentment may be made to him or to his trustee or assignee.

§ 243. *On what days presentment may be made.*—A bill may be presented for acceptance on any day on which negotiable instruments may be presented for payment under the provisions of sections one hundred and thirty-two and one hundred and forty-five of this act. When Saturday is not otherwise a holiday, presentment for acceptance may be made before twelve o'clock noon on that day.

§ 244. *Presentment when time is insufficient.*—Where the holder of a bill drawn payable elsewhere than at the place of business or the residence of the drawee has not time

with the exercise of reasonable diligence to present the bill for acceptance before presenting it for payment on the day that it falls due, the delay caused by presenting the bill for acceptance before presenting it for payment is excused and does not discharge the drawers and indorsers.

§ 245. *Where presentment is excused.*—Presentment for acceptance is excused and a bill may be treated as dishonored by non-acceptance in either of the following cases:

1. Where the drawee is dead or has absconded, or is a fictitious person or a person not having capacity to contract by bill;

2. Where after the exercise of reasonable diligence, presentment cannot be made;

3. Where, although presentment has been irregular, acceptance has been refused on some other ground.

WHEN DISCHARGED BY NON-ACCEPTANCE.—

§ 246. *When discharged by non-acceptance.*—A bill is dishonored by non-acceptance:

1. When it is duly presented for acceptance, and such an acceptance as is prescribed by this act is refused or cannot be obtained; or

2. When presentment for acceptance is excused and the bill is not accepted.

§ 247. *Duty of holder where bill not accepted.*—Where a bill is duly presented for acceptance and is not accepted within the prescribed time, the person presenting it must treat the bill as dishonored by non-acceptance or he loses the right of recourse against the drawer and indorsers.

§ 248. *Rights of holder where bill not accepted.*—When a bill is dishonored by non-acceptance, an immediate right of recourse against the drawers and indorsers accrues to the holder, and no presentment for payment is necessary.

PROTEST.—

§ 260. *In what cases protest necessary.*—Where a foreign bill appearing on its face to be such is dishonored by non-acceptance, it must be duly protested for non-acceptance, and where such a bill which has not previously been dishonored by non-acceptance is dishonored by non-payment, it must be duly protested for non-payment. If it is not so protested, the drawer and indorsers are discharged. Where a bill does not appear on its face to be a foreign bill, protest thereof in case of dishonor is unnecessary.

§ 261. *Protest; how made.*—The protest must be annexed to the bill, or must contain a copy thereof, and must be under the hand and seal of the notary making it, and must specify:

1. The time and place of presentment;

2. The fact that presentment was made and the manner thereof;

3. The cause or reason for protesting the bill;

4. The demand made and the answer given, if any, or the fact that the drawee or acceptor could not be found.

Certificate of Protest, Value of.—As competent evidence, a notarial certificate of protest is sufficient without further proof, and is accepted in the courts even though the notary at a subsequent trial cannot recall the details. (*Sherer* v. *Easten Bank*, 33 Pa. St. 134.)

Presentment and Demand by Notary.—In the absence of custom and usage to the contrary, presentment and demand must be made personally by the notary. (*Commerical Bank* v. *Varnum*, 49 N. Y. 269.)

§ 262. *Protest; by whom made.*—Protest may be made by:

1. A notary public; or

2. By any respectable resident of the place where the bill is dishonored, in the presence of two or more creditable witnesses.

§ 263. *Protest; when to be made.*—When a bill is protested, such protest must be made on the day of its dishonor, unless delay is excused as herein provided. When a bill has been duly noted, the protest may be subsequently extended as of the date of the noting.

§ 264. *Protest; where made.*—A bill must be protested at the place where it is dishonored, except that when a bill drawn payable at the place of business or residence of some person other than the drawee, has been dishonored by non-acceptance, it

must be protested for non-payment at the place where it is expressed to be payable and no further presentment for payment to, or demand on, the drawee is necessary.

§ 265. *Protest both for non-acceptance and non-payment.*—A bill which has been protested for non-acceptance may be subsequently protested for non-payment.

§ 266. *Protest before maturity where acceptor insolvent.*—Where the acceptor has been adjudged a bankrupt or an insolvent, or has made an assignment for the benefit of creditors, before the bill matures, the holder may cause the bill to be protested for better security against the drawer and indorsers.

§ 267. *When protest dispensed with.*—Protest is dispensed with by any circumstances which would dispense with notice of dishonor. Delay in noting or protesting is excused when delay is caused by circumstances beyond the control of the holder and not imputable to his default, misconduct, or negligence. When the cause of delay ceases to operate, the bill must be noted or protested with reasonable diligence.

§ 268. *Protest where bill is lost, et cetera.*—Where a bill is lost or destroyed, or is wrongly detained from the person entitled to hold it, protest may be made on a copy or written particulars thereof.

ACCEPTANCE FOR HONOR.—

§ 280. *When bill may be accepted for honor.*—Where a bill of exchange has been protested for dishonor by non-acceptance or protested for better security and is not overdue, any person not being a party already liable thereon may, with the consent of the holder, intervene and accept the bill supra protest for the honor of any party liable thereon or for the honor of the person for whose account the bill is drawn. The acceptance for honor may be for part only of the sum for which the bill is drawn; and where there has been an acceptance for honor for one party, there may be a further acceptance by a different person for the honor of another party.

§ 281. *Acceptance for honor; how made.*—An acceptance for honor supra protest must be in writing and indicate that it is an acceptance for honor, and must be signed by the acceptor for honor.

§ 282. *When deemed to be an acceptance for honor of the drawer.*—Where an acceptance for honor does not expressly state for whose honor it is made, it is deemed to be an acceptance for the honor of the drawer.

§ 283. *Liability of acceptor for honor.*—The acceptor for honor is liable to the holder and to all parties to the bill subsequent to the party for whose honor he has accepted.

§ 284. *Agreement of acceptor for honor.*—The acceptor for honor by such acceptance engages that he will on due presentment pay the bill according to the terms of his acceptance, provided it shall not have been paid by the drawee, and provided also that it shall have been duly presented for payment and protested for non-payment and notice of dishonor given to him.

§ 285. *Maturity of bill payable after sight; accepted for honor.*—Where a bill payable after sight is accepted for honor, its maturity is calculated from the date of the noting for non-acceptance and not from the date of the acceptance for honor.

§ 286. *Protest of bill accepted for honor, et cetera.*—Where a dishonored bill has been accepted for honor supra protest or contains a reference in case of need, it must be protested for non-payment before it is presented for payment to the acceptor for honor or referee in case of need.

§ 287. *Presentment for payment to acceptor for honor; how made.*—Presentment for payment to the acceptor for honor must be made as follows:

1. If it is to be presented in the place where the protest for non-payment was made, it must be presented not later than the day following its maturity;

2. If it is to be presented in some other place than the place where it was protested, then it must be forwarded within the time specified in section one hundred and seventy five.

§ 288. *When delay in making presentment is excused.*—The provisions of section one hundred and forty-one apply where there is delay in making presentment to the acceptor for honor or referee in case of need.

PAYMENT FOR HONOR.—

§ 300. *Who may make payment for honor.*—Where a bill has been protested for non-payment, any person may intervene and pay its supra protest for the honor of any person liable thereon or for the honor of the person for whose account it was drawn.

§ 301. *Payment for honor; how made.*—The payment for honor supra protest in order to operate as such and not as a mere voluntary payment must be attested by a notarial act of honor, which may be appended to the protest or form an extension to it.

§ 302. *Declaration before payment for honor.*—The notarial act of honor must be founded on a declaration made by the payer for honor, or by his agent in that behalf declaring his intention to pay the bill for honor and for whose honor he pays.

§ 303. *Preference of parties offering to pay for honor.*—Where two or more persons offer to pay a bill for the honor of different parties, the person whose payment will discharge most parties to the bill is to be given the preference.

§ 304. *Effect on subsequent parties where bill is paid for honor.*—Where a bill has been paid for honor all parties subsequent to the party for whose honor it is paid are discharged, but the payer for honor is subrogated for, and succeeds to, both the rights and duties of the holder as regards the party for whose honor he pays and all parties liable to the latter.

§ 305. *Where holder refuses to receive payment suprd protest.*—Where the holder of a bill refuses to receive payment supra protest, he loses his right of recourse against any party who would have been discharged by such payment.

§ 306. *Rights of payer for honor.*—The payer for honor, on paying to the holder the amount of the bill and the notarial expenses incidental to its dishonor, is entitled to receive both the bill itself and the protest.

BILLS IN SET.—

§ 310. *Bills in sets constitute one bill.*—Where a bill is drawn in a set, each part of the set being numbered and containing a reference to the other parts, the whole of the parts constitute one bill.

§ 311. *Rights of holders where different parts are negotiated.*—Where two or more parts of a set are negotiated to different holders in due course, the holder whose title first accrues is as between such holders the true owner of the bill. But nothing in this section affects the rights of a person who in due course accepts or pays the part first presented to him.

§ 312. *Liability of holder who indorses two or more parts of a set to different persons.*—Where the holder of a set indorses two or more parts to different persons he is liable on every such part, and every indorser subsequent to him is liable on the part he has himself indorsed, as if such parts were separate bills.

§ 313. *Acceptance of bills drawn in sets.*—The acceptance may be written on any part and it must be written on one part only. If the drawee accepts more than one part, and such accepted parts are negotiated to different holders in due course, he is liable on every such part as if it were a separate bill.

§ 314. *Payment by acceptor of bills drawn in sets.*—When the acceptor of a bill drawn in a set pays it without requiring the part bearing his acceptance to be delivered up to him, and that part at maturity is outstanding in the hands of a holder in due course, he is liable to the holder thereon.

§ 315. *Effect of discharging one of a set.*—Except as herein otherwise provided where any one part of a bill drawn in a set is discharged by payment or otherwise the whole bill is discharged.

PROMISSORY NOTES AND CHECKS.—

§ 320. *Promissory note defined.*—A negotiable promissory note within the meaning of this act is an unconditional promise in writing made by one person to another, signed by the maker, engaging to pay on demand or at a fixed or determinable future time a sum certain in money to order or to bearer. Where a note is drawn to the maker's own order, it is not complete until indorsed by him.

Certificate of Deposit.—Under the statute a certificate of deposit in the ordinary form is a negotiable promissory note. (*Forest* v. *Safety Banking & Trust Co.*, 174 Fed. Rep. 345.)

§ 321. *Check defined.*—A check is a bill of exchange drawn on a bank, payable on demand. Except as herein otherwise provided, the provisions of this act applicable to a bill of exchange payable on demand apply to a check.

Cashier's checks, whether certified or not are construed under the statute as bills of exchange payable on demand. (*Singer Mfg. Co.* v. *Summers*, 143 N. C. 103.)

REASONABLE TIME FOR PRESENTMENT OF CHECKS.—

§ 322. *Within what time a check must be presented.*—A check must be presented for payment within a reasonable time after its issue or the drawer will be discharged from liability thereon to the extent of the loss caused by the delay.

General Rule.—Reasonable time ends with the end of the next business day after delivery of the check. (*Dehoust* v. *Lewis*, 128 App. Div. [N. Y.] 131.)

§ 323. *Certification of check; effect of.*—Where a check is certified by the bank on which it is drawn the certification is equivalent to an acceptance.

Certification by Drawee.—Certification of a check by a bank at the request of the payee is equivalent to payment to the drawee and to deposit to his credit. The drawer is absolved from further liability to the payee, even if the bank fails thereafter.

Certification by Drawer.—Certification of a check by a bank at the request of the drawer, does not become effective until delivery to the payee. (*Anglo-South Am. Bank* v. *Nat. City Bank*, 161 App. Div. [N. Y.] 268.) The effect of such a certification is that the check is genuine and the certifying bank becomes liable thereon with the drawer. (*Davenport* v. *Palmer*, 152 App. Div. [N. Y.] 761.)

§ 324. *Effect where the holder of check procures it to be certified.*—Where the holder of a check procures it to be accepted or certified the drawer and all indorsers are discharged from liability thereon.

§ 325. *When check operates as an assignment.*—A check of itself does not operate as an assignment of any part of the funds to the credit of the drawer with the bank, and the bank is not liable to the holder, unless and until it accepts or certifies the check.

§ 326. *Recovery of forged check.*—No bank shall be liable to a depositor for the payment by it of a forged or raised check, unless within one year after the return to the depositor of the voucher of such payment, such depositor shall notify the bank that the check so paid was forged or raised.

§ 330. *Negotiable instruments given for patent rights.*—A promissory note or other negotiable instrument, the consideration of which consists wholly or partly of the right to make, use or sell any invention claimed or represented by the vendor at the time of sale to be patented, must contain the words "given for a patent right" prominently and legibly written or printed on the face of such note or instrument above the signature thereto; and such note or instrument in the hands of any purchaser or holder is subject to the same defenses as in the hands of the original holder; but this section does not apply to a negotiable instrument given solely for the purchase price or the use of a patented article.

§ 331. *Negotiable instruments for a speculative consideration.*—If the consideration of a promissory note or other negotiable instrument consists in whole or in part of the purchase price of any farm product, at a price greater by at least four times than the fair market value of the same product at the time, in the locality, or of the membership and rights in an association, company or combination to produce or sell any farm product at a fictitious rate, or of a contract or bond to purchase or sell any farm product at a price greater by four times than the market value of the same product at the time in the locality, the words, "given for a speculative consideration," or other words clearly showing the nature of the consideration, must be prominently and legibly written or printed on the face of such note or instrument above the signature thereof; and such note or instrument, in the hands of any purchaser or holder, is subject to the same defenses as in the hands of the original owner or holder.

§ 332. *How negotiable bonds are made non-negotiable.*—The owner or holder of any corporate or municipal bond or obligation (except such as are designated to circulate as money, payable to bearer), heretofore or hereafter issued in and payable in this State, but not registered in pursuance of any State law, may make such bond or

obligation, or the interest coupon accompanying the same, non-negotiable, by subscribing his name to a statement indorsed thereon that such bond, obligation or coupon is his property; and thereon the principal sum therein mentioned is payable only to such owner or holder, or his legal representatives or assigns, unless such bond, obligation or coupon be transferred by indorsement in blank, or payable to bearer, or to order, with the addition of the assignor's place of residence.

Banks and Banking

CAPITAL OF BANKS.—The capital of a bank is virtually a **trust fund for creditors**, most of whom are the depositors. The capital must be kept unimpaired and in case of a deficiency through losses or otherwise, an **assessment** may be levied on the stockholders. (*Chicago Title etc. Co.* v. *Omaha State Bank*, 86 Fed. Rep. 863.)

LIABILITY OF STOCKHOLDERS.—

Liability Attached to Ownership of Bank Stock.—The liability attached to ownership of bank stock for bank debts is **statutory** and for the benefit of creditors. (*Swethers* v. *Western Carolina Bank*, 155 N. C. 283.)

Double Liability of Stockholders Statutory.—The double liability of stockholders of **national banks** under Revised Statutes of the United States, Section 5151, is a resultant of contract whereby stockholders acquire stock, and the operation of law. That liability continues until stockholders cause their names to be removed from the records. A mere transfer of shares without changing the corporate records does not free them from liability. (*Williams* v. *Vreeland*, 244 Fed. Rep. 346.) In the case of death the liability attaches to the estate of the stockholder (*Rankin* v. *Miller*, 207 Fed. Rep. 602.) Many **states** have similar laws governing the liability of stockholders of state banks.

Transfer of Stock.—Stockholders of national banks divest themselves of double liability imposed by the federal statutes for the protection of creditors by transferring their stock when the banks are solvent, or even when insolvent, by a bona fide transfer without knowledge of the insolvency; the only ground for holding them liable after a transfer is fraud. (*Fowler* v. *Crouse*, 175 Fed. Rep. 646.)

Necessity of Transfer on Books of Company.—Stockholders of an insolvent bank who, though they had disposed of their stock, failed to have it transferred upon the books of the corporation, were liable as stockholders to bank creditors. (*Van Tuyl* v. *Robin*, 142 N. Y. S. 535.)

No Right to Set-off.—Since all creditors of an insolvent bank are entitled to share pro rata in the trust fund created by the enforcement of the statutory double liability of stockholders imposed by the United States Revised Statutes, Sections 5226, 5227, stockholders of national banks have no right to set off against such liability, the amount of their unpaid deposit accounts in the banks. (*Williams* v. *Rose*, 218 Fed. Rep. 898.) The same principle of law is applied in most states against the stockholders of state banks.

LIABILITY OF BANK DIRECTORS.—There is a liability of bank directors for failure to perform the duties which the general principles of law casts upon them when they become directors, distinct from and in addition to the duties and liabilities expressly imposed by the statutes. (*Williams* v. *Brady et al.*, 232 Fed. Rep. 740.)

In addition to the specific duties defined in the national banking law, directors of national banks are under a common law obligation, to depositors and share-

holders as well as to borrowers, to exercise at least **ordinary care and prudence** in the supervision and administration of the bank's affairs. While knowledge may be essential to render directors liable for breach of duty specially imposed by the statute, this does not prevent the application of the common law rule in measuring violations of common law duties. (*Bowerman* v. *Hamner, Rec. of First Nat. Bank of Salmon*, 250 U. S. 504.)

The statutory liability of directors of national banks as prescribed in Revised Statutes, Section 5239, is the measure of the right of recovery against them for loss resulting solely from their violation of the express provisions of the statute; but that does not exclude their common law liability for negligence in the management of the business of their banks, in violation of their oath of office, which results in loss to their creditors and stockholders. (*McCormick* v. *King et al.*, 241 Fed. Rep. 737.)

Directors Severally Liable.—The directors of national banks are severally liable for the failure to perform their official duties, and suit may be brought against one, all, or any number of them. (*Williams* v. *Brady et al.*, 232 Fed. Rep. 740.)

When Fiduciary Relation of Directors Ceases.—The fiduciary relation between a bank and its directors ceases when they leave the board. (*Receiver of Atlantic Nat. Bank of Providence R. I.* v. *Conley et al.*, 257 U. S. 260.)

Liability of Banks for Acts of Officers.—Banks are liable for the acts of their officers where those acts are within the scope of their duties and apparent authority. (*Chemical Nat. Bank* v. *Armstrong*, 83 Fed. Rep. 556.)

COLLECTIONS.—

Ordinary Duty of Collecting Agents.—The ordinary duty of banks receiving notes for collection extends no further than to make proper demand of payment, and sometimes in case of non-payment to take such further action as may be necessary to secure and preserve the liability of all parties by protest and notice as may be required by the law of the State. (*Carpenter* v. *Nat. Shawmut Bank*, 187 Fed. Rep. 1.)

Authority for Collection is Limited.—Banks receiving notes for collection only have no authority to extend the maturity of the notes or sell them. (*In re L. Danos Planting & Mfg. Co.*, 238 Fed. Rep. 791.)

What Constitutes Collection and Payment.—When a bank has performed the function of collecting and crediting a check, the transaction is closed and, in the absence of fraud or mutual mistake, the transaction is **equivalent to payment** in the usual course as though presented to another bank and paid over the counter. (*Nat. Bank* v. *Burkhardt*, 100 U. S. 686; *American Nat. Bank of Nashville* v. *Miller*, 229 U. S. 517.)

Liability of Banks for Default of Sub-Agent.—The courts of the several states take opposite views on this subject. **First view** is that the collecting bank is liable for the acts of its sub-agents in making collection of bank items. In the states following this rule the depositor need only look to the collecting bank which he can hold responsible for its actions and those of its sub-agents. (*Exchange Nat. Bank* v. *New York City Third Nat. Bank*, 112 U. S. 276.) This view is held in Arkansas, Colorado, Georgia, Kansas, Louisiana, Michigan, Minnesota, Montana, New Jersey, New York, Ohio, Pennsylvania, Texas, and England.

Second view is that a collecting bank employing another bank or person as a sub-agent in collecting bank items is bound only to use reasonable care in selecting competent sub-agents who are worthy of trust. Its liability ends

there and in case of any default the depositor must look to the sub-agent for redress and cannot hold the collecting bank. (*Wilson* v. *Corlinville Nat. Bank*, 187 Ill. App. 222.) Second view followed in Alabama, California, Connecticut, Florida, Illinois, Indiana, Iowa, Kentucky, Maryland, Massachusetts, Mississippi, Missouri, Nebraska, North Carolina, South Dakota, and Wisconsin.

Liability of National Banks for Default of Sub-Agents.—National banks receiving commerical paper in one state for collection in another are liable for any neglect of duty occuring in collection, whether arising from default of their own officers or employees, or from that of their sub-agents or correspondents. Such obligations may be modified by contract, which, however, will not be inferred from knowledge that the receiving banks must or intend in due course of business to forward the paper to other banks for collection. (*Taylor & Bournique Co.*, v. *Nat. Bank of Ashtabula*, 262 Fed. Rep. 168.)

COLLECTION BANKS—DUTIES AND LIABILITIES.—The duties of banks having items for collection are to act **in good faith,** use due skill, care and diligence in making proper presentment and demand for payment, and in case of non-payment to give **proper notice of dishonor** required by the laws of the state to protect the holder and preserve the liabilities of the parties on the instruments for collection. (*Pittsburgh Exchange Nat. Bank* v. *N. Y. Third Nat. Bank*, 112 U. S. 276.)

Payment in Money Only.—Unless specifically authorized collecting banks having paper for collection can only accept money or what is considered as money in banking circles. (*National Life Ins. Co.* v. *Mather*, 118 Ill. App. 491; *Bradley Lumber Co.* v. *Bradley County Bank*, 206 Fed. Rep. 41.)

Must Follow Instructions.—When banks have instruments for collection which are connected with other transactions, such as delivering warehouse receipts, bills of lading, goods, etc., which are to be delivered only on payment of the paper sent for collection, it is necessary for the banks to follow instructions and they are liable for any losses in deviating from such instructions. (*Peoples Nat. Bank* v. *Freeman Nat. Bank*, 169 Mass. 129.)

LIABILITY OF COLLECTING BANKS SUMMARIZED.—Collecting banks are liable:

1. For failure to use due diligence in presentation of paper for acceptance and payment;
2. For taking irregular acceptance;
3. For failure to give notice, or reasonable notice of dishonor;
4. For not making protest on foreign bills;
5. For failure to return promptly unpaid paper.

DEPOSITS.—Relation of depositor to the bank is that of debtor and creditor. In making ordinary and regular deposits, the title to the items of deposit pass to the bank which credits the depositor for a like amount. (*Clement Nat. Bank* v. *State of Vermont*, 231 U. S. 120.) There is no trust relation, and in case of failure of the bank the depositor has no preference and must share pro rata with general creditors.

"Special Deposit" Defined.—A "special deposit" implies the custody of property without the authority in the custodians to use it, and the right of the owner to receive back the identical thing deposited. (*Tuckerman* v. *Mearns et al.*, 262 Fed. Rep. 607.)

Special Deposits—Relation of Parties.—While ordinarily the relation between banker and depositor is that of debtor and creditor, yet if the deposit

is made for a specified purpose the bank becomes *a bailee* of the depositor In such a case a bank is not entitled to apply the balance against an indebtedness to it from the depositor. (*Continental & Commerical Trust & Savings Bank* v. *Chicago Title & Trust Co.*, 199 Fed. Rep. 704.)

Open Accounts.—Deposits in a bank under a running check account with the privilege to the depositor to withdraw all or any part at any time either in person or by check, creates a contract for the **payment of money on demand without interest.** (*Forscheim* v. *Mechanics & Traders Bank*, 206 N. Y. 745.)

Ownership of Deposits.—Deposits are **not the property of the depositors** but the bank receiving them; the relation of the bank and its depositors being that of debtor and creditor, deposits are the assets of the bank. (*Anderson* v. *Farmers Loan & Trust Co.*, 241 Fed. Rep. 322.) On the other hand, a bank must pay out the deposits on proper orders of the depositor, of balances standing in the name of a depositor and the bank cannot question a depositor's right thereto. (*Murphy* v. *Franklyn Sav. Bank*, 131 App. Div. [N. Y.] 759.)

Depositor's Passbooks.—The reception of a passbook by a depositor with entries made therein without examination of the same and without complaint constitutes an implied acquiescence in the correctness of the entries and makes the entries an account stated between the parties. (*Pospisil* v. *Hajicek*, 190, Ill. App. 638.)

Right of Set-Off.—The general rule is that the bank and depositor have mutual rights of set-off in their accounts. Where a depositor is indebted to a bank he is entitled to set-off this indebtedness against his credit balance in the bank even though the bank is insolvent. (*Building, etc. Co.* v. *New York Northern Bank*, 206 N. Y. 400.) On the other hand a bank may look to the credit balance in its hands for repayment of any matured indebtedness to it by the depositor. (*Walsh* v. *First Nat. Bank of Maysville*, 201 Fed. Rep. 522.)

Unmatured Debts—Set-Off.—A bank has no right to set-off or to apply a debt against the depositors credit balance until such debt matures and becomes due. (*Irish* v. *Citizens Trust Co.*, 163 Fed. Rep. 880.) A bank cannot withhold payment of a fund on deposit or refuse payment of a check on the ground that it holds a note which will mature at some future date for payment for which it seeks to hold the deposit. (*Elzy* v. *Morrison*, 180 Ill. App. 711.)

PAYMENT.—

Written Agreement Not Necessary.—Since the law implies a promise from banks in accepting deposits that they will repay all money deposited, it is not necessary to have written agreements. (*Fircano* v. *Columbia Nat. Bank*, 118 App. Div. [N. Y.] 567.) Such deposits may be withdrawn in part from time to time. (*Lafayette Trust Co.* v. *Haldane*, 146 App. Div. [N. Y.] 553.)

Banks Must Pay Proper Holder of Checks.—Payment of checks must be made to the person who is the holder as designated by the maker or by the subsequent indorsers. Banks are therefore bound to require **identification.** (*U. S.* v. *Nat. Bank of Commerce*, 205 Fed. Rep. 433.) Where checks are made payable to bearer such identification is not necessary.

Payment Only on Direction of Depositors.—The relation between banks and depositors being that of debtor and creditor, the banks can justify a payment on the depositors' accounts only upon the actual direction of the depositors. (*Seaboard Nat. Bank* v. *Bank of America*, 193 N. Y. 26.)

Banks Cannot Question Purpose of Checks.—It is the duty of banks to honor checks of depositors to the extent of their deposits without regard to

the purpose for which the checks were given. (*Limick* v. *Nutting*, 140 App. Div. [N. Y.] 265.)

Overdrafts and Banks Refusal to Make Partial Payment of Check.—A bank is bound to honor checks to the extent of the depositors credit balance, but if the amount of his balance is insufficient to pay a check in full a bank may decline to pay the check and is under no obligation to apply the depositors' balance as a partial payment of it.

Overdrafts and Payment by Banks.—When a depositor draws upon a bank in excess of his balance and the bank honors the order, the payment is a **loan to the depositor,** which the latter impliedly promises to pay.

Where a bank notifies a depositor that his check had been presented for payment and that there were no funds to pay it, and the depositor promises to reimburse the bank if it would pay the check, the bank is entitled to recover the amount so paid. When a bank pays checks drawn upon it, the presumption is that the drawer had funds to meet the checks, but such presumption may be rebutted.

CORPORATE FUNDS.—

Deposits and Withdrawals.—Banks in which corporate funds are deposited are not trustees, quasi trustees, factors or agents of corporations but debtors only, and such banks must satisfy themselves that the officers of the corporation signing checks are authorized to do so. Failure to determine this question is at their peril. (*Anderson* v. *Farmer L. & T. Co.*, 241 Fed. Rep. 322.)

Corporate Funds for Officers' Use.—Banks which receive from officers of corporations, corporate obligations for their individual use, drawn by themselves in their own favor, or if banks receive from such officers money or securities of the corporations in payment of the officers' personal debts, do so at their (the banks') peril. Banks are thereby put on inquiry to determine whether the officers had authority to make such use of the corporations' property. (*Anderson* v. *Farmers Loan & Trust Co.*, 241 Fed. Rep. 322.)

Unauthorized Payment of Corporate Checks.—Banks are liable to corporate depositors for the amount of checks paid which are drawn without the authority of the corporations. (*Guaranty State Bank & Trust Co.* v. *Oklahoma Coal Co.*, 209 Fed. Rep. 350.)

TRUST FUNDS.—Banks receiving deposits in the name of an estate are charged with knowledge of the effect of entries relating to the deposits and knowledge that the administrator's misappropriation would be a breach of trust.

Banks having notice that they are dealing with trust funds are bound by information obtainable on inquiry if pressed until the truth is ascertained. Bankers with knowledge that funds deposited are trust funds are held liable on appropriation in breach of trust to refund the money. (*Allen* v. *Puritan Trust Co.*, 211 Mass. 409.)

Where a bank received without inquiry checks drawn by one as executor of an estate, which checks were deposited to his individual credit, and the bank received some of the proceeds in payment of its own debt, it was liable to the estate for the amount of the checks received. (*Bischoff* v. *Yorkville Bank*, 218 N. Y. 106.)

FORGED CHECKS.—Banks are presumed to have knowledge of the signature of their depositors and payments made by them on forged checks cannot be charged against the accounts of the depositors whose names were forged.

The banks are liable for the amounts so paid. (*Morgan* v. *U. S. Mortgage and Trust Co.*, 208 N. Y. 218.)

Forged Indorsements.—Banks are bound to pay valid checks of depositors, but they cannot charge against the depositors accounts money paid on forged checks or on checks to which the banks obtained title by forged indorsements. (*United States* v. *Nat. Bank of Commerce of Seattle*, 205 Fed. Rep. 433.)

Where Forger Is a Stranger to the Parties.—Where a party forging a check was a stranger to the drawee and to the person receiving the money on the check, and they were equally innocent, the drawee, which is the bank, must stand the loss, for the risk of paying out money on a forged signature of a depositor is one the banker must assume. (*Trust Co. of America* v. *Hamilton Bank of N. Y. City*, 127 App. Div. [N. Y.] 515.)

Account Credited with Proceeds from Forged Check.—Where a check sent to a bank for collection, has been credited to the depositor it may be charged back on being discovered that it is a forgery. (*Union Nat. Bank* v. *Franklin Nat. Bank*, 249 Pa. 375.)

Banks Must Know Payee.—When checks are presented for payment it is the bank's duty to know that there is such a person as the payee named in the check and that the person presenting it is entitled to receive payment. In the absence of investigation the bank pays at its own risk. (*U. S.* v. *Nat. Bank of Commerce of Seattle*, 205 Fed. Rep. 433.) Where a bank pays a check on another bank made payable to the order of a certain payee and another person indorsed the payee's name thereon without authority, the bank is liable to the true payee. (*Ellery* v. *Peoples Bank*, 114 N. Y. S. 108.)

Negligence of Depositors.—Banks are not liable for payment on forged checks where the **depositors' negligence** contributed to such payments and the banks have been free from negligence. (*Morgan* v. *U. S. Mortgage and Trust Co.*, 208 N. Y. 218.)

Raised and Altered Checks.—Banks must bear losses incurred through payment on checks which have been altered, either by raising the amount, changing the date, name of the bank on which they are drawn or where checks payable to designated person are changed to bearer. (*Critten* v. *Chemical Nat. Bank*, 171 N. Y. 219; *Chicago Sav. Bank* v. *Block*, 126 Ill. App. 128.)

Duties of Depositors to Examine Returned Checks.—One of the duties of depositors to their bank is to examine returned checks. When the passbook is written up or bank statement received with the cancelled checks charged against the depositor's account, he should examine them within a **reasonable time** and report any forgeries or alterations which he has discovered. If this is not done and his delay has resulted in a detriment to the bank, he is precluded from disputing the correctness of payments as shown by the bank statement. (*Shattuck* v. *Guardian Trust Co.*, 145 App. Div. [N. Y.] 734; *Leather Mfrs. Nat. Bank* v. *Morgan*, 117 U. S. 96; *Hammerschlag Mfg. Co.* v. *Importers and Traders National Bank of New York*, 250 Fed. Rep. 105.)

Bank Statements—Need for Examining.—A depositor has such relation to his bank that he is bound to give heed to the periodical statements coming from the bank in connection with the return of his passbook and cancelled checks showing the balance of his account. If he interposes no objections to such statements the presumption naturally follows that he deems them correct and the bank has the right to rely on such presumption and act upon it in the future. (*National Bank of Commerce of Tacoma* v. *Tacoma Mill Co.*, 182 Fed. Rep. 1.)

A bank will not be held liable for overpayment of checks where checks were written and altered by the bookkeeper and where the depositor's passbook was written up and returned with cancelled checks each month and no claim was made by the depositor until more than a year after the raising of the checks commenced. (*Hammerschlag Mfg. Co.* v. *Importers and Traders Nat. Bank of New York*, 250 Fed. Rep. 105.)

LIABILITY FOR REFUSING TO PAY CHECKS.—Banks are under obligation to honor their depositors' checks to the extent of the depositor's credit balance. A refusal to pay without good and sufficient reasons will warrant recovery of substantial damages. (*Schaffner* v. *Ehrman*, 139 Ill. App. 109.)

May Sue Without Further Demand.—Depositors having funds in banks sufficient to meet checks drawn by them may sue the banks for refusal to honor the checks when presented without any further demand. (*Levine* v. *State Bank*, 141 N. Y. S. 596.)

Banks' Obligation Is to their Depositors, Not to Payees.—Banks are under no obligation to payees to pay checks, being only answerable to the depositors for refusal to pay. (*Columbia-Knickerbocker Trust Co.* v. *Miller*, 215 N. Y. 191.)

Banks by their contract with depositors must pay on their accounts, to the holders of checks bearing the genuine signatures of depositors, the amounts called for, provided such amounts are to their credit. (*Limick* v. *A. J. Nutting & Co.*, 140 App. Div. [N. Y.] 265.)

STOP PAYMENT.—A drawer of an uncertified check may stop payment on it at any time before it is presented to the bank for payment. The bank is bound by such order and if it pays after such notice it does so at its peril. (*Glenman* v. *Rochester Trust Co.*, 209 N. Y. 12.)

The death of the drawer of a check revokes the authority of its payee to collect the check and of the bank to pay it. When payment is made in good faith without knowledge of the drawer's death and in the course of business a bank is relieved from any liability. (*Glenman* v. *Rochester Trust & Safe Deposit Co.*, 209 N. Y. 12.) A bank which pays checks after the death of the drawer with no knowledge of his death is not liable for the amount thereof. (*In re Stacey's Estate*, 152 N. Y. S. 717.)

CERTIFIED CHECKS.—A bank in certifying a check enters into an absolute undertaking to pay the check when it is presented. Certification is **equivalent to the acceptance** of the check by the bank and implies that the check is drawn on sufficient funds in possession of the bank which have been set aside for its payment and that the funds will be applied to pay the check when presented. (*Goshen Nat. Bank* v. *Bingham*, 118, N. Y. 349.)

Banks' Liability on Certified Checks.—The certification of a check by a bank, like the acceptance of a draft, creates an original, actionable liability against the bank, and implies that, when the check is certified, the drawer has sufficient funds in the bank, and that they have been set apart and will be retained for the holder whoever he may be, and whenever the check may be presented. (*Merchant's Bank of Valdosta* v. *Baird*, 160 Fed. Rep. 642.)

Banks Liable Only to Bona Fide Holders of Certified Check.—A bank which certifies a check, though the depositor is without funds, is not liable to anyone, save a bona fide holder for value. (*National City Bank of Seattle* v. *Titlow*, 233 Fed. Rep. 838.)

When Certification Discharges Maker.—Certification of a check at the request of the drawer does not discharge him; but where it is certified at the

request of the holder, the drawer is discharged from further liability. (*Times Square Auto Co.* v. *Rutherford Nat. Bank*, 77 N. J. Law 649.) Certification of a check at the drawer's instance merely operates as an insurance that the check is genuine, and that the certifying bank will become bound for its payment to the payee. (*Davenport* v. *Palmer*, 211 N. Y. 596.)

NOTES PAYABLE AT BANKS DO NOT AUTHORIZE BANKS TO PAY.—The relation of debtor and creditor and not principal and agent exists between a bank and its depositor. Therefore, when a depositor makes a note payable at a bank in which he has funds, that does not constitute the bank his agent to pay it. (*Baldwin Bank of Penn Yan* v. *Scott*, 155 App. Div. 881.)

Agencies for Collection—Notes Payable at Banks.—When a bank at which notes are payable accepts an agency from the owner to collect them the bank is bound to preserve for him every right he would have had if another party had accepted and performed the duty of such agent. (*Security Nat. Bank of Sioux City, Iowa* v. *Old Nat. Bank of Battle Creek, Mich.*, 241 Fed. Rep. 1.)

Bad Checks

ISSUING BAD CHECKS A CRIME.—A majority of the states have passed laws making the issuance of bad checks a crime, the nature of which is variously defined as a misdemeanor, felony or larceny.

Such laws have been adopted in practically all states and the District of Columbia.

The Bad Check Law of New York as amended in 1923 is as follows:

> Any person who, with intent to defraud, shall make or draw or utter or deliver any check, draft or order for the payment of money upon any bank or other depositary, knowing at the time of such making, drawing, uttering or delivering that the maker or drawer has not sufficient funds in or credit with such bank or other depositary for the payment of such check, although no express representation is made in reference thereto, shall be guilty of attempted larceny, and if money or property is obtained from another thereby is guilty of larceny and punishable accordingly.
>
> In any prosecution under this section as against the maker or drawer thereof, the making, drawing, uttering or delivering of a check, draft or order, payment of which is refused by the drawee because of lack of funds or credit, shall be *prima facie* evidence of intent to defraud and of knowledge of insufficient funds in or credit with such bank or other depositary; where such check, draft or order has been protested, the notice of protest thereof shall be admissible as proof of such presentation, non-payment and protest, and shall be presumptive evidence that there was a lack of funds in or credit with such bank or other depositary.
>
> The word "credit" as used herein, shall be construed to mean an arrangement or understanding with the bank or depositary for the payment of such check, draft or order.

IMPORTANT ELEMENTS.—

Insufficient Funds.—Practically all the statutes charge a maker with a crime when he negotiates a check and has no account or, if he has an account, knows that he has insufficient funds to meet it.

Intent.—Most statutes contain a provision to the effect that where a check is issued and payment refused on account of lack of funds or credit, intent to defraud and knowledge of insufficient funds is constructively established for purposes of prosecution.

Specified Time to Make Good.—In a majority of states a maker has a specified time in which to make good a check drawn on insufficient funds.

This period is usually ten days. If the check is not honored within the prescribed statutory period the fraudulent intent is fastened on the maker.

POST-DATED CHECKS.—The weight of authority seems to hold that post-dated checks do not come within the statute. The reasoning followed is:

"The giving of a check presently payable, is an implied representation by the drawer that he then has funds on deposit in the bank upon which it is drawn sufficient to meet it upon its presentation for payment. The giving of a post-dated check carries with it no such implication, but rather the contrary. It is a mere promise to discharge a present obligation on a future day. And the fact of its non-payment when the due date arrives—without more—is no more evidence that it was given with fraudulent intent than is the permitting of a promissory note to go to protest proof of such intent or the failure to pay the purchase price of goods sold on credit standing alone evidence of fraud in the making of the contract. Fraud is never presumed, but must always be proved, and an intent to defraud, cannot be predicated solely upon the mere non-performance of a future promise. The citation of authority in support of such proposition is unnecessary. Its application under facts similar to those presented in the present case led to a reversal of a conviction in *Brown* v. *State* 166 Ind. 85 and in *State* v. *Winter* 98 S. C. 294." (*State* v. *Barone*, N. J. L. 1923.)

The foregoing principle is followed in most states except:

Arizona	Idaho*	Michigan
California	Kentucky	Nevada*
Delaware	Maine	Wyoming

In those states marked by (*) their Supreme Courts have not as yet passed on the subject.

PRE-EXISTING DEBT.—The giving of a check, where there are insufficient funds to meet it, in payment of a pre-existing debt, does not come within the law in those states which define the crime as larceny. This is followed in New York, New Jersey, Colorado, and other states except those mentioned in the next paragraph.

The states which do not seem to follow this principle but which consider the giving of a bad check for a pre-existing debt a crime, are as follows:

Alabama	Kansas	North Dakota
Arizona	Maine	Ohio
Arkansas	Maryland	Oklahoma
Connecticut*	Michigan	Oregon*
Delaware	Missouri*	Rhode Island
Florida	Montana*	Utah
Idaho*	Nebraska*	Wisconsin
Indiana	Nevada	Wyoming*

In those states indicated by (*) their Supreme Courts have not passed on the question. The lower courts however have held in most instances that the statutory penalty covers the issuance of checks for pre-existing debts.

PROCEDURE WHEN BAD CHECK IS RECEIVED.—The procedure to be followed to take advantage of the statutes is for the recipient of a bad check to notify the maker and demand that payment be made within the time allowed by the statute, generally ten days. Such notice should be served personally on the maker of the check. If payment is not made good within that time, the facts should be laid before the District Attorney of the county having jurisidiction. Arrest should not be ordered without an indictment by a grand

jury in cases which relate to post-dated checks and checks in payment of pre-existing debts, the reason being the uncertainty of such cases under the statutes of the several states. Making an arrest without these precautions will lay a person open to an action for false imprisonment or malicious prosecution.

False Financial Statements

FALSE STATEMENTS UNLAWFUL.—A number of states have enacted laws declaring that the making of a false financial statement for the purpose of obtaining credit is a misdemeanor punishable by fine or imprisonment.

STATES HAVING SUCH LAWS.—The following states have enacted such laws:

Arkansas	Maine	Oklahoma
California	Maryland	Oregon
Connecticut	Michigan	Pennsylvania
Delaware	Missouri	Rhode Island
Florida	Nebraska	Utah
Illinois	New Hampshire	Vermont
Indiana	New Jersey	Washington
Kentucky	New York	West Virginia
Louisiana		Wyoming

NATURE OF STATE LAWS.—Although the laws of the various states on this subject differ in minor details and impose different penalties, they are substantially like the **New York statute** as follows:

Any person

1. Who shall knowingly make or cause to be made, either directly or indirectly, or through any agency whatsoever, any false statement in writing, with intent that it shall be relied upon, respecting the financial condition, or means or ability to pay, of himself, or any other person, firm or corporation, in whom he is interested, or for whom he is acting, for the purpose of procuring in any form whatsoever, either the delivery of personal property, the payment of cash, the making of a loan or credit, the extension of a credit, the discount of an account receivable, or the making, acceptance, discount, sale or indorsement of a bill of exchange or promissory note, for the benefit of either himself or of such person, firm or corporation; or,

2. Who, knowing that a false statement in writing has been made, respecting the financial condition, or means, or ability to pay, of himself, or such person, firm or corporation in which he is interested, or for whom he is acting, procures, upon the faith thereof, for the benefit either of himself or of such person, firm or corporation, either or any of the things of benefit mentioned in subdivision one of this section; or,

3. Who, knowing that a statement in writing has been made, respecting the financial condition, or means, or ability to pay of himself or such persons, firm or corporation, in which he is interested or for whom he is acting, represents on a later day, either orally or in writing, that such statements theretofore made, if then again made on said day, would be then true, when in fact, said statement if then made would be false, and procures upon the faith thereof, for the benefit either of himself or of such person, firm or corporation, either or any of the things of benefit mentioned in subdivision one of this section,

Shall be guilty of a misdemeanor and punishable by imprisonment for not more than one year or by a fine of not more than one thousand dollars, or both fine and imprisonment.

PENAL LAWS.—In some states statutory provisions are made penalizing the giving of false financial statements when property, money, credit or anything of value is obtained on the basis of the statement.

Nature of Penal Laws.—Section 442 of the Penal Law of New York reads as follows:

Where property is purchased by aid of a duly signed financial statement and in said statement the buyer shall state that he conducts a specified kind of business and keeps books of account of said business, upon failure to pay for such property at maturity of the account, the seller may, at any time within ninety days thereafter, request the buyer to produce his said books of account within ten days after such request. The buyer shall then permit the seller to fully examine such books of account and to make copies of any part thereof. Failure to so produce the books is presumptive evidence that each and every pretense relating to the purchaser's means or ability to pay, in said statement contained, was false when made and known to the buyer to be false.

States Having Penal Laws.—The following states have penal laws which punish those who furnish false financial statements:

Colorado	Ohio
Georgia	Tennessee
Nevada	Virginia
New York	Wisconsin

False Statements to Banks.—The following states have enacted statutes relating specifically to giving false statements to banks:

Colorado	Tennessee
Georgia	Virginia
Nevada	Wisconsin
Ohio	

IMPORTANT ELEMENTS SUMMARIZED.—In order to convict an offender under the statute it is necessary to prove the following:

First: That the statement was made for the purpose of obtaining credit. This is sufficient in New York and several other states. Some, however, hold that a crime is not committed until property is obtained on the statement.

Second: That the statement is false in a material way. If the grantor of credit relies on a statement subsequently found to be false and would not have extended the credit if the facts had been shown, the discrepancies in the statements are obviously material.

Third: That the statement was made with intent that it shall be relied on.

Fourth: That the statement was made within the state or county having jurisdiction where prosecution is brought.

Interest

DEFINITION.—**Interest** is "money to be paid for the use of capital, on a loan of money, or forbearance of a debt and becomes part of and incident to a debt; or it is damages for the detention of a debt due, and fixed by law at a given rate, in proportion to the amount of money lent, or detained, and the time for which it is thus lent or detained." (*Corcoran* v. *Henshaw*, 8 Gray Mass. 267.)

Compound interest is "interest added to the principal as the former becomes due, and thereafter made to bear interest." (*Hovey* v. *Edmison*, 3 Dak. 449.)

Compound interest is **not favored by the courts** and will not be allowed unless authorized by statute or by contract, expressed or implied. (*Timberlake* v. *First Nat. Bank*, 43 Fed. Rep. 231.)

Legal interest is the rate prescribed by law which will prevail in the absence of special agreement between the parties.

Lawful interest means any rate of interest up to the maximum set by statute for which interest may be contracted. In many states parties may agree on any rate of interest within the prescribed statutory maximum. Such agreements should be in writing and comply with the requirements of the local statutes. The maximum of such interest rate is set forth in the following table:

Arizona	Not exceeding 10%
Arkansas	" " 10%
California	" " 12%
Colorado	" " 12% on amounts to $300 and any rate above this amount.
Connecticut	" " 12%
District of Columbia	" " 8%
Florida	" " 10%
Georgia	" " 8%
Idaho	" " 10%

WHAT LAW GOVERNS.—In general, and in the absence of agreement, where interest is reserved it is governed by the law of the place where the contract was made. (*Carro* v. *Zane*, 149 U. S. 122.) Where, however, a contract involving interest is made in one state to be performed in another, the law of the place of performance will govern. (*Coghlan* v. *South Carolina R. Co.*, 142 U. S. 101.) **Parties may agree** to be bound by the interest laws of the place where the contract was entered into instead of the place of performance. (*Kellogg* v. *Miller*, 13 Fed. Rep. 198.)

Strict Construction.—Interest laws, being statutory and in derogation to the common law, must be strictly construed. **Construction and interpretation** of contracts for interest are governed by the same rules that apply to contracts in general.

INTEREST NOTICE ON INVOICES.—Where invoices sent with goods contain the terms of credit, together with words to the effect that bills bear interest after maturity and they are accepted without objection, it constitutes a contract for interest. (*Braun* v. *Hess*, 187 Ill. 283.)

CUSTOM OF TRADE.—A trade custom which is legal, well known, long established, and generally agreed to within the trade, that interest is due under given conditions, results in an implied contract to pay interest. (*Woerz* v. *Schumacher*, 161 N. Y. 530.)

Knowledge of Trade Customs.—"This knowledge may be established by presumptive as well as direct evidence. It may be inferred from the uniformity and long continuance of the usage, from the fact that a party has for some time been in the particular trade to which it relates, from the previous dealings between the parties, or from any other facts tending to show its general notoriety." (*Fisher* v. *Sargent*, 10 Cush. [Mass.] 250.)

WRITTEN INSTRUMENTS.—As a general rule all written instruments referring to the payment of money carry with them an implied promise to pay interest if not paid when due. (*Goodwin* v. *Fox*, 129 U. S. 601.)

OPEN ACCOUNT.—As a general rule interest is **not allowed** on an unliquidated open and running account. "While, as a general rule, the law does not allow interest on an open account, it is perfectly **competent for the debtor to agree** to pay interest on it, and if he does so agree, he is bound to pay interest on the amount that is actually due, when it is ascertained, even though he disputes certain items in the account. There is no law prohibiting such a contract." (*Lee* v. *Hill*, 92 S. C. 114.)

SETTLED ACCOUNTS.—In the absence of agreement to the contrary, interest will be allowed on settled accounts where the balance due has been agreed to by the parties. (*Cooper* v. *Coates*, 21 Wall 105.)

RATE OF INTEREST.—The rate of interest agreed to by the parties, if within the statutory limitations, runs on at that rate at simple interest until the obligation is paid. (*Ohio* v. *Frank*, 103 U. S. 697.) "To hold that the

stipulated rate of interest shall not govern after the maturity of the contract would be to disregard the plain intent and common understanding of men in their contracts, to pervert the unmistakable meaning of their language and unjustly to pay defaulting debtors a premium not contemplated by them for their default. It is probable that no man ever promised a stipulated rate of interest who did not well understand that it was to be borne as long as the debt was unpaid. When the contracting parties stipulate for a rate of interest different from that prescribed by law, their agreement, if not prohibited by the statute, fixes the incident of the debt which attends it as long as it exists, and to say the rate fixed by statute to govern in the absence of a conventional rate shall at any time supersede the rate agreed on, is to do violence to the right of parties to make their agreement a substitute for the statutory rate." (*C. J. Campbell in Meaders* v. *Gray*, 60 Miss. 400.)

WHEN INTEREST BEGINS.—Interest runs from the time agreed to by the parties. Where no agreement is made the interest runs from the time the principal becomes due. (*Am. Iron etc., Mfg. Co.* v. *Seaboard Air Line R. Co.*, 233 U. S. 261.)

When Demand is Necessary.—In debts, due bills, and obligations payable on demand, interest does not begin to run until demand for payment is made. (*Ledyard* v. *Bull*, 119 N. Y. 62.)

When Demand is Not Necessary.—Interest will begin to run although demand is not made or necessary, at maturity of the obligation when the debtor knows when and what he is to pay, where the law sets the time or obligation, or the debtor has placed obstacles in the way of the creditor to prevent him from making demand.

WHEN INTEREST STOPS.—Interest will stop running in the following instances:

1. On Payment of Principal.—

2. Improper Acts of the Creditor.—Making it impossible for the debtor to pay the debt. Generally interest is suspended during the period he is prevented from making payment. (*Davidson* v. *Mexican National R. Co.*, 58 Fed. Rep. 653.)

3. Laches.—Where the creditor delays unreasonably in pressing the claim against the debtor, interest cannot be collected. (*Redfield* v. *Ystalyfera Iron Co.*, 110 U. S. 174.)

4. Absence of Creditor.—Where the creditor cannot be found or is absent from the country and has left no agent to collect the debt, interest will cease if the debtor has made proper effort to find the creditor.

5. Valid Tender of Payment by Debtor at Maturity.—The reason for such a rule rests in the fact that the person to whom the tender was made, if the sum tendered is sufficient to satisfy him for his debt and for his costs, is bound to take it, and if he does not while the debt is not paid, the liability of the debtor for interest is suspended." (*Hoffman* v. *Rose Dress Co. Inc.*, 179 App. Div. [N. Y.] 57.) A tender before maturity is not valid and does not stop the running of interest.

"Among the elements of a tender, where money is to be paid, in order that such tender may be effective as such, are that it must involve the **proper amount** and be **unconditional**. If either of such elements is lacking the tender is ineffective. The circumstances of the offer must be such as to leave the creditor free to accept the amount offered without prejudice to him, and without thereby rendering himself liable to be held to have impliedly admitted that the amount

tendered is all that is due." (*Kingan* v. *Maryland Casualty Co.*, 65 Ind. App. 301.)

6. Payment Suspended by Court Order.—Where the payment of the debt is suspended by reason of an order of a court of proper jurisdiction or by action of law interest ceases to accumulate. (*Thomas* v. *Western Car Co.*, 149 U. S. 95.)

7. Deposited in Court.—A deposit in court or at the direction of the court suspends the accumulation of interest. This is generally done when the debt is the subject matter of litigation. If the depository bank pays interest on the deposit the amount follows the fund and goes to the party successful in the litigation.

COMPUTATION.—As a rule interest is computed so as to obtain simple interest which will represent the interest for the period during which it should run. Compound interest is computed only where allowed by statute or contract and unless there is such authority for it will not be allowed by the courts. (*Harlan* v. *Houston*, 258 Fed. Rep. 611.)

"United States Rule."—What is generally known as the United States rule for computing interest in **partial payments** is set forth by Chancellor Kent in the leading case of *Connecticut* v. *Jackson*, 1 Johns Ch. (N. Y.) 13: "The rule for casting interest, where partial payments have been made, is to apply the payment, in the first place to the discharge of the interest then due. If the payment exceeds the interest, the surplus goes toward discharging the principal, and the subsequent interest is to be computed on the balance of principal remaining due. If the payment be less than the interest, the surplus of the interest must not be taken to augment the principal; but interest continues on the former principal until the period when the payments, taken together, exceed the interest due, and then the surplus is to be applied towards discharging the principal; and interest is to be computed on that balance, as aforesaid."

Judge Wayne stated the rule as follows: "The correct rule, in general, is that the creditor shall calculate interest, whenever a payment is made. To this interest, the payment is first to be applied; and if it exceeds the interest due, the balance is to be applied to diminish the principal. If the payment fall short of the interest, the balance of interest is not to be added to the principal so as to produce interest."

Where "United States Rule" Is Followed.—In general the foregoing rule in computing interest is followed by the courts where the contracts of the parties or the usage of trade do not indicate some other way of computing interest. In estates and relations with the government this method is also followed.

Mercantile Rule.—Where it is the agreement of the parties or the custom of the trade in which the parties are engaged to indicate the use of the Mercantile Rule for computing interest the courts have permitted it. By this method the balance of the debt is obtained by calculating the interest on each item of the debt on the one side and allowing interest on each payment on the other. This method, however, is not followed by all the courts of all jurisdictions. (*Gay* v. *Beckey*, [Mich.] 100 N. W. 920.)

ACCOUNTS.—Interest begins to run when accounts are due. It is not permissible to strike periodic balances, compute interest thereon and make the new balance a new principal on which interest is computed for the next period. (*Spain* v. *Talcott*, 165 App. Div. [N. Y.] 815.) Where, however, this is the trade custom and is acquiesced in by the debtor, the courts have permitted this method. (*Barclay* v. *Kennedy*, 2 F. Cas. No. 976.)

Usury

DEFINITION.—"Usury consists of extorting or taking a rate of interest for money, above that allowed by law. It is not necessary that money should be actually advanced, in order to constitute the offence of usury; but any pretense or contrivance whatever to gain more than legal interest, where it is the intent of the parties to contract for a loan, will make that contract usurious." (*Wilkie* v. *Roosevelt*, 3 Johns Cas. [N. Y.] 206.)

ESSENTIALS OF A USURIOUS CONTRACT.—"Three things must unite to render any contract usurious. First, there must be a loan, express or implied. Second, there must be an agreement that the money lent or, which is the same thing, that which is lent for the purpose of raising money, shall be repaid, and that without conditions or contingency. And, third, there must be an agreement to pay a greater rate of interest than that allowed by statute." (*Leavitt* v. *De Launy*, 4 N. Y. 363.)

TEST OF A USURIOUS CONTRACT.—"The test . . . . is: Will the contract, if performed, result in producing to the lender a rate of interest greater than is allowed by law, and was that result intended?" (*Smith* v. *Parsons*, Minn. 520.)

THE LENDER LIABLE.—"These laws are enacted to protect the weak and necessitous from oppression. The borrower is not *particeps criminis* with the lender, whatever his knowledge or intention may be. The lender alone is the violator of the law, and against him alone are its penalties enacted. It would be indeed strange if the only party who could violate the law had intentionally done so, and could escape its penalty because by some device or deception he had so deceived the borrower as to conceal from him the fact that he was taking usury." (*Lukins* v. *Hazlet*, 37 Minn. 441.)

USURIOUS CONTRACTS CONSTRUED AGAINST LENDER.—Contracts shown to be usurious are strongly construed against the lender. (*Union Mortgage etc. Co.* v. *Hapgood*, 97 Fed. Rep. 360.)

WHAT LAW GOVERNS.—The **situs of a contract** determines under which law the rights and liabilities of the parties shall be determined. The usury laws of that state apply. The interpretation of the contract is largely governed by the facts and intent of the parties. The intent must be in good faith and not for the purpose of evading the laws of another state; there must be some important element referable to the state where the contract has its situs and which may be the place of making or execution or residence of the parties. It must not be against public policy. (*Kellogg* v. *Miller*, 13 Fed. Rep. 198.)

USURY LAWS NOT APPLYING IN CERTAIN INSTANCES.—

Building and Loan Associations.—Some states exempt certain corporations and associations from the usury laws. Most prominent among these are building and loan associations. (*Concordia Sar. etc. Asso.* v. *Read*, 93 N. Y. 474.)

Banking Loans on Collateral Security.—Certain kinds of loans have been exempted from the operation of the usury laws, such as certain banking loans on collateral security under the New York statute.

Interest in Advance.—Generally, as a result of usage, banks are allowed to take interest in advance. This practice is not considered to be usurious. (*Alexandrian Bank* v. *Mandeville*, 2 Fed. Case No. 850.)

Pawn Brokers' Loans.—In most states loans made to individuals on pledge of personal property are not affected by the usury laws where such loans are made by licensed pawn brokers.

MASSACHUSETTS LAW ON USURY EXCEPTIONAL.—"It is to be observed in this connection that there is no law in Massachusetts against usury. Excepting a loan of less than $1,000 it is lawful to contract in writing for any rate of interest." (*In re Ponsi*, 268 Fed. Rep. 1000.) Section 3, Chapter 107, Laws of Massachusetts, sets forth that if there is no agreement or provision of the law for a different rate such as governing small loans on personal property as security (mentioned in the next paragraph) the rate of interest shall be 6 per cent per annum but it shall be lawful to pay, reserve or contract for any rate of interest or discount. No greater rate than 6 per cent can be recovered in a suit unless the agreement to pay it is in writing.

MASSACHUSETTS LAW ON LOANS UNDER $1,000 TO INDIVIDUALS.—The law of Massachusetts (Chapter 140, Sections 86 to 112) regulates in detail the manner in which loans of $1,000 or less are made to individuals on security of personal property. The rate of interest cannot exceed 18 per cent per annum. must be only for the time the loan runs, and the total other charges for services, etc., cannot exceed $5. The lender must keep full records of each loan which may be subject to inspection by state officers. This section of the Massachusetts law does not apply to pawn brokers.

CORPORATIONS INCAPABLE OF PLEADING USURY LAWS.—In New York and several other states, corporations cannot plead the usury laws as a defense, the effect being the repeal of usury laws in so far as they relate to the obligations of corporations. (*Curtis* v. *Leavitt*, 15 N. Y. 9.)

Why Corporations Cannot Plead Usury Laws.—The statutes of many states do not permit corporations to set up the defense of usury. The underlying reason is: "These laws were originally based upon the assumption that the needy borrower was in some degree in the hands of the lender. Government has, therefore, assumed that it was a duty incumbent upon it to protect the former against the rapacity of the latter by adequate pains and penalties. In regard to natural persons, subject to the contingencies of business, often with little or no capital to start with, these considerations might apply with great force; but in regard to corporations organized for the purpose of concentrating in one undertaking the contributions of a large number of individuals until the aggregate shall amount to the capital supposed to be requisite for the successful prosecution of such undertaking, the legislature may well have assumed that no such protection was necessary; that if corporations thus organized became borrowers it would not be from necessity, but voluntarily, to enable them to carry forward some enterprise which afforded a reasonable expectation of profits sufficient to enable them to repay the necessary interest without loss or sacrifice." (*Southern L. Ins. etc., Co.* v. *Packer*, 17 N. Y. 51.)

MONEY OR ITS EQUIVALENT THE SUBJECT MATTER OF CONTRACT.—The loan must be money or its equivalent to come under the statutes. However, a loan of money repayable in chattels is not usurious no matter how extortionate it may be. (*Cutler* v. *How*, 8 Mass. 257.) Where however, the price of this chattel is fixed by agreement and the chattel is to be returned and compensation charged for its detention, this is construed as interest and is usurious if in excess of the amount allowed by law. (*Galveston Ins. Co.* v. *Grymes*, 94 Tex. 609.) Here the use of the chattel is considered merely a means to hide usury.

It was held (*Dry Dock Bank* v. *American L. Ins. Co.*, 3 N. Y. 344) that "the true construction of the two last statutes, as I apprehend, is and has been, that no more than the prescribed rate of interest should be taken, on a loan, or forbearance of money, directly, or indirectly, by way of loan of goods or choses in action, or in any other manner. In a word, the statute would have been as comprehensive without the specifications of 'goods and things in action' as it now is. The terms 'interest' and 'forbearance' cannot be predicated of any other than a loan of money, actual or presumed. Interest is defined to be a certain profit for the use of the loan; and forbearance, the giving a further day when the time originally limited for the return of the loan, has passed. Both imply that the thing loaned has an established value, so that the lender on its return, with the compensation fixed by law for the use and risk, may receive a 'certain profit.' Now this is true only of money, which is legally supposed to have a fixed, unchangeable value in itself, and to be consequently the true measure of value of all other property. A fixed rate per cent on money, therefore, in contemplation of law, is supposed to give to the lender a 'certain profit,' because the thing loaned is of the same value at the end of the term as at its commencement."

SALES OR EXCHANGES OF PROPERTY.—Sale or exchange of property if bona fide cannot become usurious under any conditions. But the courts will not countenance a usurious loan in the form of a sale. (*Roat* v. *Pinney*, 11 Wis. 84.)

NOTES FOR DEFERRED PAYMENTS.—In general, where notes are taken in deferred payment and contain interest at a rate greater than allowed by law on loans, such interest is not considered usurious where the parties acted in good faith. (*Cutler* v. *Wright*, 22 N. Y. 472.) The reasoning behind this rule is stated by Lord Tenterden in *Beete* v. *Bidgood*, 7 B and C 453 (Eng.).

"The agreement was founded partly upon what was considered the present price of the estate, and partly upon what was considered its price if paid for at a future day. The only difficulty has been occasioned by calling the difference between these two prices interest; but it is our duty to look not at the form and words, but at the substance of the transaction; and as on the one hand, we should not pay attention to the words of the contract, if the substance of it went to defeat the provisions of the Statute of 12 Anne, c. 16, so, on the other hand, we ought not to rely upon the words, so as to defeat the contract, if in substance the transaction was legal. It appears to me that in substance this was a contract for the sale of the estate at the price of £20,800 to be paid by installments; in that there was no illegality."

DISGUISED SALES TO COVER USURIOUS LOANS.—Where a borrower as a condition precedent to obtaining a loan is compelled to purchase from the lender property at an exorbitant price and the purchase price taken out of the sums loaned and although the money loaned on its face bears lawful interest, it is considered usurious. (*Stockwell* v. *Richardson*, 101 N. Y. 643; *Earnest* v. *Haskins*, 100 Pa. St. 551.)

Where property is sold by the lender to the borrower at an exorbitant price to be paid at a future date so as to enable the seller to resell the goods immediately for cash and so obtain the funds he needs, it is held to be usurious where the purchaser's obligation was greater than the fair value of the property plus lawful interest. (*Quackenbos* v. *Sayer*, 62 N. Y. 344.) The same holds true where securities are sold payable at a future date in an amount greater than the value of the securities when sold, plus lawful interest, the sale of the securities being made for the purpose of enabling the purchasing borrower to resell or

exchange them to obtain the money he needs. If the borrower's obligation to pay at a future time is greater than the present value of the securities and lawful interest, it is construed as usurious. (*Meaker* v. *Fiera*, 145 N. Y. 165; *Orleans Bank* v. *Curtis*, 11 Metc. [Mass.] 359.)

If property is sold by the borrower to the lender at a given price with a binding condition that the borrower repurchase the property at a higher price, which price is greater than the purchase price and lawful interest, the transaction is considered usurious. (*Fielder* v. *Darwin*, 50 N. Y. 43.)

PURCHASE AND SALE OF NOTES AT A DISCOUNT NOT USURIOUS.—Notes after issue may be bought and sold at any price the parties may agree to without becoming charged with usury.

The Rule.—A note which has been negotiated by the maker, and which might, if at maturity, be enforced against him by the holder, may be sold at a greater discount than the rate of 6 per cent per annum, without involving the purchaser in the penalties for usury. But the note must be perfect and available to the holder to make it salable by him. The test is the right to maintain an action upon it, against the parties to it, if it was then due.

PURCHASE AND SALE OF MORTGAGES AT DISCOUNT.—A bona fide purchase or sale of an existing mortgage issued for a consideration at less than its face value is **not usurious.** However, a pretended sale of a mortgage to cover a usurious loan will not be allowed. (*Green* v. *Elmer*, 8 N. Y. 422; *Colebour* v. *State Sav. Inst.*, 90 Ill. 152; *Stewart* v. *Hamel*, 91 N. Y. 199.)

OTHER USURIOUS DEVICES.—The courts will look with disfavor on devices resorted to as a cover for usurious loans. The fiction of form is set aside in order to arrive at the real intent of the parties. If the transaction is in fact a usurious loan the courts will consider it unlawful.

EFFECT OF USURY.—Usury being a statutory offence, the penalty is according to what the statute of the particular state prescribes. These statutes are not in harmony, but in most states they provide for forfeiture of the usurious interest; in others, the excess of usurious interest above the legal interest; and in several, the usurious loan is void as to both principal and interest.

When Contract Is Void.—When a usurious contract is void under the statute the lender cannot enforce the contract. (*Ormund* v. *Hobart*, 36 Minn. 306.)

When Interest Is Forfeited.—When the statutes declare all the interest forfeited in a usurious contract the lender can nevertheless recover the principal loaned. (*Kesner* v. *Trigg*, 98 U. S. 50.)

When Usurious Excess Is Forfeited.—In those states where the statute declares the excess over the lawful interest forfeited, the lender can recover the principal and legal interest. (*Yancy* v. *Teter*, 39 Ind. 305.)

EVIDENCE AND BURDEN OF PROOF.—Usury, being a statutory offence, will never be presumed. A violation of the law must be shown by competent evidence by the party alleging the violation, on whom lies the burden of proof. (*Stillman* v. *Northrup*, 109 N. Y. 473.)

RULE IN NEW YORK.—In New York the legal rate of interest is 6 per cent per annum. Usury is forbidden except in certain instances where the usury laws do not apply. Usurious contracts are void and the lender cannot recover principal or interest under them. Where payments of interest have been made by a borrower the excess above the legal rate can be recovered by the borrower. (Chapter 21, Section 371-373, Consolidated Laws of New York.)

RULE IN PENNSYLVANIA.—In Pennsylvania the legal rate of interest is 6 per cent per annum. Special provisions are made to govern licensed money lenders on loans of $300 or under on personal property. Usurious contracts are not void but the interest in excess of the legal rate is forfeited. Usurious interest paid by a borrower may be recovered by him. (*Steere* v. *Oakley*, 186 Pa. 582.)

Attachment

DEFINITION.—"The word 'attachment' as ordinarily understood in American law has reference to a writ the object of which is to hold property to abide the order of the court for the payment of a judgment in the event the debt shall be established." (*Wilder* v. *Inter-Island Navigation Co.*, 211 U. S. 245.)

STATUTORY REMEDY.—Proceedings under a writ of attachment are not common law actions but are founded on statutes and hence are strictly construed in favor of those against whom they are directed. (*Kelderhouse* v. *McGarry*, 143 N. Y. S. 741.)

BASIS OF WRIT OF ATTACHMENT.—

Non-Resident.—Non-residence of the debtor in practically all states is a basis for the issuance of a writ of attachment.

Resident.—In general where the ordinary process of law can be served on a debtor by his being actually within the reach of the courts of the state, a writ of attachment will not be issued in the absence of other grounds given by statute.

Resident—Absconded or Concealed.—An attachment may be issued against a resident where he has absconded from the state or is absent or concealed so that the ordinary process of the courts cannot reach him. A mere temporary absence from the state without intent to avoid process does not authorize an attachment. (*Brekke* v. *Waite*, 36 S. D. 26.)

Fraud.—A fraudulent transfer of property is cause for issuance of a writ of attachment in most states. To warrant an attachment the fraud must be actual and intentional and not constructive fraud. (*Millang* v. *Lambros*, 153 N. Y. S. 944.) The burden of proof is on the attaching creditor to prove intent to defraud where this is the ground on which an attachment is sought. (*First State Bank of Durant* v. *Smith*, 43 Okl. 320.)

PROPERTY SUBJECT TO ATTACHMENT.—

Personal Property.—In general, personal property is subject to attachment in practically all states. Where, however, this property is pledged, as by a chattel mortgage, it is not subject to a writ of attachment to the extent of the prior lien, or pledge. (*Crutts* v. *Daly*, 145 N. Y. S. 850.) As shares of stock are personal property, they may be attached. (*Pease* v. *Chicago Crayon Co.*, 235 Ill. 391.)

PROPERTY IN THE HANDS OF THE LAW.—

Decedent's Estate.—Property of a decedent while in course of administration cannot be attached. (*Griggs* v. *Nadeau*, 221 Fed. Rep. 381.)

PROPERTY ATTACHED UNDER JURISDICTION OF COURTS.—The courts obtain jurisdiction over property upon the consummation of attachment. (*Bank of Appleton City* v. *Griffith*, 192 Mo. App. 443.)

REQUISITES OF WRIT OF ATTACHMENT.—In order to justify the granting of an attachment the plaintiff must set forth by affidavit one of the

causes for which an attachment will be issued under the statutes of that state. (*Jonasson* v. *Herrick*, 126 App. Div. [N. Y.] 827.) The information set forth in the moving papers must be such as a person of reasonable prudence would be willing to accept and act on. (*Kelderhouse* v. *McGarry*, 143 N. Y. S. 741.) The proof of facts relied on must be sufficient to establish specified matters and must be more than the mere belief or conclusions of witnesses. (*Hanford* v. *Duchastel*, 87 N. J. L. 205.)

BONDS ON ATTACHMENT.—A creditor applying for a writ of attachment in most states is required to furnish a bond to pay costs and damages to the defendant for loss sustained by reason of a wrongful issuance and levy of writ of attachment. (*Green* v. *Hoppe*, 175 S. W. [Tex.] 1117.)

WRONGFUL ATTACHMENT.—Where an attachment is wrongfully sued out the plaintiff is liable to an action in damages. (*Katsulius* v. *Confectiones & Bakers' Supply Co.*, 166 Ill. App. 581.)

ATTACHMENT LAWS OF VARIOUS STATES.—The attachment laws of the various states being statutory and subject to frequent changes great care must be exercised in the procedure to make use of them. The grounds on which and the nature of causes of actions under which attachments may be issued in the different states are not in harmony. When attachment proceedings are contemplated, competent legal advice should be followed.

Liens

DEFINITION.—A lien is "a security—given by law to secure the payment of money." (*Gilchrist* v. *Helena, etc. R. Co.*, 58 Fed. 708.) "A special right which one has in that of which another has the general property; and, to the extent of the lien, it is an abridgment of the dominion which the latter has in the thing." (*Hayden* v. *Delay*, Litt. Sel. Cas. [Ky.] 278.)

CLASSIFICATION OF LIENS.—Liens are generally classified as common law liens, equitable liens, and statutory liens.

Common law liens are rights to hold as security personal property in possession of the lienor or until some debt or claim on that property is paid. (*The Menominee*, 36 Fed. Rep. 197.) Title does not vest in the lienor nor has he a right to sell the property.

Equitable liens are rights granted by courts of equity to have property of another applied for the payment of a claim or debt. Such actions are rights in equity and rest on the jurisdiction of the equity courts. They differ from common law liens in that it is not necessary for the lienor to have possession of the property. (*The Menominee*, 36 Fed. Rep. 197.)

As to **statutory liens,** the statutes of the various states have definitely declared that under certain circumstances persons shall have liens on certain classes of property. Many of the common law liens have become statutory liens by legislative enactment. (*The Menominee*, 36 Fed. Rep. 197.)

ESSENTIALS.—

Rightful Possession.—To sustain a claim for a common law lien it is essential that the lienor has rightful possession of the property and the claim must be for some service rendered or debt due the claimant on the personal property held. (*Cincinnati Cooperage Co.* v. *Woodyard*, 21 Ky. L. Rep. 1221.)

Confined to Specific Property.—A lien created by contract for one debt is confined to and attaches to the personal property in possession and the claim cannot be used to create a lien for some other debt against the same person.

(*Talbot* v. *McPherson*, 23 Fed. Cas. No. 13728.) **In equity** possession of the property is not essential to sustain a lien but the property must be capable of identification. (*Drake* v. *Taylor*, 7 Fed. Cas. No. 4067.)

Most Important Statutory Liens.—Many of the states provide by statutes for liens and under what circumstances persons may have liens on certain classes of property for certain debts. Some of the more important liens of interest to a financial manager are mechanics' liens and landlords' liens.

WAIVER OF LIENS.—Liens may be waived by:

Agreement, which may be oral or written when such agreement is supported by a consideration. (*Fisher* v. *Stewart*, 191 Pa. St. 323.)

Operation of law.

Act of the holder of the lien, which is inconsistent with the continuance of the lien. (*U. S.* v. *Barney*, 24 Fed. Cas. No. 14525.)

LOSS OF LIENS.—Liens may be lost by—

Fraud on the Part of the Lien Holder.—The fraud must relate to the property and the lien relating thereto.

Voluntary parting with possession and control over the property to which the lien is attached. (*Gregory* v. *Morris*, 96 U. S. 619.)

Sale of the Property.—A lien is lost where the lien holder sells the property in a different way than that prescribed by statute for the sale of property subject to liens. (*Foltz* v. *Peters*, 16 Ind. 244.)

Failure to Assert Lien.—Withholding the property for some other reason than for the lien amounts to a failure to assert the lien and it is thereby lost. (*Folsom* v. *Barrett*, 180 Mass. 439.)

Assignment of Liens.—Common law liens may be assigned by transfer of the personal property to which the lien attaches. (*Davis* v. *National Surety Co.*, 139 Cal. 223.) Liens under the statutes require compliance with the statutory provision regarding the transfer of such liens. Equitable liens may be assigned by transferring the obligation which it secures. (*Payn* v. *Wilson*, 74 N. Y. 348.)

PREFERENCE OF LIENS.—Unless exception is made by the statutes (as in liens for wages, etc.) liens attach to property in the order in which they occur and the prior liens are entitled to satisfaction before payment is made on the account of subsequent liens. Priority in most of the statutory liens is determined by the order in which the liens are recorded according to the requirements of the statutes.

ENFORCEMENT OF LIENS.—**Statutory liens** are enforced in the manner prescribed by the statutes of the several states creating those liens. Strict adherence to the requirements as to the time, form and manner of enforcement is essential to protect the lienor's rights. Although the statutes of the several states are at variance, the essentials regarding enforcement of liens in most of them involve notice to the owner of the contemplated sale of the property to satisfy the liens, public sale of such property, and payment to the owner of the excess, if any, realized over the amount of the lien and costs of the sale.

MECHANICS' LIENS.—Mechanics' liens are statutory liens on buildings and improvements to real estate to secure payment to certain classes of persons for material, supplies, work and labor furnished for the construction, and in some states for repairs and alterations to those buildings.

General Essentials.—In order to create a lien the statutes must be complied with.

The sale of material must be for a specific building on which the lien attaches.

A lien will not be created if the sale is only on the general credit of the contractor or the owner.

A lien for labor attaches only on the building on which the work was performed.

Although some states permit oral contracts to become liens, most states require written contracts.

In New York and in the states following the **New York doctrine,** the lien is only in favor of the general contractor. The subcontractors and material men cannot obtain a lien without the consent of the contractors. To protect their interests subcontractors and material men may file written notice on the owner to retain certain amounts due them from the general contractor. The material men may secure themselves by either a right of action against the owner or by a lien upon the interest of the owners where such notice is ignored.

The Pennsylvania doctrine followed by some states is that the subcontractor and material men are given a prior lien on the building and the general contractor's lien is subordinated to theirs.

Nearly all states require recording of the contract and filing notice of the lien, generally in the office of the clerk of the county where the real estate is located and the payment of the recording fees.

The statutes generally give such liens priority over all unrecorded and subsequent transfers, liens, mortgages or other incumbrances.

Protection of Rights under Liens.—Mechanics' liens being statutory, the technicalities of proceedings thereunder must be followed closely in order to protect the interests of the lienor. The importance of competent legal advice in such situations is emphasized.

Chattel Mortgages

A chattel mortgage is "a contract made by the owner by which specific personal property is hypothecated for the performance of an act without the necessity of a change of possession." (*Kennedy* v. *Hull*, 14 S. D. 234.)

Elements of a chattel mortgage consist of "an indebtedness, a transfer of property by the debtor to the creditor to insure the payment of the debt and a right in the debtor to have all that remains after the debt is paid." (*Hostings* v. *Fithian*, 71 N. J. L. 311.)

PASSING OF TITLE AND RIGHT TO REDEEM.—"The uniform language of the authorities is that a mortgage of personal property passes the whole legal title to the mortgagee, subject, however, to be revested in the mortgagor upon the performance of the condition of the mortgage, and possibly by redemption after breach of it." (*Carson River Lumbering Co.* v. *Bryant*, 3 Nev. 313.)

DISTINGUISHED FROM OTHER TRANSACTIONS.—"A chattel mortgage is neither a sale absolute nor conditional; neither is it more than a pledge, or an absolute pledge; neither does it vest an absolute title in the mortgagee; but that a chattel mortgage is nothing but a mere security, a lien upon the property therein described, which the mortgagee may himself, or by an agent, sell for the satisfaction of his debt; and until so sold, or the mortgagor's title is foreclosed, does not vest it in the mortgagee for any other purpose except that of satisfaction." (*Shoecraft* v. *Beard*, 20 Nev. 182.)

DISTINGUISHED FROM CONDITIONAL SALE.—"It is settled beyond controversy, in nearly all of the courts of this country, that where personal

property is sold and delivered, with an agreement that the title thereto shall remain in the vendor until payment of the purchase price is made, it is a conditional sale, and the transaction cannot be held a mortgage." (*Keystone Mfg. Co.* v. *Casselius*, 74 Minn. 115.)

REMOVAL OF MORTGAGED PROPERTY TO ANOTHER STATE.—"The general consensus of judicial opinion seems to be that when personal property, which at the time is situated in a given state, is there mortgaged by the owner, and the mortgage is duly executed and recorded in the mode required by the local laws, so as to create a valid lien, the lien remains good and effectual, although the property is removed to another state, either with or without the consent of the mortgagee, and although the mortgage is not re-recorded in the state to which the removal is made." (*Shapard* v. *Hynes*, 104 Fed. Rep. 449.)

IDENTIFICATION OF PROPERTY NECESSARY.—"In order to mortgage property so as to create a lien upon it, such property must be ascertained and identified at the time of the execution of the instrument." (*Lee* v. *Cole*, 17 Ore. 559.)

EXECUTION OF CHATTEL MORTGAGES.—As between immediate parties the failure to comply with the statutory requirements would not be fatal to a chattel mortgage. But in order that such a mortgage may be held valid as to third parties the statutory provisions must be complied with. (*American Surety Co.* v. *Worcester Cycle Mfg. Co.*, 100 Fed. Rep. 40.)

FAILURE TO RECORD.—A failure to record a chattel mortgage does not affect the obligations of the mortgagor and mortgagee but is not binding on a subsequent purchaser for value who has no knowledge of the mortgage. (*St. Louis Clay Products Co.* v. *Christopher*, 152 Wis. 603.)

PURPOSE OF RECORDING.—"When a mortgage is filed as provided by the statute, it becomes effective as against all persons who extend credit to the mortgagor after that event, unless they can invalidate it upon the ground of actual fraud or for some other legal reason." (*Volker Lumber Co.* v. *Utah etc. Lumber Co.*, 45 Utah 603.) "The purpose of recording the mortgage is to give to intending purchasers or creditors notice of its existence; notice that the owner of the cattle has given the lien mentioned for the purpose stated. The object of the mortgage is to protect the mortgagee and insure the fulfillment of the original agreement of the parties. The object of the recording is to warn purchasers that they may refrain from buying until the lien is discharged, or until the mortgagor and mortgagee have set apart the particular chattels to be held under the mortgage." (*Sparks* v. *Paris Deposit Bank*, 115 Ky. 461.)

TIME FOR FILING.—A chattel mortgage should be filed immediately on delivery or at least within a reasonable time thereafter. "While the purpose of the act does not in terms require an immediate filing of a mortgage in order to make it valid against creditors or subsequent mortgagees or purchasers, the purpose of the act can only be satisfied by prompt and diligent action on the part of the mortgagee in filing his mortgage. The filing stands as a substitute for immediate delivery and an actual and continued possession of the property, and avoids the conclusive presumption of fraud which would otherwise attach to the instrument under the Act of 1833 in the absence of delivery and a change of possession of the mortgaged property. Some time must necessarily elapse between the execution and filing of the mortgage. Where it appears that due diligence was exercised in filing the mortgage and there was no unnecessary delay and no actual intervening lien has been acquired, there would seem to be no ground upon which subsequent lien holders could question the validity of the

mortgage under the Act of 1833. The filing under these circumstances would be immediate and make the mortgage valid as against liens subsequently acquired." (*Karst* v. *Gane*, 136 N. Y. 316.)

PLACE OF FILING.—The statutes as a rule indicate the place where chattel mortgages should be recorded. Generally it is the office of the clerk of the county wherein the mortgagor lives.

CHATTEL MORTGAGE ON MERCHANDISE FOR SALE.—The various states take different views regarding the giving of chattel mortgages on complete stocks of merchandise retained by the mortgagor for sale in the usual course of business.

Held Good in the Following States.—In the absence of fraud and where the proceeds of continuing sales are to be applied to the debt, chattel mortgages are considered good in the following states:

Georgia	Michigan	North Dakota
Indiana	Minnesota	Ohio
Iowa	New Jersey	Oregon
Kentucky	New Mexico	South Carolina
Maine	North Carolina	South Dakota
Maryland		Wisconsin

Held Fraudulent and Void in the Following States.—Chattel mortgages on merchandise retained by the mortgagor for sale in the usual course of his business are held fraudulent and void in the following states:

Arizona	Florida	Missouri
Arkansas	Idaho	Nebraska
California	Illinois	Tennessee
Colorado	Maryland	Texas
Connecticut	Mississippi	Virginia

New York Law.—In New York chattel mortgages on merchandise for sale are covered by Chapter 462 of the laws of 1921 which provides that:

> Every chattel mortgage, or conveyance intended to operate as a mortgage, upon a stock of merchandise in bulk or any part thereof, or on merchandise and fixtures pertaining to the conduct of the business of the mortgagor, shall be void as against the creditors of the mortgagor unless the mortgagor shall at least 5 days before the execution of such mortgage make a full and detailed inventory showing the quantity, and so far as possible with the exercise of reasonable diligence, the cost price to the mortgagor of each article to be included in the mortgage, and unless the mortgagee demand and receive from the mortgagor a written list of the names and addresses of the creditors of the mortgagor, etc., and unless the mortgagee shall at least 5 days before the execution of such mortgage notify personally, or by registered mail, each creditor whose name and address is stated in such list or of which he has knowledge, of the proposed mortgage and the terms and conditions thereof.

Exemptions

DEFINITION.—"The right of a debtor to an exemption of his property from seizure and sale for the payment of his debts is determined by the statute which creates the exemption, and only the specific articles mentioned as exempt are held to be exempted, as in the absence of such statutes all property is subject to execution." (*Roberts* v. *Carrithers*, 180 Ky. 315.)

PURPOSE.—"The purpose of the exemption is not only to protect every debtor from total destitution, but also to protect the public from the resultant necessity of providing for him as a public charge." (*In re Solomon*, 254 Fed. Rep. 503.)

PROPERTY BEYOND REACH OF CREDITORS.—"Exempt property is something toward which the eye of the creditor need never be turned." (*Taylor* v. *Winnie*, 59 Kan. 16.)

STATUTES LIBERALLY CONSTRUED.—"In construing exemption statutes . . . . they are not to be strictly construed, but such construction will be placed thereon as will carry out the obvious purpose of the legislature in enacting them—to protect the debtor." (*Finlen* v. *Howard*, 126 Ill. 259.)

WHO MAY CLAIM EXEMPTION.—Exemption being statutory the only persons who may claim exemption are those specifically provided for by the law.

Residents.—Generally in most states the benefits of the statute may be claimed only by residents. "The benevolent provision is for our own citizens —those who have a residence among us—and must be construed as not embracing cases of mere domicile, where the rights incident to domicile may be retained until a domicile is obtained elsewhere." (*Munds* v. *Cassidy*, 98 N. C. 558.)

Head of Family.—Head of family is generally entitled to exemption. Who is head of a family and the relations of family is stated in *Roco* v. *Green*, 50 Tenn. 483, as follows: "We deduce from the authorities the following general rules to determine when the relation of a family as contemplated by law exists:

1. It is one of social status, not of mere contract.
2. Legal or moral obligation on the head to support the other members.
3. Corresponding state of dependence on the part of the other members for his support."

Householder.—"The term householder sometimes covers the case of a man without a family or wife or children who keeps up a house, but it also embraces usually the head of an actual family dependent on him, whether housekeeping or not. No doubt many legal phrases may be construed differently, according to context and subject matter. But the purpose of the exemption in the garnishee law is so plainly to enable husbands and other heads of families to support the family, as well as in case of house occupancy to meet its expenses, that no reason can make it plainer." (*Pettit* v. *Muskegon Booning Co.*, 74 Mich. 214.)

Persons Engaged in Agriculture.—Generally have certain exemptions. Such persons are those who derive the support of themselves and family from tilling the soil.

Other Persons.—The statutes of the several states often give persons engaged in various trades and professions **additional exemptions** which may include their tools, books, instruments and implements necessary for them to carry on their vocation.

PROPERTY EXEMPT.—In many states certain articles are enumerated in the statutes which debtors may claim as exempt from legal process. Often the statutes are broader and cover items by general description such as household goods and furniture, clothing, foodstuffs, growing crops for home consumption, fodder for exempt animals, tools and implements required to carry on the debtor's trade or profession.

Tools.—"The word tools, as used in these statutes is presumed to embrace such implements of husbandry or of manual labor as are usually employed in, and are appropriate to, the business of the several trades or classes of the laboring community, and according to the wants of their respective employments or professions, whether farmer, mechanic, manufacturer, or, in fact,

any artisan or laborer, who may require the use of such helps to obtain his living." (*Wilkinson* v. *Alley*, 45 N. H. 551.)

EARNINGS FOR A FIXED PERIOD.—"Earnings mean the reward of labor or the price of personal service performed. They mean the gains of a person derived from his services or labor without the aid of capital. Earnings imply more than labor—one has relation more particularly to mental effort and the other to physical endeavor." (*Jones* v. *Nicoll*, 131 N. Y. S. 341.)

VALUE OF PROPERTY EXEMPTED.—The fair market value of property is generally taken to determine the amount of property which may be claimed as exempt. (*Moffett* v. *Shiekay*, 52 Ill. A. 376.) This also includes notes, accounts and other choses in action regardless of the face value of the instruments.

WHEN CLAIM FOR EXEMPTION MUST BE ASSERTED.—The statutes in some states specify when claims for exemption must be made, generally after levy or notice of execution and before the time of sale. Where no specific time is set the claim must be asserted within a reasonable time after levy and before rights of creditors have accrued and before further costs are incurred, such as advertising, commencement of sale, etc.

"The precise time when this claim and selection should be made is not specified. . . . It is as easy for him to make the demand early as late, and it is no harsh construction which requires him to claim the advantage of a statute like this at a time, and in a manner which will do the least possible injury to his honest creditors, and interpose no delay to the recovery of their just claims. We therefore hold that the claim must be asserted at least before the sale has commenced, and if the debtor waits until the sale has begun his right is gone." (*State* v. *Boulder*, 57 Md. 314.)

STATE EXEMPTION LAWS.—The exemption statutes of the several states in many instances go into considerable detail in enumerating articles which are exempt and the manner of obtaining exemption. The statutory procedure can be determined by the inhabitants of each state by consulting the local statutes.

Statutes of Limitations

DEFINITION.—Statutes of limitations are **legislative acts** limiting the time in which legal actions must be brought to enforce rights.

PURPOSE.—"Statutes of limitations are statutes of repose, intended to put at rest controverted questions of fact by compelling their production before they are affected by the infirmities of memory." (*Bettman* v. *Cowley*, 19 Wash. 207.)

OPERATE AS A BAR TO RECOVERY.—Where the full statutory period has run they operate as a bar to recovery and must be enforced as a positive rule of law when pleaded and found applicable. (*Adams* v. *Hopkins*, 144 Cal. 19.)

WAIVER AND ESTOPPEL.—The protection of the statutes may be waived by the party in whose favor it operates. Waiver may be made by express agreement, a new agreement, part payment or by implication where the party fails to plead the statute as a defence.

WHEN STATUTES OF LIMITATIONS BEGIN TO RUN.—Statutes of limitations begin to run from the time a cause of action can be maintained in a court of competent jurisdiction. "The statute (of limitations) never runs except against a cause of action, and a cause of action implies not only the

existence of a right but such a denial of it, either actual or constructive, as puts the party entitled under a necessity to act if he would preserve it." (*Cowper* v. *Cowper*, 61 Miss. 676.)

Capacity.—The statute of limitations does not begin to run until there is legal capacity. Where there is legal incapacity the statute is suspended until the disability is removed. Such incapacity may be infancy, judicially declared incompetency such as insanity, or other legal disability. (*Dunwing* v. *Ocean National Bank*, 61 N. Y. 19.)

Fixed Time.—Where a fixed time is agreed to for completion of the contract, or for payment, performance or other important element of the transaction, the statute begins to run from that time. (*Pinkum* v. *Eau Claire*, 81 Wis. 301.)

Time not Fixed.—Where no time is fixed the statutes begin to run at the expiration of a reasonable time for the performance of the contract. What a **reasonable time** is depends on the nature of the transaction, and is a question of fact to be determined by a jury.

Agent Obliged to Account for Money.—"In general, when an agent has transacted business for his principal, especially when he has received money belonging to his principal, he should make report of those facts at the earliest convenient time to the principal, unless there is something in the agreement between them which excuses the agent from rendering such account; and at all events it is the duty of the agent, when a demand is made by the principal for an account, or for the payment of money received by him, to respond according to the nature of the demand; and if he fails to do so, he cannot claim the benefit of the statute of limitations unless the conduct of the principal may have been such as to excuse him. But in order that the principal may be subject to the operation of the statute upon his claim, he must have had knowledge, either by direct notice from the agent, or by some other means, of the facts that the agent has received money and holds it for his benefit." (*Quinn* v. *Gross*, 24 Ore. 147.)

Contract of Sale.—The statute begins to run at the expiration of the term of credit or extensions thereof given to the debtors.

Breach of Contract.—The statute begins to run at the time of the breach, and not when the debtor refuses to pay or at a time subsequent to the breach when the damages are ascertained.

Deposits of Money.—Where money is deposited with banks, trust companies and other depositories, the statutes begin to run only after demand is made for repayment and refused. (*Bank of British North America* v. *Merchants National Bank*, 91 N. Y. 106.)

Negotiable Instruments.—Demand instruments as well as due bills are due and payable from the day of execution, from which time the statute runs. (*Bartlett* v. *Rogers*, 2 Fed. Case No. 1079.) As to **time instruments** the statute begins from the day of maturity of the instrument.

Mutual Current Accounts.—The statute begins to run from the date of the last transaction and applies to the entire account. (*Green* v. *Disbrow*, 79 N. Y. 1.)

A mutual current account is "a course of dealing where each party furnishes credit to the other on the reliance that upon settlement the accounts will be allowed, so that one will reduce the balance due on the other." (*In re Hiscock*, 79 Mich. 537.)

Open Accounts.—An open account, as understood by the various statutes of limitations, is one in which the dealings are mutual and current between

the parties: wherein some term of the contract is not settled and there are current dealings between them kept open because of contemplated future dealings. (*Fennell* v. *Black*, 53 N. Y. S. 797.) **Account stated** is an account as to which the parties agree, expressly or by implication of fact or law, fixing the balance resulting from previous dealings.

Where There Is Fraud.—Where fraud is of the essence of the action, the statute does not begin to run until the fraud is discovered. Fraud must be the principal ground for action and relief and not merely a collateral or incidental cause. (*Price* v. *Mulford*, 107 N. Y. 303.)

In *Gregory* v. *Spieker*, 110 Cal. 150, it was held that: "fraud was so ingrained with the breach of contract by defendant that the action, as regards the bar of the statute, at least, must be treated as one for relief on the ground of fraud."

Absence from State.—The statutes of most states provide that the running of the statute of limitations is suspended where the debtor has absented himself from the state. (*Hart* v. *Kip*, 148 N. Y. 306.) This absence must include change of residence to be effective. A mere temporary absence on business or for other purposes does not result in suspending the statutes of limitations.

War.—War suspends the statutes of limitations between citizens of the countries at war and continues until peace is restored.

REMOVAL OF BAR OF STATUTES OF LIMITATIONS.—In the United States the general rule followed by the courts is that a particular case may be taken out of the statute by:

1. A promise of the debtor to pay the debt.
2. Action by debtor which implies a promise to pay the debt.
3. Debtor waiving rights under the statute.

Definite Promise.—An express promise to pay a specific debt barred by the statute will remove the case from the operations of the statute. (*Levy* v. *Popper*, 106 App. Div. [N. Y.] 394.)

In **writing**—most states require by statute that such promises be made in writing.

Part Payment.—In most states it is held that part payment takes the debt out of the statute and starts it running anew from the time payment is made. (*Cross* v. *Allen*, 141 U. S. 528.) Such payment must be voluntary, apply to the specific debt and must be on account of a larger debt which would indicate the intention to pay the balance.

Payment of Interest.—The payment of interest on a debt will take it out of the operation of the statute and start it running again from the date interest is paid. (*Lyman* v. *Warner*, 113 Fed. Rep. 87.)

Part Payment in Full Settlement.—The debt is not taken out of the statute nor is the statute suspended where a lesser payment is made as payment of the debt in full.

APPLYING PAYMENTS.—

At Direction of Debtor.—Where payments are made by a debtor, his direction as to what the payment applies to governs in all cases.

Debtor's intention, although undisclosed, will govern payments made by him. (*Austin* v. *McClure*, 60 Vt. 453.)

Where no directions are made, the creditor may apply payments as follows:

On several unbarred notes the creditor may apply part of the payments on

each note, thereby starting the statute anew as to all. (*Taylor* v. *Foster*, 132 Mass. 30.)

On several distinct debts, if payment exceeds one or several, the surplus may be applied on another. (*Corliss* v. *Grow*, 58 Vt. 702.)

When all debts are treated as one by agreement with the debtor, payment will start the statute anew as to all of them.

When specific application of payment is not made by either the debtor or the creditor, the law applies it to the debt which became outlawed when suit was brought, but not outlawed when payment was made. (*Robinson* v. *Allison*, 36 Ala. 525.)

In an instalment account, every part of which is due but not outlawed, payment on account of one part will start the statute anew as to all parts.

If some debts are barred, and others are not, an undirected payment applied to the subsisting debts starts the statute running anew as to them. (*Blake* v. *Sawyer*, 83 Me. 129.) Where a creditor **receives money indirectly** which belongs to a debtor, he (the creditor) cannot apply the money on the account so as to stop the running of the statute. (*Drouilliard* v. *Wilson*, 1 Ohio Dec. 555.)

STATUTES OF LIMITATIONS AS A DEFENSE.—The **general rule** is that most states require the pleading of the statutes of limitations as a defense either by way of answer or by demurrer, and if such pleading is not brought out by the action the defendant is deemed to have waived his rights under the statute. (*Gormley* v. *Bunyon*, 138 U. S. 623; *West Hoboken* v. *Syms*, 49 N. J. L. 546; *Malloy* v. *Chicago R. Co.*, 109 Wis. 29.)

Avoidance of Statutes of Limitations.—Where the defendant relies on the statute of limitations, the plaintiff must set up with clearness and distinctness in his pleadings the grounds which he contends take the case out of the operation of the statute. The type of the specific pleading will be governed by the nature of the action, the subject matter, previous pleadings and acts relied on.

BURDEN OF PROOF.—In some states the burden of proof of showing that the action is within the statutory time limit is on the person bringing the action when the opposing side pleads the statute of limitations. In other states the burden of proof is on the person pleading the statute. It may be generally said that the burden of proof is on the person who claims that the statute does not apply when the pleadings and the item constituting the cause of action on their face show that they are barred by the statute. (*Mason* v. *Henry*, 152 N. Y. 529.)

STATUTES OF LIMITATIONS IN DIFFERENT STATES.—

Open Accounts.—In many states the statute of limitations on open accounts is **6 years.** The following states, however, have different periods:

	Years		Years		Years
Alabama	3	Iowa	5	North Carolina	3
Arizona	3	Kansas	3	Oklahoma	3
Arkansas	3	Louisiana	3	Texas	2
California	4	Maryland	3	Utah	4
Delaware	3	Mississippi	3	Virginia	3
District of Columbia	3	Missouri	5	Washington	3
Florida	3	Montana	5	West Virginia	5
Georgia	4	Nebraska	4	Wyoming	8
Idaho	4	Nevada	4		
Illinois	5	New Mexico	4		

Notes.—On notes, **6 years** is the period of the statute of limitations in all states except the following:

	Years		Years		Years
Arkansas	5	Kansas	5	Ohio	15
California	4	Kentucky	15	Oklahoma	5
District of Columbia	3	Louisiana	5	Texas	4
Florida	5	Maryland	3	Virginia	5
Idaho	5	Missouri	10	West Virginia	10
Illinois	10	Montana	8	Wyoming	10
Indiana	10	Nebraska	5		
Iowa	10	North Carolina	3		

Contracts.—**Six years** is the period of the statute of limitations on contracts in all states except the following:

	Years		Years
Arizona	4	Maryland	3
Arkansas	3	Missouri	5
California–Oral contracts	2	Montana	8
–Written contracts	4	Nebraska–Oral contracts	4
Delaware	3	–Written contracts	5
District of Columbia	3	Nevada–Oral contracts	4
Florida	5	–Written contracts	6
Idaho	4	New Mexico	4
Illinois	5	North Carolina	3
Iowa–Oral contracts	5	Ohio	3
–Written contracts	10	Texas	4
Kansas	3	Virginia	5
Kentucky	5	West Virginia	5
Louisiana	10	Wyoming	10

Instruments Under Seal.—Instruments under seal have a longer time under the various statutes of limitations, generally running from **ten to twenty years.** For the purpose of summarizing, the following table is presented. All states except those mentioned have a statute of limitations of **twenty years** for instruments under seal.

	Years		Years		Years
Alabama	10	Michigan	10	Oregon	10
Arizona	6	Minnesota	6	Tennessee	6
Arkansas	5	Missouri	10	Texas	4
Colorado	6	Montana	8	Utah	6
Connecticut	17	Nebraska	5	Vermont	8–15
District of Columbia	12	Nevada	6	Virginia	10
Idaho	5	New Jersey	16	Washington	6
Illinois	10	New Mexico	6	West Virginia	10
Iowa	10	North Carolina	10	Wisconsin	10–20
Kansas	5	North Dakota	10	Wyoming	10
Louisiana	10	Ohio	15		
Maryland	12	Oklahoma	5		

Sales

SALES DEFINED.—A sale is "an exchange of goods or property for money paid or to be paid." (*Hatfield* v. *State*, 9 Ind. App. 296.) "A transfer, in pursuance of a valid agreement, from one party, called the seller, to another, called the buyer, of the general or absolute title to a specific chattel, for a price, or a consideration estimated in money." (Mechem Sales 1.)

CONTRACTS TO SELL AND SALES DISTINGUISHED.—1. A contract to sell goods is a contract whereby the seller agrees to transfer the property in goods to the buyer for a consideration called the price.

2. A sale of goods is an agreement whereby the seller transfers the property in goods to the buyer for a consideration called the price.

3. A contract to sell or a sale may be absolute or conditional.

4. There may be a contract to sell or a sale between one part owner and another. (Uniform Sales Act.)

REQUISITES.—These are existence of the subject matter, either actual or potential, an agreed price in money, parties (buyer and seller) capable of contracting, and mutual assent.

ACCEPTANCE MUST BE UNQUALIFIED.—Mutual assent is essential to constitute a contract to sell. Where an offer is made, the acceptance must be unqualified and without any condition, reservation or modification. (*Malis* v. *Knapp*, 196 App. Div. [N. Y.] 628.)

PLACE OF SALE.—The law of the place where the sale is made governs. The intention of the parties controls to indicate the place of sale. If not specified a sale is said to be made at the place where the order is accepted and the goods shipped. (*Hump Hairpin Mfg. Co.* v. *Emmerson*, 293 Ill. 387.)

UNIFORM SALES ACT.—The Uniform Sales Act, as drafted by the commissioners appointed to work out uniform laws governing commercial transactions, combines the best features of the existing laws of the various states. The Uniform Sales Act has been adopted with various slight modifications in the following states and territories:

Alaska	Minnesota	Pennsylvania
Arizona	Mississippi	Rhode Island
Connecticut	Nevada	South Dakota
Idaho	Nebraska	Tennessee
Illinois	New Jersey	Utah
Iowa	New York	Wisconsin
Maryland	North Dakota	Wyoming
Massachusetts	Ohio	
Michigan	Oregon	

FORMALITIES.—The formalities required to make a valid contract apply in making a contract of sale and may be oral, in writing, partly oral and partly in writing or may be inferred from the conduct of the parties. (See Statute of Frauds in the law on **Contracts** for full treatment of sales under that statute, particularly the **requisites for oral and written contracts of sales.** In this section the law of sales is stressed and the requirements under the Statute of Frauds is dealt with briefly.)

Oral contracts in sales are not enforcible by action at law where the value of the goods exceeds the statutory limitation unless:

1. Some note or memorandum is made in writing and signed by the party to be charged or by his duly accredited agent.
2. Part of the goods are delivered and **accepted** with intent to retain it. Mere delivery is not sufficient, and acceptance must be indicated in some manner.
3. Part payment is made or a valuable consideration given to bind the contract.

Where Writing Required.—Contracts for the sale of personal property where no part is delivered and accepted and part payment is not made must be in writing signed by the person to be charged where the amount exceeds the amount under the Statute of Frauds. (See Statute of Frauds in this section for amounts under the laws of the several states.)

RECEIPT AND ACCEPTANCE.—Purchasers must actually receive and accept part of the merchandise to render the contracts of sale binding on them. (*Davis* v. *Carnegie Steel Co.*, 244 Fed. Rep. 931.)

Part payment may be money or anything of value mutually acceptable to buyer and seller as part of the purchase price. (*Wenger* v. *Gummel*, 136 Md. 80.)

WRITTEN MEMORANDUM.—The written memorandum required under the statute of frauds may be formal, as a bill of sale, or informal, made up of several notes or letters. The essentials required are a recital of the agreement, subject matter, terms, and names of parties. Most important is that the memorandum shall be signed by the person to be charged or held thereon.

SPECIFIC GOODS DEFINED.—Specific goods must be capable of identification, designation, and separation as such. A regular run of oil, grease or other product which is part of an undistinguishable quantity of a seller's regular production is not a sale of specific goods under the statute. (*Agri. Mfg. Co.* v. *Atlantic Fertilizer Co.*, 129 Md. 42.)

SUBJECT MATTER—EXISTING AND FUTURE GOODS.—1. The goods which form the subject of a contract to sell may be either existing goods, owned or possessed by the seller, or goods to be manufactured or acquired by the seller after the making of the contract to sell, called "future goods."

2. There may be a contract to sell goods, the acquisition of which by the seller depends upon a contingency which may or may not happen.

3. Where the parties purport to effect a present sale of future goods, the agreement operates as a contract to sell the goods. (Uniform Sales Act.)

Legality of Subject Matter.—The subject matter must not consist of goods the sale of which is prohibited by law, such as drugs, or if a license or permit is a prerequisite to the sale of an article, such provision of the law must first be complied with, otherwise there is no sale which will be recognized at law.

PRICE—HOW DETERMINED.—1. The price may be fixed by the contract, or may be left to be fixed in such manner as may be agreed, or it may be determined by the course of dealing between the parties.

2. The price may be made **payable in any personal property.**

3. Where the price is not determined in accordance with the foregoing provisions the buyer must pay a **reasonable price.** When there is a general market, **the market price** will in most cases be accepted as a reasonable price; but when the market is limited it will be considered only in connection with other circumstances, or even be disregarded altogether.

CONDITIONS AND WARRANTIES.—

Effect of Conditions.—1. Where the obligation of either party to a contract to sell or a sale is subject to any condition which is not performed, such party may refuse to proceed with the contract or sale, or he may waive performance of the condition. If the other party has promised that the condition should happen or be performed, such first-mentioned party may also treat the nonperformance of the condition as a breach of warranty.

2. Where the property in the goods has not passed, the buyer may treat the fulfillment by the seller of his obligation to furnish goods as described and as warranted expressly or by implication in the contract to sell as a condition of the obligation of the buyer to perform his promise to accept and pay for the goods. (Uniform Sales Act.)

EXPRESS WARRANTY.—An express warranty is a statement of fact made by the seller as to the quality, quantity, durability, or other characteristic of the thing sold. To hold the seller on his warranty the buyer must have relied

on the statements in making his purchase. (*Heath Dry Gas Co.* v. *Hurd*, 124 App. Div. 68; *Naylor* v. *McSwegan*, 21 N. Y. S. 930.)

Opinion and "Dealers' Talk."—An expression of opinion, hope or expectation is not a statement of facts and does not amount to a warranty. Likewise, commendatory statements as to the character of the articles and mere statements of opinion, although unfounded, are not sufficient to constitute warranties. (*Arnold* v. *Norfolk, etc. Hosiery Co.*, 148 N. Y. 392.)

Language Constituting Warranty.—"No particular words or forms of expression are necessary to create a warranty. A positive assertion of a matter of fact made by a seller at the time of the sale for the purpose of assuring the buyer of the fact, and inducing him to make the purchase, and accepted and relied on by the purchaser, constitutes a warranty." (*Van Horn* v. *Stantz*, 297 Ill. 530.)

IMPLIED WARRANTIES.—"An implied warranty in the case of a sale of an article is an obligation imposed by law." (*Craig* v. *Pellet*, 209 Ill. App. 368.)

Title.—The seller impliedly warrants the title to the goods sold. Where a vendor has goods for sale and in his possession it is prima facie evidence that he has title to the goods. A seller of goods impliedly warrants:

1. That he has good title;
2. The buyer will not be disturbed by adverse claims of title; and
3. The goods are free from claims, charges, and incumbrances at the time of sale. (*Smith* v. *Ruggles*, 3 N. Y. S. 329.)

Doctrine of Caveat Emptor.—In sales the doctrine of caveat emptor applies in every state except Louisiana. Under this doctrine, which means, "let the buyer beware," it is not incumbent on the seller to disclose facts which a buyer can ascertain by examining the articles. In order to charge a seller with fraud there must be a false representation or an active suppression of facts so as to convey a false impression. (*Wolf* v. *Michael*, 46 N. Y. S. 991.)

Estoppel and Waiver of Defects.—A buyer who has knowledge of a fraud or defect of an article purchased and retains the articles without objection, cannot at a later date set up fraud to have the sale set aside. (*Wellauer* v. *Fellows*, 48 Wis. 105.)

If the **buyer has examined** the goods, there is **no implied warranty** as regards defects which such examination ought to have revealed.

In the case of a contract to sell or a sale of a specified **article under its patent or other trade name, there is no implied warranty** as to its fitness for any particular purpose.

A warranty or condition as to quality or fitness for a particular purpose may be implied by the usage of trade.

An express warranty or condition does not negative a warranty or condition implied under this act unless inconsistent therewith. (Uniform Sales Act.)

Implied Warranties in Sale by Sample.—In the case of a contract to sell or a sale by sample:

1. There is an implied warranty that the bulk shall correspond with the sample in quality.
2. There is an implied warranty that the buyer shall have a reasonable opportunity of comparing the bulk with the sample.
3. If the seller is a dealer in goods of that kind, there is an implied warranty that the goods shall be free from any defect rendering them unmerchantable which would not be apparent on reasonable examination of the sample. (Uniform Sales Act.)

Samples—"As Is."—Goods sold as is from samples must conform in quality to the sample furnished even if damaged. (*Schwartz* v. *Kohn*, 155 N. Y. S. 547.)

Burden of Proof.—The burden of proof that the goods conform in quality with the sample rests on the seller. (*Grand Union Folding Box Co.* v. *Rose Mirror Works*, 173 N. Y. S. 433.)

Samples—Buyer's Approval.—Where goods for sale are subject to the buyer's approval of the sample, the buyer's decision is final. It is unnecessary for him to have or give any grounds for his decision. (*Vickers* v. *W. W. Vaughan Co.*, 204 Ill. App. 284.)

WHEN TITLE PASSES.—The following extracts from the Uniform Sales Act define when title to goods passes:

Rules for Ascertaining Intention.—

Unless a different intention appears, the following are rules for ascertaining the intention of the parties as to the time at which the property in the goods is to pass to the buyer.

Where there is an unconditional contract to sell specific goods, in a deliverable state, the property in the goods passes to the buyer when the contract is made, and it is immaterial whether the time of payment, or the time of delivery, or both, be postponed.

When Something Is to Be Done on Goods.—

Where there is a contract to sell specific goods and the seller is bound to do something to the goods, for the purpose of putting them into a deliverable state, the property does not pass until such thing be done.

Goods Sold with Return Privilege.—

When goods are delivered to the buyer "on sale or return," or on other terms indicating an intention to make a present sale, but to give the buyer an option to return the goods instead of paying the price, the property passes to the buyer on delivery, but he may revest the property in the seller by returning or tendering the goods within the time fixed in the contract, or, if no time has been fixed, within a reasonable time.

Sales on Approval.—

When goods are delivered to the buyer on approval or on trial or on satisfaction, or other similar terms, the property therein passes to the buyer.

When he signifies his approval or acceptance to the seller or does any other act adopting the transaction.

If he does not signify his approval or acceptance to the seller, but retains the goods without giving notice of rejection, then, if a time has been fixed for the return of the goods, on the expiration of such time, and, if no time has been fixed, on the expiration of a reasonable time.

Sale by a Person Not the Owner.—

Where goods are sold by a person who is not the owner thereof, and who does not sell them under the authority or with the consent of the owner, the buyer acquires no better title to the goods than the seller had, unless the owner of the goods is by his conduct precluded from denying the seller's authority to sell.

RISK ON PARTY HAVING TITLE.—The Uniform Sales Act defines the risk as follows:

Risk of Loss.—

Unless otherwise agreed, the goods remain at the seller's risk until the property therein is transferred to the buyer, but when the property therein is transferred to the buyer the goods are at the buyer's risk whether delivery has been made or not.

Buyer's Risk.—

Where delivery of the goods has been made to the buyer, or to a bailee for the buyer, in pursuance of the contract and the property in the goods has been retained by the

seller merely to secure performance by the buyer of his obligations under the contract, the goods are at the buyer's risk from the time of such delivery.

Risk on Party Delaying Delivery.—

Where delivery has been delayed through the fault of either buyer or seller the goods are at the risk of the party in fault as regards any loss which might not have occurred but for such fault.

NEGOTIABLE DOCUMENTS.—The Uniform Sales Act deals with the negotiable document as follows:

Definition of Negotiable Document of Title.—

A document of title in which it is stated that the goods referred to therein will be delivered to the bearer, or to the order of any person named in such document is a negotiable document of title.

Negotiation of Negotiable Documents by Delivery.—

A negotiable document of title may be negotiated by delivery:

(a) Where by the terms of the document the carrier, warehouseman or other bailee issuing the same undertakes to deliver the goods to the bearer, or

(b) Where by the terms of the document the carrier, warehouseman or other bailee issuing the same undertakes to deliver the goods to the order of a specified person, and such person or a subsequent indorsee of the document has indorsed it in blank, or to bearer.

Where by the terms of a negotiable document of title the goods are deliverable to bearer or where a negotiable document of title has been indorsed in blank or to bearer, any holder may indorse the same to himself or to any other specified person, and in such case the document shall thereafter be negotiated only by the indorsement of such indorsee.

Negotiation of Negotiable Documents by Indorsement.—

A negotiable document of title may be negotiated by the indorsement of the person to whose order the goods are by the terms of the document deliverable. Such indorsement may be in blank, to bearer or to a specified person. If indorsed to a specified person, it may be again negotiated by the indorsement of such person in blank, to bearer or to another specified person. Subsequent negotiation may be made in like manner.

Transfer of Negotiable Document without Indorsement.—

Where a negotiable document of title is transferred for value by delivery, and the indorsement of the transferor is essential for negotiation, the transferee acquires a right against the transferor to compel him to indorse the document unless a contrary intention appears. The negotiation shall take effect as of the time when the indorsement is actually made.

Transfer of Non-Negotiable Documents.—

A document of title which is not in such form that it can be negotiated by delivery may be transferred by the holder by delivery to a purchaser or donee. A non-negotiable receipt cannot be negotiated and the indorsement of such a receipt gives the transferee no additional right.

Negotiable Documents of Title Marked "Not Negotiable."—

If a document of title which contains an undertaking by a carrier, warehouseman or other bailee to deliver the goods to the bearer, to a specified person or order, or to the order of a specified person, or which contains words of like import, has placed upon it the words "not negotiable," "non-negotiable" or the like, such a document may nevertheless be negotiated by the holder and is a negotiable document of title within the meaning of this act. But nothing in this act contained shall be construed as limiting or defining the effect upon the obligation of the carrier, warehouseman, or other bailee issuing a document of title of placing thereon the words "not negotiable," "non-negotiable," or the like.

Who May Negotiate a Document.—

A negotiable document of title may be negotiated—

(a) By the owner thereof, or

(b) By any person to whom the possession or custody of the document has been entrusted by the owner, if, by the terms of the document the bailee issuing the document undertakes to deliver the goods to the order of the person to whom the possession or custody of the document has been entrusted, or if at the time of such entrusting the document is in such form that it may be negotiated by delivery.

Rights of Person to Whom Document Has Been Negotiated.—

A person to whom a negotiable document of title has been duly negotiated acquires thereby,

(a) Such title to the goods as the person negotiating the document to him had or had ability to convey to a purchaser in good faith for value and also such title to the goods as the person to whose order the goods were to be delivered by the terms of the document had or had ability to convey to a purchaser in good faith for value, and

(b) The direct obligation of the bailee issuing the document to hold possession of the goods for him according to the terms of the document as fully as if such bailee had contracted directly with him.

Rights of Person to Whom Document Has Been Transferred.—

A person to whom a document of title has been transferred, but not negotiated, acquires thereby, as against the transferor, the title to the goods, subject to the terms of any agreement with the transferor.

If the document is non-negotiable, such person also acquires the right to notify the bailee who issued the document of the transfer thereof, and thereby to acquire the direct obligation of such bailee to hold possession of the goods for him according to the terms of the document.

Prior to the notification of such bailee by the transferor or transferee of a non-negotiable document of title, the title of the transferee to the goods and the right to acquire the obligation of such bailee may be defeated by the levy of an attachment or execution upon the goods by a creditor of the transferor, or by a notification to such bailee by the transferor or a subsequent purchaser from the transferor of a subsequent sale of the goods by the transferor. (Uniform Sales Act.)

DELIVERY OF BILL OF LADING.—Delivery and acceptance of the bill of lading constitute a delivery of the goods and a vesting of the title in the buyer. (*Cohen* v. *Curtin*, 177 N. Y. S. 246.)

Indorser Not a Guarantor.—

The indorsement of a document of title shall not make the indorser liable for any failure on the part of the bailee who issued the document or previous indorsers thereof to fulfill their respective obligations. (Uniform Sales Act.)

PERFORMANCE OF CONTRACT.—

Seller Must Deliver and Buyer Accept Goods.—

It is the duty of the seller to deliver the goods, and of the buyer to accept and pay for them, in accordance with the terms of the contract to sell or sale. (Uniform Sales Act.)

F. o. b.—In sales made, f. o. b. at a given point means, "Free on board" railroad or ship at that place. The seller is under obligation to deliver the goods at his expense and title does not pass until the goods are so delivered. The carrier is the agent of the buyer.

Goods Ordered at Distant Places.—Where goods are ordered from a seller at a distant place the intention of the parties controls. Generally title passes on delivery of the goods to the common carrier. But if the seller takes the bill of lading in his own name, title is retained until the bill of lading is indorsed to the buyer.

C. o. d. Sales.—In sales, cash on delivery, most courts hold that title passes to the buyer when the subject matter is delivered to the common carrier but that the buyer is not entitled to possession until the price is paid.

Sales Subject to Approval.—In sales subject to approval title does not pass until the conditions precedent, which are examination and approval, are completed.

Goods to be Manufactured.—In a contract of sale of goods to be manufactured, title does not pass until after the goods are in a deliverable state.

Sale by Sample or Description.—Where goods are sold by description or sample, title passes when they are applied to the contract and put in a deliverable condition.

Stolen Goods.—A thief cannot convey title to goods and a person buying goods from one having larcenous possession not alone gets no title but is also liable for their conversion if he has disposed of them. (*Reichard* v. *Hutton*, 142 N. Y. S. 935.)

Goods Obtained by Fraud.—Where a seller has voluntarily parted with the title to goods to the buyer as a result of fraud on the part of the buyer, an innocent second purchaser obtains a good title and will be protected. (*Phelps* v. *McQuade*, 158 App. Div. [N. Y.] 528.)

PLACE, TIME AND MANNER OF DELIVERY.—The Uniform Sales Act provides for the place, time and manner of delivery as follows:

Intention of Parties.—

Whether it is for the buyer to take possession of the goods or for the seller to send them to the buyer is a question depending in each case on the contract, express or implied, between the parties.

Place of Delivery.—

Apart from any such contract, express or implied or usage of trade to the contrary, the place of delivery is the seller's place of business if he have one, and if not his residence; but in case of a contract to sell or a sale of specific goods, which to the knowledge of the parties when the contract or the sale was made were in some other place, then that place is the place of delivery.

Time to Send.—

Where by a contract to sell or a sale the seller is bound to send the goods to the buyer, but no time for sending them is fixed, the seller is bound to send them within a reasonable time.

Goods in Possession of Third Parties.—

Where the goods at the time of sale are in the possession of a third person the seller has not fulfilled his obligation to deliver to the buyer unless and until such third person acknowledges to the buyer that he holds the goods on the buyer's behalf; but as against all others than the seller the buyer shall be regarded as having received delivery from the time when such third person first has notice of the sale. Nothing in this section, however, shall affect the operation of the issue or transfer of any document of title to goods.

Time of Delivery.—

Demand or tender of delivery may be treated as ineffectual unless made at a reasonable hour. What is a reasonable hour is a question of fact.

Unless otherwise agreed, the expenses of and incidental to putting the goods into a deliverable state must be borne by the seller.

Delivery in Instalments.—

Unless otherwise agreed, the buyer of goods is not bound to accept delivery thereof by instalments.

Where there is a contract to sell goods to be delivered by stated instalments, which are to be separately paid for, and the seller makes defective deliveries in respect of one or more instalments, or the buyer neglects or refuses to take delivery of or pay for one or more instalments, it depends in each case on the terms of the contract and the circumstances of the case, whether the breach of contract is so material as to justify the injured party in refusing to proceed further and suing for damages for breach of the entire contract, or whether the breach is severable, giving rise to a claim for compensation, but not to a right to treat the whole contract as broken.

Payments for Partial Deliveries.—Where the contract requires the purchaser to pay for each shipment of an instalment contract of sale and he deliberately violates the requirement his conduct is a breach of the agreement which will justify the seller in refusing to make any further deliveries under the contract. (*Marrone* v. *Engel*, 171 N. Y. S. 47.)

Delivery of Wrong Quantity (Uniform Sales Act).—

Where the seller delivers to the buyer a quantity of goods less than he contracted to sell, the buyer may reject them, but if the buyer accepts or retains the goods so delivered, knowing that the seller is not going to perform the contract in full, he must pay for them at the contract rate. If, however, the buyer has used or disposed of the goods delivered before he knows that the seller is not going to perform his contract in full, the buyer shall not be liable for more than the fair value to him of the goods so received.

Where the seller delivers to the buyer a quantity of goods larger than he contracted to sell, the buyer may accept the goods included in the contract and reject the rest, or he may reject the whole. If the buyer accepts the whole of the goods so delivered he must pay for them at the contract rate.

Where the seller delivers to the buyer the goods he contracted to sell mixed with goods of a different description not included in the contract, the buyer may accept the goods which are in accordance with the contract and reject the rest, or he may reject the whole.

The provisions of this section are subject to any usage of trade, special agreement, or course of dealing between the parties.

Reservation of Right of Possession or Property when Goods are Shipped (Uniform Sales Act).—

Where there is a contract to sell specific goods, or where goods are subsequently appropriated to the contract, the seller may, by the terms of the contract or appropriation, reserve the right of possession or property in the goods until certain conditions have been fulfilled. The right of possession or property may be thus reserved notwithstanding the delivery of the goods to the buyer or to a carrier or other bailee for the purpose of transmission to the buyer.

Where goods are shipped, and by the bill of lading the goods are deliverable to the seller or his agent, or to the order of the seller or of his agent, the seller thereby reserves the property in the goods. But if, except for the form of the bill of lading, the property would have passed to the buyer on shipment of the goods, the seller's property in the goods shall be deemed to be only for the purpose of securing performance by the buyer of his obligations under the contract.

Where goods are shipped, and by the bill of lading the goods are deliverable to the order of the buyer or of his agent, but possession of the bill of lading is retained by the seller or his agent, the seller thereby reserves a right to the possession of the goods as against the buyer.

Where the seller of goods draws on the buyer for the price and transmits the bill of exchange and bill of lading together to the buyer to secure acceptance or payment of the bill of exchange, the buyer is bound to return the bill of lading if he does not honor the bill of exchange, and if he wrongfully retains the bill of lading he acquires no added right thereby. If, however, the bill of lading provides that the goods are deliverable to the buyer or to the order of the buyer, or is indorsed in blank, or to the buyer by the consignee named therein, one who purchases in good faith, for value, the bill of lading, or goods from the buyer will obtain the property in the goods, although the

bill of exchange has not been honored, provided that such purchaser has received delivery of the bill of lading indorsed by the consignee named therein, or of the goods, without notice of the facts making the transfer wrongful.

Delivery to a Carrier on Behalf of the Buyer (Uniform Sales Act).—

Where, in pursuance of a contract to sell or a sale, the seller is authorized or required to send the goods to the buyer, delivery of the goods to a carrier, whether named by the buyer or not, for the purpose of transmission to the buyer is deemed to be a delivery of the goods to the buyer, except shipments f. o. b. destination.

Unless otherwise authorized by the buyer, the seller must make such contract with the carrier on behalf of the buyer as may be reasonable, having regard to the nature of the goods and other circumstances of the case. If the seller omit so to do, and the goods are lost or damaged in course of transit, the buyer may decline to treat the delivery to the carrier as a delivery to himself, or may hold the seller responsible in damages.

Unless otherwise agreed, where goods are sent by the seller to the buyer under circumstances in which the seller knows or ought to know that it is usual to insure, the seller must give such notice to the buyer as may enable him to insure them during their transit, and, if the seller fails to do so, the goods shall be deemed to be at his risk during such transit.

Right to Examine the Goods (Uniform Sales Act).—

Where goods are delivered to the buyer, which he has not previously examined, he is not deemed to have accepted them unless and until he has had a reasonable opportunity of examining them for the purpose of ascertaining whether they are in conformity with the contract.

Unless otherwise agreed, when the seller tenders delivery of goods to the buyer, he is bound, on request, to afford the buyer a reasonable opportunity of examining the goods for the purpose of ascertaining whether they are in conformity with the contract.

Where goods are delivered to a carrier by the seller, in accordance with an order from or agreement with the buyer, upon the terms that the goods shall not be delivered by the carrier to the buyer until he has paid the price, whether such terms are indicated by marking the goods with the words "collect on delivery," or otherwise, the buyer is not entitled to examine the goods before payment of the price in the absence of agreement permitting such examination.

What Constitutes Acceptance (Uniform Sales Act).—

The buyer is deemed to have accepted the goods when he intimates to the seller that he has accepted them, or when the goods have been delivered to him, and he does any act in relation to them which is inconsistent with the ownership of the seller, or when, after the lapse of a reasonable time, he retains the goods without intimating to the seller that he has rejected them.

Acceptance of Part.—A purchaser has no right to accept part and reject the rest of an entire contract of sale. (*Beilman* v. *Goldstein*, 172 N. Y. S. 334.) Acceptance of part of a contract which is indivisible is deemed acceptance of the entire contract. (*Felsteiner-O'Connell Shoe Co.* v. *Levy*, 185 N. Y. S. 899.)

Buyer is not Bound to Return Goods Wrongly Delivered (Uniform Sales Act).—

Unless otherwise agreed, where goods are delivered to the buyer, and he refuses to accept them, having the right so to do, he is not bound to return them to the seller, but it is sufficient if he notifies the seller that he refuses to accept them.

DEFAULT OF BUYER.—

When and How Resale May be Made (Uniform Sales Act).—

Where the goods are of a perishable nature, or where the seller expressly reserves the right of resale in case the buyer should make default, or where the buyer has been in default in the payment of the price an unreasonable time, an unpaid seller having a right of lien or having stopped the goods *in transitu* may resell the goods. He shall not thereafter be liable to the original buyer upon the contract to sell or the sale or

for any profit made by such resale, but may recover from the buyer damages for any loss occasioned by the breach of the contract or the sale.

When Right of Lien May be Exercised (Uniform Sales Act).—

1. The unpaid seller of goods who is in possession of them is entitled to retain possession of them until payment or tender of the price in the following cases, namely:
(a) Where the goods have been sold without any stipulation as to credit.
(b) Where the goods have been sold on credit, but the term of credit has expired.
(c) Where the buyer becomes insolvent.

2. The seller may exercise his right of lien notwithstanding that he is in possession of the goods as agent or bailee for the buyer.

Definition of Unpaid Seller (Uniform Sales Act).—

The seller of goods is deemed to be an unpaid seller within the meaning of this act—
When the whole of the price has not been paid or tendered;
When a bill of exchange or other negotiable instrument has been received as conditional payment, and the condition on which it was received has been broken by reason of the dishonor of the instrument, the insolvency of the buyer, or otherwise.

GOOD FAITH REQUIRED IN RE-SALE.—"A vendor's right of resale must be exercised in good faith and at such time, by such methods and under such circumstances as are most likely to produce the fair value of the property, and he (the vendor) has the burden of showing that it was so exercised." (*Woodward* v. *Tyng*, 123 Md. 98.)

When Seller May Rescind Contract or Sale (Uniform Sales Act).—

Where the goods have not been delivered to the buyer, and the buyer has repudiated the contract to sell or sale, or has manifested his inability to perform his obligations thereunder, or has committed a material breach thereof, the seller may totally rescind the contract or the sale by giving notice of his election so to do to the buyer.

ACTIONS FOR BREACH OF THE CONTRACT.—

Remedies of the Seller—Action for the Price (Uniform Sales Act).—

1. Where, under a contract to sell or a sale, the property in the goods has passed to the buyer, and the buyer wrongfully neglects or refuses to pay for the goods according to the terms of the contract or the sale, the seller may maintain an action against him for the price of the goods.

2. Where, under a contract to sell or a sale, the price is payable on a day certain, irrespective of delivery or of transfer of title, and the buyer wrongfully neglects or refuses to pay such price, the seller may maintain an action for the price, although the property in the goods has not passed, and the goods have not been appropriated to the contract. But it shall be a defense to such an action that the seller at any time before judgment in such action has manifested an inability to perform the contract or the sale on his part or an intention not to perform it.

3. Although the property in the goods has not passed, if they cannot readily be resold for a reasonable price, the seller may offer to deliver the goods to the buyer, and, if the buyer refuses to receive them, may notify the buyer that the goods are thereafter held by the seller as bailee for the buyer. Thereafter the seller may treat the goods as the buyer's and may maintain an action for the price.

Remedies of the Buyer—Action for Converting or Detaining Goods (Uniform Sales Act).—

Where the property in the goods has passed to the buyer and the seller wrongfully neglects or refuses to deliver the goods, the buyer may maintain any action allowed by law to the owner of goods of similar kind when wrongfully converted or withheld.

Action for Failing to Deliver Goods (Uniform Sales Act).—

1. Where the property in the goods has not passed to the buyer, and the seller wrongfully neglects or refuses to deliver the goods, the buyer may maintain an action against the seller for damages for non-delivery.

Remedies for Breach of Warranty (Uniform Sales Act).—1. Where there is a breach of warranty by the seller, the buyer may, at his election—

(a) **Accept or keep the goods** and set up against the seller, the breach of warranty by way of recoupment in diminution or extinction of the price.

(b) **Accept or keep the goods** and maintain an action against the seller for damages for the breach of warranty.

(c) **Refuse to accept the goods,** if the property therein has not passed, and maintain an action against the seller for damages for the breach of warranty.

(d) **Rescind the contract** to sell or the sale and refuse to receive the goods, or if the goods have already been received, return them or offer to return them to the seller and recover the price or any part thereof which has been paid.

2. When the buyer has claimed and been granted a remedy in any one of these ways, no other remedy can thereafter be granted.

3. Where the goods have been delivered to the buyer, he cannot rescind the sale if he knew of the breach of warranty when he accepted the goods, or if he fails to notify the seller within a reasonable time of the election to rescind, or if he fails to return or to offer to return the goods to the seller in substantially as good condition as they were in at the time the property was transferred to the buyer. But if deterioration or injury of the goods is due to the breach of warranty, such deterioration or injury shall not prevent the buyer from returning or offering to return the goods to the seller and rescinding the sale.

4. Where the buyer is entitled to rescind the sale and elects to do so, the buyer shall cease to be liable for the price upon returning or offering to return the goods. If the price or any part thereof has already been paid, the seller shall be liable to repay so much thereof as has been paid, concurrently with the return of the goods, or immediately after an offer to return the goods in exchange for repayment of the price.

5. Where the buyer is entitled to rescind the sale and elects to do so, if the seller refuses to accept an offer of the buyer to return the goods, the buyer shall thereafter be deemed to hold the goods as bailee for the seller, but subject to a lien to secure the repayment of any portion of the price which has been paid, and with the remedies for the enforcement of such a lien allowed to an unpaid seller.

6. The measure of damages for breach of warranty is the loss directly and naturally resulting, in the ordinary course of events, from the breach of warranty.

7. In the case of breach of warranty of quality, such loss, in the absence of special circumstances showing proximate damage of a greater amount, is the difference between the value of the goods at the time of delivery to the buyer and the value they would have had if they had answered to the warranty.

Conditional Sales

DEFINITION.—A conditional sale is a sale on condition that the title shall not pass until the happening of an event, generally the payment of the price. (*Roach* v. *Curtis,* 191 N. Y. 387.)

INTEREST OF PARTIES.—The purchaser becomes the legal owner of the property, title to which vests in him subject to being divested upon his failure to fulfil the conditions of the sale.

DEFAULT OF CONDITION.—On default of the condition by the purchaser, the absolute title in the property revests in the vendee subject to the rights accorded him under the statute.

DISTINCTIVE FEATURES.—The distinctive features of a conditional sale are:

1. Title remains in seller.
2. Possession is generally held by the purchaser.
3. Title passes to purchaser on complying with the conditions of the sale.

RECORDING.—Most states have passed statutes requiring the recording of conditional sales agreements. "The reason for the enactment of the law providing for the filing of contracts for conditional sales was to protect those purchasing in good faith articles from those apparently having the title to the same as evidenced by their possession." (*Groves Elevator Co.* v. *Callanan*, 11 App. Div. [N. Y.] 301.)

EACH SALE MUST BE RECORDED.—The statutes being modifications of the common law, they must be construed strictly. The statutes contemplate the making and filing of each separate contract of sale and do not contemplate a general agreement in advance to cover all future sales. (*Scherl* v. *Flam*, 129 App. Div. [N. Y.] 561.)

PLACE OF RECORDING.—The statutes as a rule indicate the place where conditional sales are to be filed. This is generally with the clerk of the county where the vendee resides if he resides within the state and if not then in the county where the goods are situated.

RECOVERY OF PAYMENTS.—In a number of states the statutes provide that where the vendor retakes property sold under a conditional sales agreement the vendee may recover the sums which he has paid on the contract.

"The obvious purpose of the Legislature in enacting the statute governing conditional sales was to protect purchasers on the instalment plan from the oppression of unconscionable dealers, to prevent the forfeiture of considerable sums paid on account by reason of the default in the payment of a small instalment. The statute was wise and salutary, enacted in response to public sentiment aroused by many instances of harsh and brutal conduct perpetuated upon people quite helpless to protect themselves. Intended to be a shield against harsh and unfair conduct in strictly enforcing the technical requirements of such contract, it never was intended to be used as a sword to enforce harsh and technical requirements." (*Nyboe* v. *Doll & Sons, Inc.*, 167 App. Div. [N. Y.] 225.)

UNIFORM CONDITIONAL SALES LAW.—The following states have adopted the Uniform Conditional Sales Law:

Arizona, 1919	New Jersey, 1919	West Virginia, 1921
Delaware, 1919	New York, 1922	Wisconsin, 1919
Nebraska, 1921	South Dakota, 1921	

Patents

WHO MAY OBTAIN A PATENT.—Under section 4886 of the Revised Statutes of the United States, a patent may be obtained by any person who has invented or discovered any new and useful art, machine, manufacture or composition of matter or any new and useful improvements thereof, not known or used by others in this country before his invention or discovery thereof, and not patented or described in any printed publication in this or any other country, upon making proper application and paying the required fees to the United States Patent Office. Under the statute a patent may be issued to

aliens as well as to citizens. In case of the death of the applicant the patent is issued to his representative.

RIGHTS UNDER A PATENT.—The interests of the public are the primary considerations, and to these the privilege granted by patents to inventors are secondary and subordinate. (*Warner* v. *Smith*, 13 App. Div. [D. C.] 111.)

The inventor is entitled to all the uses to which his invention can clearly be put, no matter whether he had conceived the idea of the use or not. (*Rossell* v. *Allen*, 16 App. Div. [D. C.] 559.) An inventor cannot be deprived of the right to his invention when he has used due diligence in the assertion of his right through compliance with the patent law procedure, except by contract or by a course of conduct which gives rise to an implication of an intention to part with or dispose of the right. (*Sendelbach* v. *Gillette*, 22 App. Div. [D. C.]109.)

WHAT MAY BE PATENTED.—Patents will be granted for inventions covering new and useful arts, machinery, manufacture or composition of matter or any new and useful improvements of them complying with the statutory requirements set forth in part in paragraph one of this section.

CLASSIFICATION OF PATENTS.—**Mechanical patents** are those covering machinery, engines or mechanical contrivances of all descriptions. **Process patents** cover methods in manufacture or industry in general, such as a method of extracting copper or gold from ores by a chemical process. **Composition patents** cover any patentable physical or chemical combination of matter such as a chemical compound. **Design patents** may be obtained for any new, original or ornamental design for an article of manufacture.

PATENTABILITY.—An invention to be patentable must extend into the domain of original thought, although the extent of the mental process is immaterial. It must, however, extend beyond the merely novel and useful. (*In re Snyder*, 10 App. Div. [D. C.] 140.)

Novelty is a question considered in patentability. A device, which is of superior utility over other devices and which has gone into general use even to the displacement of other devices, is not patentable unless it possesses novelty. (*In re Smith*, 14 App. Div. [D. C.] 181.)

Anticipation.—A patent will not be issued for an improvement which is merely a new application of knowledge already possessed by those skilled in the arts and industry and which is merely an adaptation or variation of a previous invention or discovery. (*In re Klemm*, 21 App. Div. [D. C.] 186.)

Combination.—The addition of one well known process to another does not in itself constitute a patentable invention unless some different or better result is produced than that which had been previously obtained. (*Mond* v. *Duell*, 16 App. Div. [D. C.] 351.)

Analogous Use.—A method of applying an old device or process to a similar or analogous subject with no change in the manner of application, with a result that is not substantially distinct in its nature, is not patentable, even though its new form of result had not been contemplated previously. (*Miller* v. *Allen*, 27 App. Div. [D. C.] 70.)

Double Use.—A patent will not be granted upon the discovery of a new and analogous function or use of an old machine. (*In re McNeil*, 82 App. Div [D. C.] 461.)

Substitution of Elements.—Not every new and useful improvement produced by the adaptation or substitution of some well known material for another will entitle a party to a patent. The improvement must be the result of invention. (*In re Cheneau*, 5 App. Div. [D. C.] 197.)

Substitution of Equivalents.—The substitution of one ingredient for another in a composition will not avoid infringement if the two ingredients were well known at the date of its patent as endowed with the same capacity. (*Lane* v. *Levi*, 21 App. Div. [D. C.] 168.)

An adaptation or extension of an original idea which was patented, or a new and more extended use of it which may involve only a change of form, proportions, or degree, by the substitution of equivalents, thereby doing the same thing as the original invention in a better way, is not such an invention as can be patented. Only an invention of that which is new and of practical utility, and not obtained by comparative superiority or greater excellence in that which was already known, is protected by the law as the exclusive property secured by a patent right. (*In re Iwan*, 17 App. Div. [D. C.] 566.)

Operativeness.—To obtain a patent the machine or method must operate. A claim cannot be regarded as patentable where it is lacking in one of the elements or steps which in accordance with the statement of the invention is essential to carrying out the alleged process or operation of the machine. (*In re Creveling*, 25 App. Div. [D. C.] 530.)

Many inventions are originally extremely crude, nevertheless if they operate they are patentable and their subsequent improvements in operation are covered by their original patent. (*Fowler* v. *Dodge*, 14 App. Div. [D. C.] 477.)

Processes.—"From the authorities it may be deduced: **first,** that processes involving a chemical or other elemental action, if new and useful, are patentable; **second,** that a process which amounts to no more than the function of a machine is not patentable; **third,** that a process or method of a mechanical nature not absolutely dependent upon a machine, although perhaps best illustrated by mechanism, may, if new and useful, be the proper subject of a patent, even though it involves no chemical or other elemental action." (*In re Weston*, 17 App. Div. [D. C.] 431.)

PROCEDURE TO OBTAIN PATENTS.—The United States Patent Office at Washington, D. C., publishes for gratuitous distribution rules of practice relating to the issuance of patents. In view of the technicalities of patent office practice, the observance of the rules and forms as well as the employment of attorneys versed in patent practice is recommended.

PATENT OFFICE RULES.—

Correspondence.—All communication and business with the United States Patent Office must be carried on in writing through the Commissioner of Patents.

Secretness.—All papers and matters connected with a patent application are kept secret until a patent is finally granted.

Deals with One Person Only.—The patent office usually deals with only one person at a time in any given application and all correspondence is with the one person, either the attorney, the inventor, or his assignee.

Attorneys.—The patent office advises applicants to select a competent attorney to represent them in patent cases. The value of many patents depends upon their skilful presentation and careful preparation of specifications and claims.

Power of Attorney.—This, made out in due form, should be given to the attorney. Thereafter the patent office will recognize only the attorney in the case.

Preliminary Search.—This consists of a search of the records of the patent office to determine whether or not a patent has been issued for a particular matter. The fee for such a search is small, generally about $10, and is desirable if an applicant wishes to avoid the payment of a filing fee of $20 and the costs for legal services in the preparation of the application, specifications, claims, etc., which may vary from $50 to over $1,000, depending on the nature of the case.

APPLICATIONS.—A complete application consists of:

1. Petition.
2. Specification.
3. Oath.
4. Drawings.
5. Government fee of $20, called the filing fee.

When a patent is issued a final government fee of $20 is due. It is payable within 6 months after the patent is allowed. Attorney's fees vary and may be anything from $50 up, depending on the nature of the case.

PETITION.—The petition must:

1. Set forth the name, residence and post office address of the petitioner.
2. Request specifically the grant of a patent.
3. Designate the title of the invention.
4. Refer to the specifications and drawings if necessary for full description and claims of the inventor which must be signed by the applicant.

Any omission will result in delay until corrected.

Specifications must set forth clearly and precisely the invention for which a patent is solicited, explain the principles of it and make distinct claims as to which is the most important part.

Complete specification consists of:

1. Preamble stating the name and residence of the applicant and title of the invention.
2. General statement of the object and nature of the invention.
3. Brief description of the several views of the drawings, if the invention requires such drawings.
4. Detailed description.
5. Claim or claims.
6. Signature of the inventor.
7. Signature of two witnesses.

OATH OR AFFIRMATION OF THE INVENTOR.—The inventor must set forth under oath or affirmation:

1. Of what country he is a citizen.
2. Where he resides.
3. Whether he is the sole or joint inventor of the invention claimed.
4. That he believes himself the first inventor of the invention in question
5. That he does not know or believe the invention was ever known or used before his invention or discovery, or
   (a) Patented or described in any printed publication in any country before his invention or discovery thereof, or
   (b) In public use or sale in the United States for more than two years prior to his application.
6. That the invention has not been patented in any foreign country and that no application has been filed by him or his legal representative

or assignee more than 12 months before his application in the United States.

INVENTOR'S CLAIMS.—The claims made by the inventor in his specifications are the most important part of his application because the patent when granted covers only what the inventor specifically claims.

Examination by Patent Office.—After making application and filing the required specifications, the patent office makes an examination as to the form and merits of the application. If defective in form, amendments may be made correcting the deficiencies. If defective on its merits the application will be rejected.

Rejection of Claims on Merits.—Some of the reasons why applications are rejected are: (1) lack of invention, novelty or utility; (2) prior public use or sale; (3) inoperativeness; (4) aggregation of elements or incomplete combination of elements; (5) where application is made for patent on improvement and application departs from invention originally disclosed or there is no identity with the original invention.

APPEALS.—Every applicant for a patent, whose claims were twice rejected on merits may file an appeal from the examiner-in-chief to the Commissioner of Patents. The government fee for such an appeal is $20. The attorney's fees depend on the nature of the case.

INTERFERENCES.—An interference is the technical name of a quasi judicial proceeding instituted by the Patent Office for the purpose of determining questions of priority of inventions between two or more applicants claiming the same invention. Interferences often involve highly technical matters and are generally expensive. Such proceedings will be ordered by the Patent Office in the following cases involving substantially the same invention:

1. Between two or more original applications.
2. Between an original application and an unexpired patent.
3. Between an original application and an application for the reissue of a patent granted during the pendency of the original application.
4. Between an original application and a reissue application when original applicant made the invention before the patentee's original application was filed.
5. Between two or more applications for the reissue of patents granted on application pending at the same time.
6. Between a reissue applicant and an unexpired patent.
7. Between an application for reissue of a later unexpired patent and an earlier unexpired patent granted before the original applicant of the later patent was filed.

ASSIGNMENT, MORTGAGE OR LICENSE OF PATENT.—Patents or any interest therein may be mortgaged, licensed or assigned in part or in their entirety. To be effective against third parties for value such conveyance must be recorded in the patent office within three months after it is made.

Infringement is a wrong committed by a person who uses, makes, or vends an article protected by the patent right of another.

Actions in infringement may be brought by the inventor or his assigns. Owners in common must sue jointly. A licensee cannot sue for infringement or grant sub-licenses.

Actions on patents are brought in the equity courts and generally consist of the following:

1. A temporary injunction restraining the defendant from using, making or selling the patented article pending trial of the action.
2. Permanent injunction if the plaintiff wins the suit.
3. Plaintiff can obtain damages, and is entitled to the profits made by the defendant by reason of his infringement.

NOTICE REQUIRED ON PATENTED ARTICLES.—A United States statute provides that it shall be the duty of all persons making articles under a patent to give notice to the public that it is patented, either by affixing the word "**patented,**" together with the date and year, or, if the article cannot be marked, then by having a label placed thereon or the container so marked.

Failure to so mark articles will make it impossible for the patentee to collect damages in any suit for infringement except on proof that the defendant was notified of the infringement and continued to use, make, or sell the articles after such notice.

LIABILITY FOR USE OF PATENTED ARTICLE NOT MARKED.—A patentee is under obligation to mark his articles "**patented.**" Where an infringer makes and sells such articles without marking "**patented**" the owner of the patent can bring an action against him for damages. If such articles are sold to innocent purchasers who have no knowledge of the patent rights they can nevertheless be held for damages to the patentee in an action by him.

PROTECTIVE CLAUSE IN CONTRACTS.—Contracts for work involving various kinds of products, such as buildings and construction work in general, should have a clause inserted therein that all patented articles should be clearly marked with the date of the patent, and should require the contractor to furnish a bond holding the owner of the building blameless in case of a suit arising by reason of use of patented articles not so marked.

FALSELY MARKING OR LABELING ARTICLE "PATENTED".—A United States statute provides that every person who in any manner marks upon anything made, used or sold by him for which he has not obtained a patent, the name, or any imitation of the name of any person who has obtained a patent therefor without the consent of such patentee or his assignee or legal representatives; or

Who in any manner marks upon or affixes to any such patented article the word "**patent**" or "**patentee**" or the words "**letters patents**" or any words of like import with intent to imitate or counterfeit the mark or device of the patentee, without having the license or consent of such patentee or his assigns or legal representatives; or

Who in any manner marks upon or affixes to any unpatented article the word "**patent**" or any word importing that the same is patented, for the purpose of deceiving the public,

Shall be liable for every such offense to a penalty of not less than one hundred dollars, with costs; one half of said penalty to the person who shall sue for the same and the other half to the use of the United States, within whose jurisdiction such offense may have been committed.

PENALTIES FOR INFRINGEMENT IN DESIGN CASES.—Penalty is $250, and where the total profit derived in any form from the use of such design exceeds $250 the defendant shall be liable for all profit above $250. Recovery is for the benefit of the owner of patent of the design and for his own use. These penalties are added to the other rights under the patent law.

TERMS AND COSTS OF PATENTS.—Issued for 17 years, not renewable,

Government fee on application	$20
" " " issue of patent	20
" " " appeals, when necessary:	
(1) From primary examiner to chief examiner	10
(2) From chief examiner to Commissioner of Patents	20
Attorney's fee	40 and upward
Drawings	5 " "

Trade-Marks

DEFINITION.—"A trade-mark may be tersely defined to be any sign, mark, symbol, word or words which indicate the origin or ownership of an article, as distinguished from its quality, and which others have not the equal right to employ for the same purpose. In its strictest sense, it is applicable only to a vendible article of merchandise to which it is affixed." (*Ball* v. *Broadway Bazaar*, N. Y. Ct. of Appeals, 87 N. E. 674.)

WHAT MAY BE USED AS A TRADE-MARK.—

A Mark to Designate Origin.—"A trade-mark which designates the time, origin, or ownership of the article manufactured or sold, will be protected, but words which have no other relation to the origin or ownership of the goods than merely to indicate the name or quality will not be protected." (*Lanabee* v. *Lewis*, 67 Ga. 561.)

Must Be Affixed or Imprinted on Article.—"Trade-marks, properly so-called, consist of some description or device in some way affixed to the article sold. That description or device may be either affixed to, or impressed upon the goods themselves by means of a stamp, or an adhesive label or ticket, or may be made to adhere to an envelope or case containing them." (*Singer Mfg. Co.* v. *Wilson*, 2 Ch.D. 434.)

Symbol or Mark.—The symbol or mark used in a trade-mark may be any arbitrary mark used to designate the origin of the goods, and may consist of letters, numerals, figures, words or combination of words.

WHAT CANNOT BE USED AS A TRADE-MARK.—

Merely Descriptive Words.—"The general proposition is well established that words which are merely descriptive of the character, qualities, or composition of an article, or of the place where it is manufactured or produced, cannot be monopolized as a trade-mark." (*Brown Chemical Co.* v. *Myer*, 139 U. S. 540.)

Geographical Name.—A geographical name used in its ordinary significance cannot be used as a trade-mark.

Name of a Private Person.—"It is hardly necessary to say that an ordinary surname cannot be appropriated as a trade-mark by any one person as against others of the same name who are using it for a legitimate purpose; although cases are not wanting of injunctions issued to restrain the use of one's own name where a fraud upon another is manifestly intended, or where he has assigned or parted with his rights to use it." (*Brown Chemical Co.* v. *Myer*, 139 U. S. 540.)

Mere Shape, Form or Substance.—"It is well settled that a person cannot obtain the monopoly incident to a trade-mark by the mere form of a vendible commodity that may be adopted." (*Adams* v. *Heisel*, 31 Fed. Rep. 279.)

Color.—No one can obtain exclusive rights by trade-mark to a certain color for any of his merchandise or containers. (*Faber* v. *Faber*, 49 Barb. [N. Y.] 357.)

Manner of Packing Goods.—"It has been too often reiterated to be now questioned, that under ordinary circumstances the adoption of packages of a peculiar form and color alone, having no distinguishing symbol, letter, sign, or seal, is not sufficient to constitute a trade-mark." (*Fisher* v. *Blank*, 138 N. Y. 244.)

Good Faith Essential in Trade-Marks.—The use of a name or term which is likely to deceive the public in reference to the component and nature of the article to which it is applied, will not be tolerated. (*Ginter* v. *Kinney Tobacco Co.*, 12 Fed. Rep. 782.)

Flag or Coat of Arms of United States, etc.—A simulation of a coat of arms of the United States or of any sovereign state or municipality cannot be registered as a trade-mark. (*William Connors Paint Mfg. Co. ex parte*, 119 O. G.2522.)

MATTERS NOT SUITABLE FOR TRADE-MARKS.—Immoral or scandalous matter cannot be used in a trade-mark.

Flag or coat of arms of any foreign country, or emblem of any fraternal organization or any simulation of them cannot be used as trade-marks.

Merely the **name of an individual, association, corporation, or firm** unless it is written, printed, woven or impressed in some distinctive manner.

No portrait of a living person without his consent in writing.

The **insignia of the American Red Cross.**

A design identical with or very similar to a registered or known trade-mark used by another.

LIMITATIONS OF TRADE-MARKS.—The right to use a trade-mark is not limited as to territory or point of time unless so stated; the right to use is co-extensive with the entire country and is perpetual. (*Kidd* v. *Johnson*, 100 U. S. 617.)

PROPERTY RIGHTS IN TRADE-MARKS.—"Property in trade-marks is not property in the words, letters, marks or symbols as things, or assigns of thought, or as products of the mind, like that of patent or copyright; but simply, and solely property as a means of designating things—the things thus designated being the production of human skill, or industry, whether of the mind, or the hands, or a combination of both; and this property has no existence apart from the thing designated, or separable from its actual use in accomplishing the present and immediate purpose of its being." (*Congress & Empire Spring Co.* v. *The High Rock Congress Spring Co.*, 57 Barb. [N. Y.] 526.)

UNFAIR TRADE.—"Unfair competition in trade, as distinguished from infringement of trade-marks, does not involve the violation of any exclusive right to the use of a word, mark or symbol. The word may be purely generic or descriptive, and the mark or symbol indicative only of style, size, shape, or quality, and as such open to public use like the adjectives of the language yet there may be unfair competition in trade by an improper use of such word mark or symbol." (*Dennison Mfg. Co.* v. *Thomas Mfg. Co.*, 94 Fed. Rep. 651.)

"The tendency of the courts at the present time seems to be to restrict the scope of the law applicable to technical trade-marks, and to extend its use in cases of unfair competition." (*Church & Dwight Co.* v. *Russ*, 99 Fed. Rep. 276.)

What Must be Shown to Sustain Unfair Trade.—"It has long been settled that in cases of unfair competition the action is based on deception, unfairness and fraud, and that this fraud should be generally proved and not left to inferential evidence alone. This rule is far more strictly followed in cases o

unfair competition than in cases involving a technical trade-mark, where fraud will be presumed from the wrongful use of the trade-mark, without regard to the intent. The United States courts have repeatedly held that the intent to deceive the public is an indispensable element in the fraud charged in unfair competition, and that this intent and the fraud in which it inheres may be, and generally must be, proved by circumstances, by facts, by sales, by a course of action." (*Daviess County Distilling Co.* v. *Martinoni*, 117 Fed. Rep. 186.)

APPLICATION FOR TRADE-MARK REGISTRATION.—Trade-marks are registered in the patent office. Certain technical formalities must be complied with in making application for the registration which should be left to an attorney skilled in such practice. Drawings of the trade-mark on bristol board of a certain size must also be submitted with the application.

LIFE OF REGISTRATION.—Trade-marks are registered for 20 years with the privilege of renewal on payment of the prescribed fee. Request must be made for renewal not more than 6 months before the expiration of the period of original issue.

Government Fees.—The fees, exclusive of those of the attorney, are as follows:

Application for registration	$10
" " renewal	10
Filing notice on opposition	10
Appeal from examiner in charge to Commissioner of Patents	15

PATENT OFFICE RULES.—The United States Patent Office at Washington, D. C., issues pamphlets giving the laws on trade-marks and the rules of the patent office. These may be obtained on application and instructions therein should be carefully followed.

Copyright

Copyright, under the act of Congress, gives an exclusive right to authors, compilers, designers, artists, etc., or their assigns, to publish and dispose of their productions during the statutory period of 28 years with the privilege under certain circumstances of renewing their copyright for another 28 years.

Copyright gives **exclusive right**

1. To print, publish and sell a copyrighted work.
2. To translate, dramatize, arrange and adapt.
3. To deliver lectures, sermons, etc., prepared for oral delivery.
4. To represent, make record of, exhibit or perform dramatic works.
5. To perform music and make any arrangement or setting of it.

Detailed information regarding the copyrights can be obtained in pamphlet form by applying to the **Copyright Office of the Library of Congress**, Washington, D. C. The pamphlet contains the copyright law and rules of the United States Supreme Court governing suits on copyrights and rules of the copyright office. Proper forms and blanks for copyright application are also sent on request.

WHAT MAY BE COPYRIGHTED.—

1. Books, including composite and cyclopedic works, dictionaries, gazetteers and other compilations.
2. Periodicals, including newspapers.
3. Lectures, sermons, addresses prepared for oral delivery.
4. Poems, dramatic or dramatico-musical compositions.
5. Musical compositions.
6. Maps.

7. Works of art, models or designs of works of art.
8. Reproductions of works of art.
9. Drawings or plastic works of a scientific or technical character.
10. Prints and pictorial illustrations.
11. Photographs.

WHAT CANNOT BE COPYRIGHTED.—

1. Blank books for carrying out any system of transacting business such as journals, diaries, account books.
2. Forms of contracts, leases, etc., not containing original copyrightable material.
3. Forms for use in legal, commercial or financial affairs, in whole or partly blank.
4. Puzzles, games, labels, wrappers or containers.
5. Advertisements or catalogs containing merely names, prices and places where articles can be purchased.
6. Stage, business or professional names.
7. A mere name of article of manufacture, substance or product.
8. Name, title or coined names.
9. Mere title as such, of any literary, musical, dramatic or artistic production.
10. Names or titles of newspapers or magazines.
11. Mere form of words or mottoes, phrases, catch words, riddles or any other similar combinations of words.

PROCEDURE TO OBTAIN COPYRIGHT.—

Application.—Proper blanks for application should be used and although the forms issued by the copyright office are not prescribed, their use is convenient. Each application must set forth the following facts, without which registration cannot be had:

1. Name and address of claimant of copyright.
2. Nationality of the author of the work.
3. Title of the work.
4. Name and address of person to whom certificate is to be issued and sent.
5. In works that are published, the actual date of publication, which means the year, month and day.

When Application Is Made.—Any work entitled to a copyright should be registered in the copyright office promptly after publication, by sending to that office the registration application properly filled out, a money order or equivalent for the registration fee and two complete copies of the best edition of the work. The law says "promptly" which has been defined as "without unnecessary delay." The very day of publication is not necessary but as soon thereafter as possible.

Notice.—To enable the holder of a copyright to bring action for infringement it is necessary to give notice of copyright. The ordinary form for books, periodicals, musical and dramatic productions is **"Copyright 1924 by John Jones."**

Name in Copyright.—The name appearing in the notice should be the name of a living person, his trade name, or the name of the company claiming to own the copyright. A pen name or pseudonym should not be used.

Certain Restrictions.—In order to secure a copyright certain works must be manufactured in the United States. Such works are books in the English

nguage, or in any language by a citizen or resident of the United States, ıcluding illustrations produced by a photographic process.

INFRINGEMENT OF COPYRIGHT.—A plaintiff in an infringement ction is entitled to relief as follows:

1. Injunction restraining further infringement.
2. Payment of damages that the proprietor has suffered and payment of profits earned by the infringer.
3. Delivery for impounding of all articles alleged to have infringed.
4. Delivery for destruction of all infringing copies as well as all plates which the defendant has, as the court may order.

TERM AND COST OF COPYRIGHT.—A copyright is issued for 28 years, enewable in some cases for 28 years more. The government's filing fee is $1.

Prints and Labels

Under certain conditions prints and labels **may be registered** and thereby ıe exclusive use of such labels and prints obtained.

DEFINITIONS.—A print is an artistic production, resulting from an intel-tual effort, and made for the purpose of being used with an article of trade ıd in some manner related to it as an advertisement.

A label is an artistic production stamped or impressed on the article of anufacture, or on a piece of paper which is attached to the article, or on its ntainer, for the purpose of identification.

REQUISITES FOR REGISTER.—A print or label to be registered must operly belong to an article of manufacture and be descriptive of such an ticle or the contents. Application for registration **must be filed before** ıblication.

TRADE-MARKS, PRINTS AND LABELS—DIFFERENTIATED.—A print label must be descriptive of the article to which it is attached whereas a trade-ark need not be. A print or label must be of an artistic nature whereas a trade-ark need not be. A print need not be attached to the article whereas a label ıd trade-mark must be so attached.

WHO MAY REGISTER PRINTS AND LABELS.—Prints and labels may registered by any citizen of the United States or subject of a country to ıich the United States has extended copyright privileges.

Application must be made of the Commissioner of Patents. The essentials ıd formalities to be complied with are:

1. Name of applicant.
2. Nationality.
3. Place of business.
4. Whether author or proprietor is applying.
5. Title of the print or label.
6. Name of article of manufacture for which the label or print is to be used.
7. Ten copies of the print or label.

Government fee is $6. The label is registered for 28 years with the privilege being renewed for another 28 years.

ASSIGNABILITY.—The rights under a registered label or print may be assigned; such assignment should set forth:

1. Name of the assignee and assignor.
2. Title of the print or label.
3. Date when application for registration was filed.
4. Date of registration.
5. Statement that a consideration was paid.
6. Date of signing.
7. Signatures and acknowledgment.

NOTICE AND INFRINGEMENT.—In order to maintain an action for infringement of a label or print it is necessary for the owner to have printed on each copy of the label or print the words, **"Registered U. S. Patent Office,"** or words to that effect.

SECTION 7

CAPITAL STRUCTURE AND POLICIES

THREE PRINCIPAL PHASES OF CORPORATE FINANCE.—The problem f corporate finance may be divided into three parts. The first relates to the riginal capital requirements, the second deals with current operations, and the hird is concerned with the development of the business and resulting financial eeds.

Consideration of the **original capital requirements** of a concern deals with the itial capital needs, the methods of raising it, the kinds of securities which re to be issued, and how and where they are to be sold. Capital financing iso includes a consideration of how best to utilize the funds thus obtained, hich involves a proper allocation for plant, equipment and working capital.

Current financial operation involves all the financing incident to the con- inued operation of a business as well as the determination of profits and their llocation for the enlargement of working capital and increasing permanent apital investments, as well as their allocation to surplus, dividends, sinking nds, and various reserves.

The third phase of corporate financing is concerned with the **development f the business.** This involves the formulation of a financial plan and its ad- istments, as well as to the forecasting of the growth of the business and the aking of adequate financial provisions for such growth.

RELATION OF FINANCE AND ACCOUNTING.—Although finance and ccounting are closely related in the conduct of business, their functions are istinct and separate. Financing is essentially formulating and effectuating olicies of the financial management, and is concerned with the best methods f raising money, whether by bank borrowing, or by the sale of funded debt r capital stock, the kind of securities to be issued, if securities are to be sold, here and how they are to be sold and how the proceeds may be used to best dvantage in the business. It is primarily the function of the financial man- gement to anticipate the requirements of the business for additional capital nd to provide it as cheaply and satisfactorily as possible. Accounting, on he other hand, is concerned with recording and analyzing results that have een achieved in the business and drawing conclusions which are used in turn y the financial manager as a basis for conducting the finances.

FUNDAMENTAL RULES OF FINANCE.—The fundamental rules and prin- ples of finance in relation to the operation of a concern, which are applicable any form of business, whether incorporated or not, may be summarized as llows:

1. **Adequate capital.** This requires the utilization of all sources of capital, hether owned or borrowed, and may include, in addition to the initial capital, he reinvestment of accumulated earnings in the business.

2. **Proper proportion of owned and borrowed capital.** A concern should not

hesitate to obtain long-term loans to be used for capital purposes if such loans will enable it to carry on its business more effectively, and if such loans may be made more advantageously than stock can be sold. In determining the proper proportion of such loans due consideration must be given to their cost and also to the prospective earning power of the business, which should be adequate to insure the payment of fixed charges and to provide for the repayment of loans at maturity,—if a refunding operation is not anticipated for a portion of such loans.

3. **Intensive use of capital.** The turnover should be as rapid as is consistent with the nature of the business.

4. **Singleness of purpose.** The capital invested should be confined to profitable lines and the dissipation of capital in side lines and outside investments which are irrelevant and unnecessary to the business should be avoided.

5. **Preserving a well-balanced capital structure.** This involves a study of the proper ratios of current assets to capital assets, both to each other and to the sales volume.

6. **Keeping proper share of assets liquid.** Sufficient cash and readily convertible assets should be kept to meet current liabilities, and to seize such special opportunities and advantages as may be presented to the business from time to time.

7. **Retaining earnings.** To a large degree earnings should be "ploughed back" in the concern until the capital structure is such that subsequent distributions of earnings may be made without impairing the financial status of the company regularly and in proportion to the average earnings. This will avoid the necessity of "spotty" distributions, large in some years, small in others, and will serve to entitle the company's securities to an investment rating.

8. **Free use of earnings.** Earnings should be applied generously in necessary business maintenance and development but sparingly for non-essentials.

9. **Provision for adequate reserves.** Sufficient provision should be made for wasting assets and for business contingencies.

10. **Use of foresight in planning financial operations.** This involves ascertaining the sources of funds and their availability when needed. Some form of budgetary control is an important aid in planning and operating the finances of a business.

Corporate Promotion

PROMOTION DEFINED.—Promotion may be said to consist of **raising** capital necessary for launching a business by selling its securities or making the necessary arrangements for the sale of such securities.

"In a comprehensive sense 'promoter' includes those who undertake to form a corporation and to procure for it the rights, instrumentalities and capital by which it is to carry out the purposes set forth in its charter, and to establish it as fully able to do its business. Their work may begin long before the organization of the corporation, in seeking the opening for a venture and projecting a plan for its development and may continue after the incorporation by attracting the investment of capital in its securities and providing it with the commercial breath of life." (*Old Dom. Copper Min. etc. Co.* v. *Bigelow*, 203 Mass. 159.)

PROMOTERS.—Promoters are often classified as professional and occasional. **Professional promoters** are generally bankers but sometimes are large engineering firms or certain large industrial companies. These engineering

firms become actively engaged in financing, organizing, promoting, and sometimes in operating public utility companies. With such concerns promotion sometimes grows from a side line to one of their leading activities. Some of the larger manufacturing companies promote and finance new enterprises in order to obtain orders for equipment and generally operate through subsidiaries, which sell the securities of the companies they promote.

Occasional promoters may be found among lawyers, engineers, local bankers and business executives to whom opportunities come to develop local concerns and who are looked upon as the natural leaders in organizing local enterprises. Small companies are generally promoted in this way.

Very often **business executives,** particularly **financial executives,** are called upon to act as promoters. Instances have occurred where such executives have promoted industrial corporations and after the companies were organized and in operation, became managers or officers of the company. Frequently such promoters retain control.

BUSINESS EXECUTIVES ACTING AS PROMOTERS.—When business executives act as promoters they should watch the following points:

1. **Protect their own interest.** Many business executives do not recognize the legal significance of their capacity as promoters and fail to protect their own interests. An important distinction is whether they are acting as agent or principal of the enterprise promoted.

2. **When acting as agent** the promoter should protect himself by **a definite contract** setting forth what his compensation will be under different stages of the promotion, how and when payments are to be made, and what compensation he will be entitled to should the proposed promotion be abandoned. Without a definite and clearly defined contract, the promoter may find himself frozen out after he has given valuable information to his associates.

3. **When acting as principal** many business executives do not realize the amount of compensation to which they are entitled in promoting an enterprise, particularly if it is their first experience. As each promotion is governed by its own peculiar problems, specific suggestions cannot be made. In general, the promoter should retain for himself the equity in the business which remains after he has raised sufficient capital by the sale of bonds and stocks to operate the concern. That equity depends on the size of the corporation. Sometimes the promoter retains control.

4. **Sufficient capital** should be raised to operate the concern and pay for the promotion and organization expenses. A large part of such expenses are usually paid by the issue of common stock. Common stock is often used to pay the promoter.

5. **Long organization period.** Where the preliminary arrangements, investigation, assembling and organization necessary for the promotion of a concern extends over a long period of time, the sale of securities should be postponed until all of these steps are accomplished.

6. **Preliminary financing** may be necessary where the organization period is protracted. In such cases arrangements should be made with bankers or others to carry through the preliminary financing and to underwrite the securities of the concern when they are ready for issue.

LEGAL STATUS OF PROMOTERS.—The legal status of a promoter depends on the question whether he is acting as an independent person or as an agent or trustee for other interests in promoting the planned but as yet unincorporated corporation. In general, promoters hold a fiduciary relation to the subscribers of a proposed corporation and to the corporation when

formed. "This trust relationship is necessarily twofold: towards the corporation, as a separate legal entity in respect to corporate property, and towards the shareholder, in respect to his property right in his shares." (*Wills* v. *Nehalem Coal Co.*, 52 Ore. 70.)

Although a promoter may be paid a profit on his transactions, he cannot take secret and exorbitant profits at the expense of the proposed corporation he is promoting and to which he stands as a trustee.

VALUE OF THE PROMOTER.—The value of the promoter lies in the service he renders to the business community in discovering, formulating and assembling business propositions, thereby providing business activity on the one hand and avenues for investments on the other. "No enterprise of any importance can be inaugurated without the services of a capable promoter and organizer. He is the man who sees the opportunity, who can make others see it and believe in it, who organizes the plans and pushes them to completion." (R. E. Heilman, *Journal of Political Economy*, Nov. 1915.)

STAGES IN PROMOTION.—There are **four stages** in promotion:

1. **Preliminary investigation** of all details and aspects of the proposed enterprise.
2. **Organizing a plan** and securing a charter, etc.
3. **Assembling the enterprise** which involves securing options on various plants and companies.
4. **Financing the enterprise** which in large promotions requires the organization of a syndicate and in smaller companies the selling of the securities by the promoter himself.

INVESTIGATION.—The success or failure of the promotion depends largely upon the thoroughness and accuracy of the preliminary investigation which may cover a wide range of subjects with many variations governed by the nature of the enterprise. The investigation often inquires into the social, economic, financial and business conditions on the one hand, and technical engineering and construction problems on the other. Such investigations are generally **made by experts** in their respective fields of engineering, accounting, economics and law. It is not unusual for a report of such investigations to contain from 50,000 to 200,000 words of concise and digested information.

INVESTIGATION FOR INDUSTRIAL PROMOTION.—E. K. Chapman, President of the Hudson Trust Co. of New York, in a paper entitled "Initial Financing of an Enterprise," sets forth a number of points to be covered in investigating the desirability of promoting a manufacturing corporation, which is to take over either tangible property or such intangible assets as patents, copyrights and goodwill. These points which should receive careful consideration are presented as follows:

1. The validity of the patents, copyrights, and other **titles and rights,** or the soundness of the claim of goodwill.
2. Strength and dangers of present and potential **competition.**
3. Likelihood of securing for the new company the proper grade of **managerial talent.**
4. Sufficiency of **capital** and dependable resources. This should be enough, not merely to get along if everything goes well, but to include the expenses and losses of the early experimental stage, and to provide a safe margin for emergencies. It is generally not desirable to apply

for money a second time to the people who subscribed the original amount of capital stock.

5. The **par value** of the capital shares, which should be low if the appeal is to be made to small investors, and not less than $100 if the appeal is to be made to large investors.
6. The **contract between the corporation and the promoter.** The promoter should be reimbursed in cash for his actual cash expenditures, but the compensation for his services should be in the form of shares in the corporation.
7. Necessity of investing a large sum of capital in constructing a **plant** for manufacturing the proposed product. Ordinarily it is less risky to start by having the product manufactured under contract by outsiders or by assembling the parts which have been purchased or manufactured under contract.
8. Probability of securing capital from men with experience in similar lines of business or with special information.

INVESTIGATION FOR PUBLIC UTILITY PROMOTION.—In the field of public utilities, bankers have worked out certain standards which they use in their preliminary estimates of earnings based on certain probable **yearly receipts from each person** in the territory to be covered by the utility company. Some of these standards taken from "Promotion and Organization of Public Service Corporations," by L. R. Nash, of Stone & Webster, require that before public utilities can be promoted there must be shown that yearly receipts from each person in the territory covered by the proposed public utility will be approximately as follows:

Electric light and power companies	$3 to	$ 6	per capita
Gas companies	2 "	6 "	"
Electric street railways in small cities	4 "	5 "	"
Electric street railways in large cities	7 "	10 "	"
Interurban railways	6 "	10 "	"

The following digest of a description of the preliminary survey of an electric railway promotion is adapted from the New York *Analyst*, July 20, 1914:

The 25 or 30 banking houses in New York and vicinity specializing in financing electric railways, receive from 500 to 1,000 proposals a year to build new lines or purchase and rehabilitate old ones. The bankers, in considering the proposals submitted to them, consider first the political attitude of the state or city regarding public utilities. They have on file tabulated data regarding the political records and activities in each state. They consider next the United States census figures of population and statistics which indicate the rate of growth of the community.

After preliminary consideration by the bankers, the promoter is asked to pay the expenses and fees of an expert engineer, selected by the banking house, to make a preliminary survey of the proposed line. The engineer makes an examination and gives an approximate estimate of the cost of the right of way, construction and terminals. This preliminary estimate of cost of construction and operation is expected to come within 5% of the actual figures.

The banking house checks this preliminary report against its previous experience and adds to the cost of construction the carrying charges on investments before the proposed company begins to make a return on its capital. Sometimes they go as far as to obtain bids for the construction of power plants and the roads.

PROBABLE NET EARNINGS.—Bankers generally decline to take up the new proposition unless the preliminary estimate shows net earnings equal to

2½ times the interest charges on the bonds necessary to float it. The generally accepted figure for interurban roads is that each mile of track should earn a minimum of $5,000. Assuming operating costs are 60%, there is left $2,000 for net earnings, and if the construction cost is $25,000 per mile, provided by 5% bonds, the interest charges per mile are $1,250, which leaves a balance of $750 per mile for depreciation, unexpected losses and accidents.

PRELIMINARY ANALYSIS OF RAILROAD PROMOTION.—An idea of the information required of a preliminary analysis on railroad propositions, is indicated by the following questions put to a promoter of a proposed railroad 30 miles long passing through three prosperous villages and connecting a rich agricultural and lumber country with a port on the sea.

1. How much traffic is now hauled by existing transportation agencies in this region?
2. How much standing lumber will be made available for shipment by this new road?
3. What are the important markets for this lumber?
4. At what price can it probably be sold in these markets?
5. What, approximately, will be the cost of cutting and of hauling lumber to railroad and loading on cars?

(Answers to the above questions will give a basis for figuring the possible rates on lumber from the point of loading to the markets.)

6. Just how much rail and water traffic through "D" is in sight?
7. What advantages as a port for rail and water traffic will Port "D" have over competing ports?
8. What inducements can be offered which will lead to the diversion of traffic now moving through competing ports to the route through Port "D"?
9. At what rates does traffic now move through competing ports to and from the markets which the promoter hopes to reach by his proposed route?
10. What is the attitude of connecting rail and water lines? Will they be inclined to assist in the development of Port "D" or will they find it to their interest rather to discourage the growth of this port? (This is perhaps the most important question of all, for a short railroad, such as the promoter has in view, could scarcely exist, let alone thrive, unless it has the cordial co-operation of connecting lines.)
11. Assuming that connecting lines are friendly, what rate per ton-mile can the proposed railroad probably secure on through traffic?
12. What will be the exact cost of securing the right of way and constructing the proposed road?
13. What will be the cost of providing docks and other terminal facilities at Port "D"?
14. Do the above estimates contemplate providing a well-built, modern road, or rather a temporary construction which will have to be replaced later?
15. What will be the cost of equipment and of necessary supplies of all kinds?
16. Will it be possible to secure local subsidies or other assistance?
17. Does the promoter have banking connections on which he can rely for assistance in floating the securities of the proposed road?
18. Does the promoter know any capitalists who may be willing—provided satisfactory answers to all the above questions are given—to buy the stock issues of the proposed road?
19. Is the promoter able and willing to incur the expense that will be necessary to secure correct, dependable answers to all the above questions?

PROMOTION OF COMBINATIONS.—An analysis preliminary to the combination of going concerns should cover the following:

1. What is the financial history of each concern that is to be considered as a possible member of the combination? How long has it been in existence? Is its organization stable? Are its earnings increasing or decreasing? Are adequate depreciation and other reserves deducted before estimating profits? Is the plant and physical property in good condition?
2. Who are the men engaged in this industry who have shown the most enterprise and good judgment? Will they join in the proposed combination and work together on harmonious terms? Will it be necessary to give positions to incompetents or to make unfair concessions in order to influence men who are essential to the combination?
3. What, if any, advantages as a money maker will the proposed combination have over

the separate, independent concerns? Will the combination be in violation of any laws? Will it be necessary to raise prices or otherwise incur any unpopularity in order to secure larger profits? Is it possible to introduce more efficient methods into the management of the various plants without arousing undue hostility at the beginning?

4. Assuming that the combination is agreed to, what should be the financial plan of the proposed combination? Upon what basis can its securities be exchanged for the securities of the independent concerns? On what basis can other securities be underwritten and sold to the public? How much fresh capital will the combination need? Will there remain a block of securities sufficient to compensate all who took part in the promotion, for their respective risks and expenditures?

CAUSES OF FAILURE IN PROMOTIONS.—Some of the causes of failure in promoting enterprises which are known in themselves to be sound and profitable are as follows:

1. **Defective financial plan** in not providing for adequate capital requirements, not only for fixed capital but also for working capital, including the necessary expenses to sell the securities.
2. Failure to establish **close relations with a financial house** which will be of assistance in selling securities.
3. **Neglecting to comply with some legal requirement** or failure to obtain by contract, option or outright purchase some essential property.
4. Failure to ascertain all facts necessary before floating the enterprise, or failure correctly to interpret the facts obtained.

ESSENTIALS OF PROMOTION REQUIREMENTS.—The **first essential**, after a decision has been reached that the enterprise is sound and feasible, is that sufficient capital should be authorized and raised. In a large promotion, the services of a banking house should be secured which is willing to underwrite the sale of securities and where a long term intervenes between the period of original planning, construction and development, and the sale of securities, some preliminary financing may be necessary. In smaller propositions the sale of securities may be handled directly by the promoter, and generally should be postponed until the corporation is launched.

The second point to consider is for the promoter to protect his own interests by retaining for himself sufficient equity in the business to compensate him for his services and risk of initial capital in promoting the company. Sometimes in smaller promotions business executives fail to realize that full return should come to them for their services and the risk of their capital. They often put in their own money under precisely the same conditions as the money of other people who are interested. The promoter should protect himself with the greatest care and forethought if he is to reap a reward for his efforts, which may become fruitless after considerable expenditure of money, patience and diplomacy in securing options on companies, or otherwise assembling the proposition.

PROMOTER'S PROFITS.—Although the relation of trust exists between the promoter and his associates, he may, with entire propriety, profit by his connection with the corporation but such profits must be **open and above board** and must be of such a nature as to be compatible with his trust relations.

Although much has been said in condemnation of promoter's profits, the precarious nature of the business seems to justify large returns—first, because they are paid almost invariably in common stock of the company promoted, the value of which is usually entirely dependent on the ultimate success of the promotion; second, because the compensation is generally in proportion to the risk involved.

Promoters generally figure as their profits on whatever remains of the capitalized value of the company after it is financed. An illustration is as follows:

Illustration.—A promoter estimates that a manufacturing enterprise will earn, after completing a 2-year development period, more than $110,000 net profits yearly. He plans on creating securities salable at par on following basis:

Capitalization		Interest and Dividend Requirements
$ 500,000	7% first mortgage bonds	$ 35,000
250,000	Preferred stock	22,500
500,000	Common stock yielding 10%	50,000
$1,250,000		$107,500

Assume that the corporation needs $1,000,000 cash, and that expense of investigating, securing options, incorporating, and selling securities is $150,000. The promoter enters into a contract to turn over $1,000,000 cash, or possibly property and total assets for which he pays $1,000,000 in exchange for all bonds, preferred and common stock. He then sells bonds, preferred stock, and $250,000 common stock, and retains for himself $250,000, against which he offsets expenses, $150,000. His net profit, in form of common stock, is $100,000. Among conservative promoters it is a recognized principle that the promoter, to show his faith in the enterprise, should receive his compensation in common stock.

PROMOTER'S SECRET PROFITS AND OVERVALUATION.—As the promoter's relations to others in the enterprise are of a fiduciary nature requiring utmost confidence and trust, he must disclose any profits received by him. Otherwise he cannot retain them. Unusual profits obtained without the full knowledge of others interested with him are generally construed as illegal and may be recovered by either the corporation or the stockholders who bought the original issue of stock. Profits are generally considered illegal unless they have been obtained with the consent of a fully informed board of directors who had full knowledge of the entire transaction.

Recourse cannot be had against the promoter for overvaluation of the property if it is accepted by the corporation and stockholders with full knowledge of such overvaluation.

A promoter acquiring property before the inception of the company may dispose of it to the company at whatever profit he can secure. He must, however, disclose his own interest in the property and his offer must be made without misrepresentation.

The promoter's work requires patience and diplomacy, is expensive and hazardous, and may end without profit. A promoter must exercise a high degree of diplomacy in conciliating the various conflicting interests when he attempts to unite previously independent and sometimes competitive enterprises. To accomplish this several plans are feasible, but one which seems preferable is to make an outsider the chief official of the new company giving him free rein in the choice of subordinates. Another plan is to choose the chief executives from the companies to be combined, relying on their influence to forward his plans.

PROMOTION FAILURES.—Probably more than half of the really serious attempts at promotion result in failure due to the omission of some important phase in the investigation and estimate of income and expenses of the concerns involved.

Syndicates

DEFINITION.—A syndicate, which, in the eyes of the law, is classed as a joint venture, has been defined as "an association of individuals or a combination of companies united for the prosecution of some enterprise or scheme requiring large capital." (Standard Dictionary.) Among banking and security houses the term may generally be narrowed down to apply only to a group associated together for the purpose of purchasing and distributing a large block of securities to the public. Such a syndicate is sometimes referred to as a **joint account.** Where the term **underwriting** or **underwriting syndicate** is correctly used, it applies to a syndicate which agrees (or underwrites) to purchase all of an issue of securities which are unsubscribed by the individuals, generally stockholders, to whom they are originally offered.

The **primary purpose of a syndicate** is to relieve the corporation issuing securities of all risk connected with floating the issue. The corporation is assured a fixed sum of money within a given time, the syndicate undertaking to purchase the securities outright. The corporation thereby is enabled to proceed with its operation and is relieved of the problems of financing. The syndicate generally operates through investment bankers who assist the corporation in formulating its financial plan and advise it in regard to the form of stocks and bonds to be issued and other details connected with the flotation of security issues. The success of the enterprise, in so far as it relates to capital financing, is guaranteed by the syndicate which undertakes and is willing to market the issues.

STEPS IN SYNDICATE ORGANIZATION.—The various steps in syndicate organization may be summarized as follows:—

1. **The purchase syndicate,** which consists of a group of bankers who agree to purchase the entire security issue of the corporation.
2. **The syndicate manager,** designated to form the selling syndicate and manage its operations.
3. **The selling syndicate** which is made of a group of investment bankers who undertake to sell the securities to investors either through their own sales organizations or in conjunction with smaller investment bankers who reach the ultimate investors.

ORGANIZATION OF THE PURCHASE SYNDICATE.—The **original agreement** for the sale of securities is usually made between the corporation and a single banking house. If the issue is small, the banking house sells these securities direct, and if the issue large, it will undertake the formation of a syndicate of bankers to aid in selling the securities. The essential function of a syndicate is to distribute the risk among several banking houses and also to afford the banking houses a greater diversification of securities than would otherwise be possible.

In the financial district of New York there is a tacit understanding among bankers that they will join each other in syndicates, and when an invitation comes from one of the three or four leading houses, it is customary to participate in the syndicate. In this way billions of dollars worth of securities are disposed of.

The banker generally considers his services of a professional nature and will not undertake to underwrite an issue while negotiations are pending with another banking house. Therefore, a corporation purposing to secure a contract with one banking house, should break off all relations and negotiations with others before approaching it.

SYNDICATE MANAGEMENT.—The active management of a syndicate is carried on by the house which organizes it, which may impose such conditions as it deems fit to insure the flotation and distribution of the security issue. An **example of such an agreement** is set forth in the following illustration taken from the agreement of the United States Steel Syndicate:

J. P. Morgan and Company shall be sole managers of the syndicate, and in behalf of the syndicate they may make any and all arrangements, and may perform any and all acts, even though not herein provided for, in their opinion necessary or expedient to carry out the provisions of this agreement; or to promote or to protect what they deem to be the best interests of the syndicate. The enumeration of specific powers in this or any other article of this agreement, shall not be construed as in any way abridging the general powers of this article intended to be conferred upon or reserved to J. P. Morgan and Company.

COMPENSATION OF SYNDICATES.—The compensation of syndicates varies according to the credit and standing of the issuing company, the nature of the securities, and the financial conditions prevailing for the flotation of securities. Generally one syndicate buys the securities at one price and sells them to the next group (other bankers, selling syndicates or retailers) at a little more than the cost to them. The profits may vary from ½% to 10%, and in some cases even higher.

DETAILED DESCRIPTION OF SYNDICATE OPERATION.—The Harvard Business Review for Oct. 1924, gives the following description of syndicate operation:

"Among the general methods of distribution, the **selling syndicate** is the most common. By this method the risk of purchasing an issue from another company can be distributed among a number of other investment houses. In the case of large issues, or for a smaller issue which might appeal indifferently to investors and require a long period for sale, this method relieves the issuing house of the risk and expense involved in keeping its capital tied up for a long period.

"The issuing house, or small group of houses called the syndicate managers, makes up a **participation list** from the many retailers whose records it has on file and with whom it has had previous relations. A larger house, which may at other times also originate issues and with which relations are friendly and close, will be allotted large blocks in this list.

"In fulfilling the pure selling function of the syndicate, the retailer assumes liability for an amount of bonds equal to or larger than his **participation;** these he purchases and must sell. 'Participation' is only the amount to be guaranteed, or underwritten, by each dealer and can theoretically be entirely separated from the number of bonds sold; but the total subscription for sale is not limited by the size of the participation. If the issue is a failure on account of many refusals of participation, each retailer is responsible for his accepted participation only—and not for other bonds left in the hands of the syndicate managers.[1] Small retailers depend for their supply of bonds upon being included in this 'syndicate list,' and since their continued position and reputation among issuers depend upon the prompt and complete acceptance of participations, speed in offering and so making a quick survey of the issue's success is facilitated for the offering house. The possession of a large amount of other bonds may often serve as an adequate excuse for nonparticipation. Where relations between houses are fairly close, a frank refusal may be accepted. Very rarely,

[1] "In an older form of syndicate, now seldom used, syndicate liability for unsold bonds was determined in relation to the total issue, rather than to the individual subscriptions. Thus a participant who had sold all his bonds might still have to accept remaining bonds in proportion to his own subscription."

partial refusals are possible. An issuing house almost always intends (there are some notable exceptions) and is equipped to sell a portion of the bonds it is distributing, and is thus able to care for bonds left undistributed. The amount of participation is determined from the records of past offerings and from a figure furnished as a general guide by the retailer, when he is first placed upon the lists, and revised from time to time.

"The total subscription, furthermore, is flexible in amount. A retailer's indicated participation is considered as a minimum, and he is usually allowed to subscribe for an additional amount up to a reasonable limit, the point of reasonableness being the syndicate manager's estimate of his financial standing and selling ability. Some of the effects of these extra subscriptions will be discussed below.

"The retailer as a member of a syndicate has entered into a definite contract for the purchase of bonds, and the managers have definitely sold them; but there are many provisions in the contract which allow the managers to control the methods by which the retailers dispose of the issue and by which the sale becomes partially provisional.

"One of these is a clause either expressly allowing or prohibiting the **inter-selling of bonds** among members of the syndicate without direct reference to the syndicate manager. Where marked differences in the absorptive power of the market in different cities appear, it is advantageous to allow this transfer of bonds in the shortest possible time. It is accomplished at a specified reduction in price. The inclusion of such a clause in syndicate agreements is fairly recent.

"Another group of clauses is aimed to prevent the selling of bonds by syndicate members to brokers who might immediately offer them for resale at a discount from the offering price and so depress the market at a time when selling pressure is greatest. Part of the blame for this practice rests on the retailer, who feels obligated in many cases to accept bonds for which he knows he has no real market, in order to maintain a good record of acceptances on the books of the issuing houses. They do this, not because issuing houses attempt to force bonds upon them, but rather because the practice of these houses is to seek out the weaker distributers and either reduce their allotments in the future or eliminate them from the syndicate list. Part of the blame arises from the general necessity inherent in the method of syndicate distribution of securing rapid sale for many successive issues.

"Unable to marshal enough capital to carry the bonds, retailers seek brokers who will accept large blocks of bonds, provided there is a discount. Resale at a cut price by these dealers is necessarily harmful to the high-pressure, American method of sale which characterizes all our security distribution. Trouble arises when the issuing house discovers the bonds and traces them to the particular retailer to whom they were allotted; it usually makes this discovery in the regular process of buying up all bonds of the issue which are offered below the offering price during the stated period of the syndicate, thus maintaining the 'market' price very near to the offering price. For this purpose of supporting the market, it is advantageous to reduce the number of dealers offering the bonds to a minimum; or better, to have them listed on some exchange, so that the market condition can be kept well in hand without a constant 'scouting' process to find small offerings and take them up. The discovered seller is always penalized for his offense in one way or another.

"The variation of the practice known as **'investment guaranteed' selling** is also prohibited by large originating houses, some of which make special efforts to discover and punish the practice. Under this arrangement the broker

who buys the bonds agrees to resell them to investors only. If the bonds reappear on the market, he agrees to repurchase them, provided that the syndicate managers discover the bonds and force the retailer to rebuy them (this is a usual penalty for the practice; another is to reduce the profits of the syndicate returned to the member at fault). The prevalence of the whole difficulty is in direct ratio to the activity of the market—that is, the necessity of absorbing closely successive issues is a distinct burden upon retailers; if the number of issues appearing is moderate, there is very little trouble.

"It has been shown that a retailer is often allowed to subscribe for additional bonds above his offered participation. In a good market he may become overoptimistic and subscribe for a large block of bonds, partly because he believes he can sell them and partly because he believes that other houses will also apply for large additional amounts, and that as a result he will merely receive a pro rata fraction of his application. Being disappointed in either of these beliefs, he meets the difficulties outlined above. Trouble more often arises from these causes than from the fact that the dealer is unable to take his ordinary allotment: in the latter case he will not long exist, for the house will either cut his participation amount or remove him from its list. But the tendency to oversubscription remains, being desired by both parties either to insure or increase the profit margin involved.

Firm Withdrawals.—"Allied with this whole problem of satisfactory distribution among retail dealers in a syndicate, but arising from another angle of it, is the practice of allowing 'firm withdrawals.' Formerly, after the oversubscription of an issue by retailers, the practice was for the syndicate managers to allot the available amount of bonds pro rata among all the applicants; if the issue were 100% oversubscribed, dealers who had applied for only 50% more than their regular participation in accordance with their estimate of the issue's popularity (whereas others had subscribed for 200% more) would be forced to accept a reduction affecting their original participation. This caused a great deal of inconvenience and ill will among investors to whom it was impossible to deliver the amount of bonds purchased. To remedy this recurring situation, issuing houses developed the practice of guaranteeing delivery on a stated per cent (ranging from 60% to 100%)[2] of the participation—that is, 'firm withdrawals' from the supply of bonds up to that amount. By doing this, the syndicate manager secures the good-will and better cooperation of dealers. He is obligated, on the other hand, to make a less widespread offering of the issue and to watch the amounts of additional subscriptions during the height of the period of distribution more closely, since he is under contractual obligations to deliver a certain amount of bonds 'firm.' It is claimed that the rapid growth since the war of the inclusion of a 'firm withdrawal' clause is partially the result of greater competition in the field of organization of issues by the entrance of many new organizations into the field.

"For the retailer, this clause in a syndicate agreement is a distinct advan-

[2] "By varying the percentage of participations allowed each 'firm,' an issuing house may bind itself more or less closely to absolute delivery of bonds. A 100% clause—which occurs fairly frequently—means that subscriptions must coincide exactly with the amount of the issue and that retailers will receive the exact amount of their participation; whereas a 60% or 80% clause—other common figures—gives an opportunity for oversubscription and pro rata allotment in the 40% or 20% that is unrestricted. In the actual management of an issue, the syndicate manager will often be able to promise delivery on bonds which he does not possess, thus creating a temporary short interest; he meets these promises with bonds repurchased in the process of supporting the preliminary market during the life of the syndicate, as described above. Occasionally, in a very large issue, this short interest may assume considerable proportions."

age in relieving him of uncertainty, allowing him to make definite sales to his customers in the shortest time, and reducing the necessity of estimating the popularity and selling appeal of a forthcoming issue as a means of setting the amount of his additional subscription so as to secure just the allotment that he can sell profitably.

"The syndicate form of distribution is, then, the most complicated as well as the most frequent. At the present time agreements are flexible and dynamic in the inclusion or exclusion of various clauses. In its application the method is distinctively the outgrowth of American investment methods.

Other Methods of Distribution.—"The second method of distribution is through a **selling group.** Selling groups are used on smaller issues in which the risk of unsuccessful distribution is considered slight. This situation exists usually when the bond is especially attractive, when the bond market is strong, or when retailers have insufficient securities to supply the investment demand. Selling groups occasionally are used simply because the gross profit on the issue is insufficient to permit the formation of a syndicate, or in order to increase profit even when the margin would have permitted the formation of a syndicate (which arouses dissatisfaction among the retailers whose profit is correspondingly reduced). In a selling group no liability is assumed by the members. Applications for bonds are placed with the manager and are filled either in the order of receipt or by allotment, members being paid a single commission based on the confirmed allotment. It is possible for retailers in many cases to secure additional bonds above their allotment by immediate telephone communication with the syndicate manager. The chief advantage of a selling group from the originator's viewpoint is in its economy and simplicity. The disadvantage is that failure to distribute the issue completely forces the originator to assume the unallotted bonds. In general form it resembles closely the English methods of distribution.

"The third method possible, the use of **a wholesale group,** is the least frequent. This method is used for the distribution of small issues, particularly serial bonds of which the dealers cannot be expected to accept allotments which do not include bonds of all maturities. A wholesale group is used to greatest advantage in the distribution of securities which sell quickly and for which the market is well defined, since the average allotment is generally larger than in a selling syndicate or a group. The advantage of a wholesale group, in addition to the fact that it permits complete allotments, is its simplicity. It usually is limited to less than 50 firms, so that approximately all the arrangements can be completed by telephone."

Financial Plan

FIXING TYPES OF SECURITIES.—Every new corporation should adopt a **systematic plan of financing** its activities. This means a predetermination of the kind and amount of stocks and bonds to be issued and the amount to be authorized for subsequent issues. The preparation of such a plan involves the exercise of discrimination in selecting the type of securities to be authorized and the use of judgment in fixing the relative proportions of each type, the terms and conditions on which securities are to be issued and how they are to share in the earnings of the company. Decisions on such matters require a wide knowledge of finance and of the particular industry, as well as the investment market.

The financial plan must stand long after the promotion period is over and

there is no phase of corporate finance which is more important and requires more careful consideration.

FUNDAMENTALS OF THE FINANCIAL PLAN.—In preparing the financial plan, consideration should be given to:

1. The adaptation of the securities to **the investment market.**
2. **Present and future requirements** of the corporation.
3. The **relation between assets and the securities** to be issued.
4. The **probable earnings** of the company.

ADAPTING SECURITIES TO THE INVESTMENT MARKET.—The financial executive, in developing the financial plan, will naturally adapt the securities offered by his company so as to best fit in with the market he is trying to reach. He will consider popular interests and passing fashions in the type of securities he has to offer.

Attention should be given to the desires of prospective investors, as particular issues under certain conditions are readily marketed and at other times they may be looked upon as unfavorable. At one time popular interest may be centered in industrial preferred shares, and at another, convertible bonds may be in demand.

An example of adjusting security issues to conditions prevailing in the investment market may be cited by drawing attention to the fact that during the World War, and immediately thereafter, a great number of corporations issued high interest bearing short-term notes. These securities were issued in large quantities for several reasons. First, there was a public preference for such issues; second, the high interest rates prevailed at that time; and third, corporations believed that interest rates would fall in a few years when conditions would be more favorable for long-term issues.

Generally **familiar forms of securities** should be adhered to as they are more easily marketed and their legal status is fixed. Unfamiliar types should be avoided unless they are brought out by a corporation of great prestige and sponsored by bankers of good standing.

LISTED AND UNLISTED SECURITIES.—Securities to be sold on the stock exchanges may require special form, whereas if they are to be sold in the over-the-counter market, the financial plan need not be drafted according to the rules of the stock exchange authorities. The advice of the investment bankers should be sought at this juncture, as any prejudices of the investors cannot be neglected.

As to **par values**, in case of stocks, although the conventional form is $100, the prospective purchasers may be people of small income who would find it easier to subscribe to shares of a par value of $5 or $10. Of late years many corporations have issued common stock of no par value. There are certain merits in this form of capital stock issue which should be considered when formulating the financial plan.

Bonds are frequently issued in denominations of $1,000, $500 and $100. The last two are quite common since the sale of Liberty bonds has created many small bond buyers.

SECURITIES ISSUED AT OR UNDER PAR.—When **preferred stock** as well as **common stock** is to be issued, it is usually more desirable to sell the preferred stock at par and give a certain proportion of common stock as a bonus than to sell both issues at a discount. A decidedly unfavorable impression is made when the balance sheet of the company discloses a large item of preferred stock discount. Investors in preferred stock have a greater confidence in the financial standing of a company which can sell its preferred stock

at par even though in its initial stages it may offer as an inducement common stock, the value of which will only be determined by future earnings.

Such a method is better than to be confronted with the admission that the financial standing of the company is such that it cannot float its preferred stock at par. In considering this plan the laws of the state where the corporation was incorporated must be considered and complied with. The general rule is that all par value stock must be issued full-paid. That is, property of value equal to the full par value of the outstanding stock must be turned into the corporation or the stock will be deemed to be only partly paid for, thus establishing a claim against the shareholders for the deficiency. In such cases it is not proper that any item of **stock discount** be carried on the books.

PAYING INTEREST IN SEVERAL PLACES.—In putting out security issues every possible convenience should be made for the prospective purchasers. Some of the large corporations which enjoy an international market frequently make interest payable in various countries in which the bonds are likely to be sold. Some bonds issued by large corporations in this country have interest **payable in London, Paris or New York,** while others may pay in New York, Chicago and San Francisco.

PAYMENT BY COMPANY OF STATE AND FEDERAL TAXES.—In some instances it is customary for corporations to agree to pay various state taxes to holders of bonds, as shown in the following statement:

> The Company will agree to reimburse to owners resident in the respective states, upon proper application, the following taxes paid in respect to the Bonds or the interest thereon: the Four Mills Tax in Pennsylvania; any Securities Taxes in Maryland not exceeding in the aggregate forty-five cents on each $100 of assessed value in any year; any Personal Property or Exemption Tax in Connecticut, not exceeding 4/10% of the principal in any year; and any Massachusetts Income Tax, not exceeding in any year 6% of the interest on such Bonds.

Another covenant contained in many bonds relates to so much of the federal income tax as may be ordered deducted at the source. The 1924 law requires a deduction of 2%. The following is a typical covenant:

> Both the principal and interest of this bond are payable without deduction for any tax or taxes of the United States, or any State or municipality thereof, which the Company may be required by law to retain therefrom under any present or future law.

FINANCIAL PLAN ADOPTED TO RETAIN CONTROL.—The balance of control is another factor to consider in developing the financial plan. Where the promoters and bankers have confidence in the future success of the enterprise, they desire the public's money but do not care for the public's partnership, in which case they do not want to surrender to investors either the control of the business or the right to exceptional earnings. For this reason they will retain a large proportion of the common stock to assure them voting control and any unusual earnings, while the public is generally offered some form of bonds or preferred stock. Voting control is generally retained by giving common stock sole voting power and making the issue small. This device is practiced by a large number of New England manufacturing companies.

ADAPTATION OF SECURITIES TO THE CORPORATION.—The requirements of the company must be kept in mind which may make it necessary to reject certain forms of securities which are otherwise desirable. From the corporation standpoint, there should be a well **balanced relation between capital stock issues and bond issues** so that capital requirements can be obtained upon as economical terms as possible. In order to determine the proper

proportion of bonded indebtedness and capital stock issues, consideration must be given to the relation of the assets to the earnings of the company. A failure to obtain a proper relation may result in imposing upon the company an indebtedness which it is unable to liquidate at maturity or place upon it such heavy interest charges that it may be unable to meet them in dull times.

RELATIVE PROPORTION OF SECURITIES ISSUED.—**In public utilities,** where earnings are comparatively low but relatively stable, the financial plan may provide for a large bond issue if the common stockholders are to receive a sufficiently high return to make their investments attractive. In public utilities, in general, it would be an injustice to common stockholders to expect them to furnish all the funds required for capital financing, which accounts for the reason that great numbers of bonds are issued by such companies.

RELATION BETWEEN INCOME AND SECURITIES ISSUED.—In formulating the financial plan, the factor of income should be taken into consideration in determining the amounts and kinds of securities to be issued. The rule of prudence requires that in issuing funded obligations the corporate income should, at a minimum, not only cover **fixed charges** but should leave a fair margin for contingencies. The anticipated income should be ample to provide in addition to all fixed charges and contingencies a reasonable return to the shareholders.

Relation of income to capital issues may be summarized as follows:

1. Assured net income should be sufficient to meet all fixed charges on funded obligations, including sinking fund payments.
2. Income which may be reasonably expected should be enough to cover contingencies and dividends on preferred shares.
3. Additional probable income should be large enough to provide a satisfactory return on common stock.

In developing the financial plan adequate provisions should be made for **contingencies.** The prudent financial manager will adopt a policy of safety in making generous allowances for the hazards of the business, and where they are great, the amount of funded indebtedness will be relatively small and the capital stock issues large.

In drafting the financial plan good faith requires that the **relations between earnings and capital stock issues** be such that there will be a reasonable certainty of an increasing return on the common stock as the business develops.

PROPORTION OF ASSETS TO CAPITAL ISSUES.—In preparing the financial plan the relationship between the fixed, current and intangible assets to the various kinds of capital issues should be considered. Although it may be difficult to show a direct relationship between the classes of assets and kinds of securities issued, there is in reality some relationship between them. These ratios will vary considerably with various types of business, and should be approximately as follows:

Fixed Assets.—The actual value, not mere book value, of the fixed assets should exceed by at least 25% to 50% the proposed bond issues.

Fixed Plus Net Current Assets.—The actual value of fixed assets plus the net value of current assets after deducting current liabilities should at least equal and preferably exceed the outstanding capital obligations, consisting of preferred stock, bonds, etc.

Tangible and Intangible Assets.—The total actual value of the tangible assets and intangible assets should equal or exceed all outstanding obligations and capital issues, such as bonds, preferred and common stock.

CAPITALIZATION OF ASSETS.—When preferred as well as common stock is provided for in the financial plan, the common stock may represent the capitalization of intangible values. Frequently the goodwill, copyrights, patent rights and other intangible assets represent the value back of the entire common stock issue.

In such a financial plan the preferred stock and bond issues generally represent the entire value of the tangible assets.

FUNDAMENTALS AFFECTING CAPITAL ISSUES.—The following fundamental axioms of finance should be observed in formulating the capital structure of the corporation.

1. Bonds should be issued only when the future earnings of the corporation are likely to be reasonably constant and more than sufficient to meet interest charges and sinking fund requirements.
2. Preferred stock may be issued when the earnings, although irregular, when averaged over a number of years are sufficient to leave a fair margin over preferred stock dividend requirements.
3. Common stock only should be issued when the probable earnings of the company are uncertain.

FACTORS TO BE CONSIDERED IN FORMULATING THE CORPORATE FINANCIAL PLAN.—Financial executives in formulating the financial plan for a corporation should consider the following factors:

1. The actual value and cost of the tangible assets required by the proposed corporation.
2. The probable regularity and certainty of the future earnings of the new company.
3. The condition of the security market and temper of the investment public.
4. The attitude of the promoters and investment bankers regarding the type of securities to be issued and the form of compensation they demand and degree of control they expect to secure or retain.

EARNINGS AND COST OF ASSETS IN FINANCIAL PLAN.—In developing a plan of financial organization it is well for the financial manager to bear in mind that there is no normal connection between the **cost of assets** of a corporation and **earnings.** The cost of the property to be acquired, while important in determining the amount of money to be raised by capital issues, should not be a predominating influence in developing the financial plan. The important factor is earning power in amount as well as regularity.

BOND ISSUES AND REGULARITY OF EARNINGS.—Where the nature of the business is such that there is likely to be regularity in earnings, the corporation could consider the advisability of issuing bonds. Bond interest must be paid regularly and if the earnings vary greatly from year to year, the corporation is likely to be unable to earn its interest charges at the first depression it encounters, with the possible result of default and bankruptcy.

The fluctuations of earnings of industrial corporations are generally wide and consequently it is not always a wise policy for such companies to have large outstanding bond issues. Conservative promoters and bankers are reluctant to issue bonds of industrial corporations, and conservative investors in industrial securities do not look with favor on those companies which have

unduly large funded debts. In a new and untried industry, where earnings are speculative to a high degree it is not safe to issue bonds. The oil production industry is an example.

Where the financial manager has reason to expect, after thorough investigation and as a result of past experience, that the net earnings of a company will not under any circumstances fall below a certain amount each year and it is necessary to float a bond issue, the wise course to pursue is to limit the issue to such an amount that the interest charges will fall well below the lowest expected earnings.

Where **purchase money mortgages** are left on the property, or where purchase money bonds or notes are given for plant and equipment, they should be as small an amount as possible and should be of comparative short maturity. The financial plan must be adjusted to provide for such obligations.

BASIS OF DETERMINING PROBABLE EARNINGS.—In computing future earnings the following factors should be considered:

1. Earnings should be compared with those of other concerns engaged in the same business, in the same locality, if possible, or under similar conditions.
2. It is not worth while to make comparisons of probable earnings between unrelated enterprises.
3. The personal equation of the new management should be considered. If the men who are to undertake the management have been successful elsewhere under similar conditions, they will probably be successful in managing the concerns under consideration.

The practice of **"dead reckoning"** is common in the promotion of new manufacturing concerns in localities where such concerns have not previously existed. By "dead reckoning" is meant obtaining statistics prevailing in one city or location and applying the same or similar statistics in another distant city. In such cases, no matter how accurate the statistical computation, there are many unknown factors which will modify the final outcome. Although the statistical factors may be similar, the personal equation comes into play when a new man is selected to go to a distant location and undertake the management of an enterprise, no matter how close the parallel may be.

SUMMARY OF PRINCIPLES IN DEVELOPING FINANCIAL PLANS.—A summary of fundamental principles governing the developing of the financial plan of a new enterprise may be presented as follows:

In a new business in which there is no basis for estimating earnings only common stock should be issued. If a reasonably safe estimate of earnings may be made, based on previous earnings of similar plants, a preferred stock issue may be sold to so-called speculative investors. The preferred stock dividends should not exceed one-half of the average earnings for at least five years past where the promotion is a combination or reorganization of existing plants. The prospective earnings in the promotion of a new enterprise in an established industry should be at least three times the preferred stock dividend requirement.

NEW FINANCING OF AN OLD CONCERN.—There are innumerable circumstances under which it is desirable or necessary to undertake a refinancing of an established concern. Some of the conditions necessitating such changes are:

1. **Business Expansion.**—The business may have developed to such an extent that the original plant equipment, together with the permanent capital, has proved inadequate.

On the other hand, the owners of an established business may wish to expand the business. Such expansion may be along:

(a) The old lines,
(b) A new direction, or
(c) To buy out other concerns or to combine with them.

Before undertaking new financing for the purpose of expansion it may be well for the financial executive to consider:

(a) How fast should the business expand?
(b) Will it pay to expand the business?
(c) Will the old management be capable of handling the increased business?
(d) When is the proper time for such expansion?

2. Insufficient Working Capital.—In the growth of a business considerable fixed assets may have been acquired through the application of current funds from earnings or through the use of temporary loans, the repayment of which may have made inroads on the available working capital. This condition may necessitate additional capital financing.

3. Unavailable Working Capital.—Because current assets such as receivables and inventories which are normally supposed to be liquid are in a "frozen" condition.

4. Need of Change in Form of Obligations.—This will be particularly true where bank loans have been relied on for extensive periods and it has become necessary to convert them into more permanent liabilities.

The form and type of capital liabilities may be of such a nature that they preclude further financing and it may be desirable to provide a new financial structure. Such changes may be brought about at a convenient time such as when capital issues are maturing or are to be refunded.

5. Reorganization.—Sudden losses in operations, through decreases in sales, declines in inventory values, or other reasons, may be so extensive that it may be necessary to revise the capital structure of the company if it is to continue in operation.

READJUSTMENT OF THE CAPITAL STRUCTURE OF A SOLVENT CONCERN.—A readjustment of the capital structure of a solvent concern may occur from some cause or causes other than the need for additional funds or on account of financial difficulties. Some of these causes have been enumerated by Professor Charles W. Gerstenberg in "Financial Organization and Management of Business," page 685, as follows:

"1. Dissolution **because some law, such as the anti-monopoly law, has been violated.**
2. Segregation of companies **specifically required by law** to dissolve their relationships. An example of this form of reconstruction is furnished by the segregation of the coal and railroad companies under the Commodities Clause of the Interstate Commerce Commission Act.
3. Recapitalization as a step **preliminary to consolidation.**
4. Recapitalization as a step **preliminary to refinancing.**
5. Recapitalization **to get rid of arrearages of preferred dividends.**
6. Reconstruction **to get rid of unprofitable units.**
7. Reconstruction **to give active management an interest in the ownership control.**
8. Reconstruction **to reduce taxes.**"

ILLUSTRATION OF FINANCIAL PLAN FOR A SMALL INDUSTRIAL COMBINATION.—The Western Manufacturing Co. was organized to manufacture patented specialties. Its capital stock was $150,000. First mortgage bonds were issued for $25,000. $100,000 capital stock was given for patents, and $50,000 stock was given to a promoter for selling the bonds at par. The $25,000 received for the bonds represented total cash actually invested.

It was found that the business could not thrive with the few specialties it controlled, and other specialties were added. As a result, practically all profits earned from year to year were spent securing and developing new patents. After 5 or 6 years the output became satisfactory. Then a depression wiped out the company's business and cut profits to zero. A recovery has occurred and profits are now about $20,000 yearly. The business has changed considerably in character and is established on a reasonably sound basis. The company, however, is handicapped by its location which is not favorable for its business.

A few miles away is located the Western Machinery Co., a related but not competitive business, owned by James Smith. His plant is worth $60,000 and net earnings are $6,500. In the neighborhood there is also the plant of a concern which went bankrupt some years ago. It has been closed over three years. In their run-down condition the building and other assets are worth over $100,000 but can be bought for much less.

The proposed plan is to combine these three plants under the name and charter of the first-named company. Smith will remain for a short time with the new organization and then retire. It is proposed to capitalize the Western Manufacturing Co. as follows:

	Authorized Issue	Issued at Time of Combination
6% first mortgage bonds	$500,000	$150,000
6% cumulative preferred stock	250,000	180,000
Common stock	250,000	250,000

It is proposed to distribute the securities of the reorganized company as follows:

	Bonds	Preferred Stock	Common Stock
Western Machinery Co.	$ 30,000	$100,000	$250,000
James Smith		20,000	
Owners of abandoned plant	20,000	40,000	
To be sold to public	100,000	20,000	
	$150,000	$180,000	$250,000

It is anticipated that the bonds, with a 20% bonus of preferred stock, can be sold to an underwriting syndicate at par. The syndicate can probably dispose of the bonds alone at par, its selling expenses and profits being covered by the preferred stock bonus. The company will realize $100,000 cash.

The financial plan also provides that Smith shall receive in addition to $20,000 preferred, $30,000 cash, leaving $70,000 cash to rehabilitate the abandoned plant and for working capital.

It also provides that when earnings on preferred amount to 12%, the 70% of preferred remaining unissued at time of organization shall be distributed as a bonus in agreed proportion among owners of the three plants entering the combine.

Net profits are estimated to average at least $60,000, or about three times interest and preferred dividend requirements at the outset.

An independent analysis and criticism of the foregoing plan shows that earnings of proposed combination appear to be loosely estimated, and that

a much more thorough investigation of probable markets for products, of selling expenses, and of actual expenditures required to build up an efficient working organization in the abandoned plant, would be demanded by careful investors. Unless it can be shown as a reasonable certainty that earnings will average $60,000 or more, there will be no advantage to the Western Machinery Co. in carrying through the combination. Its plant is the only one earning large profits. Although the Western Machinery Co. could advantageously use enlarged facilities, it may be asked whether a small bond or preferred stock issue based upon its own assets would not provide needed additional facilities with less risk. Under the plan proposed this company assumes most of the risk, contributes its own profits to the payment of interest and dividends, and must rely on its ability to develop new business for the other two plants. The most successful of the three companies would have to give up the certainty of continued satisfactory profits for the uncertainty of developing a new enterprise. The wisdom of combining a successful going concern with an unsuccessful one may always be questioned. It may be better for the successful concern to raise cash on its own credit and purchase outright the assets of the unsuccessful one. The above plan was abandoned for these reasons.

ILLUSTRATION OF A FINANCIAL PLAN OF RAILROAD.—The financing of a short railroad involves the investment in construction work, including terminals, of about $4,183,000. It is estimated that two years after date of opening the road to operations, gross earnings will be $2,018,000. Operating expenses are estimated at about 65%, or $1,300,000, and taxes and insurance at $80,000, a total expense of $1,380,000. This leaves an estimated net revenue of $638,000 to pay fixed charges and provide surplus. It is estimated that there will be a deficit of about $100,000 during first 2 years of operation. Equipment is estimated to cost $1,650,000 and the working capital to amount to $500,000. Total capital required is:

Cost of construction	$4,183,000
Cost of equipment	1,650,000
Loss first 2 years of operation	100,000
Working capital	500,000
	$6,433,000

Some capital required for earlier stages of construction is tied up without any income to pay interest on it, until operations begin. One plan of taking care of this expense is to form a construction company to build the road and furnish all other required property and cash. This company should be prepared to hand over to the railroad company $600,000 in cash, the sum required to provide working capital and to cover loss on first 2 years' operation. Construction company should also pay interest, taxes, insurance, etc., up to time property is handed over to railroad company. In exchange for the railroad and cash the railroad company will then turn over all its securities to construction company, from sale of which construction company will derive its profit. The promoters of the railroad will be the organizers of the construction company.

On basis of normal earnings of $638,000 the company might be capitalized as in the following table.

This leaves a balance of $58,000 a year for contingencies out of income for first 10 years.

Common stock required for bonuses to purchasers of first mortgage bonds and preferred stock is $1,100,000. For their own remuneration and to retain control of the company the promoters issue $4,000,000 common stock to the

construction company, which, under above estimates, leaves $2,900,000 common stock for themselves.

	Nominal Value	Cash Receipts to Corporation	Fixed and Contingent Charges
5½% first mortgage bonds on all property, exclusive of equipment, to be disposed of at 90 with a bonus of 2 shares of common stock to each $1,000 bond	$4,000,000	$3,600,000	$220,000
6% 10-yr. serial equipment notes	1,500,000	1,500,000	90,000
Annual payment during 1st 10 years of operation to retire above notes			150,000
8% cumulative stock to be disposed of at 90, with a bonus of 1 share of common to each 5 shares of preferred	1,500,000	1,350,000	120,000
	$7,000,000	$6,450,000	$580,000

During first 10 years common stock could not expect to receive dividends as $150,000 of serial notes is to be retired each year. Interest on that amount each year should be added to the balance available for contingencies. At the end of 10 years there will be no interest to pay on the notes and annual payments on the principal will cease. Therefore $298,000, less any reserve or payments for contingencies, may then be paid as dividends on common stock.

Note that first mortgage bonds are approximately equal in amount to actual cost of mortgaged property, not a very conservative arrangement, but rather common in railroad finance. Preferred stock is equal to more than remaining value of tangible assets, being partly offset by good-will. Common stock is offset only by good-will and prospective earning power. The amounts of the different classes of securities have been determined rather on the basis of earnings than of asset values.

Marketing Securities

Securities may be marketed through promoters, investment bankers, or by direct sales by the company.

SALES OF SECURITIES THROUGH PROMOTERS.—The sale of securities **through promoters** is generally a special operation, designed to meet a special case. The promoter might dispose of the securities to one or more individuals or corporations, or might arrange for their sale and distribution to the public through investment bankers. In certain cases, the promoter might attempt to build up a sales organization and distribute the securities to the public himself.

SALES OF SECURITIES THROUGH INVESTMENT BANKERS.—Investment bankers are divided into **three classes**—the wholesalers, the large retail distributers and the small bond houses, the last named possessing as a rule a local and rather limited circle of customers. Certain of the large wholesalers are also large retailers themselves.

WHOLESALE INVESTMENT BANKERS.—The wholesale investment bankers generally are represented by the larger banking houses in New York. Such banking houses purchase directly entire issues of corporate securities and they may have special distributing facilities for handling the sale of the securities to the public. If they do not have retail distributing facilities, they arrange for such distribution by syndicating the issue to retailers. Very often such wholesale bankers work out all the details of the financial plan of the corporation and determine the amount and kind of securities to be issued, make all

investigations, arrange the formation of syndicates, when necessary, superintend their operation, and attend to everything that is necessary to consummate the sale of the securities to the public.

Procedure Followed by Wholesale Banking Houses.—The procedure followed by the large banking houses is somewhat as follows:

When a proposition is offered them, either by their own investigators, by promoters, or by other bankers, the head of the buying department will make a rough estimate of its feasibility. If this preliminary examination meets with his approval and the securities to be issued will be acceptable and adaptable to their clientele, they make further arrangements and employ engineers to report on the physical and economic value of the property owned by the company. At the same time accountants will be employed to go over the records of the company.

When the reports of the accountants and the engineers are received and accepted, some arrangement, generally provisional, will be made under which the securities of the company may be acquired. Lawyers are employed to examine the agreements and other legal aspects of the corporation, and prepare the legal papers covering the transaction. When bonds are issued, the indenture or mortgage, and in the case of preferred stocks, the amendments to the articles of incorporation, are also drawn by the bankers' attorneys, who usually insert a number of special restrictions for the protection of the position of the security holders.

Arrangements are then made for the sale of securities. Where the issue is large, a syndicate is generally formed to handle the issue.

TYPICAL INVESTMENT BANKERS.—Among the leaders in the group of wholesale bankers may be classed J. P. Morgan & Co., The Chase Securities Co., Kuhn, Loeb & Co., and others, who usually market large issues through syndicates, whose members are composed of large and small retail dealers. Another type of investment banker is represented by such firms as Lee Higginson & Co., Harris, Forbes & Co., and the National City Co., who not only are prominent in originating business, but also sell direct to investors through their own sales forces.

THE COMPENSATION OF INVESTMENT BANKERS.—Investment bankers prefer to handle large issues at a small rate of commission rather than small issues at a higher rate. The rate ranges from 3 to 5% for large issues of railroad bonds, but the smaller bond issues and preferred stock issues are sold at commissions which may range from 5 to 10%. Occasionally as high as 15 or even 20% might be charged for marketing small industrial preferred stock issues.

RESPONSIBILITY OF INVESTMENT BANKERS FOR ISSUES BROUGHT OUT.—Although investment bankers generally do not obligate themselves in a contractual way to be responsible for the issues they sell, there is a certain **moral obligation** on their part to look after the interest of their customers who purchase their securities. Generally in their advertising, they set forth the information reported to them and on which they rely and which they believe to be correct. They do not, however, guarantee the correctness of such information. The following form is generally used in all circulars:

> The information contained in this circular is based upon official statements and statistics on which we have relied. We do not guarantee but believe it to be correct.

The better class of investment bankers attempt to follow closely the fortunes of companies whose securities they have distributed, and if there are signs of trouble, will try to improve conditions in any way possible. If affairs go from bad to worse, they usually organize a protective committee and make every effort to save as much as possible for the security holders.

ADVANTAGE OF LISTING SECURITIES ON STOCK EXCHANGE.—Listing securities on the recognized exchanges, such as the New York Stock Exchange, affords a wide market and provides easy facilities for the sale of securities at any time after their original distribution. Usually this is a factor in favor of such securities. Listing securities on the New York Stock Exchange carries with it assurances that they are bona fide issues of a legitimate company. Further than this listing does not go.

SELLING SECURITIES DIRECT BY THE COMPANY.—A corporation may sell its own securities to outsiders in one of the following ways—first, by personal solicitation; second, by circularizing; third, by advertising.

Personal solicitation is probably the most satisfactory way for a company to sell securities direct. This is generally done through acquaintances and influential business men in the locality. Ordinarily a small company cannot market its securities unless its officers and representatives have a strong personal influence.

Generally **circularizing** is not the best method to be followed by a company in selling securities because it is extensively used by swindling corporations or those nearly so. Reputable bankers, however, frequently follow this method in sending advertisements of their securities through the mails to a selected list of customers. If properly safeguarded, this is quite economical and effective.

The **prospectus** is an essential element in any selling campaign. In style, it should be concise and dignified. It generally sets forth the terms and conditions of the sale of the securities to be marketed and an outline of the history and future prospects of the company. It is generally printed for wide distribution. The most important part of the prospectus is the statement of past earnings in a going concern and the balance sheet. These statements should go back at least 5 years.

The balance sheet should be so constructed that it will submit to analysis and interpretation by the class of security buyers the company is trying to reach.

Although widely advertised names on the board of directors are often used as a means to aid in the sale of securities, shrewd investors examine the lists with caution.

The **expense in selling securities** through advertising and circularizing is sometimes as high as 25 to 50% of the offering price, whereas the expense of selling good securities should not, under the best conditions, exceed 5 or 10% of the sales price.

DIRECT SELLING PROPER FOR SMALL ISSUES.—Small issues may properly be sold through personal efforts of the corporate officers, as the larger and better class of investment bankers do not care to sell securities of a company in amounts of less than about $500,000. Direct sales of securities by a company becomes increasingly difficult as the amount of the issue increases. As a rule it is more economical for a concern of moderate or large size to sell good securities through investment bankers than to attempt to market them itself.

DIRECT SALES OF SECURITIES BY PUBLIC UTILITY COMPANIES.—In recent years a number of public utility companies have undertaken the direct sale of their securities to their customers. The purpose of such sales is not primarily due to the advantages of direct sales by the company but the cultivation of a friendly interest on the part of the consuming public. The quasi-public nature of public utility companies makes it desirable to have the good-will of the consuming public which can be obtained by a system of consumer stock ownership.

DISADVANTAGES OF DIRECT SELLING OF STOCK BY THE COMPANY.—The disadvantages of selling securities direct by a corporation may be summarized as follows:

1. Not Economical.—A corporation is not always equipped to sell its securities to the public. To do such selling requires an advertising campaign and a selling organization. On account of its lack of experience in this field the expense is likely to exceed the cost of having it done by investment bankers who are equipped for such security sales.

2. Slow Receipt of Proceeds of Sale.—A sale of its own securities by a company generally means that the proceeds come in slowly over a considerable period. A sale to investment bankers means the immediate realization of the proceeds.

3. Unsatisfactory Class of Security Holders.—Securities sold through an investment banker generally reach a better class of investors than can be reached by the company by direct sales through advertising or its own limited sales force. Investors purchasing securities through a banker generally hold them for long periods and in times of financial difficulties are more likely to cooperate with the management of the corporation through the banker than those who buy the securities direct from the company.

On the other hand, where the company sells its own securities they are likely to be bought by a limited or local group of persons who purchase such securities because of their speculative possibilities and if these are not realized will try to dispose of them, thereby creating a large floating supply, which may tend to impair the company's general credit and standing in the community.

4. Lack of Banking Support.—Probably one of the best reasons for floating stock and bond issues through banking houses is the support such bankers can give the new corporation in providing funds for expansion and for emergencies that may develop. Another reason is that such bankers can often be of great assistance in maintaining a market for the company's securities.

5. Prejudice of Investing Public.—In some cases the investing public might assume that where a corporation undertakes to market its own securities, there is some weakness and the corporation cannot find a reputable banker to offer its securities and is therefore forced to offer them itself.

Corporate Capital

In view of the confusion which sometimes exists regarding the meaning of capital, capital stock, capitalization, capital assets and similar terms a few paragraphs are given explaining and differentiating these terms.

CAPITAL STOCK DEFINED.—The **authorized capital stock** of a corporation is the amount of stock it is authorized to issue by its charter. This amount

can be increased or diminished only by amendment of its charter in the prescribed statutory manner.

The **issued capital stock** is the amount subscribed and paid for. **Treasury stock** is stock which has been issued full-paid, and which is acquired by the issuing corporation by gift or purchase. It must not be confused with **unissued stock.**

CAPITAL STOCK AND CAPITAL DISTINGUISHED.—The capital of a corporation is the sum total of all of its assets less its liabilities, whereas the term capital stock as used in corporate records means the amount of stock authorized and issued. "The funds of a company may fluctuate. Its authorized capital stock remains unchanged, save by legislative enactment. This distinction between the value of the property of incorporated companies and their capital stock is perfectly familiar." (*The State* v. *Morristown Fire Assn.*, 23 N. J. L. 195.)

CAPITALIZATION.—The legal meaning of the word **capitalization** refers to the total par value of a corporation's authorized capital stock. In a popular sense it refers to the total par value of all the security issues, consisting of stocks and bonds, outstanding at any given time. More accurately the term should include corporate surplus, particularly in view of the widespread use of capital issues without par value.

Capital or capital funds is a term often used to describe the total investment in assets of a business. This investment may include fixed and current assets. **Capital assets** is a phrase frequently used for fixed assets in which are included those assets which are of a permanent nature and which are essential to the continuance of the business. Such assets are real estate, plant, machinery, equipment, and **the intangible assets** are goodwill, patent rights, etc.

In a manufacturing concern having a plant with machinery and equipment of $1,000,000, inventories of $250,000 and accounts receivable and cash of $200,000, it would be said that the capital assets amount to $1,000,000 and the current assets to $450,000.

CAPITAL AND NET WORTH.—The term capital is often used to denote the stockholders' total investment in a corporation, or the **net worth.** In a sense the capital stock of a corporation is the valuation made by the organizers of net worth of the enterprise if the stock has been issued at par. At the beginning this is theoretically true and as a matter of legal fiction is a fairly accurate valuation. This status, however, does not continue after the corporation operates as a business unit. The net worth changes constantly, the result being reflected in periodical adjustment of surplus.

The book figures of net worth at best are an awkward measure of value. Such values change from day to day whereas book figures as representatives of values are adjusted only at stated intervals and then many of the figures represent changes made on an arbitrary basis. The necessity of making such estimates in evaluating the assets and liabilities, actual, contingent and potential, makes it very difficult in accounting practice to give a statement of net worth which is absolutely correct from a theoretical standpoint, and at best all that can be expected is a statement of such values which is substantially correct for practical purposes.

Capitalization

BASES AND PRINCIPLES OF CAPITALIZATION.—In financing industrial corporations capitalization is one of the first problems to be considered. The basis of capitalization may be one or more of the following:

1. The value of the assets
2. Cost of property
3. Earning power of the business

COST AND VALUE OFTEN CONFUSED.—In finance, particularly when considering the capitalization of corporations, cost frequently plays a large part and is often confused with value to which it is rarely equivalent in a given instance. While the cost to reproduce under certain conditions approximates value, there are, at times, elements of an intangible nature connected with the property which would be ignored if the reproduction cost alone were accepted as the value.

CAPITAL INVESTMENT AS BASIS.—The popular concept is that a corporation's capitalization should equal the amount of capital invested. This idea is probably based on the legal fiction caused by the statutes of many states which require that the initial issue of capital stock must be issued at par.

Small or close corporations, with few exceptions, generally issue capital stock and bonds at a par value, exactly or nearly equivalent to the cash or cash value of property which the corporation receives. In its initial stages the capital stock and net worth of such a corporation are practically equivalent. The agreement between the capital stock and investment disappears after profits or losses from operations occur. If the concern has the proper amount of capital, and earns a normal rate on its investment all of which it pays out as dividends, there will be very little divergence between its capitalization and net worth. This equilibrium is, however, seldom maintained.

In many large corporations or small corporations of a speculative nature, there is no close relation even at the beginning between the amount of capitalization and value of its assets. Generally such concerns must use part of their original capital in order to get capital. If of a speculative character, the assets acquired will fluctuate up or down immediately after organization.

Initial capitalization legitimately covers not only cost of tangible assets, but also certain intangible elements in form of promotion, engineering, and developmental expenses. Frequently these are capitalized in a single account, such as Organization Expenses or Deferred Expenses. Ultimately, depending on the nature of the items and the policy of the management, these are either written off or are permanently capitalized. **Interest during construction** is usually permanently capitalized.

CAPITALIZATION BASED ON EARNING POWER.—Where capitalization of a corporation is based on earning power it usually bears little relationship to tangible values. Earning power is probably a more correct basis for capitalization than asset values. This principle of capitalization, however, does not accord with the principles of law governing corporations which assumes that investment is the basis of capitalization. Out of this conflict between legal theory and business practice many of the difficulties, evasions and legal fictions connected with corporate capitalization have developed.

In an economic sense, which is also the business view, wealth is measured not by the amount of investment but rather by the income produced. This can be illustrated by comparing two businesses, or better, two pieces of property which are equal in cost, character and stability. The one produces a net income of $40,000, and the other $10,000 a year. If the two incomes are equally stable, the one is worth four times the other. If income is accepted as the determining factor in the value of investment, earning power is the correct basis for determining the capitalization of a concern.

CAPITALIZATION OF EARNING POWER.—This principle is generally accepted as correct among the financiers of this country. As to the practice in other countries, Paul M. Warburg some years ago wrote as follows:

"Stock-watering, that is, capitalization of earning power or goodwill, is permitted in England and France, while it is not allowed in Germany. While personally I prefer the German system, it is a mistaken idea to think that the capitalization of earning power necessarily means taking advantage of somebody. If the German sells at 200% an industrial stock paying 10% dividends, it amounts to the same as if the Englishman had sold at par twice the amount of shares on which 5% dividend is paid."

Capitalization on the basis of earning power is not necessarily the result of a carefully thought out plan. On the contrary, it usually is the by-product of an effort on the part of the organizers of corporations to make the corporate stock attractive so as to be able to sell it at the highest possible price. It is for this reason that corporations which have shares that are actively dealt in are more generally capitalized on an earning power basis than are the corporations which are closely held.

THE MAGIC OF PAR VALUE.—The reason for the adoption of earning power as a basis of capitalization is well expressed by a writer who does not believe the basis a sound one.

"But if the earning power basis of capitalization is both unsound in theory and impracticable in application, why is it so generally supported by American financiers? The answer is fairly clear: It is that the earning power basis of capitalization gives promoters the opportunity to set the nominal capital at whatever figure they think will give the securities their highest market value. One of the strange but well-recognized phenomena of the financial market is that an enterprise capitalized at a liberal figure is very apt to seem more valuable to the investing public than would that very same enterprise if capitalized at a lower amount. The 'magic of par value' often has a decided influence. American promoters are past masters in the art of taking advantage of this preference for a large nominal amount of stocks and bonds. And in this game their best ally is the highly sanctioned theory that capitalization should be determined by earning power. For by estimating future earnings at an extravagant figure and then by capitalizing these earnings at a very low rate, the promoters are able to justify an issue of securities far in excess of the actual cost of the property."

RATE OF CAPITALIZATION.—The nature of the business and the stability of earnings are the determining factors in arriving at the rate of capitalization. In **public utility companies and railroads** it is customary to capitalize earnings, which are practically certain, at a low rate. The stocks of such companies which pay 6 to 7% in dividends sell at or near par.

Where earnings can be estimated with reasonable certainty, it would be conservative to capitalize them on an 8 to 10% basis in common stock, depending on the prevailing rate of profits of that type of business in the section of the country where the company is financed. In order that the shares of stock of manufacturing and trading concerns may sell at or near par, it is necessary that they usually pay from 8 to 10% dividends and earn considerably more. It is, however, not usually considered necessary to have shares sell at par when first issued. Hence the original capitalization on a basis lower than would be used if the same properties were to be sold for all cash.

DEFINITION OF EARNING POWER.—The phrase "earning power" is a vague term used with all the elusiveness and flexibility necessary to serve

the purposes of persons using it as a basis for capitalization. This earning power may be past, present or prospective. The prospective earning power may in turn be possible or probable.

The nature of each business will determine the proper method of arriving at the earning power to be used as a basis of capitalization. Such earnings may be classified as follows:

1. Those which are practically certain and can be determined in advance, as may be the case in public utilities or other businesses of a monopolistic character.
2. Those which can be estimated with approximate accuracy on the basis of previous years' earnings, as in the case of established concerns.
3. Those which are uncertain and are estimated on the basis of earnings of companies in a similar line of business.
4. Those which have no basis for estimate but represent only earnings hoped for, as in the case of new enterprises in untried fields.

In corporations organized to conduct a speculative business, where the profits may prove to be very large or nothing, no conservative basis can be recommended for capitalization. The promoters of such corporations usually determine the capitalization on the basis of their plans for selling the stock, which may be governed by the financial condition and the public attitude toward speculative stock issues.

Sometimes a corporation has prospective earnings which may fall into the classes mentioned, that is, earnings which are certain, those which are probable and those which are hoped for. If the financing is conservative, no attention will be paid to the last one. The first two may be used as the basis for different classes of securities. Frequently in financing public utilities part of the certain earnings may be used as a basis for determining the amount of bond issues.

COMPUTING EARNING POWER.—In estimating the earning power of a **new business** in order to arrive at the capitalization, it is necessary to ascertain the probable gross income for a typical year. From this amount would be deducted the operating costs and expenses. Due allowance would then be made for such fixed charges as taxes, insurance, interest, depreciation, etc. In addition, liberal reserves should be made for contingencies. The remainder will be regarded as the net income to be used as a basis of capitalization. What the rate should be must be determined by what is regarded a fair return in that line of business, considering the degree of risk and stability in question.

Assuming that $100,000 is the net income indicated in the above hypothesis and that the nature of the business is such that 10% is regarded as a satisfactory return on the capital invested, then by capitalizing the earnings of $100,000 on the basis of 10%, $1,000,000 would be the amount of par value of stock the concern might be authorized to issue.

AVERAGE EARNINGS.—The anticipated earnings should be the average earnings over a series of years and not merely the earnings for any one year. This holds particularly true when it is contemplated to increase the capitalization of the concern from time to time, as the business and earnings increase.

If a company has been doing business successfully over a period of years and has had reasonably stable earnings, it would seem to be an easy matter to estimate the probabilities for the future; yet the experience gained during the last 25 years in forming combinations of industrial companies indicates quite clearly that even expert estimates are an unsafe guide.

The following interesting table shows the disparity between the promised and the actual profits in the case of a number of important industrial com-

binations. The aggregate earnings of the subsidiary companies before the combination are taken as 100; the percentages given show whether these prior percentages were exceeded or otherwise under the combination.

Mount Vernon-Woodberry Cotton Duck Co.	166%
National Salt Co.	134
New England Cotton Yarn Co.	98
International Cotton Mills Corporation	56
United States Ship Building Co.	56
United States Realty & Construction Co.	50
Asphalt Company of America	40
American Malting Co.	31
American Bicycle Co.	24

The results shown above may have been due in part to padded statements of earnings on the part of the constituent companies, which just prior to the combination were trying to make the best possible showing for themselves; to some extent they are due, doubtless, to the fact that combinations are generally organized at the height of a period of prosperity. In general, however, they seem to represent a tendency toward actual decline in efficiency under the new organization.

OVERCAPITALIZATION.—Overcapitalization as used in its popular sense means that the total outstanding capital stock of a corporation has a nominal or par value substantially greater than the value of net assets or more than is warranted by the probable earning power of a business. Generally corporations are considered as overcapitalized when their outstanding issues of capital stock are so large that reasonable dividends thereon cannot be earned or paid for a number of years.

Some of the ways in which overcapitalization may be brought about are as follows:

1. **Over-enthusiasm in estimating the future earnings** of the business, and basing the capitalization on such optimistic and hoped for earnings.
2. **Difficulties of promotion** which required large distribution of common stock, (a) at low prices, (b) as bonus with preferred stock, or (c) for services of promoters.
3. **Fraudulent transactions** in which large issues of common stock are issued without regard to possible future earnings or the assets of the company. Such promotions are primarily stock selling transactions without a bona fide attempt legitimately to finance corporations.
4. **Loss or destruction** of a large part of the essential assets not compensated by insurance and where the corporation has not sufficient reserves or surplus to replace such assets.
5. **Losses year after year from operations** exhausting surplus and making inroads on the capital stock.

Among the **disadvantages of overcapitalization** are:

1. High incorporation fees, annual franchise taxes and capital stock taxes.
2. Credit may be questioned by bankers and creditors.
3. Excessive capitalization may prevent payment of dividends or if paid may make their rate ridiculously low.
4. Deceptive as to earning power in that a low dividend payment on an overcapitalized stock issue conceals the actual earnings on the real investment.
5. Under certain conditions may lead to extravagance in the operation of a new corporation.

UNDERCAPITALIZATION.—Undercapitalization exists where a corporation issues its total capital stock at a nominal or par value which is considerably less than the fair value of the assets and is low compared with the earning power of the business. It may be brought about when a new concern with very good earning possibilities capitalizes on a basis of a conservative estimate of future earnings. A going concern in which the earnings are reinvested in the business over a long period, resulting in building up a large business from an investment which was relatively small, results in a condition which is popularly considered undercapitalized.

Some of the **disadvantages of undercapitalization** are:

1. If the business is successful the earnings will appear very large on the outstanding capital stock which when brought to the attention of the public may cause (a) disapproval and possible loss of trade or (b) increase competition by causing others to enter such an apparently lucrative business.
2. An undercapitalized company generally has greater financial strength than is apparent, and while this is an advantage from the standpoint of conservatism, it has its disadvantages in that it may be rated unfavorably by those dealing with the business at its inception.

Capitalization of Good-Will and Other Intangibles

The intangibles generally capitalized are **good-will, patent rights, copyrights, trade-marks, trade-brands, and secret processes.**

In formulating a financial plan for a corporation, particularly in cases of reorganization and changes of ownership, the subject of valuation of intangibles for purposes of capitalization frequently presents a perplexing problem. The very fact that intangibles were often used as a means of manipulation in connection with stock issues indicates that their valuation and treatment were in general little understood or properly regarded.

DEFINITION OF GOOD-WILL.—"Good-will, in its commercial sense, is the present value of the right to receive expected future super-profits, the term 'super-profits' meaning the amount by which future revenue, increase, or advantage, to be received, is expected to exceed any and all economic expenditure incidental to its production."

Leake's definition is sufficiently comprehensive to include all elements usually regarded as creating good-will. Chief among these are: **good name, reputation, business connections, custom, individuality,** and **locality.** No present value in good-will exists unless expected future revenue exceeds cost of producing it (including current expenses, depreciation, cost of management, and interest on capital, both owned and borrowed). The **interest rate** to adopt depends on what rate is necessary to attract capital to the undertaking in question. Having regard to risk involved, rate of return on investments varies from, say, 4½% where element of risk is negligible to, say, 7%, where risk incident to ordinary industrial undertakings is present. Before a good-will value can be said to exist it must be shown that expected future yearly profits will exceed **normal hire** of invested capital in the industry in question, because this normal hire can be obtained by capital at any time without payment of a premium. Payment for good-will is equivalent to payment of a premium.

WHERE VALUATIONS REQUIRED.—Good-will valuations may be required under the following circumstances:

1. Upon the purchase of an enterprise by another concern or when a merger takes place.
2. Upon the incorporation of an enterprise.
3. Upon the admission of a partner to a partnership.
4. Upon the dissolution of a partnership, resulting from the death of a partner, the voluntary retirement of a partner, or the bankruptcy of a partner.
5. As a matter of routine policy.
6. Upon the purchase of a professional practice.

VALUATION OF GOOD-WILL ON EXCESS EARNINGS.—Since it has become the almost universal rule to value good-will on the basis of earnings in excess of interest on investment and a fair allowance for managerial services, the four following factors must be considered:

1. Value of net assets of business as a going concern.
2. Earning power of business.
3. The rate of interest to allow as a return on net investment.
4. The number of years' purchase of profits to take.

1, 2. To determine **net investment** it is necessary to arrive at a mutual agreement or else secure an expert appraisal of the fixed assets and a valuation by accountants of current and working assets. It may be necessary to make certain adjustments in the balance sheet items. Thus, if leases have not been carried at any figure, they should be given a figure and brought into the balance sheet. A revaluation of timber lands or of mineral rights may be desirable if these have increased from a low valuation to one based on surveys and estimates by engineers. Various changes may be necessary to allow for **amortization** or **depreciation.** Present, not past, conditions with respect to depletion, depreciation, and amortization must be considered, because it is under these conditions that the future income of the business will be considered. If extraneous items are found among the assets they should be carefully considered. If a reserve fund exists which produces an income lower than normal rate of profit, this should be excluded in considering both principal and income. But if investments yield a return equivalent to ordinary commercial return upon capital, it is not necessary to eliminate them. Caution should be exercised in eliminating assets which represent a dead expense because ownership of them frequently contributes indirectly to the profits of a business.

In manufacturing it is sometimes advisable to construct facilities of sufficient capacity to meet growth in demand which will extend over a period of 5 years or more. Before doing this a reasonable estimate of increased volume of business must be secured. In valuing good-will, cost of maintenance, overhead, and insurance of temporarily unused facilities should not be charged against profits, nor should interest on excess capital invested be deducted in arriving at excess profits upon which valuation of good-will is based. Instead, valuation should be made upon basis of facilities employed.

3. **Proper rate of return on investment** is normal rate at which capital can be secured for the enterprise in question at date of good-will valuation. This varies with nature of business, kind of assets involved, and ratio of earnings to assets. There are certain limits within which capital can be raised by sale of bonds. Likewise there are certain limits within which preferred stock can be sold. These limits vary at different times, being affected by the conditions of the money and the investment market. If capital can be secured for industrial purposes by issuing 7% preferred stock to amount of the tangible assets, provided the dividend has been earned on an average of at least 4 times over a

series of years, 7% is the rate to charge on tangible assets in valuing good-will. Again, if a 5% bond could be sold equal in amount to 40% of tangible assets, a 6% preferred stock for another 40% of tangible assets, and if common stock paying 10% were issued for the balance of tangible assets and good-will, then the average rate of 6½% would be a proper rate to use, provided certain ratios of earnings to interest charges and good-will could be shown.

For valuing good-will the **legal rate** should not be regarded as the **normal rate,** although in a number of New York decisions 6% was adopted.

The Treasury Department uses a rate of 7 or 8% in stable businesses, but in other cases a rate of 10% is used.

4. The **number of years' purchase of profits to take** is the least settled point in good-will valuation. Its determination is partly a matter of judgment. The transferability of the good-will must be considered. Some kinds of good-will are **personal,** attaching to the individuals who create them. Others are readily transferable to a vendee. Again, some good-will is **institutional,** as distinguished from that attaching to a single product. Good-will attaching to the name of Heinz is institutional because it helps the sale of any product coming under that name. Good-will attached to the **name of a particular product,** as *Danderine* or *Cascarets* is not institutional and has a more limited application. Institutional good-will should be valued at a greater number of years' purchase than good-will which rests upon a single brand of goods.

If good-will is nation-wide or world-wide it should be valued upon a greater number of years' purchase than if it is of only local extent. Good-will of a chain store should be valued on the basis of a higher multiple of average profits than should good-will of one large store with a more limited market. Tending to create a higher purchase of good-will are: wide distribution in proportion to volume of product; wide variety of products sold under an institutional name; staple products in general demand by buying public; increasing volume of business. The last factor may be considered in applying the usual formula, or it may be considered as an independent factor. Possibility of adverse legislation may be a factor.

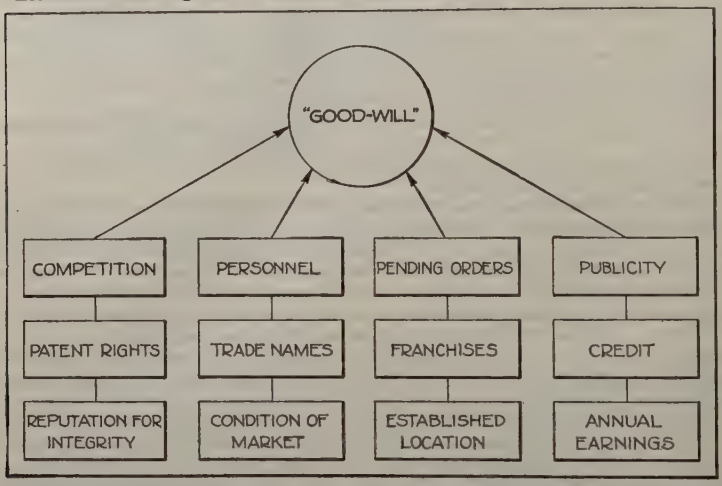
In fixing an allowance for managerial services, give consideration to character of business, i.e., whether staple or otherwise; to kind of training required of manager; and to usual standard of compensation for services established in similar lines of business.

It is sometimes necessary to make certain variations from the results shown in profit and loss accounts when determining net profits, with a view to ascertaining a certain number of years' purchase price.

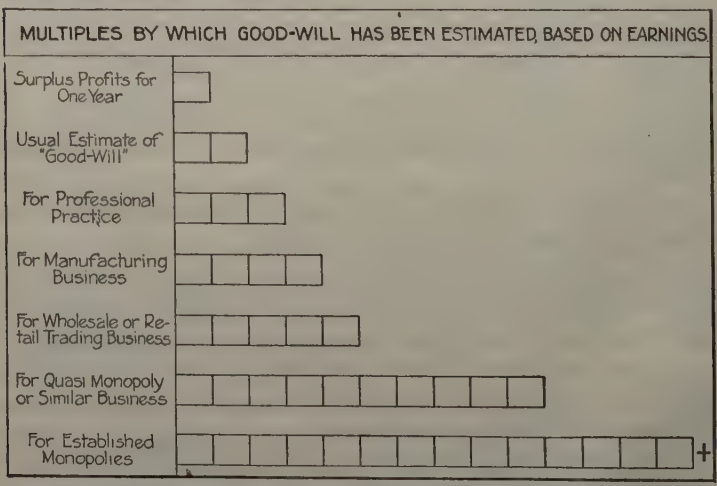
At formation of the International Harvester Co. the good-will of the merging concerns was fixed by adding to the sum of profits of the two preceding years an additional 10% thereof. This method is fairly common among manufacturers. But in ascertaining net profits certain classes of income and expenditure were not included, among these being interest on accounts and bills receivable, on certain accounts payable, and also cost of collecting receivables. Depreciation was not deducted in determining value of good-will. Consequently, profits figure employed in placing a valuation on good-will was larger than that shown in Profit and Loss account.

The courts generally have not approved valuations based on more than 5 years' purchase, although in New York the Appellate Court in *Von Au* v. *Magenheimer*, permitted a multiple of 6 years' purchase; while in valuing the good-will of Tiffany & Co. a multiple of 10 was approved. This is the maximum multiple permitted by the courts. The courts recognize, however, that in most American cases a period ranging from 2 to 6 years is adopted, the number being

Elements Entering Into Valuation of Good-Will—Graphic Presentation



Some of the factors that enter into a computation of the "good-will" of a business. For obvious reasons these factors vary greatly in importance, dependent upon the peculiar conditions that affect the business.



MULTIPLES BY WHICH GOOD-WILL HAS BEEN ESTIMATED, BASED ON EARNINGS
Surplus Profits for One Year
Usual Estimate of "Good-Will"
For Professional Practice
For Manufacturing Business
For Wholesale or Retail Trading Business
For Quasi Monopoly or Similar Business
For Established Monopolies
+

The first rule in computing "good-will" is to determine the net earnings of a business, from which sum is deducted the interest on capital actually employed and the value of the owner's services. The result, multiplied ordinarily by 2 but sometimes by many times that amount, has been accepted as the value of the "good-will."

NOTE.—The above charts are reproduced from *System, the Magazine of Business*, for January, 1912.

dependent upon the nature of business, length of time it has been established at a given place, and extent to which it is known to the public. The tendency to go beyond the 5-year rule is justified by the increasing stability of forms of industrial organization and to improvement made in training executives. The accompanying chart reproduced from *System*, Jan., 1912, shows multiples employed in estimating good-will of various enterprises.

It is not desirable to employ as high a multiple against excess earning power when excess earnings are large, as when comparatively small; and it may be desirable to use different rates for different parts of such excess earnings. Suppose Company A has earnings of $10,000 in excess of a normal return of 7% on its net worth. If it is desirable to multiply such excess of $10,000 by 5 to determine value of good-will, or, as technically known, 5 years' purchase price of excess profits, then were average earnings $20,000 instead of $10,000 it would not be desirable to multiply the total $20,000 by 5, but to multiply first $10,000 by 5 and remaining $10,000 by, say, 3, thus securing a figure of $80,000, instead of $100,000, for good-will. Each additional block of excess earnings should be taken at a still lower rate. In general terms, the greater the surplus earnings as related to normal profits, the lower should be the rate by which they should be multiplied.

PERMANENCY AND AMOUNT OF GOOD-WILL.—Good-will is a much more permanent asset in some lines of business than in others. Those lines of business which employ an overwhelming proportion of fixed capital assets, ordinarily attribute their earnings almost wholly to these assets, and there is seldom any occasion for entering such an item as good-will. On the other hand, those corporations that are engaged chiefly in trading, their earnings being dependent to a great extent upon the rapidity of their turnover, or upon popular favor, may find, if they are successful, that their earnings mount far beyond any sum that can reasonably be attributed to their capital assets.

There are many cases, also, where highly profitable and rapidly growing companies may have trouble in valuing their tangible assets at a figure high enough to offset the amount of stock which their directors feel should properly be outstanding, and good-will must be resorted to for a balancing item.

ACTUAL GOOD-WILL VALUATIONS.—The figures at which large American corporations have placed their good-will in recent years are shown below:

B. F. Goodrich Co.	*$57,798,000.00
American Tobacco Co.	54,099,430.00
P. Lorillard Co. (trade-marks, brands, etc.)	21,137,927.00
Liggett & Myers Tobacco Co. (trade-marks, brands, etc.)	40,709,711.00
Republic Motor Truck Co.	4,805,936.00
Pyrene Manufacturing Co. (patents, trade-marks, and good-will)	1,002,450.00
W. S. Light & Heat Co. (patents and good-will)	4,608,256.40
Cluett Peabody (good-will and trade-names)	18,275,000.00
Butterick Co. (patents, good-will, copyrights, trade-marks, etc.)	13,893,271.00
Silver-Burdett & Co. (publishing rights, contracts, copyrights, etc.)	1,024,820.00
Hendee Manufacturing Co.	6,157,646.00
American Chicle Co. (good-will, trade-marks, etc.)	18,826,642.00

* Omitted from balance sheet after 1919.

Sometimes valuations are assigned to good-will although it has not been brought into the balance sheet as an asset. Recently the advertising manager of the California Fruit Growers' Exchange estimated the value of the Sunkist

trade-mark at $1,000,000, but the president of the exchange thought that it would be nearer $10,000,000. The value of the name *Bull Durham* has been estimated at between $10,000,000 and $20,000,000, and it is said that $10,000,000 has been offered for the *Camel* cigarette good-will. It is a familiar saying that such trade-marks as *Ivory Soap*, *Kodak*, and *Uneeda* are worth a million dollars a letter.

In Sept., 1914, an appraisal was made of the estate of Joseph Pulitzer, former proprietor of the New York *World* and St. Louis *Post-Despatch*. The earning power of each was first estimated on the basis of average yearly earnings for 4 years preceding Mr. Pulitzer's death; but from this average a considerable amount was deducted to allow for certain favorable contracts for the purchase of white print paper which were soon to expire. A deduction of $100,000 was also made to allow for services of Mr. Pulitzer; also 6% was deducted on actual capital invested. Average net earnings left amounted to $196,411 for the St. Louis *Post-Despatch*, and $81,180 for the New York *World*. The appraiser capitalized these amounts on a 10% basis, resulting in a good-will valuation of $1,964,110 for the former paper and $811,800 for the latter.

There is a tendency among some companies to dispense with good-will altogether, because it is sometimes viewed with suspicion. The General Electric Co. has written its good-will down to $1, and the Victor Talking Machine Co. to $2. The tendency to treat good-will in this way was checked by the excess profits tax, but with the repeal of this a return to this policy may be expected.

The following extract from the New York Times, Nov. 3, 1922, refers to the valuation of the estate of Temple Bowdoin:

"Transfer Tax Appraiser Berwin, in estimating the value of the good-will interest, accepted the average annual profits for ten years, and multiplied this sum by three. This is called the 'purchase value,' and is explained by George Brokaw Compton in a treatise on good-will as follows: 'This multiple, or a number of times the average annual net profit, is held to equal the amount a purchaser would be willing to pay solely for the advantage of continuing the business.'

"Appraiser Berwin accepted 'three years' purchase' as the value of Mr. Bowdoin's interest in the good-will over the protest of Lafayette B. Gleason, counsel for the State Tax Commission, on the ground that the appraiser should have fixed the 'purchase' at a higher multiple than three. In appraising an interest in the business of Franklin Simon & Co., the multiple of five was fixed by the Surrogate, while the good-will value of stock in Tiffany & Co. was estimated on a basis of 10 years' purchase. Stock in the Hearn department store was appraised on a multiple of five. It is expected that an application will be made in the Surrogate Court to increase the value of the good-will on the ground that a higher multiple than three should have been used, and that the basis for the good-will fixed at the present time will be used in later taxation of estates of other members of the Morgan firm."

GOOD-WILL IN PURCHASE AND MERGER.—When one concern purchases an interest in another, good-will is brought in to represent excess earning power of purchased concern. An alternative procedure is suggested in the *Accountant* for June 3, 1922 (p. 784), as follows:

"As good-will represents the capitalized value of the company's earning powers it might, therefore, be preferable for new companies to issue their ordinary shares at a premium representing the purchase price of the good-will, thus avoiding the necessity for showing any good-will value in the Balance

Sheet; then, if profits did not reach the standard expected, the good-will would be automatically eliminated by the corresponding fall in the market price of the shares."

When companies buy out small traders who have given personal attention to the management of affairs, they frequently pay for good-will more than conditions warrant. The small owner earned a profit which recompensed him not only for his investment but also for his time and personal exertions. Stockholders do not make the same personal exertion and so cannot expect to secure the same profits. This circumstance frequently leads to over-capitalization of companies through their anticipation of a continuance of the profits of the small absorbed enterprises, but whose earning capacity under changed conditions does not fulfil expectations. If the old owner continues with the concern as manager the situation is more favorable, but then earnings on capital ordinarily are decreased because of increased investment necessary to make it possible to capitalize good-will.

Ordinarily the **amount to be paid for good-will** is determined in the agreement of sale entered into between purchasing company and vendor. If the agreement does not specifically mention good-will, it may be inferred that it does not exist unless purchase price is in excess of assets taken over. Also, such assets may be representative of other intangible assets—as, patents, trade-marks, copyrights, etc. Sometimes good-will is regarded as one asset in combination with these other items which may be essential to its existence.

To have a **sales value** good-will must represent a substantial excess of earning power over a fair return on the investment plus a reasonable allowance for managerial salaries. Merely because a business is well established does not mean that it has good-will for which a buyer can afford to pay a large sum. If, under any conditions earnings are not largely in excess of interest on capital plus managerial salaries, it is improbable that a new management can increase them greatly. **Mere sentiment** attached to an old but losing business is not good-will. Frequently lack of earning power is ascribed to bad management, but this plea is overworked. Profits should be increasing. In case of a business which is standing still the danger of retrogression is great.

RELATION OF COMMON STOCK TO GOOD-WILL.—When good-will represents an important item in capitalization of mergers and consolidations, it is usual to make it the basis for an issue of common stock. Preferred stock is issued to amount of physical assets and from total net earnings is deducted the sum required to pay dividends on this preferred stock. Remainder of net earnings is then capitalized to find amount of good-will and therefore amount of common stock to be issued.

To illustrate, assume case of a concern having net earnings of $4,000,000 a year. Its physical property is valued at $21,000,000 and preferred stock is issued to that amount. A 6% dividend is to be paid. This amounts to $1,260,000, which deducted from net earnings of $4,000,000 leaves $2,740,000 of yearly profits due to good-will. Now, if common stock dividend rate is to be 8%, good-will valuation will be $2,740,000 ÷ .08 = $34,250,000, which, for sake of round numbers, might be placed at $35,000,000. At organization of the U. S. Steel Corp. preferred stock and bonds were issued to cover tangible assets and common stock was issued to represent good-will, its amount being such that had profits been maintained it would have received a dividend of 7½%. So little confidence existed in the ability of the Steel Corp. to succeed that at one time a share of its common, par $100, could be bought for $8. Yet it later sold for more than 136.

Sears, Roebuck & Co. was capitalized on a similar basis. At time of organi-

zation in 1906 its material assets were valued roundly at $10,000,000. The preceding year profits were $2,868,061.31. Preferred stock was issued to amount to $10,000,000 and was assigned a 7% cumulative dividend, necessitating $700,000 yearly. This left $2,168,061.31 upon which to base good-will valuation. Common stock was placed at $30,000,000 and was therefore capitalized at between 7% and 8%.

The requirements of the **excess profits tax law** in effect from 1917 to 1921 to the effect that no valuation of intangible assets acquired for stock in excess of 25% of total par value of a corporation's stock should be recognized, interfered with this plan of capitalization. When, in 1919, the Endicott-Johnson Co. was organized, the good-will was valued, not on basis of producing power, but arbitrarily in order to comply with provisions of the tax law. The capital stock amounted to $29,000,000; $7,000,000 of this was based on good-will. It was stated that had good-will been based on earnings or a lump sum valuation, it would have been placed at a much higher figure.

GOOD-WILL IN PARTNERSHIP INCORPORATED.—When a partnership is to be incorporated and the old partners are to become sole stockholders in new company, the necessity of bringing in good-will is not apparent, because each would secure his proportionate interest and his due proportion of profits. In such a close corporation capitalization is not a matter of importance; in fact it is frequently fixed at an amount which is purely arbitrary. When, however, there is a likelihood of changing membership, the question of capitalization becomes of importance; it may be laid down as a general rule that if stock is sold at any time, an undercapitalization will be found disadvantageous. For this reason, when a firm is incorporated, good-will should be valued as carefully as any other asset.

GOOD-WILL BASED ON TRADE-NAMES.—An essential difference exists between good-will of a concern which sells a **staple product** which is bought and sold under its staple name but without reference to the producer, and good-will of a concern which sells an article under a **trade-name** and which is always traded in with a knowledge of the producer or of the brand. The former kind of article is usually advertised under its trade-name, and if the market is an expanding one, it gives rise to a form of good-will of which the owner cannot be easily deprived. Good-will which is built up on trade-names may, however, be suddenly lost if the article becomes unpopular for some reason. The **tobacco business** affords an illustration of good-will built up on trade brands. Most forms of manufactured tobaccos are sold under **special brand names.** Extraordinary profits have resulted from the popularity which some of these brands have acquired. Such popularity must be based upon actual valuable qualities possessed by the goods. Brands of manufactured tobaccos are in this respect like many so-called proprietary articles—patent medicines, perfumes, liquors, toilet preparations, and chewing gums.

GOING CONCERN VALUE.—The expression **going concern value** is employed in place of **good-will** in connection with valuation of public utilities. Mr. Justice Moody, of the United States Supreme Court, in *Knoxville Water Co.* case, defines going concern value as follows: "This sum we understand to be an expression of the added value of the plant as a whole over the sum of the values of its component parts, which is attached to it because it is in active and successful operation and earning a return."

Wm. H. Bryan's definition: "It is the value such a plant has over and above its physical value, due to the fact that it is not a bare and idle system, but it

is in actual operation, doing business with large numbers of connected customers. It is something like the good-will of a business but is even more tangible."

Various methods have been employed to **estimate going concern value.** Frequently English syndicates, when buying property in the United States, have valued this item as the equivalent of the net income of a given number of years, or, in other words, as a given number of years' purchase price. But when the utility possesses a **monopoly,** the majority of court decisions are against allowing anything for going concern value. In other cases it is customary to allow for a reasonable expenditure of money in getting the business of an undertaking established. This item was first officially recognized by Judge Brewer in 1894, in the *Kansas City Waterworks* case. He said: "The city steps into possession of a property which not only has the ability to earn, but is, in fact, earning. It should pay, therefore, not merely the value of a system which might be made to earn, but that of a system which does earn."

One method of determining going concern value is to base it on net earnings. But it must be remembered that courts are not inclined to favor property valuations arrived at by this method. It was followed by the Wisconsin Commission, in *Hill* v. *Antigo Water Co.*, and in *State Journal Printing Co. et al.* v. *Madison Gas & Electric Co.* The method followed is illustrated by results secured in case of the electric light plant in Madison. Cost of electric plant at time of acquisition was first determined as closely as possible. To this was added cost of all new extensions, increases in value of land, depreciation, and interest and profit calculated on original cost at rate of 8%. From the total thus secured net earnings of the year were deducted. The balance indicated value of plant at end of year. This amount was then carried forward and became "earning value" as of Jan. 1 of following year. To this amount same items as shown above were again added. In this way the value was determined for each year and used as starting point in year following. The last value determined, in this case for year ended Dec. 31, 1908, was taken as earning value of plant. Depreciation, it should be noted, is added to value instead of being subtracted from income. By either method the result is the same, but the Commission calculated on setting up a depreciation account to which a certain sum should be added out of surplus each year. Moreover, computing interest and profit at rate of 8% and adding this amount and depreciation to general cost, resulted in carrying forward to next year any balance of depreciation, interest, and profit which was not covered by the year's net earnings, and which was to be paid during later prosperous years in the life of the plant.

CAPITALIZATION OF TRADE-MARKS.—Trade-marks, particularly if they are well and favorably known, have a value which may be capitalized. The ownership of trade-marks on proper registration is practically perpetual whereas a patent is limited to 17 years. The valuation of trade-marks for purposes of capitalization presents problems which are very similar to the valuation of good-will.

CAPITALIZATION OF SECRET PROCESSES.—One of the most intangible of assets is the item of secret process. Some concerns consider a secret process a more important asset than a patent on the ground that if the process is developed by the company it is able to keep it a secret, whereas if it is patented, there is a danger of it becoming known. On the other hand, if such a process is not registered and it becomes known, discovered or developed by a competitor its value is gone without right of legal action.

When secret processes of manufacture enable goods to be produced at a cost lower than that incurred by competitors, a valuation may be arrived at by

capitalizing the savings likely to result over a period of years based upon the estimated production.

Although the exploitation of secret processes may give a company a distinct financial advantage great care is necessary in evaluating such processes for purposes of capitalization. Probably the most conservative basis is to capitalize secret processes at the cost of development or at cost when purchased. A good financial policy is to set up a liberal reserve against the secret process during the early years of its life.

CAPITALIZATION OF BRAND NAMES.—Some products are purchased largely because of the fact that the brand name has become a household word. Intrinsically such products may be of no greater value than the same or similar product sold under a commercial or unbranded name. Such brand value is largely built up by advertising.

Brand values may sometimes be determined by sales of the same or similar brand names. As, however, such sales usually have peculiar features which differentiate them from other cases where no sale has taken place, other methods of valuation may have to be employed.

In some lines of business it is the practice of the manufacturer to sell part of the product under a brand name at a certain price, selling the remainder of identically the same product at a lower price without the brand name or in bulk for redistribution. The value of a brand name in such a case can be computed by capitalizing the excess earnings which can be shown to arise from the sales under the brand name. Care must be taken not to assume that if all of the manufacturers' product was sold under the brand name, the profits would rise proportionately. A restricted market may be part of the reason for the higher price named for the branded article.

When the condition indicated in the foregoing paragraph does not exist, it may be necessary to use a method of capitalization previously outlined herein for goodwill valuation. A fair return is to be allowed on the investment in net tangible assets; the excess of the actual or potential earnings over such return is then capitalized at an appropriate rate.

Classification of Stock

The capital stock of a corporation is the amount of stock it is authorized to issue and has issued. A certificate of stock is the **written evidence of the contract between the corporation and the holder** and states the proprietary interests and rights of the owner in the corporation. Such certificates of stock may be classified as follows:

1. According to rights and limitations.
2. According to their par value.
3. According to conditions governing their issue.

PREFERRED STOCK.—Preferred stock represents a portion of the capital stock which has been given **certain preferences and limitations** not enjoyed by the ordinary or common stock.

"Generally the rights, powers and privileges of preferred stockholders depend upon terms upon which it is issued; preferred stock taking a multiplicity of forms according to the desire or ingenuity of the stockholders, and the necessity of the corporation itself." (*Storrow* v. *Texas Cons. Compress, etc. Assn.*, 87 Fed. 612.)

The rights of preferred stockholders are **defined by the charter and by-laws**

of the corporation which constitute the terms of the contract between the corporation and the preferred stockholders.

Nature of Preference.—Preferred stock may have one or more of the following preferences:

1. Preference as to dividends.
2. Preference as to assets in dissolution.
3. Protection of the preferred stock against future issuance of securities having a prior claim on assets or earnings.
4. Convertibility, at the option of the holder, into common stock.
5. Voting power in case of default in dividends or covenants of corporation.
6. A sinking fund to retire preferred stock. This frequently makes the preferred stock very similar to a debenture bond.

Nature of Limitations.—Preferred stock may also have certain limitations. The most common are the following:

1. Limitation of participation in earnings.
2. Restricted or no voting rights.
3. Redeemable at the option of the company or at some specified time.

PREFERENCE AS TO DIVIDENDS.—The preference usually takes the form of a prior claim to dividends and is generally limited to 6 to 8% in industrial or business corporations. As a rule preferred stock is entitled to no more than the specified preference, regardless of the amount earned by the company or distributed to the common stockholders. The preferred stock may participate further in dividends on certain terms where such terms are prescribed in the charter and by-laws of the corporation and which are usually set forth in the certificate of stock. Such stock is generally designated as participating preferred stock.

Cumulative and Non-cumulative Preferred Dividends.—Preferred stock dividends are either **cumulative** or **non-cumulative.** A cumulative dividend, if not paid, accumulates from year to year, so that if profits are not sufficient to pay full rate in one year the unpaid dividend or portion thereof is a prior claim in succeeding years before holders of common stock receive dividends. Non-cumulative preferred stock has a prior claim on the profits of the current year only, so that the corporation need not make up in future years any unpaid dividends. Ordinarily non-cumulative preferred stock is undesirable because it is to the interest of the common stockholders to defer dividends on it. Most industrial preferred stocks bear **cumulative dividends** at the rate of 6, 7, or 8%. Unless the charter provisions authorizing the preferred stock specifically state that it is non-cumulative, it will be held to be cumulative. It is best, however, to have the cumulative feature expressly provided. Unpaid cumulative dividends which have accumulated over a period of years and have so become burdensome are sometimes **funded,** securities of some kind being issued in satisfaction of the claims of the preferred stockholders.

The court decision in the *U. S. Cast Iron Pipe* case in 1924 has given rise to a new legal phrase. Decision was in effect that a **non-cumulative preferred stock** is entitled to receive no dividends not earned in any year, but that any dividends which are earned in a given year accumulate on such preferred until paid. In order to get around this the reorganization agreement of Wilson & Company, which provided for some preferred and Class A stocks which were to be non-cumulative for a certain period and cumulative thereafter, said: "Dividends on this stock shall be non-cumulative for a period of

five years (in case of Class A; period is 2 years for preferred), whether or not earned in whole or in part in any year of said period."

BASIS OF DISTRIBUTION OF EARNINGS TO PREFERRED STOCK.—In considering an issue of preferred stock the following points as to distribution of earnings should be decided:

1. What the **fixed dividend rate** shall be.
2. Whether or not the **dividend** shall be **cumulative.**
3. What **rights of participation** may be given in excess earnings.

CALLABLE PREFERRED STOCK.—Frequently preferred stock is issued by a corporation and carries with it a callable feature in that it is made redeemable at the option of the company at any time or at some specified time. This feature might detract from the value of such securities from the investors' standpoint were it not for the fact that it is generally provided that it must be redeemed at a premium of from 5 to 25 points, giving the original purchaser a good profit. It may be a decided advantage to the issuing corporation to have a redemption clause so that the stock can be redeemed if necessary.

Preferred stock may be retired by lot, when legally authorized, by assigning to each share of stock a serial number and drawing lots for their retirement in the manner usually prescribed for such drawings.

The **advantages to the company** of issuing callable preferred stock may be summarized as follows:

1. Condition of the investment market may be such that common stock or bonds can be sold on favorable terms.
2. The company may not be sure of its earning capacity. If the income should be small, the company will not be embarrassed by its inability to meet fixed interest charges on a bond issue and if the company is prosperous it can recall the issue of such preferred stock.

The **redemption figure** is usually placed above par. From 105 to 110 is quite common, although in some instances they have run as high as 125. The **time for redemption** may be at a definite time, before a certain time or within certain dates, generally a number of years after issue. A familiar provision is that such securities may be called on any dividend date upon 30 days' notice.

CONVERTIBLE PREFERRED STOCK.—Preferred stock may sometimes carry with it a provision that the holder may convert it into common stock on a prescribed basis, or in some instances into the bonds of the company. Such provisions generally carry with them a time limitation during which period the conversion privilege must be exercised.

PARTICIPATING PREFERRED STOCK.—A preferred stock which may participate in dividends over and above its fixed rate is generally called a participating preferred stock. After the preferred stock has received its dividends and the common stock has received a stipulated amount and surplus profits are still available for distribution the question may arise as to the rights of the preferred and common stockholders to share in this excess profit. If the preferred stock is not to share in the additional profit, the certificate should state that it is non-participating.

Although there are innumerable **types of participation rights** the following are a few of the most common:

1. On preferred stock a designated dividend is paid in preference to common stock. If earnings are sufficient a dividend on common stock is paid up to a fixed rate, after which the preferred and common share equally.

2. Preferred stock may receive its preferred dividend and then may participate equally with common stock.

3. Preferred and common stock may receive designated dividends, after which the preferred may participate with the common stock in surplus earnings, but at a declining rate. An illustration of such an arrangement would be as follows:

Preferred stock receives 7% if earned.
Common stock receives remainder up to 7%.
Preferred and common share equally up to 4% additional. Then preferred receives 1% to every 3% of additional dividends distributed to common.

PREFERRED AS TO ASSETS.—Preference as to assets on involuntary dissolution is usually equal to its par value. In voluntary dissolution it is usually entitled to its call price and accumulated dividends before any payment goes to the common. To obtain these preferences it must be set forth in the certificate. This preference, however, may not be worth as much as it appears to be, as other securities having a prior lien may, in case of liquidation, absorb most of the value. It has often been found, in practice, that in reorganizations preferred stockholders have possessed no material advantages over common stockholders.

VOTING PRIVILEGES.—Voting privileges are often denied preferred stockholders. Sometimes partial voting rights are accorded preferred stockholders when dividends are not paid over a short period, while complete voting power is sometimes given if dividend requirements are not paid for a longer period. Complete voting power usually accrues to the preferred stock provided any violation of the preference covenants occurs and is not corrected on reasonable notice.

PROVISIONS SAFEGUARDING PREFERRED STOCKS.—In recent years a number of features have been developed to safeguard preferred stocks and make them more attractive to investors. Some of these provisions are:

1. Protection Against Bond Issues.—Protection against bond issues usually takes the form of a provision requiring the consent of a large majority, generally over 75%, of the outstanding preferred stock to secure authority to issue bonds. Sometimes mortgaging the property is prohibited entirely.

2. Protection Against Further Issues of Preferred Stock.—As a further protection of the preferred stock there may be provisions that no stock may be issued which has priority over or is on a parity with the preferred stock outstanding without the consent of 75% of the preferred stock.

In some issues it is provided that these things may be done if, after due notice, say, 25% of stock does not object.

3. Maintenance of Working Capital Ratios.—Provision may be made that the ratio of current assets to current liabilities shall be maintained above a specified minimum. Such a provision should include a definition of current assets and current liabilities.

DISADVANTAGES OF PROVISIONS SAFEGUARDING PREFERRED STOCKS.—Provisions limiting the issue of bonds or preferred stock may hamper the development of the business should it be necessary to secure additional capital through the sale of bonds or future issues of preferred stock. This emphasizes the importance of a well planned financial plan.

Overcoming These Disadvantages.—The effect of such provisions may be mitigated by having other clauses which provide for the acquisition of additions

and betterments through the issue of bonds or additional preferred stock when the earnings and net assets meet certain requirements.

Another method of overcoming such disadvantages is to make use of the callable feature should it be impossible to obtain the consent of the required number of preferred stockholders to consent to a bond issue or a further preferred stock issue. When the outstanding preferred stock is redeemed a new issue of bonds or preferred stock may be sold.

SINKING FUND REQUIREMENTS.—A cumulative sinking fund requirement may be another method of protecting the preferred stock and making it attractive to investors. The operation of the sinking fund increases the equity of the preferred stock in the property from year to year.

This requirement might operate by providing that a fund be created by setting aside, say, 5% per annum of the greatest amount of preferred stock outstanding for the purpose of retiring the issue at not more than, say, 110. In some cases a sinking fund of this character might be treated as a minimum sinking fund with an additional sinking fund based on earnings.

The sinking fund requirement virtually constitutes a fixed charge and care should be taken to make the minimum requirement not unduly heavy.

RETENTION OF WORKING CAPITAL IN THE BUSINESS.—A protection to preferred stockholders is a provision to prevent the dissipation of working capital through the payment of dividends on common stock at a time when conservatism demands that such dividends be passed. This requirement may take the form that common dividends cannot be paid which would reduce total **net tangible assets** to less than, say, 250%, and the **net current assets** to less than 150% of the preferred stock outstanding.

LIMITATIONS OF DIVIDENDS ON COMMON STOCK.—Preferred stock may be protected by having a provision that no dividends shall be paid on common stock until a **reserve is created** and maintained equal to 1, 2 or 3 years' dividend requirements on the preferred stock.

ENFORCING RESTRICTIVE PROVISIONS.—In all cases where provisions are made to protect the preferred stockholders there should be adequate penalties and means of enforcing them. An effective means to accomplish this is that the preferred stockholders shall receive sole voting power when the provisions of the contract are violated.

Typical Statement of the Rights and Restrictions on Preferred and Common Stock.—A statement of the rights, preferences, privileges and restrictions or limitations respectively attaching to the 8% cumulative first preferred stock and the common stock of the Motor Wheel Corporation follows:

A. The Preferred Stock shall be entitled to receive out of surplus profits dividends cumulative from the quarterly dividend date next preceding the day of issue, or from the day of issue if it be a quarterly dividend day, at the rate of eight per cent. (8%) per annum and no more, payable quarterly on the fifteenth day, to stockholders of record on the first day, of each of the months of February, May, August and November, in each year, before any dividends shall be paid on the Common Stock, which Common Stock, subject to the conditions hereinafter set forth, shall be entitled to receive all net income, profits or surplus distributed as dividends in excess of the said cumulative dividends of eight per cent. (8%) per annum, payable on the Preferred Stock.

B. On any voluntary distribution of capital assets, the Preferred Stock shall be entitled to receive an amount equal to 115 per cent. of the par value thereof, and any unpaid dividends accumulated thereon, and no more; and on any other distribution of capital assets, the Preferred Stock shall be entitled to receive an amount equal to 100 per cent. of the par value and any unpaid dividends accumulated thereon, and no more. After distribution

shall have been made to the Preferred Stock as above provided, the Common Stock of the Corporation shall be entitled to receive the remainder of such capital assets.

C. The Preferred Stock shall have no preemptive right in or right to subscribe for any additional stock of whatever class which may hereafter be issued by the Corporation.

D. The Preferred Stock shall be redeemed on September 1, 1949, at par; but the Corporation reserves the right to redeem or retire any or all of the Preferred Stock prior to the said date at 115 per cent. of the par value thereof and all unpaid dividends accumulated thereon to the date fixed for such redemption. If less than the whole amount of outstanding Preferred Stock be so redeemed at any time, the Stock to be so redeemed shall be selected by lot, in such manner as the Board of Directors may determine. At least thirty days' notice in advance of such redemption shall be mailed to each holder of Preferred Stock to be redeemed, at his address registered with the Corporation, and such other notice shall be given in the manner to be fixed by the By-laws; and on and after the date fixed for such redemption the said Stock shall cease to bear further dividends, and the respective holders thereof shall have no other right or interest therein, except to receive payment therefor, at the said redemption price, upon presentation and surrender of their respective certificates.

E. Within ninety days after the termination of each fiscal period, commencing with the fiscal period ending December 31, 1920, the Corporation shall set aside in a Sinking Fund a sum in cash equal to at least fifteen per cent. of the balance of its net income for such fiscal period, remaining after the payment of current dividends on the Preferred Stock during such period and all accumulated dividends, if any (but in no event less than a sum equal to three per cent. of the largest aggregate par value of Preferred Stock at any time issued and outstanding), and the Corporation shall thereupon apply the said Sinking Fund either to the purchase of Preferred Stock in the open market or at private sale, at prices not exceeding a sum equivalent to 115 per cent. and accrued dividends, or if the Corporation shall be unable to apply all the moneys in the Sinking Fund to the purchase of Preferred Stock prior to July 1 in any year, then it shall apply the moneys so remaining to the redemption as above provided, on August 15 next succeeding, of so much of the Preferred Stock as the said moneys shall be sufficient to retire at the said redemption prices. All the Preferred Stock so purchased or redeemed shall forthwith be cancelled, and the total authorized amount of Preferred Stock of the Corporation shall be reduced accordingly.

F. The Corporation will at all times maintain the aggregate amount of its net current assets and the net current assets of its constituent companies at an amount at least equal to 125 per cent. of the par value of the oustanding Preferred Stock, and it will at all times maintain the aggregate amount of its net tangible assets and the net tangible assets of its constituent companies at an amount equal to at least 250 per cent. of the par value of the outstanding Preferred Stock.

G. Except as otherwise expressly provided by law, the Preferred Stock shall have no right to vote for the election of directors so long as the Corporation shall not be in default as hereinafter provided. In case, however, and whenever, the Corporation shall be in default in maintaining net current assets or net tangible assets at the respective amounts hereinbefore stipulated, and any such default shall continue for the period of six successive months, or if the Corporation shall be in default for the period of sixty days in the payment of any quarterly dividend or in setting aside any required Sinking Fund instalment, the Preferred Stock shall thereafter have equal voting rights with the Common Stock (on the basis of one vote for every ten dollars par value of Stock) for any and all purposes, including the election of directors; and such rights shall continue in the Preferred and Common Stocks, respectively until all matters in respect of which the Corporation was in default shall have been made good and all accumulated dividends shall have been paid in full, at which time the right to vote shall again vest in the Common Stock exclusively; provided, that if, at any time, the Corporation shall be in default in the payment of any five consecutive quarterly dividends, thereupon the right to vote for the election of directors shall pass to the Preferred Stock to the complete exclusion of Common Stock, and such right shall continue in the Preferred Stock, exclusively, until all accumulated dividends shall have been paid in full, at which time the said right shall again vest in the Common Stock exclusively; provided, that the Board of Directors elected by the holders of Preferred Stock shall not have the power to retire or redeem Preferred Stock except through the operation of the Sinking Fund.

H. The Corporation shall not execute any mortgage upon any of its fixed assets, or cause or suffer any lien in the nature of a mortgage to be placed thereon (except to secure the

purchase price of property by a purchase money mortgage of not exceeding seventy-five per cent. of the fair value thereof) except with the prior consent in writing of seventy-five per cent. in amount of the outstanding Preferred Stock; and the Corporation shall not, either directly or indirectly, make, issue or negotiate any issue of secured or unsecured bonds, notes, debentures or other funded obligations by their terms payable more than one year from the date of issuance thereof, or become or be an accommodation endorser, guarantor or surety on any notes, bills, bonds, debentures or other obligations for the payment of money except those of a constituent company, if the holders of twenty-five per cent. or more of the outstanding Preferred Stock shall object thereto.

I. The Corporation shall not cause, suffer or permit any constituent company to make, issue or negotiate any issue of bonds, notes, debentures or other funded obligations by their terms payable more than one year from the date of issuance thereof, or to execute or place any mortgage, or lien in the nature of a mortgage, upon any of the fixed assets of such constituent company, except to secure the purchase price of property by a purchase money mortgage of not exceeding seventy-five per cent. of the fair value thereof.

J. In each fiscal period, the Corporation shall cause its books and accounts, and the books and accounts of its constituent companies, to be audited by a certified public accountant of recognized standing; and if, in any fiscal period, the Corporation shall fail to cause such audit to be made, then, upon the written request of twenty-five per cent. or more of the outstanding Preferred Stock, the Corporation shall permit such audit to be made by certified public accountants designated in such request.

K. No class of stock shall hereafter be created ranking prior to or on a parity with the Preferred Stock in the payment of dividends or the distribution of capital assets. The par value of Preferred Stock issued and outstanding shall at no time exceed two-thirds of the Corporation's actual capital paid in.

L. No Preferred Stock, other than the initial issue of $2,500,000 par value, shall at any time be issued unless the average net income of the Corporation for the period of twenty-four months ending not more than sixty days next preceding the issuance thereof shall have been at least equal to two times the aggregate annual dividend requirements of the Preferred Stock outstanding and that proposed to be issued; nor shall the Corporation in any event issue any additional Preferred Stock if the Corporation shall be in default in the payment of any quarterly Preferred Stock dividend or in setting aside any Sinking Fund instalment, or if, by the issuance of such additional Preferred Stock, the respective ratios borne to the Preferred Stock then outstanding, including that proposed to be issued, by the net current assets or the net tangible assets of the Corporation and its constituent companies shall be reduced below the percentages hereinbefore specified. In the computation of the average annual net income for the purpose of this Article L there shall be included the average annual net income for the same period of any property or plant to be acquired with such additional Preferred Stock or with the proceeds of the sale thereof, and also the amount of the annual interest charge for the same period on loans to be discharged by the sale of such additional Preferred Stock; and in the computation of net current assets and net tangible assets for the purpose of this Article L there shall be included the proceeds of the sale of such additional Preferred Stock of the net current assets and the net tangible assets respectively to be acquired with such proceeds.

For the definition of the terms herein employed, reference is hereby made to the Articles of Association of the Corporation, as amended, a duly certified copy of which is on file with the Transfer Agent.

COMMON STOCK—DEFINITION.—Common stock is stock which has no special privileges or rights but which is entitled to whatever capital or income remains after prior claims are satisfied. In general common stock represents the **final equity** in an enterprise.

One kind of **common stock** stands for the entire capital of the business, if there are no preferred stockholders, no bondholders, and no noteholders. Another kind of common stock merely represents an equity in the assets after other securities having a prior lien are considered. The tendency is away from the simple capital structure of the older form of corporation with but one class of stock, all common, toward a more complicated capital structure.

Dewing says that common stocks of the first groups are now "restricted to

a few small railroads, the majority of Massachusetts electric light and gas companies, most small and medium-sized cotton mills, locally owned manufacturing companies, banks, insurance companies, and mines. There have been in almost every case some special reasons tending to hold back these types of industry from developing the more elaborate form of capitalization. Until recently the tax laws in Massachusetts levied a general property tax on bonds, but not on stocks, so that gas companies, electric light companies, and even cotton mills, found a readier sale for their tax-exempt stocks among local capitalists."

FULL-PAID AND NON-ASSESSABLE STOCK.—Full-paid stock is stock for which value has been received equivalent to its par value. In most states stock may be issued for cash, property or services, and so long as the officials of the corporation act in good faith and take the property or services at what they deem a fair value, the stock is considered full paid and non-assessable. Such stock is usually **free from any liability.** In case of insolvency the investor loses his original investment but cannot be held by the creditors of the corporation. In California, and possibly one or two other states, the owner of full-paid stock is still liable to creditors of the corporation for his share of the deficit in case of insolvency. Certificates of common stock usually have stamped or printed thereon "Full-paid and non-assessable."

The advantage of issuing non-assessable stock is that it is more easily sold than assessable stock. Experienced investors are reluctant to purchase assessable stock on account of the contingent liability that is attached to it.

FULL-PAID STOCK SOLD AT A DISCOUNT.—Where a corporation cannot sell its stock to investors at par it may be compelled to sell it at a discount. Purchasers might not buy this stock even at a discount if they would be subject to assessment for the discount in case of insolvency. In order to overcome this difficulty, as well as the requirement of the laws of some states that stock must be issued at par, a number of subterfuges are resorted to such as the company arranging to issue a large quantity of stock in payment for certain property with an agreement that part of it is to be donated back to the company. As this stock is originally issued at par for the property and donated to the company, it becomes treasury stock and may be sold at any price the company can obtain for it.

ASSESSABLE STOCK.—Assessable stock is stock which has not been fully paid for by the subscriber and which is liable for further assessment up to the par value. The liability for assessment of such stock may be due to the fact that the stock was issued and payments were to be made on instalments, all of which have not been paid, or it may be that the stock was sold at a discount and the stock issued to the purchaser at less than par.

The **laws of most states** provide that in case of insolvency the purchaser of stock is liable to creditors for the difference between the par value and lower issue price.

RESTRICTIONS ON THE SALE OF STOCK.—Sometimes stockholders of small, close corporations agree among themselves to withhold their stock from outsiders. Where such agreements rest on a valid contract they are enforcible between the stockholders, but would be ineffective to any outsiders who purchase such stock without notice and in good faith.

Close corporations sometimes attempt to restrict the sale of their securities by setting forth in their by-laws and in the stock certificates that stockholders are prohibited from selling their securities to anyone not already a stockholder, or prohibiting the sale of the securities without the consent of the directors,

or unless it has been offered to the directors at a price not greater than that at which it is later to be offered to outsiders. Such provisions are illegal and not enforcible in so far as they attempt to prevent sales at any price. But if the conditions are set forth in the stock certificates and merely confer an option which if not exercised frees the stock from all conditions, the provisions are legal.

SPECIAL TYPES OF STOCK.—

Guaranteed Stock.—This is stock of a company the dividends of which are guaranteed by another company. Generally, this guaranty is given in return for the use by the guarantor of some property owned by the corporation whose stock is guaranteed. This condition is frequently found among railroads but only occasionally in industrial companies.

Founders' Stock.—This type of stock is more frequently met with in England than in the United States. It is generally retained by the original organizers of a corporation and carries with it certain privileges not accorded to other shares, generally consisting of special voting rights and greater dividends than are accorded to other kinds of stock. Such issues are usually relatively small in amount as compared with the remaining capitalization. Frequently founders' shares carry with them the provision that after preferred stock dividends are paid the remainder is divided equally between the common stock and the founders' stock. On account of the comparatively small amount of the issue such stock may have a very high potential and speculative value. The Armour Leather Co. and the Amalgamated Coal Co. of Pittsburgh, both incorporated under the laws of the state of Delaware, are among the few American companies having founders' stock.

Junior Preferred Stock.—At times a corporation may issue two classes of preferred stock, generally known as **first preferred and second preferred.** As a rule the first preferred is entitled to certain dividends before any are paid to the second preferred. The latter, however, has a preference as to dividends over the common stock.

Such junior preferred stock is seldom issued when a corporation is organized but is often necessary in cases of consolidations, reorganization or refinancing. The return that must be offered to second preferred stock must usually be higher than that offered the first preferred stock.

Class A and Class B Stock.—Sometimes corporations may divide the common stock into two or more classes, generally designated as Class A and Class B stock. One class has certain rights and privileges not enjoyed by the other and where there is no preferred stock it will often be found that the Class A stock is really preferred in everything except the name. An illustration of Class A and Class B common stocks may be found in the case of the Bethlehem Steel Corporation where both classes have exactly the same rights except that Class B stock has no voting power.

TREASURY STOCK.—Treasury stock is stock lawfully issued by the corporation for money, property or services, and **reacquired by purchase or donation.** Such stock may be sold by the company for any price and on any terms it may obtain. The sale of such stock at a discount will not subject the purchaser to liability for the unpaid balance.

UNISSUED STOCK.—Unissued stock represents part of the authorized capital stock of a corporation which has not been issued. Such stock does not represent an asset but merely a right which can be exercised in the issue of stock for money or property, usually at par, when the corporation may deem

its issue expedient or necessary. Unissued stock should not be confused with treasury stock and to show unissued stock on a balance sheet as treasury stock is erroneous.

AUTHORIZED STOCK.—The certificate of incorporation states the amount and kinds of capital stock the corporation is authorized to issue. This is known as the authorized capital stock. Any issue of stock beyond the amount authorized is void, as it is beyond the power of the corporation to issue it and can in no way be validated.

At the time of organization the corporation should obtain authority to issue a larger amount than it needs at the time and to issue capital stock as the company expands. If this is not done and subsequent development of the company demands larger capital stock issues, it may be inconvenient and difficult to obtain it as it is necessary to obtain the consent of the present stockholders and the state authorities for such additional stock issues.

VALUES OF STOCK.—Stock may be said to have five values:

1. Market value
2. Book value
3. Real value
4. Par value
5. No par value

Market Value.—The market value of stock is the price it can be sold for in the open market by a willing seller to a willing buyer. This value may be influenced by its book value, the earning power and general credit of the company, and the condition of the investment market for such securities.

Book Value.—The book value of stock is the value determined by the books of the issuing corporation. To ascertain this value in the case of a company with only common stock outstanding divide the net worth of the company by the number of shares outstanding, the net worth of the business being determined by the excess of the total assets over the liabilities. If a company has issued preferred as well as common stock, the book value of the former is the amount of its claim per share to the assets in the event of liquidation plus any accrued and accumulated dividends; the book value of the common is ascertained by dividing the remainder of the net worth by the number of issued shares.

Real Value.—The real value of stock is its actual value which may be the book value if all the values stated on the books are accurate. But as the earning power of the corporation influences the value of the stock, its real value may more closely be determined by its market value under normal conditions. In the final analysis the market value determines the real value, to the corporation as well as to the investor, more closely than any other consideration.

Par Value.—The par value of a stock is the amount stated in the certificate. The corporation laws of most states permit the issuance of stock of any par value desired. In a few states there are limitations. In New York the par value may not be less than $5 nor more than $100 a share; in Illinois a par value of less than $10 a share is prohibited. In New Jersey any par value may be chosen.

Generally, corporations have the same par value for all classes of stock except where they issue one class of stock at no par value. Most of the railroad and industrial corporations have issued stock of a par value of $100. Some of the older railroads, among which are Delaware, Lackawanna & Western, Pennsylvania, Lehigh Valley, and Reading, have stock with a par value of $50.

The tendency in many industrial corporations is to place a low par value

upon their stock in order that sales to small investors may be facilitated. Some of the largest industrial corporations have issued stock with a par value of $50 a share. Among these are the Westinghouse Electric & Manufacturing Co., United Gas Improvement Co., etc.

No-Par Value.—When shares of stock have par value, this par value theoretically expresses the amount of the stockholder's original investment. The real value of a share changes with the changing fortunes of the enterprise. Since each share represents a proportionate interest in net worth of an enterprise there has arisen recently a demand for stock of **no-par value.** No-par shares do away with the meaninglessness of "par value," avoiding any supposition that there is an equivalence between actual values and par value of stock. The following is from the report of the Hadley Railroad Securities Commission:

"We do not believe that the retention of the hundred-dollar mark, upon the face of the share of stock, is of essential importance. . . . . It is less in accord with existing business habits and usages; but it has the cardinal merit of accuracy. It makes no claim that the share thus issued is anything more than a participation certificate."

Stock of no-par value was first authorized by the state of New York in 1912. Since that time a number of other states have followed New York. At present practically every state of the United States authorizes the issuance of no-par value stock.

From present indications the number of corporations issuing stock of no-par value will rapidly increase. In 1919, there were listed on the New York Stock Exchange 27 corporations which issued stock of no par value. In 1924 the number had grown to 189.

ADVANTAGES OF NO-PAR STOCK.—Among the more important adtages of no-par stock are:

1. **Flexibility in financing.** The company may sell its shares at whatever prices it may obtain depending upon its condition as well as on general financial and business conditions. A sound corporation may sell its no-par value stock on terms which will attract investors without causing unfavorable comment which would be likely when par value stock is sold at a discount.

2. **Stock full-paid and non-assessable.** In the absence of fraud a no-par stock sold by the company is full-paid and non-assessable regardless of the amount the company received for it. This does away with the difficulties and subterfuges resulting from the necessity of exchanging stock for property greatly overvalued in order that part of the stock may be donated back to the company so that it may be legally sold at a discount.

3. **It is elastic.** Book values can be adjusted when necessary.

4. **Is more truthful.** As no-par value stock as carried on the books represents the net worth, it is a more accurate statement of its value than par value stock whose par value bears no relation to either the market value or the book value.

5. **Investors put on their guard.** The value of any stock depends on the assets and earning power of the corporation. Par value is primarily a legal fiction which has no relation to the market or book value of stock. The psychology of par value has a tendency to mislead investors. With no-par value stock an investor is put on his guard to ascertain the value of that stock by making a study of the balance sheet and earning power of the company.

DISADVANTAGES OF NO-PAR STOCK.—A number of alleged disadvantages have been advanced against the use of no-par stock. As these are mostly

based on a failure to understand the purpose of such stock or a prejudice against their use, they may be mentioned only briefly:

1. **Novelty.** The use of no-par value stock is comparatively new and has custom against it. This is not a valid objection.

2. **Dangerous speculation.** The issue of such stock may lead to a reckless output of shares and thereby cause dangerous speculation in the securities. This objection is offset by other factors. First, the number of shares the company is authorized to issue is limited by the articles of incorporation. Second, the self-interest of the corporation tends to limit the number of shares issued at a price to the best advantage of the company. Third, the investor is put on inquiry before purchasing such stock.

3. **State taxation.** In a number of states the shares are taxed on the basis of par value. Many states have adjusted their laws to meet the situation and tax such shares on the issue or book value.

4. **Unstandardized treatment on balance sheet.** This objection is not against the use of no-par stock, but rather against unstandardized accounting methods. The accounting treatment of no-par stock is mentioned for purposes of information and not for purposes of argumentation.

NO-PAR STOCK ON THE BOOKS.—Stock of no-par value may be carried on the books in a number of different ways, as follows:

1. At the issue price.
2. At an arbitrary fixed price.
3. At its book value, which is found by dividing the net worth of the company by the number of shares outstanding.
4. At the market price.
5. At a nominal figure.
6. At a figure which combines the surplus and issue price into one amount.

In the first five methods a separate account is kept for surplus through which all adjustments for earnings and losses are made.

THE VALUATION OF COMMON STOCKS.—The question "How much is this stock worth?" is usually answered with reference to a number of different factors, chief of which are:

1. Earning power
2. Dividend policy
3. Financial condition
4. Management
5. Nature of business
6. Industrial outlook (general and particular)

Dividends and Earnings.—Since companies are organized for the primary purpose of paying dividends, the value of stocks should be measured largely by their dividend rates. But the absence of any uniform practice in adjusting the dividend rate to the earnings has greatly detracted from the usefulness of the former as an index of intrinsic worth. This is especially true among industrial corporations where the frequent sudden changes in dividend declarations have led investors generally to attach more importance to the amount earned than the amount paid per share.

Where dividend rates are longer established—as in the case of railroad stocks—they exert a more controlling influence on market prices. The tendency of investors to assume the continuance of the previous payment, without much attention to the trend of earnings or the cash position, often leads to unpleasant surprises. Earning power and financial strength are of more importance than the current dividend rate, even among the old line railroad issues.

The Cash Position.—Experienced investors do not attach overmuch significance to the figure at which the **fixed assets** are carried in the balance sheet. This item often includes an unstated but generous allowance for intangibles, and in any case, the true value of a plant or mine is measured chiefly by what it can **earn.** But the exhibit of **current assets and current liabilities** is of prime importance, because of its bearing upon both the dividend outlook and the need of new financing.

The best managed companies are careful to maintain a strong liquid asset position, in anticipation of emergency or expansion requirements. While recourse to temporary borrowing may enable other enterprises to do business on a smaller capital and thus show a larger percentage of earnings, this advantage is secured at the sacrifice of conservatism and reserve financial strength.

The Question of Reserves.—The most significant figure in every income report is the **balance available for common dividends,** from which is found the amount earned per share. But this result is often made to appear either more or less favorable than is actually the case, by under or over stating the deductions for reserves. Reserves are provided for many purposes, such as:

Taxes	Shrinkage of inventories or plant values
Depreciation and depletion	Bad debts
Contingencies	

There is wide variance among corporations in the treatment of each type of reserves, a fact which requires careful attention in comparing the final results shown by their statements. The 1919 report of U. S. Steel, for example, indicated a balance available for the common stock equivalent to about $10 per share. But the corporation had previously charged against earnings a total of $77,000,000, or $15 per share, to reduce the cost of its inventories and its plant additions to pre-war levels. Since the other large steel producers made no similar reserves, it is clear that for comparative purposes, U. S. Steel really earned about $25 per share in 1919.

All mining companies are allowed to set up a reserve to cover estimated ore **depletion,** before computing earnings subject to federal taxes. Some copper producers do, while others do not, deduct this reserve from their earnings as reported to their stockholders—the two practices being illustrated by Kennecott and Utah respectively. For a proper comparison of the earning power of these companies, the depletion reserve must of course be added to the final net profits reported by Kennecott.

It is of prime importance to make sure whether full provision for income and excess profits tax has been made in stating the earnings available for the common shares. Where no tax reserves have been set up, as in the case of the B. F. Goodrich report for 1919, the stockholder must allow for an indefinite but substantial reduction from the indicated profits.

The Capitalization Structure.—Two companies with the same total capitalization and the same net income may yet show a very divergent rate of earnings on their common shares, merely because of a different proportion of preferred stock (or bonds) to common stock. Let Companies A and B each have $20,000,000 of capital stock and let each earn $4,000,000 net. Company A, however, has half of its capitalization in preferred and half in common stock, while B has only common stock. After deducting $700,000 for preferred dividends, A will earn $3,300,000 or 33% on its common; but B evidently earns only 20% on its capital stock. Superficially A makes a far better showing, yet the basic facts are the same for both companies. For if it so desired, B

could bring its earnings per share up to those of A by merely issuing preferred stock in exchange for half of its present capital.

In comparing the earning power of different issues this important element of **financial structure** often escapes attention. Many companies with top-heavy capitalizations have made a deceptively strong showing for their common stocks during the recent prosperous years because there were relatively few junior shares to divide the large surplus profits. But conversely, in times of depression these companies may have difficulty in meeting their interest and preferred dividend requirements, and the balance applicable to the common shares will shrink with remarkable rapidity.

Low Costs versus Large Output.—This summarizes another element of great practical importance in valuing common shares. High cost producers are benefited most by advancing prices; low cost producers are hurt least by falling prices. In times of rising prices and abnormal net profits, the higher cost producers are usually overvalued as compared with the low cost companies, while in times of depression, just the opposite is the case.

Rights and Liabilities of Stock Ownership

VOTING.—It is customary to give one vote for every share of common stock. Preferred stock is entitled to vote likewise unless there is an express provision to the effect that preferred stock has no voting power. Often such stock is denied voting rights and the right to participate in stockholders' meetings. In California, the statutes provide that no preference may be granted to any class of stock. Stockholders may vote **in person or by proxy.** Notices of annual meetings are mailed to stockholders. Proxies are sent with the notices by means of which the stockholder may authorize some officer of the corporation, usually the secretary, to cast his vote if the stockholder cannot attend in person. It is customary to request that the stockholder forward his proxy, and for that purpose a stamped envelope is usually sent him. The stockholder signs the proxy and returns it. In practice many proxies fail of return because of the stockholders' lack of interest. Frequently at stockholders' meetings there are present the secretary and one or two other officers who carry out the usual formalities, elect a chairman and a secretary, make the usual reports, cast the votes, and carry out a program already agreed upon.

VOTING TRUSTS.—A voting trust is the result of an agreement under which a majority of the voting stock of a corporation is placed in the hands of trustees for a fixed period, who are authorized to vote the stock in accordance with the limitations prescribed by the agreement creating the voting trust. The voting trustees usually issue certificates, called **"voting trust certificates,"** which are issued to the stockholders in exchange for their stock.

Voting trusts may be created for—

1. **Control.** A group of stockholders who control a corporation may wish to assure the continuance of such control. This can be accomplished by an agreement among the stockholders creating a voting trust.

2. **Permanent management.** Stockholders of an embarrassed or reorganized corporation, in order to preserve continuity of responsible management and protect the interests of all stockholders, may do so through a voting trust.

3. **Carry out judicial decree.** In order to carry out a judicial decree requiring definite action on the part of the stockholders, the law may create a voting trust to enforce the decree.

CUMULATIVE VOTING.—Cumulative voting is that method of voting at elections of directors by virtue of which a stockholder is entitled to as many votes as equal the number of his shares of stock multiplied by the number of directors to be elected, all of which votes may be cast for a single director or distributed among any two or more of them.

In Pennsylvania the right to vote in this manner is given to stockholders by the Constitution. In Delaware, New Jersey, and New York it is permitted where provision therefor is contained in the certificate of incorporation.

RULES AND FORMULAS FOR CUMULATIVE VOTING.—

First Rule.—To ascertain how many votes a stockholder may cumulate on a particular number of directors, multiply the whole number of directors by the number of shares held and divide by the number to be cumulated on.

Second Rule.—To determine the minimum number of shares a person must hold or control to elect a certain number of directors, multiply the whole number of shares by the number of directors it is desired to elect and divide by the whole number of directors plus one and add one share, disregarding the fraction if any.

Third Rule.—To determine how many directors a stockholder or group of stockholders holding a certain number of shares may elect, multiply the whole number of directors plus one by the number of shares held and divide by the whole number of shares, disregarding the fraction, if any.

There are many opportunities for surprise where cumulative voting is allowed, and, unless careful, the holders of a majority of the stock may lose control of the company. Thus, in the case of 1,000 shares voting and 5 directors to be elected, if the holders of only 376 shares should cumulate their votes on 3 candidates and the holders of the remaining 624 shares should cast a straight vote for 5 directors, the holdings of the 376 shares would be successful, as they could cast 626 votes for each man on their ticket as against the 624 votes received by each of the majority candidates.

STOCK RIGHTS.—The privilege extended to stockholders to subscribe to new stock is known as a "stock right." It is evidenced by a **warrant** which resembles a stock certificate. These rights are transferable and are bought and sold in the open market. The right to subscribe is on a pro rata basis, say, for example, 1 share of new for each 4 shares of old stock.

Usage varies as to the **definition** of a single stock right. Sometimes it refers to the privilege of subscribing for 1 new share. Sometimes, as in New York, it refers to the subscription privilege attaching to each share of old stock.

Under the laws of most states the stockholders of record of corporations have a **pre-emptive right** to subscribe to new issues of capital stock or to funded debt which may be, by its terms, convertible into capital stock. The proportionate rights accruing to any stockholder depend upon the number of shares held, the amount of new stock to be issued and the price at which the new stock will be issued.

These factors are illustrated as follows: A corporation with an outstanding capital stock issue of $24,000,000, consisting of 240,000 shares of a par value of $100 a share, wishes to raise $12,000,000 by the sale of capital stock. If the stock is offered at par, each shareholder will have the right to buy one share for every two shares held by him. If the stock is offered at $120 a share, the corporation will need to sell only 100,000 shares and the stockholders will then have the right to buy one new share for every 2.4 shares held.

Stockholders may waive their right to subscribe to new issues of stock by suitable provision in the charter or by-laws.

The time during which the rights may be exercised is generally prescribed by the corporation. The exact time varies according to the nature of the company, the distribution of stock ownership, the condition of the investment market and the wishes of the corporate officers. Generally, where the stock is closely held, the life of the rights is comparatively short. The opposite holds true for stocks which are widely distributed.

THEORETICAL VALUE OF STOCK RIGHTS.—A corporation with common stock outstanding of $10,000,000, par $100, selling at $125 per share, gives its stockholders the right to buy $2,000,000 new common stock at par in the ratio of one new share for each five old shares held. The theoretical value of the rights will not be $25, the difference between market and subscription price, for the new issue will cause a dilution of the equity represented by each share. Mathematically the theoretical value of a right may be calculated as follows:

Before issue of rights:		
Shares of stock outstanding	100,000	
Market value per share	$125	
Total market value		$12,500,000
Rights issued:		
20,000 shares sold at $100 a share		2,000,000
Total value after new stock is sold		$14,500,000
Value per share after new stock is sold $14,500.000 ÷ 120,000		$120.83

The right (five of which are required to buy one new share) is theoretically worth 1/5 the difference between $100, the subscription price of the new shares, and $120.83, the probable market price after the new stock is out, or $4.16.

If m is the market price of the old stock, s the subscription price of the new, and n the number of old shares carrying the subscription to one new share, then t, the so-called theoretical value of the right, is equal to:

$$\frac{m-s}{n+1}$$

The **actual market value** of the rights fluctuates with the market value of the stock and tends to equal the theoretical values because of arbitrage dealings between the stock and the rights, whereby brokers reap profits by simultaneously purchasing the rights and selling the stock short, then subscribing to the new stock and subsequently making delivery against this sale when the certificates for the new stock are available. A better term to apply to the so-called theoretical value of rights is **parity value** since when the market value of rights equals this value, it is at parity with the market value of the stock, and no profit is to be made in arbitraging between the rights and the stock.

STOCK ISSUED AT PREMIUM.—Stock issued at a premium does not give the stockholders who may have paid this premium, any additional rights. The premium becomes part of the **paid-in surplus** of the corporation. This premium can not be recovered by the stockholders and on dissolution the rights of all stockholders of the same class to share in the distribution of corporate assets are equal, regardless of the fact that some may have paid a premium on the stock when issued.

TRANSFER OF STOCK.—Stock certificates show on the face the number of shares represented, to whom they were issued, and the legal conditions under which issued. Stock certificates are transferable, and when indorsed in blank by the person to whom issued, are negotiable. They sometimes pass through many hands before being transferrred on coporation's books. Dividends are paid to stockholders of record. One purchasing shares should attend

at once to their transfer, although if the dividend is paid to the previous holder who sold it before it became ex-dividend, the purchaser has recourse against him for the amount of the dividend.

Issuance, transfer, and handling of capital stock, in case of large corporations, are entrusted to a **transfer agent** and a **registrar.** The transfer agent sees that the record of stockholders is kept up to date—that when transfers are made old certificates are canceled and new ones issued. The registrar checks the issuance and sees that the total does not exceed the amount authorized to be issued.

Borrowed Capital

CORPORATE CAPITAL.—Corporate capital may be divided into two classes, borrowed capital and owned capital. Borrowed capital is generally provided by creditors in the form of bonds and corporate notes. Owned capital is that which is furnished by stockholders and is represented by capital stock issues.

The foregoing classification of corporate capital is for convenience of discussion of corporate finance, although not correct in an accurate or legal sense. The issue of bonds and notes establishes a relation of debtor and creditor between the corporation and the holders of such obligations. Capital stock issues on the other hand establish a proprietorship relation between the corporation and the stockholders. The rights and liabilities of each class are distinct and in a measure in conflict with one another. The proper distinction is between actual or true capital, that is, funds at the risk of the business, and borrowed capital, which is a liability and which must be discharged before actual capital has any claim to the assets.

ADVANTAGES OF BORROWED CAPITAL.—There is no method of raising funds which is cheaper than borrowing. A corporation should borrow as much as it can within the limits of safety, if it can use this capital to advantage.

The great advantages of borrowing are economy and convenience. With modern credit facilities funds can be borrowed for corporate purposes in a comparatively easy manner and at cheaper rates than can be secured through capital stock issues. Generally, first-class bonds can be sold by the issuing company on a basis to yield 5 to 7%, whereas preferred stock of the same standing must be sold on a 7 or 8% basis. When money can be borrowed at say 5% and can be used to earn a considerably larger return, borrowed capital becomes profitable. Owned capital then receives a higher return than when borrowing is not resorted to. In some instances, particularly among public utility corporations, a large proportion of the total capital is borrowed, which accounts for the reason that the common stockholders of many such companies can receive a comparatively large return on their investments. In such cases the greater part of the capital is furnished through borrowed capital, i.e., bond issues.

DISADVANTAGES OF BORROWED CAPITAL.—The chief disadvantage of borrowed capital is the increased risk to owners of capital stock, especially in corporations whose earnings fluctuate widely from year to year, and where conditions necessitating even a temporary cessation of interest payments on this borrowed capital would probably bring on a receivership. For this reason industrial corporations prefer to raise most of their capital through stock issues rather than by borrowings. In the case of public utilities where earnings are more stable, a greater proportion of the capital may be raised through borrowings.

RULE FOR BORROWED CAPITAL.—It is impossible to lay down exact rules as to the proper proportion of borrowed capital which would hold good for all concerns. In general, however, capital should not be borrowed except in cases where the earning capacity is such that the concern can surely pay the interest charges out of current earnings and meet the principal at maturity.

Borrowing on short-term bank loans may be resorted to when the **ratio of current assets to current liabilities** is two to one or greater. In long-term borrowing the condition of the concern and the particular business in which it is engaged, must govern each particular case. Generally, however, it may be said that the capital funds should not be borrowed unless there is a practical certainty that both interest and principal payments can be met when due. In putting this rule into practice, the minimum earnings during periods of industrial depression should be equal at least to the interest requirements. A basis which is frequently followed is that the average earnings over a considerable period of time should be at least **twice the interest requirements.** Under such conditions the interest payments are assured with sufficient margin to provide for the retirement of the bonds at maturity. In addition, bank borrowing should only be resorted to in order to carry the company over the peaks of its seasonal credit requirements. At least once a year, the company should be completely free from bank debts.

SOURCES OF BORROWED CAPITAL.—Borrowed funds may be obtained in two ways—(1) by contracting fixed liabilities, and (2) by contracting current liabilities. The fixed liabilities or funded debt of a corporation may be classified as bonds payable, and long-term notes payable. The current liabilities may be classified as creditor's accounts, bills payable, bank loans, etc.

TRADING ON EQUITY.—The phrase "trading on equity" has become popular in discussing corporate finance and refers to the practice of increasing the profit of a corporation by borrowing funds at rates of interest which are lower than the rate of profit which can be earned in the business of the borrower. For instance, if a manufacturer can make 12% net profit in his business and can borrow money at 6%, he makes 6% on all he can borrow and thereby increase the profit on his business. There are certain limitations, however, beyond which it is dangerous to carry this policy. If, for instance, in a year of depression he can earn only 4% on his total invested and borrowed capital, and his borrowed capital cost him 6%, he may earn less for himself than as if he had not borrowed at all.

SHORT-TERM AND LONG-TERM SECURITIES.—Although the distinction between short-term and long-term securities is not always clear, obligations having not more than 5 years to run are usually regarded as short-term, while those running over 5 years are classed in the other group. Long-term obligations usually take the forms of mortgage bonds, collateral trust bonds, or debenture bonds.

Whether to issue long or short term securities will be decided first by the character and condition of the company and second by the condition of the investment market. Short-term securities should be issued, as a rule, when the immediate situation leading to the necessity for the issue of such securities is of a temporary nature which in the normal course of business will provide the means of repayment. In other words, short-term securities should be issued for self-liquidating obligations. Long-term securities should be issued as part of the permanent borrowed capital to finance the purchase of part of the permanent assets, such as the plant and equipment of the corporation.

The use of **short-term obligations in anticipation of long-term borrowing**

may be a sound financial policy to follow under certain circumstances. During periods of high interest rates it is desirable for a business in need of permanent borrowed funds to issue short-term notes extending over 3 to 5 years in the hope that interest rates for permanent securities will drop by the time the short-term notes mature. These can then be replaced by the long-term bonds which can be floated at a lower interest rate.

SIZE OF BOND ISSUE.—The first question presented to the financial executive when a bond issue is under consideration is: How large should the bond issue be? The answer will be governed by a number of factors which may vary according to the nature of the business and condition of the investment market. Some of the principal factors to be considered in deciding this question are the following:

1. The Character of the Business.—A business dealing in a necessity of life is likely to be more stable than a speculative company or one dealing in articles of luxury. When a business of the former type is profitable, it may with reasonable safety issue a comparatively large bond issue because the probabilities of earning the required fixed charges for interest and sinking fund are favorable. In a speculative enterprise bonds should not be issued or, if at all, only for a comparatively small amount, depending on the degree of uncertainty of the earnings. Bonds of such a concern are hard to sell and generally must be offered on terms which will be costly to the company. The uncertainty of earnings of such a business may make it hazardous to burden it with large fixed charges for interest and sinking fund purposes.

2. Age of the Business.—A new concern does not possess adequate data on which to base an estimate of its ability to pay fixed charges. Such a business should observe a very conservative policy and confine its capital issues to capital stock because a failure to earn and pay dividends will not bring about receivership and reorganization which is likely in the event of its inability to pay interest charges on bonds.

A business of a few years' standing may secure funds by a relatively small bond issue provided the fixed charges do not exceed the lowest net earnings in the concern's history. The average net earnings over the period of its existence should be from four to six times the interest charges.

A business with a number of years of successful operation behind it has sufficient data on its earning power to enable it to gauge fairly accurately how much it can meet in fixed charges with reasonable safety. A conservative policy is that the fixed charges should not, at the outside, exceed one-half the average net earnings of the business during the period of its existence. Where the earnings have grown rapidly as the business expanded, an average of the more recent years may be accepted. Where a concern has built up a large surplus which is retained in the business and has created adequate reserves, both of which are offset by liquid assets, a heavier fixed charge for interest may be incurred than in a case where these elements of safety are lacking.

3. Effect of Business Cycle on the Business.—A factor to be considered in every proposed bond issue is the degree to which the business is subject to the fluctuations of the business cycle. A concern which recovers quickly after a period of deflation, other things being equal, may employ with safety more borrowed capital than a concern which cannot recover so quickly. Where the earnings are relatively stable during all phases of a business cycle, a margin of safety of two to one, which means the earnings are two times the interest requirements, for a period of 10 years, is adequate. A concern where the earn-

ngs are likely to fluctuate extensively with possible losses, the average net earnings should be from six to ten times the interest charges, depending on the financial condition of the particular concern.

RATIO OF BONDS TO VALUE OF PROPERTY.—The ratio of bonds issued to the value of the property which secures the debt is an important item for the financial manager to consider. Bankers in bringing out a bond issue invariably inquire into this ratio and emphasize it in their advertisements. Although this ratio varies widely, the **ideal percentage** is from 50 to 60%. An old well-established business in a staple line may increase this percentage to some extent, while in speculative concerns the percentage permitted would be less.

From the foregoing data a **general rule** may be formulated that the more speculative and uncertain the business, the larger the margin of safety of property values must be over the amount of the mortgage issued to secure the bonds. The salability of the plant, and its adaptability to other purposes, are factors of great importance in such a consideration. A concern having a well located plant with property of a salable character and engaged in a staple business with considerable certainty of earnings may with safety issue bonds to an amount representing a higher ratio to the value of the property, than a company engaged in manufacturing a specialty in a plant which could not readily be sold or used for other purposes.

OPEN AND CLOSED BOND ISSUES.—Corporate bond issues may be closed, open-end, or limited open-end issues. A **closed issue** prohibits the authorization and issue of bonds in addition to those being immediately issued. An **open-end issue** allows the issue of any amount of bonds in the future under certain requirements, in addition to those first issued. A **limited open-end issue** places a maximum limit on the amount of bonds that may be issued under a mortgage and usually defines the conditions under which the bonds not being immediately issued may be put out in the future.

BEST TYPE OF BONDS FOR CORPORATION.—The limited open-end bond issue is probably the most satisfactory type of bond issue for a corporation, although not always the most salable. In the case of a mortgage containing an after-acquired property clause the investor is safeguarded in that the mortgage becomes a lien on all the after-acquired property, provided that the reserved bonds are only permitted to be issued for a conservative percentage of the value of the new property. Generally the after-acquired property clause covers only property acquired for the operation of the business and does not cover stocks and bonds.

USUAL LIMITATIONS ON LIMITED OPEN-END BOND ISSUES.—McKinsey and Meech, in "Controlling the Finances of a Business," give the following typical limitation which may be placed on the issuance of additional bonds under a limited open-end mortgage:

"1. A **maximum amount** may be named in the deed of trust. That is, a maximum amount of bonds may be authorized, part of them issued at once, and the remainder may be later issued under certain conditions as in (2) following. This clause has the advantage of definitely assuring the investor as to the amount of bonds with which he must share his lien. It has the disadvantage of unnecessarily limiting the ability of the company to issue bonds under a first mortgage, and of thus hampering financial operations.

"2. No maximum limit may be set in the deed of trust, but the issuance of additional bonds may be made conditional upon the existence of certain circumstances as follows:

"(a) Additional bonds may be issued only up to, say, 75 or 80% of the sound value of new property acquired, and then only if **net tangible assets** at their sound value are equal to, say, 200% of the par value of bonds outstanding and to be issued, provided that **net current assets** are maintained at 150% of bonds outstanding and to be issued, and provided further that **average net earnings** for three years immediately preceding are at the rate of two or three times the interest and sinking fund charges on bonds outstanding and to be issued.

"(b) Additional bonds may be issued up to 75 or 80% of the cost of additions, betterments, and improvements, provided also that conditions such as those named in the foregoing paragraph exist.

"(c) Additional bonds may be issued up to 75 or 80% of the cost of additions, etc., upon consent of the holders of three-fourths of the bonds already outstanding. Limitations such as those suggested in (a) above may be added in this case.

"(d) New property subject to outstanding mortgage bond issues may be acquired by issuance of additional bonds under this mortgage (i.e., the limited open-end mortgage of the purchaser), but such old bonds outstanding on new property acquired must be retired or refunded and placed as security for the bonds issued to acquire the new property.

"The limitations suggested above under (2) are more satisfactory than those outlined under (1)."

DANGER OF THE AFTER-ACQUIRED PROPERTY CLAUSE.—The after-acquired property clause which is frequently found in both closed and open-end mortgages, may, under certain circumstances, hamper the corporation in its future expansion and financing. For this reason this clause should be used with discretion.

Thus, if a concern puts out a bond issue secured by a closed mortgage containing the after-acquired property clause, that concern cannot issue any more bonds under the given mortgage, and cannot place a mortgage equal or prior in lien to the closed mortgage on any new property later acquired or proposed to be acquired. In short, the business, other things being equal, cannot finance in the future by a first mortgage bond issue. It can place a second mortgage on its property, but second mortgage bonds will typically sell to yield a higher return, i.e., capital secured by second mortgage bonds will typically cost more than that secured by first mortgage bonds. Furthermore, if the definition of property is so worded as to include stocks, bonds, and other securities, a collateral trust bond issue is precluded. The corporation can still issue debentures or short-term notes, but probably at higher rates.

Bonds and Notes

MEANS OF CORPORATE BORROWING.—A corporation may borrow money in the investment market by issuing **long-term or short-term funded debt.** There is no distinct line of demarcation between the two. In investment circles short-term securities usually refer to obligations having not more than 5 years to run and long-term securities are those running for more than 5 years.

When the corporation desires to borrow for a short term, 5 years or less, it usually issues unsecured notes. For longer periods secured bonds are more frequently used, although many unsecured bond issues, frequently called "debentures," are issued.

FUNDED DEBT DEFINED.—Funded debt, falling generally into the main classifications of **bonds, debentures,** and **notes,** is represented by a formal written agreement, signed and sealed, which evidences the obligation of the maker to pay a definite sum of money at a specified place, on a specified date with interest at a stipulated rate. The terms and conditions under which the funded debt is issued, are contained in a more or less elaborate agreement, between the issuing company and a trustee, reference to which is made in the bond, debenture, or note. These references, however, are not to the method of payment of principal or interest as that would tend to affect the negotiability of the funded debt. The agreement may be referred to as the "mortgage," "deed of trust," "trust agreement," "trust indenture," etc., in appropriate cases.

SECURED FUNDED DEBT.—Usually there is either a pledge of certain real property under a **mortgage** as security for the payment of principal and interest, or in the case of **collateral trust issues,** certain collateral, consisting of securities, is pledged with the trustee. There is almost an infinite variety of permutations and combinations which can be found in the underlying security, ranging all the way from an unsecured note to a first closed mortgage bond.

DENOMINATIONS OF BONDS.—The denomination of a bond is the definite amount stipulated on its face which the company issuing it promises to pay at maturity. Denominations vary, although a par value of $1,000 is usual. In recent years there has been a tendency to issue a great many bonds of a par value of $500 and $100 in order to appeal to the small investors. Bonds with a par of $100 are usually called "baby bonds."

NATURE OF SECURED BONDS.—The customary form of corporate mortgage bonds sold to investors are obligations of the issuing company and constitute a contract wherein the holder has a right to participate in an agreement entered into by the company with a trustee who holds the legal title to the mortgage issued to secure the bonds.

There are **two parts to each bond.** First, there is the mortgage issued by the company to the trustee. Second, there are the bonds, issued under the agreement and signed in the name of the corporation, with the certification by the trustee that the bond is covered by the agreement. These instruments specify in detail the nature of the obligations, the duties of the trustees and the rights of the bondholders. There is a definite promise to pay the principal at maturity and a fixed rate of interest periodically. The place of payment is also stated, usually a bank or trust company. The **security** for the bond is usually described in abbreviated form.

The money paid to a corporation for its bonds is merely a loan and creates the relation of debtor and creditor between the company and the bondholder.

BONDS PAYABLE IN GOLD.—Many bonds are specifically payable in gold coin of certain weight and fineness. This provision is very important in long-term bonds and in countries in which there is danger of fluctuation in the value of the national currency.

CLASSIFICATION OF BONDS.—Many kinds and varieties of bonds are issued. Generally speaking, bonds **receive their titles** from one or more of the following characteristics:

1. The character of the issuing corporation.
2. The purpose of the issue.
3. The nature of the security given for payment.
4. The terms of payment.

5. The evidence of ownership and transfer.

A classification will be given under each of these heads.

BONDS CLASSIFIED AS TO CHARACTER OF ISSUING CORPORATION.—This characteristic is used as a basis for general classification. That is to say, market quotations are sometimes arranged under the following heads:

1. Government—state and national
2. Municipal and county
3. Railroad, express, and steamship companies
4. Traction companies
5. Gas, electric light, and water companies
6. Banks, trust companies, and insurance companies
7. Investment companies
8. Industrials
9. Mining companies
10. Miscellaneous

BONDS CLASSIFIED AS TO PURPOSE OF ISSUE.—Among the many varieties of bonds which take their names from the purpose of the issue, the following may be noted:

Adjustment bonds
Bridge bonds
Construction bonds
Consolidated bonds
Car trust bonds
Dock and wharf bonds
Equipment bonds
Founders' bonds
Ferry bonds
General bonds
Improvement bonds
Interim bonds
Interest bonds
Purchase-money bonds
Refunding bonds
Reorganization bonds
Revenue bonds
Subsidy bonds
Terminal bonds
Temporary bonds
Unified bonds
Etc.

BONDS AS TO FEATURE OF SECURITY GIVEN FOR PAYMENT.—From the point of view of the security given for payment, bonds fall into two general classes: viz., (1) **unsecured,** and (2) **secured.** Secured bonds may be divided into two general classes: (a) those having **personal security,** and (b) those secured by **liens on specific property.** These in turn may be subdivided as the following outline indicates:

I. Unsecured

1. Government bonds
2. Corporation debentures

II. Secured

1. Personal security
   - (a) Indorsed bonds
   - (b) Guaranteed bonds
     - (1) Guaranteed as to principal
     - (2) Guaranteed as to interest
     - (3) Guaranteed as to both principal and interest
2. Lien security
   - (a) By character of property pledged
     - (1) Real property:
       - Land grant bonds
       - Real estate bonds

(2) Personal property:
Collateral trust bonds
Sinking fund bonds

(b) By character or priority of lien
(1) First, second, or third mortgage bonds
(2) General mortgage bonds
(3) Blanket mortgage bonds
(4) Consolidated mortgage bonds
(5) Income bonds
(6) Profit-sharing bonds or participating bonds
(7) Dividend bonds

BONDS AS TO TERMS OF PAYMENT.—From the point of view of terms of payment, bonds may be classified:

1. According to **method of payment**
   (a) Callable bonds
   (b) Sinking fund bonds
   (c) Serial bonds
   (d) Convertible bonds
2. According to **currency in which payable**
   (a) Gold bonds
   (b) Currency bonds

BONDS AS TO EVIDENCE OF OWNERSHIP AND TRANSFER.—Considered from this viewpoint, there are three classes, viz., coupon bonds, registered bonds, and coupon registered bonds.

Coupon bonds are issues, the contracts for payment of interest on which are evidenced by separate coupons or contracts for payment which fall due consecutively on the interest payment dates. The coupons may be detached, and constitute complete promissory notes in themselves, payable to bearer. The coupons are usually printed on small sections of a sheet of paper attached to the principal obligation, and as they mature are clipped off and presented for payment. They are frequently presented for payment through a bank as a check or draft would be.

Registered bonds are credit instruments in which the interest obligation is included in the body of the document as in a promissory note, the ownership of the bond being registered as a means of protecting the payee against loss, and necessitating a formal transfer and registration to transfer the title when the old instrument is canceled and a new one issued. Interest is payable by money delivery or by check sent by mail to the address of the registered holder.

Registered coupon bonds are those for which the principal is registered, but interest coupons are made payable to bearer.

MORTGAGE BONDS.—Bonds that are backed by a mortgage on real property are, in this country, the most popular type of bonds and will probably always remain so. Not only is a note or bond secured by real estate the most popular type of secured obligation, but, for most individually owned businesses, partnerships, and small corporations, it is the only practical form of long-term obligation. Other forms of security are utilized in the main only by large concerns which are widely and favorably known and therefore enjoy an exceptional measure of credit apart from their property holdings.

JUNIOR ISSUES.—The great mass of obligations on real property are secured by first mortgages. There is a considerable amount, also, of second mortgage securities, and relatively few third, fourth, or later mortgage securities. Anything beyond a second mortgage is seldom found except among the

obligations of large railroad corporations, and seldom there under any title really descriptive.

A second mortgage issue, when it is recognized as such, will usually have to pay a rate of interest perhaps ½ to 1% higher than a first mortgage issue. The issues which are protected by subsequent mortgages may be expected ordinarily to pay still higher interest rates in rough proportion to the number and amounts of the claims before them. However, this is not an invariable rule, for the property pledged may be ample to protect all the issues. In practice junior mortgage issues in many cases are of larger size, carry no higher rate of interest, and enjoy a wider market than do the issues which precede them.

DEED OF TRUST.—It is impossible to issue separate notes and mortgages to each bondholder, because aside from the inconvenience and excessive cost which would result from this method, the mortgages would not be of equal rank since the first one issued would have priority over all the others, and so on for each successive one issued. It is necessary, therefore, to employ some means by which all the creditors will have a lien of equal rank on the property pledged as security. This is accomplished by making a **deed of trust in favor of a trustee** who holds the property for the benefit of all the creditors. In case of default, the trustee acts on behalf of all the bondholders and, if necessary, forecloses on the property pledged under the mortgage and acts for the benefit of the creditors.

Most of the corporate deeds of trust which are now used contain the equivalent of the following information, given in "Controlling the Finances of a Business," by McKinsey and Meech:

1. Date, and names of the parties to the deed of trust.
2. A section defining terms and phrases used throughout the indenture.
3. The preamble, which usually contains a full statement concerning the legal status of the corporation, including the state in which it is incorporated, the amount of its bonds and capital stock, a description of its assets, and reciting the authority given by the stockholders and directors for the bond issue, and the purpose of the issue.
4. **Full text of the bond, the interest coupon** if it is a coupon bond, and the trustee's certificate of validity which appears on each bond.
5. The **granting clause** which **transfers the property to the trustee** and gives a detailed description of it. In the case of a mortgage bond issue this clause is in the form of a mortgage on real estate in favor of the trustee. In a collateral trust bond it is in the form of a pledge of collateral security to the trustee.
6. The covenant of the corporation to pay the principal and interest upon the bond.
7. Provisions with reference to the **possession and maintenance of the property pledged.** In the case of a mortgage bond, the mortgagor retains possession and control of the mortgaged property unless it is taken possession of by the trustee or other representative of creditors in case of default. In the case of the collateral trust bond, the trustee retains possession of the pledged securities, but remits the interest or dividends thereon to the obligor. In either case the mortgagor assumes the responsibility of preserving the value of the pledged property, and the deed of trust frequently contains provisions with reference to his duty in the matter.
8. A detailed statement of **covenants** by the corporation to do or not to

do certain things, the doing or not doing of which protects the bondholder. For example, the corporation may agree that net tangible assets shall always be maintained at 200% of bonds outstanding, and that net current assets shall always be 125% of bonds outstanding.

9. In some cases, where the mortgagor is a holding company, there may be a statement with reference to the **nature and standing of the property of subsidiaries.**
10. **Procedure in case of default of interest and principal** on the bonds and a statement of what constitutes default.
11. **Procedure of the trustee in case of receivership.**
12. The **duties, responsibilities, and liabilities of the trustee.** There is frequently a statement with reference to his compensation and the conditions under which he can be removed.
13. The signatures and seal of the corporation, and of the trustee.

SINKING FUND BONDS.—Mines, oil wells and other enterprises which have a limited lease of life are generally required for the protection of bondholders to establish a sinking fund for the redemption of bonds. In modern practice, it is generally becoming the custom to provide sinking funds of one sort or another in almost all types of industrial bonds, thus compelling the utilization of a certain amount of the earnings each year to reduce the debt.

COLLATERAL TRUST BONDS.—Collateral trust bonds are those secured by deposits of other securities with the trustee who holds the deed of trust. Long-term bonds should be secured by stocks and bonds that it is intended to hold permanently. Ordinarily these securities, posted as collateral, are those of subsidiary corporations or of other corporations in which the borrowing company expects to maintain a permanent interest.

DEBENTURE BONDS.—Debenture bonds are those issued on the general credit of the company, without any specific pledged security. To successfully float an issue of this type, the issuing company must enjoy high credit standing. Debenture bonds are sometimes used as a means of obtaining funds by corporations having a small amount of money invested in tangible assets but a large amount of good-will. Various provisions are inserted in debenture bonds to give them a better credit standing than would otherwise be the case. Sometimes the owners are given a preferred charge upon property and income over owners of subsequent issues of debentures or other obligations.

The usual debenture bond is merely the formal corporate promise to pay money. It is a legal obligation of the corporation and may be sued upon if unpaid at maturity, but it cannot be made the basis of a foreclosure, since it is not a lien on any specific property. Its claim is superior to that of preferred stock, but it has no preference over other unsecured claims of the corporation, such as bank loans, unless the deed of trust so stipulates.

Sometimes the arrangement under which the debentures are issued specifically provides that no more shall be authorized while these are outstanding, but most common is the provision that no mortgage may be created on the property without including the issue of debentures. In this manner the holders of the debentures are assured that no later issue of securities will cut in under their position and destroy the strength of their security.

Debenture bonds are generally issued at a comparatively high rate of interest, in order to increase the working capital of concerns which are precluded by reason of their method of earlier financing from raising additional funds in other ways. Frequently the protective provisions surrounding earlier preferred stock issues provided against the creation of mortgage obligations and have

cut off those avenues of financing and left open financing through debenture issues alone. Under such circumstances, therefore, it is usual that provisions are made for the early retirement of such issues and rather drastic protective covenants are generally imposed.

Protective Provisions in Debenture Bonds.—Some of the commoner provisions which have to do with protective measures are the following:

While debentures are outstanding the company shall not further mortgage or pledge any of its assets except for the acquisition of additional property in which case the purchase money obligations are usually limited to a conservative percentage of the value of the newly acquired property. In the issue of the $15,000,000, 8% convertible 20-year debentures of the United Drug Co., a provision was made that no mortgage should be placed upon any of the assets of the company or its subsidiaries, except purchase money mortgages, unless the issue of debentures should be equally and ratably secured thereby.

Another protective measure often used is that the net tangible assets of the company shall be maintained at an amount equal to at least 200% of the outstanding debentures and the ratio of current assets to current liabilities shall not be allowed to fall below a certain stipulated minimum. Sometimes it is required that the working capital, or net quick assets, shall always be kept equal to or greater than the amount of debentures outstanding.

INCOME BONDS.—Income bonds possess some of the features of both bonds and stock. As the name implies, the payment of interest can be demanded only when there is sufficient income for that purpose; if the interest charges are not earned they need not be paid. The principal, however, is usually secured by a mortgage.

Income bonds possess few of the attractive features of either stock or bonds. From the viewpoint of the investor preferred stock is preferable to income bonds because preferred stock dividends are usually cumulative while income bond interest is usually not cumulative. Income bonds are seldom accepted by investors from choice. Most income bonds are the products of reorganization. In readjusting the financial structure of a company bondholders are often required to accept income bonds in place of bonds carrying a fixed charge.

PARTICIPATING BONDS.—Participating bonds participate or share with the stockholders' earnings above the regular specified interest on the bonds. The conditions governing participation are set forth with great care. Such bonds are seldom used in American corporate finance.

CONVERTIBLE BONDS.—Convertible bonds are those which possess the privilege of conversion into some form of security on some predetermined basis. Usually the security into which bonds may be converted is common or preferred stock. The conversion privileges are generally stipulated in the security and consist of the following:

1. That after or at any time up to and including a certain date, the securityholder may exercise his right to convert. If his security is callable, he may be given the privilege of converting within a given number of days after it has been called for redemption.
2. The kind of security into which the investors' bonds or stock may be converted.
3. The ratio of conversion, e.g., the number of shares of stock to be exchanged per $100 par of bonds with adjustments for accrued interest and dividends.

The conversion privilege adds a speculative element to the bonds.

If the privilege becomes valuable, the bonds will sell on a basis higher than is justified by their purely investment merits. The value of the conversion depends upon the likelihood that its exercise will become profitable. Issuance of convertible bonds is usually a concession made by the issuing company because of unfavorable money market conditions.

CALLABLE BONDS.—Bonds are usually redeemable at the option of the company, as a whole or in part, upon due notice to the bondholders at **premiums** varying with the terms of the issue. The callable feature allows the corporation, at its option, to refund high rate bonds with lower rate bonds or to clear itself entirely of debt, prior to its maturity, if the occasion for this arises. The investor, however, has the disadvantage of not knowing when his bond will be called, and he is faced with the possibility of losing a high return on his capital before the bond matures, and of being compelled to go to the trouble of reinvesting. These disadvantages are offset by making the bond callable at a premium, usually ranging from 5 to 15% of the principal amount of the bond. The premium usually decreases as the bond nears maturity.

GUARANTEED BONDS.—Guaranteed bonds are those whose payment is guaranteed by some other corporation. The guarantee may be as to principal or interest or both. It must be in writing and must be written on the instrument itself or be attached to it to be effective.

EQUIPMENT TRUST BONDS.—Equipment trust bonds differ from first mortgage bonds in that title to the equipment remains with the manufacturer, or with the trustee, the equipment being leased to the user, usually a railroad company. The lessee secures title ultimately by completing a series of payments. This is an excellent security and defaults on such bonds are extremely rare.

Short-Term Notes

SHORT-TERM CORPORATE NOTES.—Short-term corporate notes is the name applied to a corporation's promissory notes which are issued under more or less elaborate conditions set forth in an agreement between the issuing company and a trustee. They may be secured or unsecured and in coupon or registered form. They possess many of the characteristics of bonds except that they run for a shorter term, usually one to five years.

This section deals with short-term notes of this type as distinguished from the ordinary type of commercial notes usually running from 30 to 90 days or more, and sold through note brokers or discounted by commercial banks.

Short-term notes which are secured by collateral or some other specific property are known as **secured notes, collateral trust notes,** or some similar name. They are virtually short-term collateral trust bonds. Occasionally short-term notes are secured by a mortgage.

SOME CHARACTERISTIC FEATURES OF SHORT-TERM NOTES.—Short-term notes may vary in terms from time to time and from company to company. The following are some of the features usually found in them:

1. Like bonds they may be issued in **registered** or in **coupon form.** The latter have interest coupons attached and in some cases are registerable as to principal only.

2. **Redemption privilege** at the option of the company may be attached to the notes. This reservation is customarily put in notes to permit the company to anticipate their maturity, if desirable.

3. The notes may be made attractive to the investors by giving them the

privilege of converting them into the common or preferred stock or bonds of the company.

4. The element of **security** to the purchasers of such notes is usually set forth in some such provision as "no secured obligations shall be issued by the company in the future unless these notes shall be given equal security."

5. Some issues provide that certain periodic payments be made into a **sinking fund** to be used to redeem the notes at a certain price.

REASONS FOR ISSUANCE OF SHORT-TERM NOTES.—Corporations may find it desirable to issue short-term notes for the following reasons:

1. **Condition of money market.** At the time the corporation requires additional funds the condition of the money market may be such that funds can best be secured through this medium of financing.

2. **Temporary needs of the corporation.** The needs of the company may be of a comparatively temporary character yet for a longer period than could be satisfied by bankers' loans or notes sold through note brokers.

3. **High earning power and expansion.** The corporation may have large earning power and does not wish to permanently increase fixed liabilities, preferring to reinvest surplus earnings and retire the short-term notes as they mature.

DISADVANTAGES OF SHORT-TERM NOTES.—There are certain disadvantages in the continued use of short-term notes which should be brought to the attention of the financial manager.

1. **Cost of financing** may be considerable, particularly where a corporation is compelled to refund a maturing issue.

2. **Maturities** may come at an inopportune time when the concern may find it difficult to raise funds to pay them. A number of concerns during 1917 and 1918 when interest rates were very high issued short-term notes to avoid paying high interest rates on long-term bonds. When the notes matured in 1921 and 1922 some of these concerns found difficulty in paying them because of decreased earnings and sales together with inventory losses during the depression of 1920 to 1922.

3. The business may **incur a debt** it cannot pay if the proceeds are invested in fixed assets rather than in working assets. As fixed assets do not return their equivalent profits except over a long period of time it is not well, as a general rule, to issue short-term notes for this purpose.

Redemption of Bond Issues

REDEMPTION OF RAILROAD AND INDUSTRIAL BONDS.—Most industrial bond issues and some railroad issues are paid off when due, out of past earnings. The majority of railroad issues are, however, usually taken up by some **refunding operation;** usually another issue is sold and the proceeds used to redeem the matured issue. In industrial corporations these refunding operations are not always feasible. Investors are not, as a rule, willing to take chances on a refunding of the loan when it matures, and want some more specific provision for payment. Usually this provision takes the form of an agreement that certain reservations will from time to time be made out of the corporate profits. Such a reservation of profits is known as a "sinking fund."

SINKING FUNDS.—The sinking fund for bonds is a part of the stockholders' net earnings, temporarily set aside and used annually or semi-annually to retire a certain proportion of the bonds. Sinking funds may be a fixed annual amount, or a percentage of output or net profits. Such payments normally

increase the security back of the obligation and usually make possible the retirement of the bonds at maturity. It is a general practice for companies with **property of a wasting nature,** such as timberlands, mines, oil wells, and the like, to make a liberal sinking fund provision based on the annual production, so as to retire the entire issue by maturity. In the case of other concerns it frequently happens that the sinking fund will provide for the retirement of only a portion, perhaps 50%, of the bond issue before maturity.

The annual reservation for sinking fund purposes, used to buy in the bonds if they can be had at or below the redemption price, or to redeem bonds, if not so purchasable, will not, ordinarily, be a serious burden if the provisions of the sinking fund are not too excessive.

SINKING FUND METHODS.—The **fundamental purpose of the sinking fund** is to reduce the ratio between the amount of the debt and the value of property by which it is secured. The margin above the bonds, the equity, is increased. Different provisions apply to the operation of different sinking funds but this end is the primary one in all cases. The variations concern either the rates of payment into the sinking fund reserve or the manner in which the reserve shall be invested. These variations, some of which are of considerable significance, are almost innumerable.

The following table illustrates some of the more familiar methods of fixing the amount of sinking fund reserve to be set aside annually:

1. Fixed regular instalments—applying more commonly to closed issues of bonds:
   (a) Fixed amounts of money.
   (b) Fixed par value of bonds.
2. Varying but clearly defined proportional instalments not determined by the results of the business—applying more commonly to open issues of bonds:
   (a) Instalment a proportion of the outstanding bonds. This is the commonest provision.
   (b) Instalment a proportion of total capitalization or entire debt.
3. Varying instalments determined by the results of the business:
   (a) Instalments proportional to the gross earnings.
   (b) Instalments proportional to the net earnings.
   (c) Instalments proportional to the admitted surplus.
   (d) Instalments proportional to the dividend payments.
   (e) Instalments proportional production.
4. Contingent payments:
   (a) Optional payment determined by a maximum and a minimum.
   (b) Entirely optional.

The first group of sinking fund provisions, included under the first division of the classification given above, represents those bond issues in which the corporation is required to set aside a definite fixed amount each year. Sometimes the corporation is required to invest annually a definite sum of money in bonds, but rather more frequently, especially in railway issues, it is required to purchase a **definite face value of the bonds,** irrespective of market price.

Securing Funds

WHERE CAPITAL FUNDS MAY BE OBTAINED.—Capital funds may be obtained from:

1. Corporation's own surplus earnings
2. Stockholders
3. Investment public
4. Speculative public
5. Employees
6. Customers
7. Creditors

ADDITIONAL CAPITAL FROM SURPLUS.—Reinvesting profits in the business results in furnishing, for practical purposes, additional capital. Practically every concern adds a part of its profits from time to time to its accumulated surplus which when reinvested in the business virtually amounts to a **capitalization of surplus.** This is made so, legally, by distributing the book surplus as a stock dividend.

In small, close corporations, owned by people active in the business, the tendency is generally to reinvest a large part of the profits in the business. Continuing this process for a number of years results very often in building up a large business from a very moderate initial capital. The outstanding examples of this method of adding to capital are the Carnegie Steel Co. and the Ford Motor Co.

ADDITIONAL CAPITAL FROM STOCKHOLDERS.—Where the additional capital requirements of a corporation can be met by the stockholders it will leave open the possibility of obtaining future capital needs from the public. It is a **universal rule of law** that where new voting stock is issued by a corporation every shareholder must be given an opportunity to buy new shares in proportion to his holdings of old shares, unless a provision to the contrary has been inserted in the charter or by-laws. In close corporations new issues of common shares are usually allotted on this basis.

In obtaining additional capital by this method the corporation issues to the stockholders negotiable instruments known as stock rights. These give the holder the right to purchase a certain number of new shares from the company at a fixed price. In many offerings of stock to stockholders a banking firm underwrites the offering at a fixed price, thus insuring the sale of the entire issue.

CAPITAL FUNDS FROM THE INVESTING PUBLIC.—Another source of capital funds is the investing public. The most important classes of investors in corporate securities are:

1. Professional and salaried people, as well as retired business men who have no business of their own in which to place their funds.
2. Women and minors who have inherited money.
3. Estates held in trust.
4. Banks and savings institutions.
5. Insurance companies.

Active business men are not as a general rule investors to any great extent in securities of other corporations than those in which they are directly interested, for the reason that they can use all their money in their own concerns.

CAPITAL FUNDS FROM THE SPECULATIVE PUBLIC.—The speculative public may be classified into three groups:

1. **Speculators** who buy securities in the hope of making a quick and large profit.

2. **People with limited knowledge of financial affairs** but who do not know the difference between an investment and a speculation. Such people are continually placing their money in the hands of unscrupulous promoters in the blind faith that they are making an investment.

3. **Intelligent business and professional men** who buy and hold speculative

securities for a rise, in the full knowledge that they are taking chances. This group makes the best type of stockholders for a comparatively small industrial or commercial corporation, particularly of a promotional character. They recognize the business hazard incident to the establishment of a business and also that the stock sometimes must be held for a long period before dividends can be realized.

The speculative public is reached in different ways, the most common of which are:

Group (1) is usually reached through the stock market.
Group (2) is reached by means of advertising and circular letters.
Group (3) is generally reached by personal solicitation by the officers of the corporation and through the stock market.

CAPITAL FUNDS FROM EMPLOYEES.—In recent years a number of concerns have sought to sell some of their capital stock to their employees. The primary purpose in most instances has been more to **improve their relations with their employees** than a desire to raise capital.

Some of the **advantages** which are claimed for selling stock to employees are:

1. Enables the corporation to secure funds easily and cheaply.
2. Serves to retain employees because of their stock ownership in the corporation, thereby reducing the cost of a high labor turnover.
3. Employees have an incentive for better service because they share in the profits and success of the company.

Some of the **disadvantages** of employee ownership of capital stock may be summarized as follows:

1. No real economy. Generally to induce employees to purchase stock special concessions are necessary. Sometimes the stock must be sold at less than the market value and payment arranged on the instalment plan.
2. Does not materially decrease labor turnover because the average employee cannot earn or save enough to acquire sufficient stock to make him feel that his share in the profits of the concern are worth while.
3. May weaken the financial policy of the company in that the directors may hesitate to pass a dividend, when sound finance demands it, because they fear to incur the displeasure of their employees.
4. Employees may resent the suggestion of stock ownership and look upon it as a plan to weaken their labor organization or to prevent them from obtaining increased wages.
5. May promote a speculative spirit among employees, particularly where the stock is actively traded in on a stock exchange. When employees speculate in the securities of their company and lose they are apt to become disgruntled and blame the company, thereby nullifying the advantages that the company may have hoped for by having its employees as stockholders.

CAPITAL FUNDS FROM CUSTOMERS.—Although capital may be obtained by selling securities to customers this method is not often used except in public utilities and cooperative organizations. The concern which wishes to raise capital by selling stock to its customers should possess the following:

1. Have a product for which there is a continuous demand, such as a prime necessity of life.
2. Have a good reputation for quality of product and for service.

3. Have an earning capacity and financial condition which will permit uninterrupted payment of satisfactory dividends.

The principal **advantage of customer ownership** of stock is the possibility of obtaining the permanent trade and interest of the customer. For this reason quite a few public utility companies have adopted the plan and have met with success. In many instances the plan created a wide market for the stock and a large number of satisfied customers, and made stockholders of a large number of voters who were instrumental in bringing about a healthy business relation between the public utility companies and the political subdivisions of the states in which they operate.

Provision for Contingencies

DEFINITION AND NATURE OF RESERVE.—A reserve may be defined as follows: It is an account with a credit balance set up because the expenses of operation have decreased an asset or created a liability, or because it is desired to set aside part of the profits from the surplus available for dividends or clearly to mark an unrealized profit.

Nearly all well-managed corporations charge against the profits of each year an estimated sum, or a number of distinct estimated sums, which are intended to provide for losses and expenses likely to arise in the future but which are incident to the operations of the current period. The sums so charged are credited to reserve accounts, which are carried on the balance sheet of the company.

Reserve accounts do not consist of funds of cash or property set aside for the purpose of meeting future expenses. A company may accumulate large reserve accounts and yet be quite unable to meet the anticipated expenses when they actually arise. This is due to the fact that the reserved profits are tied up in stock or equipment or in other ways and the company is short on cash and free credit.

CLASSIFICATION OF RESERVES.—The reserves ordinarily met with in business may be classified as follows:

A. Valuation Reserves:

I. Asset valuation reserves, which simply represent a diminution in the value of the assets they pertain to and are a part of the operating expenses:

(a) Depreciation reserves for plant, machinery, equipment, merchandise, etc.

(b) Depletion reserves for exhaustion of natural resources such as mines, timberlands, oil wells, etc.

(c) Bad debt reserves for uncollectible accounts receivable, notes receivable, sales discount, etc.

(d) Market fluctuation reserves for merchandise inventories, securities, etc.

II. Liability valuation reserves, which represent accrued liabilities, usually whose amounts at the time can only be approximated:

(a) Operating reserves for taxes, accrued wages, rent, insurance, etc.

B. Proprietorship Reserves (a part of the total surplus):

Recorded and designated reserves:

(a) Appreciation reserves for land, buildings, machinery and other physical

assets, which segregate from earned surplus profits resulting from marking up the value of such assets in appraisals.

(b) Open reserves for—
1. Working capital
2. Plant extension
3. Extinguishment of debt
4. Improvement and betterments
5. Sinking fund reserve

These are temporary appropriations of surplus, and their main purpose is to protect the working capital position against excessive dividend disbursements. When the various payments or expenditures for which the reserves have been set up have been completed, the reserves are merged back into surplus.

(c) Contingency reserves for fire, flood, or other loss; for accidents, guarantees or pending lawsuits; for obsolescence, etc.

Through such reserves these extraordinary losses are charged against surplus instead of current operating income.

Disposition of Profits

DIVIDEND AND SURPLUS RELATED.—In formulating a policy as to the disposition of earnings the directors must decide what principle they should follow as to dividends on the one hand and as to the accumulation and use of surplus on the other.

The board of directors of a corporation have **sole authority** in deciding what disposition should be made of the earnings. The officers and stockholders have no voice in such decisions. In practice, however, the directors generally look to the financial manager for advice and recommendations to aid them in their decisions.

DIVIDEND POLICY.—In considering the dividend policy to be followed by a company it is necessary to draw on past experience, exercise a good deal of common sense and make such adjustments as expediency demands. There are several factors to consider among which are:

1. Amount of earnings.
2. Distribution of stock holdings.
3. Nature of the business.
4. Needs for additional capital.
5. Age of the business.
6. Current financial condition of the business.
7. Stage of the business cycle.

NATURE OF BUSINESS.—The nature of the business very often decides the dividend policy. A speculative business with fluctuating earnings will have a different policy than a stable business with steady earnings. The character of the business in so far as it relates to the product it handles is also a factor.

A concern which deals in consumer necessities is less subject to fluctuations in earnings than a concern dealing in luxuries or in capital or production goods. The average consumer uses about as much of the prime necessities of life during periods of depression as in periods of prosperity. On the other hand, capital goods such as machinery, freight cars, etc., are purchased largely in periods of prosperity to meet the demands for increased production. The demand for such machinery falls off during periods of depression.

Concerns dealing in capital or production goods will need to adopt a conservative dividend policy and build up a substantial surplus to withstand decreases in sales and possible inventory losses during periods of depression.

Concerns dealing in prime necessities (such as the baking industry), with a steady demand for their products and comparatively small inventories, can afford to adopt a more liberal dividend policy and distribute a large share of their earnings as dividends, adding a correspondingly smaller amount to the accumulated surplus.

The **price of the product** is an element affecting net earnings. Low-priced consumer goods are generally sold in larger quantities in periods of depression than in periods of prosperity, whereas the sale of high-priced consumer goods decreases. The net earnings of concerns dealing in low-priced necessities are generally more stable than the earnings of concerns dealing in higher-priced commodities of the same class.

The **utility of the product** will affect the sales and profits. Luxury articles, such as jewelry, will be sold in greater volume in periods of prosperity than necessities. On the other hand, in periods of depression such articles will be purchased in smaller volume than necessities. In other words, the greater the utility of a product, foodstuff for instance, the steadier the demand, and other factors being equal, the more stable the sales and profits.

PERCENTAGES OF EARNINGS DEVOTED TO DIVIDENDS.—A tabulation of the income statements of about 900 English companies for the year ended July 31, 1914, before the economic conditions of the country had been disturbed by the Great War, shows the following distribution of profits:

	Net Profits £	Preferred Dividend £	%	Ordinary Dividend £	%	Surplus, Reserves, etc. £	%
Breweries	2,409,759	486,255	20.2	1,312,820	54.4	610,684	25.4
Gas	856,541	139,729	16.3	887,953	103.7	*171,141	*19.8
Iron, coal and steel	1,533,761	275,244	17.9	669,196	43.5	589,321	38.5
Shipping	770,861	104,895	13.6	326,952	42.2	339,014	44.2
Teas, rubber, etc.	535,699	31,247	5.7	400,384	75.0	104,068	19.3
Trusts	160,725	25,663	16.0	109,220	67.9	25,842	16.1
Waterworks	62,727	9,357	14.9	45,315	72.3	8,055	12.8
Miscellaneous	3,160,147	945,715	29.9	1,473,991	46.5	740,441	23.6
	9,490,220	2,018,105	21.3	5,225,831	55.2	2,246,284	23.5

* Deficit.

The above table shows that preferred dividends received 21.3% of the net profits; ordinary dividends received 55.2%; and the balance added to surplus was 23.5%. The gas companies paid out in ordinary and preferred dividends considerably more than their net profits, showing that they drew in this year upon the surplus accumulated in previous years.

The London *Economist* comments on the above table as follows: "As usual the iron and steel and shipping companies have adopted a conservative policy with regard to the distribution of profits to their shareholders. Most of the rubber companies have no preference shares, and prefer to maintain their high dividends at the expense of the reserve funds. A very high percentage of the profits of the water and gas companies goes to the ordinary shareholders, and in the case of the latter large reductions have been made in the amounts carried forward for this purpose."

Similar compilations for companies in the United States are not available. "Statistics of Income" issued by the Treasury Department, shows that in 1919 the net income of 192,037 companies reporting definite invested capital was,

after payment of taxes, $7,143,509,710, and that the dividends paid to individual stockholders was $2,453,774,825. This gives a little over 34% of the net corporate income paid out in dividends, and between 65 and 66% retained for surplus and reserves. As will be noted, the tendency in European countries is much more strongly in favor of paying out the greater portion of earnings in the form of dividends than it is in the United States. This is due in large part to the high surtaxes on individual incomes. It is due also to different and in some respects more conservative standards of capitalization.

ESTABLISHING A FIXED DIVIDEND POLICY.—A corporation desiring to establish a policy of a fixed dividend rate should make a study of its **financial history** and ascertain:

1. The amount of fluctuations in past earnings.
2. How long the periods of operating deficits have been and under what circumstances.
3. The average earnings for 5 or 10 years immediately preceding.
4. Present surplus position.

A corporation with a large surplus invested in liquid assets can afford a more liberal policy in paying dividends even with fluctuating earnings than a concern with a small surplus. The United States Steel Corporation, for instance, with a large surplus and with substantial liquid assets could continue to pay dividends on its common stock even in the face of operating deficits for a number of years. The same policy might ruin a concern without such a surplus.

REGULARITY OF DIVIDENDS.—Regularity of dividends, both in payment and rate, is of greatest practical importance to a corporation with a large number of stockholders. The confidence of a majority of such shareholders generally rests on the regularity of the dividend. They are not active in the business of the corporation, have only the barest information as to the manner in which the business is handled, and are not sufficiently familiar with the business or interested in it to absorb detailed information set forth in the reports submitted to them.

To shareholders of this type, regularity in their dividend returns is of the highest importance. They count upon these returns as a fixed portion of their income—in thousands of instances the living expenses of dependents are provided out of these dividends. The American Telephone & Telegraph Co. has more women shareholders than men. The same thing is true of other corporations, and all of the large corporations number many women among their shareholders. The effort of the directors of a corporation which includes a large proportion of shareholders of this type should clearly be to meet their needs by paying a permanent rate of dividends with the fewest possible fluctuations. This dividend rate in a really stable and conservatively managed corporation seldom varies to any considerable degree except when it is increased. And it is not increased until after the directors have assured themselves that in all human probability a later decrease will not become necessary. If there are unusual, or possibly temporary profits which it is thought wise to distribute, the directors of such corporations will ordinarily announce an **"extra" dividend** or once in a while will cut a **"melon"** in the form of a stock dividend or a subscription privilege. These extras, however, are to be regarded only as incidents which should not be allowed to disturb the regular and uninterrupted flow of dividends.

REGULAR DIVIDENDS VS. IRREGULAR PROFITS.—In sharp contrast to the desired regularity of dividend payments is the wide fluctuation in profits

that is characteristic of the majority of corporations. Business does not move on a regular and even keel. Economic and financial conditions vary; changes in management occur; difficulties with employees arise; changes in taste may suddenly create new markets or wipe out markets—all these and many other factors which are constantly at work bring about kaleidoscopic changes which often come as great surprises even to people who are intimately acquainted with the business. The sudden outbreak of the World War in 1914, followed by an intense depression in iron and steel and machinery industries, was an unexpected variation of this kind. Within a few months it was followed by an unprecedented demand from the European nations at war for the products of American farms and factories, stimulating production and prices to an unheard-of extent; this was a variation no less surprising. Then came the deflation following the close of the war. This was the expected happening but none the less, many of the great corporations were caught unawares. Thus the Central Leather Co. showed a net income for 1919 of $16,126,689, and in 1920 a net deficit of $20,590,006.

Also rapid fluctuations are constantly taking place even under normal conditions. Certain lines of business, such as building construction, ship construction, iron and steel manufacturing, and manufacturing of novelties and articles of fashion or luxury, are peculiarly subject to great fluctuations. In Andrew Carnegie's famous phrase these industries are either "prince or pauper." For instance, during the fiscal year 1913 the Lackawanna Steel Co. earned over $3,000,000 available for dividends on its common stock, equal to 8.3%; in the fiscal year 1914, prior to the outbreak of the World War, the same company showed a deficit, after payment of fixed charges, amounting to $1,500,000. Again in 1918, profits available for dividends were over $8,000,000, while the company's profits for 1919 were but $356,863, and it "dipped" into surplus to pay dividends to the extent of $1,749,152. In 1920 this deficit was easily covered by the net profits, and this after payment of dividends.

On the other hand, industries which sell small articles for personal use, such as cigars or household sundries, are likely to avoid fluctuation. The business of the large five-and-ten-cent stores is especially stable; owing to the fact that they are operated on a strictly cash basis, there is usually little difficulty in adjusting expenditures to sales. During August and September of 1914, when almost all other lines of business were suffering, the business of F. W. Woolworth Co. and S. S. Kresge Co. both showed very satisfactory increases.

ADVANTAGE OF CONSERVATIVE DIVIDEND POLICY.—A conservative dividend policy is of advantage to the corporation. It may seem that such a policy is unfair to the stockholders, in that they cannot expect to receive, in dividends, a large proportion of the actual earnings of the company. This is, however, not so for the following reasons:

1. The earnings above dividend requirements are **reinvested** in the business thereby increasing the productive capacity of the concern. This increase may, in the course of a few years, raise the productivity of the company to such an extent that the average net earnings will permit larger distribution of dividends than would otherwise be possible.

2. In a business with great fluctuations it is at times necessary to **conserve all the available assets** to permit it to go through periods of depression and in periods of prosperity to have funds necessary to meet expansion. Earnings retained in the business are of great value to meet this recurring expansion and contraction.

An outstanding example of the benefits of a conservative dividend policy

was that followed by Andrew Carnegie and his associates in building up their iron and steel business from a comparatively small inception. Their policy of putting a large part of their earnings back into the business, year after year, resulted in creating a business of such magnitude and earning power that it became the largest unit taken over by the United States Steel Corporation when that corporation was formed and which paid the stockholders of the Carnegie Company for the properties, securities of market value of well over $500,000,000.

RULE FOR MAINTAINING REGULARITY OF DIVIDEND RATE.—Dividends should not be allowed to rise, even in the most prosperous periods, above a **conservative estimate of the minimum earnings** of the company. Those concerns which suffer from great fluctuations find this to be a harsh rule. It means that, so long as there remains even a reasonable possibility that earnings may sink close to or below the level of fixed and contingent charges, no dividends whatever should be paid. This has been the rule followed by all really successful corporations the nature of the business of which involves unavoidable fluctuations. The Carnegie Steel Co. ran as a highly successful corporation for many years without paying dividends. Even after a corporation of this nature begins to pay dividends, it is not to be expected, if the management is conservative, that they will rise anywhere near the level of the average earnings. The rule of keeping dividend payments below the level of minimum earnings must strictly be adhered to.

IRREGULAR DIVIDENDS UNOBJECTIONABLE FOR CLOSED CORPORATIONS.—As stated heretofore, **a regular dividend policy** is best for a large corporation with many stockholders. An irregular dividend policy whereby the greater part of the yearly earnings are distributed to stockholders is unobjectionable in a small or closed corporation, all the stock of which is held by men who are themselves active in the business and familiar with its affairs. Where capital requirements are fully met and there is no further necessity of building up a surplus for the needs of the business, the distribution of annual earnings as dividends has the advantage of stimulating those who are active in the business.

PREFERRED DIVIDEND.—Dividends payable on preferred stock are known as preferred dividends. These may be **cumulative or non-cumulative.** Such stock is entitled to dividends, up to a generally fixed rate, when earned and declared in preference to common stock.

Cumulative preferred dividends are dividends which, if not paid when due, accumulate and must be paid before dividends can be paid on common stock. With such stock the directors may defer payment until the earnings are sufficient to pay them. As the accumulations stand in the way of dividends on common stock and as the credit of the corporation is adversely affected by large arrears of preferred dividends, directors of corporations usually endeavor to pay such dividends where the earnings are sufficient and the company is in a financial position to do so.

EXTRA OR SPECIAL DIVIDENDS.—A corporation following a conservative policy of regular and fixed dividends may in time accumulate more surplus than the business requires. The directors under such circumstances may wish to make an additional distribution to the stockholders in the form of an extra or special dividend. Care should be taken to designate such a dividend as a special dividend so that the stockholders will not be led into the belief that a larger regular dividend will continue in the future.

PROPERTY DIVIDENDS.—The term "property dividends" is applied when the dividend payment consists of a transfer to the stockholder of property of one kind or another, generally securities of other corporations or of the government, which the corporation owns. The distribution to stockholders of dividends payable in United States Liberty bonds acquired during the World War is a case in point.

SCRIP DIVIDENDS.—Scrip dividends are written promises of a corporation to pay the dividends declared by the directors. These promises are usually negotiable and generally have a definite maturity date and often bear interest. Sometimes, however, they carry no interest and have no maturity date, being redeemable at the option of the corporation.

The **primary purpose** of using scrip dividends is to anticipate cash receipts and to segregate current earnings to present stockholders who may dispose of their scrip without parting with their stock. A corporation may have made sufficient profit to warrant a dividend but may be in a poor cash position because the earnings are tied up in accounts receivable, inventories or even capital assets. When the accounts receivable or inventories are liquidated and cash becomes available the scrip is redeemed.

Scrip dividends are often used to pay off accumulated preferred dividends. The scrip is redeemed when cash becomes available or may be converted into additional stock.

After the Westinghouse reorganization in 1891, the first dividend of 1¾% on the preferred stock was issued in scrip, so as not to reduce the working capital immediately. In the fall of 1914, the Cambria Steel Co. desired to keep up its regular 5% dividends, but on account of war conditions inventories were larger than usual, and available cash resources were smaller than usual, and the directors did not think it wise to pay out in cash the $562,500 required. The difficulty was solved by issuing a scrip dividend bearing 5% interest. The same thing was done in 1915. Since then all this scrip has been paid. Sears, Roebuck & Co. paid a 2% scrip dividend in the early part of 1921, but perceiving that the crisis before the company was more serious and of longer duration than at first supposed, suspended common stock dividends thereafter.

The payment of accumulated dividends on preferred shares has been, in a number of cases, taken care of in this manner: The Trenton Potteries Co. has outstanding $411,570 of "funding certificates" which were issued to stockholders who exchanged their 8% cumulative preferred for a new issue of 8% non-cumulative preferred. These stockholders received 44%, being the amount of their dividends in arrears, in the form of "funding certificates," bearing interest, if earned, at the rate of 4%.

STOCK DIVIDENDS.—A stock dividend is a dividend declared by a corporation which is payable by an issue of its capital stock. The stock dividend represents **capitalized surplus** reinvested in the business.

The purposes of a corporation in paying a dividend in stock are generally given as follows:

1. To give stockholders tangible evidence of the increasing value of their property.
2. To maintain the market value of the stock at a low price in order to encourage investment by the small investor.
3. To veil huge profits in order to be able to pay a smaller dividend on a larger amount of stock instead of a larger dividend on a smaller amount of stock.
4. To evade possible taxation of surplus by government.

In the first instance, the stockholders receive shares which represent capitalized surplus earnings reinvested in the business. Generally, the company is able to pay out a larger amount of net profits in dividends, but desires to do so without increasing the rate. A stock dividend permits this to be accomplished. The corporation should be able to maintain its previous dividend rate in order that the market value of the stock shall not greatly decline. The risk of overcapitalization on the basis of earning power should also be considered.

Even though the rate per cent of dividends on the old stock is not maintained but only the same number of dollars in dividends is paid, the market price is not likely to fall in proportion to the increase in stock outstanding. As a result the stockholder benefits by an increase in the cash value of his total holdings.

No fault can be found with those corporations which occasionally pass on to stockholders tangible evidence of accumulating surplus profits. Especially is such a policy commendable when stock dividends are specified as being in the nature of extras and when the earnings and assets of the corporation are adequate to continue payment of the current rate of return on new as well as old shares. The company should, however, consider carefully the probable future trend of the industry and of business in general before the new stock is issued to holders of outstanding stock. The amount of the surplus remaining after a portion has been capitalized and the risks of a possible deflation period should be carefully weighed.

STOCK DIVIDENDS AND MARKET VALUES.—In the main there are two reasons for desiring to pay stock dividends in order to decrease the market price of the stock: (1) to bring the market price down to a point where small investors will be attracted to it; and (2) to lower the market price in order to facilitate pool manipulation by insiders who desire to unload on the public shares of questionable value.

The first purpose is entirely legitimate and results in increased popularity in the market for the company's stock which stabilizes the price and widens the market for future issues of securities. Generally, the increase in stock in such instances is accompanied by a statement that the cash dividend rate per share will be reduced, but that the same number of dollars will be paid out in dividends as before. Thus by reducing yield per share, the market price may be lowered. If the rate of dividend per share remained constant, only a temporary decrease in price would occur during the period when the new stock was being absorbed. In some cases par value has been changed from, say, $100 to $25, and the old dividend rate maintained. This has succeeded, together with the increase in capital shares, in lowering the market price of the stock.

The second purpose is not justifiable. If the stock is valuable, no such tactics need be employed to sell it. If it is not valuable, manipulation for purposes of sale is wrong.

STOCK DIVIDENDS TO CONCEAL PROFITS.—Before utility and railroad commissions had begun to control the accounting methods and capital issues of the corporations over which they exercise control, and before publicity with reference to assets, earnings, and dividends was required, stock dividends were useful in concealing earnings which otherwise would have been considered as profiteering. A concern paying 20% on its capital stock could, by declaring a 100% stock dividend, show only 10% paid on common stock. Thus public ire and possible legislation might be staved off and competition discouraged.

Few people are now deceived by such juggling. Income and profits relative to total invested capital are considered and not the rate paid on stock. Cor-

trol by commissions over public utilities and railroads has put a stop in this field to the practice of "watering" by the issue of stock dividends.

STOCK DIVIDENDS TO AVOID TAXATION OF SURPLUS.—Many corporations with huge accumulated surpluses have become unduly alarmed for fear these reinvested profits will be taxed by the government. In order to evade this possible tax, large stock dividends have been declared. Such dividends are called "melons" and should be distinguished from the more frequent and much smaller (2 to 10%) stock dividends. It is obvious that, should Congress decide to do so, surplus as of a date prior to the declaration of such dividends might be taxed.

Surplus

SOURCES OF SURPLUS.—The most important sources of surplus are:

1. Reinvestment of profits.
2. Sale of stock at premium.
3. Sale of assets for more than book value.
4. Donation of stock to corporation.
5. Gift of assets to corporation.
6. Stock assessments.
7. Writing up asset book values.
8. Excess of value of assets of a corporation absorbed over par of stock paid for those assets.

REINVESTMENT OF PROFITS.—The **most important source** of surplus in a well managed corporation is from earnings retained in the business. The desirability of accumulating profits in surplus cannot be emphasized too strongly as it indicates successful operation, conservative management and financial strength. A surplus built up in this way also indicates the probability of further increase from the same source.

In this country the accumulation of surplus out of earnings is conceived almost wholly as a source of fresh capital. As such it is to be contrasted with the policy of paying out all, or nearly all, the earnings in dividends and relying upon fresh issues of securities in order to obtain new capital when needed.

The great **advantage of securing capital through issues of securities** is that it may be more quickly obtained and thus advantage may be taken of conditions which favor rapid development. Assume that two competitive corporations start to do business at about the same time with the same amount of capital, and that one corporation depends solely upon its accumulating surplus for the capital with which to finance extensions, while the other corporation distributes most of its earnings in dividends but is successful in raising fresh capital by the sale of securities. If both corporations are able to work peaceably side by side, it is probable that in the long run the first-mentioned policy will prove sounder and more profitable and that the stockholders in this first corporation will eventually reap the benefits of their self-denial. But possibly both corporations cannot work side by side. As they expand, one or the other is certain to get the mastery, to capture the market, and to drive its competitor out of business. Under these conditions it may well be that the second corporation, through its policy of selling securities, may be able to raise needed capital more quickly and thus secure the dominating position which is the goal of both, before the first corporation has made a good start.

Somewhat similar conditions frequently exist. A corporation formed to manufacture and sell a new device may find it vitally necessary to cover its

field before some other device can be brought out and introduced as an effective competitor. Or a company may have in hand a project which is peculiarly timely, such as accepting a new and profitable contract. In all cases where the element of time in developing a business is a factor of great importance, the advantage as between the two methods rests with the plan of issuing securities.

The great **advantage of securing capital through savings** consists of the **steadiness and soundness** with which the business may in this way be developed. It will not suddenly spurt ahead—perhaps before adequate preparation has been made or before an effective organization can be brought together. It will grow, year by year, adding a new piece of machinery here, erecting an addition to its plant there, gradually increasing its organization—until some day it finds itself a leader among its competitors. Something like this, as has already been intimated, was the history of the Carnegie Steel Co.; a still more striking instance of inside financing is furnished by the history of the Ford Motor Co.—in fact, this has been the history of probably 75% of the great industries of the country. The other 25% have been built up chiefly by the more rapid, more attractive, and more dangerous process of bringing together great sums of capital through the issuance of securities.

There are no rules which can be dogmatically laid down to guide the financial manager with reference to the portion of profits which should be reinvested in the business. The Pennsylvania Railroad Co. followed for years the policy of reinvesting a dollar for every dollar paid out in dividends. This rule-of-thumb is largely responsible for the investment status of Pennsylvania stock. In the last analysis, the portion of surplus profits to be reinvested must be determined in the light of factors peculiar to the individual business and in the light of the trend of the business cycle.

SALE OF STOCK AT A PREMIUM.—Paid-in surplus results from the sale of stock at a premium. In **banking, insurance and investment companies** a paid-in surplus is usually provided for when such concerns are organized. At least a moderate surplus must be shown on the balance sheet of such a company to give an appearance of strength so that its financial statement may inspire confidence. The laws of many states also require banking companies to accumulate a surplus above liabilities, which shall not be used for the payment of dividends. By subscribing this surplus at the beginning, the stockholders may draw dividends on the capital stock after the first year of business. Furthermore, at a critical time in the history of a bank or insurance company the stockholders are frequently required to subscribe to the surplus in order to maintain the unquestioned credit of the company. In all such cases the surplus is regarded to all intents and purposes as a part of the capital stock. In no sense is it a reserve for dividends; and if, under extreme provocation, the directors consent to distribute a part of the paid-in surplus to stockholders, the report of their action does irreparable injury to the credit of the company.

Sometimes the premium on stocks sold by the corporation above par is added to surplus and used for dividend purposes. Such premiums are capital contributions and should be credited to a special surplus account known as **"capital surplus"** or more specifically to an account **"Premium on Capital Issues."**

Premiums received on bond issues should be amortized over the life of the bonds as the premiums are not contributions of capital but merely represent an offset against the annual interest charge. The yearly adjustment equalizes the interest account.

SURPLUS FROM SALE OF CAPITAL ASSETS.—In conservative financial management it is not considered good practice to **appreciate capital assets in the books** of the concern. The market value of such assets may, however, be more than the book value and when sold may realize a profit. These profits may be added to surplus. Although such profits are available for dividends, a more conservative policy is to show such profits in a special account which will indicate that they are to be used as an offset against possible future losses in the sales of capital assets. Very often, however, such profits are kept in the surplus account.

SURPLUS FROM REORGANIZATION.—Sometimes a credit to surplus may be set up on the books through a readjustment or reorganization of a corporation's financial structure. The same may be accomplished by the purchase of one company's assets by another, or where a new company takes over the going business of several other companies. If a smaller par value of stocks, bonds or notes is paid than the book value at which the assets are acquired, the difference may be carried to surplus.

It is impossible for a corporation to start business with an earned surplus. When one corporation buys another the surplus of the latter merges into some capital account.

HIDDEN OR SECRET SURPLUS.—A number of old and well established concerns may be said to have a hidden or secret surplus. Generally such a condition is brought about by an **understatement of assets or an overstatement of liabilities, or reserves.** The result is that the corporation is in a stronger financial position than is shown by the books.

A secret surplus may be established by one or more of the following methods:

1. Understating net income over a series of years.
2. Excessive writing down of the book values of tangible and intangible assets.
3. Making larger provisions for reserves than is necessary.
4. Overstatement of liabilities.

The chief reasons for a hidden surplus are:

1. To strengthen the financial condition of the concern. By having a secret surplus unexpected losses may be absorbed without serious difficulties to the concern. A secret surplus also serves to check demands of stockholders for dividends and permits the reinvestment of profits for the increased needs of the business.

2. Conceals the true financial condition of the company from stockholders so that those in control can carry out their plans which may be for the betterment of the concern or for their personal benefit. The insiders knowing the real condition of the concern might buy the securities of the company from the public at a low price and make large profits when the actual condition of the corporation becomes known.

The real purpose of a financial manager is to state the condition of his company with accuracy and honesty. The balance sheet should reflect the exact truth so that every creditor, stockholder and prospective purchaser may have a correct basis for action. An understatement of assets and carrying a hidden surplus is objectionable, although not to the same extent as an overstatement of assets. Nevertheless the practice should not be encouraged.

SURPLUS POLICY.—In formulating a surplus policy it is necessary to use considerable discretion and diplomacy in dealing with the stockholders and to satisfy their wishes from time to time by distributing extra or special dividends in prosperous years. The problem is further complicated by the

difficulty, in fact, impossibility of determining in advance what the earnings will be over a number of years and what the future capital requirements will be. For these reasons it is impossible to lay down exact rules, but most well managed corporations are satisfied if they can adopt a conservative surplus policy which fits their particular requirements.

A business of a stable nature with slight variations in earnings, with a policy of a fixed dividend will have relatively regular additions to surplus. The surplus will accumulate steadily, either slowly or rapidly, depending upon the amount retained after payment of dividends. **A speculative business** with fluctuating earnings which wishes to steadily increase its surplus must do so by adopting a fluctuating dividend policy. Dividends will fluctuate because a fixed amount must be set aside periodically to increase surplus. Where the dividend policy is conservative and absorbs a small proportion of average earnings for dividends, a greater proportion will be added to surplus in prosperous years than in poor years. The result will be an irregular addition to surplus.

A concern which has steady earnings generally has no trouble in raising fresh capital for any extension that may be required. Such a concern can usually obtain capital by new security issues and it is not so necessary that all the additional capital should be provided out of earnings.

A speculative business cannot, on the other hand, secure additional capital by security issues on as favorable terms. Such a business, however, can be extended by a liberal reinvestment of earnings. A policy leading to the establishing of a large surplus is probably the best one to follow for such a business.

Financial Aspect of Patents

PATENT A MONOPOLY.—A patent is **a monopoly** recognized by the Constitution and by the statutes of Congress. As stated in a decision of the Supreme Court of the United States, "A patent is a grant of a right to exclude all others from making, using, or selling the invention covered by it." (*United States* v. *Standard Sanitary Mfg. Co.*, 119 Fed. Rep. 172, affirmed in 226 U. S. 20.) Patents are issued by the United States Government only to individuals who have personally conceived a patentable idea and diligently reduced it to practice. A **corporation** as such cannot have a patent issued to it directly in its own name. Letters patent are **assignable,** however, and corporations can obtain title to them by purchase from other owners or by assignment from their own inventors, who secure the patents as a result of their activities as employees of and for the benefit of corporations. It is a matter of common occurrence for a corporation to be in possession of all the rights and benefits of a patent and yet not be the legal owner of it. This is merely a matter of contractual arrangement whereby exclusive rights under the patents are assigned, but the legal title to the patent is retained by the nominal owner. The problems in connection with such contracts or leases are essentially the same as those involved in the ownership of patents, and need not be separately discussed.

PATENT COSTS AND VALUES.—The financial executive must have a definite policy of differentiation between **asset values** and **expense items** for the purpose of recording various expenditures in connection with patents in the books and records of the company. Whether an item shall be treated as one or the other depends primarily upon the general policy of treating patent values adopted by the company. Many corporations carry their patents upon the books at a nominal value and treat all expenditures as operating expenses of the business

for the period in which they are incurred. This may be considered **ultra-conservative practice,** but there is much to commend such treatment. There is always the possibility of infringement suits which cannot be successfully combatted because of insufficient finances or lack of meritorious legal grounds. The **feature of obsolescence** must also be considered because if the patented article, process or design is no longer desirable, there is little or no value to the patent. When a patent becomes of no commercial value because of these or other reasons, the business which has absorbed the major portion of patent cost in its past operating expenses, is in a stronger financial position to stand the reduction of income incident to the lack of usefulness of its patents. It is a severe blow to a company to be obliged to write off high capital values of worthless patents and in addition to pay the legal expenses connected with an unsuccessful attempt to defend them.

TREATMENT OF PATENT EXPENDITURES.—If it is decided to carry the patents among the assets of the business at their cost, there must be a consistent policy of segregating items which should be carried as **assets,** from those which are to be treated as **operating expenses.** When patents are acquired by purchase, the problem is simple. The **purchase price** of the patent plus the legal and incidental expenses connected with the purchase represents the cost, which may be capitalized. **Patents obtained by the inventor** and assigned to his employers present a more complicated situation. If there is an experimental department, while it is not expected that all of the time and money expended will result in patentable ideas, such a department should produce sufficient inventions to justify its cost. As the entire activities of such a department are directed toward the conception of patentable ideas, the total cost of such a group should be allocated to the patents obtained. In view of the length of time which frequently elapses between the filing of an application and the granting of a patent, this method cannot be followed with mathematical precision but some arbitrary distribution which closely follows the idea can be made by the executive.

Tests of the validity of patents by means of lawsuits for infringements are of frequent occurrence. If the suit is successful the value of the patent may be greater because of it, and it may be proper to capitalize **the expenditures for legal services.** But if the result is unfavorable, not only must the cost of the suit be charged to expense but also all the costs previously capitalized on account of the patents invalidated by the decision of the court. It is conservative practice to treat costs of litigation as operating expenses of the business until the case is decided. Then, if a favorable decision is obtained, the costs may possibly be transferred to the asset account. In some foreign countries it is necessary to pay **annual renewal fees** in addition to the original costs involved in obtaining the patent. These should be treated as expenses of the period for which they are paid.

PATENT VALUATION ON BOOKS.—It is sometimes contended that patents should be carried on the books and displayed in the balance sheets at fair values even though they may be in excess of cost. In the past there have been many cases, particularly in connection with corporate promotions, where patents have been carried at values far higher than was justified. This abuse has caused bankers and other intelligent readers of financial statements to look askance at book valuations of patents. There are, however, many cases where the real values of the patents are substantially in excess of the cost. Such values are demonstrated by the profits derived from the patents. In these meritorious cases there is no justifiable reason for not **revaluing patents** and

showing them on the books and in the published reports at their actual values. Whenever this is done it is imperative that the effect of such a revaluation upon the surplus of the company be portrayed in all of the financial statements issued by the corporation.

DEPRECIATION OF PATENTS.—The purpose of patent depreciation is to exhaust the book value of the patents during the period when they are of value to the company. The policy adopted by a concern for such depreciation depends upon the **nature of the patents** and their **probable term of useful value.** The value of a patent to its owner or assignee in the final analysis is based upon the monetary return which it is capable of producing. Hence financial benefits can be obtained from a patent only during the period when a demand for the patented product exists. It is the problem of the executive not only to determine when this period of time has elapsed, but as far as possible to anticipate it.

Depreciation on Basis of Legal Life of Patents.—It is probable that a majority of patents which have passed the test of commercial demand are of value during the entire period for which they are issued. Unless it is known that a patent will be obsolete and of no value before the expiration of its legal life, it is proper to begin to extinguish the cost proportionately over the term for which the patent is granted. This involves consideration of two factors: (1) the **original cost** of obtaining the patent, and (2) **costs accrued** since the issuance of the patent. The first factor should be depreciated over the legal life. If this is seventeen years, as is usual, 1/17th of the cost would be charged off each year, thereby completely extinguishing it by maturity. The second factor, costs after issuance, must be depreciated over the life remaining after the expenditure so that it will be eliminated from the books when the patent expires. A simpler way of arriving at the annual depreciation charge is expressed in the following:

Let A = Original cost of the patent
Let B = Subsequent cost of the patent
Let C = Cumulative depreciation

Substitute the book figures at the beginning of the fiscal year for the letters in the following fraction:

$$\frac{A + B - C}{\text{Remaining life of the patent (months or years)}} \times \frac{\text{Units (months or years) in the fiscal period}}{} = \text{Annual depreciation}$$

The result obtained is correct provided the depreciation in past years has been provided for and properly calculated. If too little depreciation has previously been written off, the resulting annual depreciation charge is more than the theoretically proper amount for the fiscal period. If **prior depreciation** has been too high, the reverse is true. If depreciation has not been taken in prior years, a taxpayer is not entitled in one year to deduct for federal income tax purposes a greater amount for depreciation than would otherwise be allowable.

Depreciation on Basis of Less than Legal Life of Patents.—Patents frequently **become obsolete** and of no value prior to their legal expiration. For example, patents covering novelties, fads, and the like rarely have a value after the business season. The cost of such patents should be written off during the period when the product is in demand. More often the problem is not so simple as the case just cited. There are numerous cases where large sums of money are expended in developing a new process of manufacture with the intention of patenting the process and inducing other manufacturers to adopt the methods

involved and pay royalties to the patentee for the use thereof. If the new process involves radical changes from existing methods and requires drastic changes in equipment, there is always the possibility that it will be difficult to convince prospective licensees of its advantages and to derive the financial return expected and required from the investment in the patents covering the process. The financial executive must be prepared to judge whether such experiments are proving too costly and should be abandoned, or whether the probabilities for eventual success are strong enough to continue the investment. In a business of moderate size the financial future of the company may depend upon his decision. No set rule can be established for the proper policy of depreciating costs of such patents, but the financial executive can best safeguard his business by adopting the conservative policy of liberal depreciation on any patent investments of questionable value.

PROFITS FROM PATENTS AFTER EXPIRATION OF PATENT RIGHTS.—The value of a patent may persist after its expiration. This is due sometimes to the **registration of the trade name** of the patented article, thereby restricting its sale under a similar name; sometimes to the relations with distributors and the **good-will of customers** which competitors may not be able to disrupt; and in other cases to the ability to produce and sell the patented article at prices which **minimize competition** because of the methods evolved during the period of patent monopoly. Such a value may exceed the cost of the original patent, but it is really an element of good-will and not a patent value.

But this ultimate value cannot be predicted in the early years of life of the patent. The **sound course** to pursue is to depreciate the patent over its life. The value after expiration should not be capitalized and set up on the books because no element of good-will created in the current business is ordinarily capitalized by a going concern. The reason for this is that surplus available for dividends is no greater by reason of appreciation in value of an asset not to be sold, except as augmented by actual earnings derived therefrom. The value may be given effect, however, in any reorganization whereby capital stock is issued for good-will or patents.

INCOME FROM PATENTS.—Revenue from patents may be derived from the following sources:

1. Sale of the patents.
2. Profit from the manufacture and sale of patented commodities.
3. Royalty payments from others for the use of patents.

Profits on Sale of Patents.—The profit or loss from the sale of a patent is measured by the difference between the amount received and the cost of the patent, less cumulative depreciation to date. If the sale is made with a provision that the transferor of the patent shall participate in its future earnings the profit or loss should be determined in the same manner. The future revenue from the profit participation in the profit should be treated as income for the period in which it accrues or is received.

Profits from Use or Sale of Patented Articles.—The second source of income is from the use of the patent in the business. The patent may cover a process of manufacture which reduces the cost of production under non-patented methods; it may cover a product, and because of the monopoly of manufacture permit the patent owner or assignee to sell the patented article at prices much higher than it could be sold for under competitive manufacture and sale. Regardless of the nature of the patent, the management should know the **approximate value** of it measured by the amount of excess earnings attributable to the patent. In attempting to determine this value, it is preferable to

determine the excess earnings or profit by means of statistical computations. Attempts to insert an arbitrary element of estimated profit as an integral part of the accounting records, and thereby combining such arbitrary estimated profit with elements of actual cost, frequently cause much confusion, particularly in the valuation of inventories.

Exclusive Use of Patent within the Business.—A decision which sometimes has to be made and frequently has an important effect upon the future growth and financial strength of a business, is whether or not to permit others to use the patented idea in a competing business. Many large businesses have been built up by reserving for their sole benefit the commercial advantages of patents. Doing this frequently requires extensive expenditures of money to bring the idea to a profitable fruition, and the financial executive is primarily responsible for obtaining and maintaining the requisite funds for this development. At the time this decision has to be made, particularly if the business is comparatively new and not abundantly supplied with cash and good credit connections, it may be that the only means of deriving the benefits expected is by the participation of others whose financial condition is of assistance. To make such a decision wisely requires intimate knowledge of many conditions and the financial executive should at least be able to contribute data as to the comparative possibilities of income under both methods.

If it is decided to **license others** to operate under the patents, **contracts** are prepared setting forth the extent of the rights of the **licensee.** Generally the **licensor** derives his income from a fixed **royalty return,** the amount of which is based upon the quantity of the patented article produced or sold by the licensee. In the absence of good reasons to the contrary, license contracts should contain a provision for the payment of a **minimum royalty,** whether or not the licensee avails himself of the advantages of the patent. This provision prevents a licensee from obtaining valuable patent rights and thereby, at no expense, eliminating them from competition with his own established business. The licensee should be required to submit to the licensor at frequent stated intervals —generally monthly—a **statement of the amount due,** with statistics as to quantities produced or sold. The statement should be executed before a notary. It is the duty of the financial manager to see that the amounts due as stated in returns are received currently, and also to assure himself of the accuracy of the statement submitted. This verification is frequently accomplished by an **audit of the licensee's records** and the right to make such an audit should be made a part of the license agreement between the parties.

PROTECTION AGAINST INFRINGEMENTS.—There is the further problem of protecting the owners and licensees of a patent or patents from illegal use of them by others who are not licensees. Close contact with the industry involved is of assistance in detecting such infringements, and when detected, they should be stopped as soon as possible, even by **invoking the aid of the courts** if necessary. An investigation to ascertain net income realized in the manufacture of patented articles, when infringement of patent rights is claimed and the claim is sustained, or when an examination is ordered pending a decision, presents several novel features, as compared with an ordinary statement of income. It is not intended to discuss the matter from a legal point of view, and it may be that the principles hereinafter set forth may not be upheld by the courts in some jurisdictions. However, most of these cases **are settled out of court** owing to the enormous expenses involved in the taking of testimony before masters, who are usually appointed where matters of account are involved.

The following procedure, therefore, may be taken as the result of actual practice, following negotiations which usually involve concessions on both sides, rather than settled rules laid down in judicial decisions.

General Accounting Principles do not Govern.—The **preliminary conferences** in a matter of this sort naturally bring out opinions which differ radically. The injured party claims everything that can be imagined, and the defendant produces a statement which shows that the manufacture of the infringing article has been attended with ruinous losses. From the beginning it is a question of gradually drawing the lines closer, until each has stripped his case of redundant matters and the issue is joined. Ordinary accounting principles do not form the basis of the claim nor of the defense. The following are exceptions to accepted practice:

1. There seems to be no reason for apportioning any part of the **general expenses** as a part of the cost of the business. The infringers would have had these expenses to pay in any event in order to carry on their legitimate business.

2. If the principal business of the defendants consists of manufacturing or dealing in infringing articles, it may be proper to include a certain part of the general expenses, but items of a questionable nature should not be included.

3. As defendants are not supposed to have pushed the sale of the article, it hardly seems proper that any credit should be claimed for special exhibitions.

4. If the **same kind of materials** is legitimately used in the manufacture of other goods handled by the defendants, and the purchases are not earmarked at the time for any particular department, it seems improper that credit should be allowed for any materials not clearly identified as having been used in the infringing product.

5. Based on similar accountings, the defendants are not entitled to place a **scrap valuation** upon materials remaining on hand when they were compelled to stop the sale of the article, but they could be compelled to scrap the articles on hand at that time, and would not be entitled to any credit whatever for the entire cost of the manufacture of said stock.

It does not seem conceivable that the defendants would be permitted to make a profit out of their wrongdoing, and this would be the result if general expenses and similar items were included, as the tendency would be to reduce the expenses of conducting their legitimate business. If they have been ordered to account for the profit made by them in the manufacture and sale of articles, the courts undoubtedly should hold that the word "profit" as here used means the difference between the proceeds from the sale of an article and the prime cost (that is, labor and material) of such sales, and that the cost of goods on hand at the end of the period should not be treated as an item of cost for which credit can be claimed.

Court Decisions.—The courts, however, do not seem to accept the foregoing view. In the case of *Rubber Co.* v. *Goodyear* (76 U. S. 788), where a master's report was being commented upon, the court said:

"He refused to allow manufacturer's profits and interest on the capital stock. This was correct. 'The profits made in violation of the rights of the complainants' in this class of cases, within the meaning of the law, are to be computed and ascertained by finding the difference between cost and yield. In estimating the cost, the elements of price of materials, interest, expenses of manufacture and sale, and other necessary expenditures, if there be any, and bad debts, are to be taken into the account, and usually nothing else. The calculation is to be made as a manufacturer calculates the profits of his business."

GENERAL RECORDS.—In order to maintain efficient accounting records and for purposes of general information, it is necessary for a concern to know the status of its patents and applications for patents at all times. In a business which does not have its own patent department with competent patent attorneys, records should be kept to show what patents have been issued and the progress made in connection with applications. The length of time elapsing between the filing of an application and the issuance of a patent varies considerably, and it may be several years before a final decision is reached. Some cases are passed promptly by the patent office, while others encounter considerable delay because of the necessity of amendments to the applications, appeals from rulings of the patent office, hearings in connection therewith, and the like. The financial executive should see that his records provide for the information tabulated below or as much thereof as it is feasible to maintain:

1. Name or title, and description of invention.
2. Name and address of the inventor.
3. Name of attorneys handling the application.
4. Serial number of the application and the date filed.
5. Actions while the application is pending in the patent office, including the dates of amendments; reference to briefs, arguments and interviews in connection with appeals from rulings; number of claims rejected and allowed; date application was abandoned or (see 6).
6. If the patent is issued:
   Date; patent number; life and expiration date.
7. Location of the patent (file, safe deposit box, etc.).
8. Record of infringements and action taken thereon.
9. Date and essential details of sale, assignments of partial or complete rights, etc.

To insure the accuracy of a record such as this, frequent contact with the attorneys handling the various cases is necessary.

TREATMENT OF PATENT ACCOUNTS.—The accounts and records should be designed so as to show amount of money expended on (1) pending applications for patents; (2) obtaining and protecting issued patents; (3) depreciation of patents; and (4) income from patents. Charges for the cost of patent applications prior to a final decision on them should be treated as **suspense items** and the aggregate cost involved carried in a separate controlling ledger account. This account should be supported by a detailed record showing the expenditures on each application. When a patent is issued, the cost should be transferred to the **patents account,** but if the application is finally rejected, the accumulated costs should be written off to expense immediately. The costs of patents should be carried in one or more ledger accounts, depending upon the desirability of classification of patents by types, and there should be corresponding **depreciation reserve accounts** to which should be credited the annual provision for patent depreciation. As supporting record for these accounts, a **patent ledger** should be maintained which will show the details of costs by patents and also record the depreciation taken on each patent.

Income from royalties under license contracts should be reflected in one or more ledger accounts. The executives of a business frequently want to know, not only the total income received monthly or periodically as royalties from licensees under the various patents, but also how much is received from individual licensees. In order to have this information available, subsidiary records of income should be kept.

SECTION 8

FIXED CAPITAL EXPENDITURES

During the readjustment of the post-war period of 1919 to 1924, the importance of proper control of fixed capital investments was brought home forcefully to bankers and financial executives. Many concerns with years of successful experience found themselves suddenly confronted with depreciation, interest and other carrying charges on war-time capital investments that threatened to impair profits, frequently eliminating them altogether, and in some cases bringing about financial disaster.

CONTROL OF FIXED CAPITAL EXPENDITURES.—The policy governing fixed property expenditures should rank in importance with other fundamental policies for the conduct of the company's business, such as quality of product, merchandising methods, employees' relations, etc. The effects of a wise or unwise policy in the handling of the fixed capital expenditures are permanent, far-reaching, and frequently the determining factor in success or failure for the concern.

The fundamental principles involved apply with equal force regardless of the type or size of the concern. In a small business the investments in fixed capital are usually subject to the control of the owner or manager, who is in close touch with all phases of the activities of his business and is in a position to establish a proper balance between these activities without the need of a definite program of reports and records. The executive of a large organization cannot personally supervise the activities of all departments and must rely on **controlling ratios, comparative reports** and **previously approved programs** to insure the continued application of the predetermined policies.

CONSERVATIVE POLICY.—When a business makes expenditures for added fixed assets, it inevitably incurs an **added burden of expenses** in the form of such more or less fixed charges as depreciation, insurance, taxes and protection, as well as an added financial burden in the form of interest or dividends which should be earned on the increased capital invested. A conservative policy demands that only such additions to fixed assets should be made which will result in an increased volume of production or trade, or will enable the business to effect a definite saving in the cost of production. In either case it must be established that the advantages realized from the added investments expressed in terms of increased earning power will be sufficient to merit the increased expenses and pay a return on the additional capital invested. Not only must the earning capacity of the added investment be assured for the immediate future but consideration must be given to **its permanence as compared with the estimated life of the improvement.** An expansion of physical property to care for a temporary increase in volume or to effect a saving in production expenses during a boom period would be unwise even though the failure to make such an investment might result in a temporary loss to the company

xpenditures for material or goods are subject to liquidation if the purchase found to be unwise, but expenditures in fixed capital assets which prove to unproductive are seldom possible to liquidate except by reorganization or a emendous sacrifice of earnings over a long period of time. In the meantime ie added expenses keep running and become a heavy handicap on the com-any's finances.

A striking instance of failure due to overexpansion of an otherwise successful anufacturing business is found in the history of a concern which started in 86 with sales amounting to less than $10,000,000 on which a net profit of er 16% was realized. Expansion continued and the company organized reign departments and factories. It financed interurban electric railway ies for the purpose of exploiting inventions, and advanced large sums to nproductive subsidiary companies. By 1906 its total funded and current abilities and stocks had risen to $45,000,000, but the net profit was a little er 5% of its sales. As a small business in a year of depression the concern d earned 16 cents on every dollar of sales. As a larger business in a year of arked prosperity it earned 5 cents on each dollar. It failed the following ear.

RELATION TO COMPETITION.—The effects of unwise fixed capital vestments are most keenly felt where a concern is compelled to meet sharp mpetition. Many industries having at present productive facilities installed ring the boom period occasioned by the war, which are far in excess of esent or probable future requirements, must now exert every effort to obtain e physical volume necessary to absorb and carry the burdens of fixed charges. he keen price competition resulting from this condition reduces the net profits joyed by all industries in the line, and a business so burdened with heavy ed capital assets is confronted with a **decreasing margin of profits** after the yment of carrying charges on its fixed capital investments.

The advantages and disadvantages of competing companies in any line of siness is shown by a comparison of their financial reports. The handicaps casioned by excessive fixed property investments in some companies are ten equivalent to their dividend requirements. For example, assuming two ncerns in the same line of business, and with practically the same commercial unsactions and gross earnings, one company having conservative fixed property vestments may earn its dividends by a comfortable margin, whereas a concern th excessive property investments may have difficulty in meeting its interest, preciation and other fixed property charges with little or nothing left as a turn on its net worth.

TURNOVER ON FIXED PROPERTY INVESTMENT.—The turnover on ed property investment expresses the relationship between the volume of siness done and the amount of capital tied up in fixed property investments. is is one of the most fundamental relationships in an industrial enterprise. he turnover may be **figured in either of two ways:**

1. As the dollars of sales per year per dollar of fixed property investment.
2. As the physical units of volume per year (pounds, barrels, cases, etc.) per dollar of fixed property investment.

these the latter is the sounder, for it is based on fixed measures which are affected by changing price levels.

Computing this turnover **on the basis of sales** and fixed property investment satisfactory in normal times when prices are steady. But prices for products ve fluctuated so greatly in recent years that changes in this turnover might misleading unless changing price levels are recognized. Where no measure

of physical volume is available, it may be approximated by adjusting the sale figures sufficiently to eliminate the effect of changing price levels. This may b done by use of a price index. Published price indexes may be employed whe they are fairly representative of the trend of values of the particular produc in question. Oftentimes an individual price index may be readily prepare on the basis of representative items of products handled.

All proposals to increase fixed property investments should take into con sideration the effect upon this turnover. Additional property investmen should be justified by a similar relative and permanent increase in volume business, in order to protect this turnover. To expand properties on temporar volume, or on volume resulting from inflated prices, would be most uncon servative. The trend of this turnover is an indicator of the trend of **unit fixe property expenses** on the volume of business done. As the turnover improve the unit expense decreases; and as the turnover decreases the unit expens increases. As the fixed property expenses—depreciation, taxes, insurance, et —bear quite a constant relation to the amount of fixed property investmen volume changes mean better or poorer unit costs and expenses, and are als directly reflected in the turnover.

FIXED PROPERTY FINANCIAL AND EXPENSE BURDENS.—A effective method of emphasizing this point is to compute the **added expens burdens** of a more or less permanent nature imposed upon a business by an proposed increase in fixed property investments. As a general rule addition fixed property investments carry increased financial and expense burdens about 20% of the amount of such increase in property investment. This woul be made up approximately as follows:

1. Financial cost of the added investment—increased interest and dividend requirements	9%
2. Average depreciation on building and equipment investments might be	5
3. Necessary repairs, taxes, insurance, and miscellaneous expenses might average	6
Total	20%

These are average and round figures, but they are representative of th additional burdens imposed by the average addition to property investment For any individual proposition the increased burdens may be figured ou quite accurately, and it is very effective to state that, for illustration, a pr posed addition of $100,000 will impose upon the business fixed financial an expense burdens of $20,000, which should be covered by the profits fro permanent additions to volume, or permanent savings in cost and expense, f otherwise they will reduce the return earned on the investment.

FINANCING FIXED PROPERTY EXPENDITURES.—Expenditures f additions and betterments for which no new capital is provided, have to con out of **working capital.** From the working capital point of view, such fun are spent as truly as though paid out in dividends. Money tied up in fix properties is no longer available as working capital; it cannot be used to p bank loans, buy goods, or carry accounts.

Important new ventures, extensive construction programs, etc., are general provided for by **special financing.** This would necessarily be the case wi large expenditures. It is the effect of the smaller and more or less regular a constant expenditures for additions and betterments which is overlooked. any going business some such expenditures are necessary every year. Wh they may not be important in any one period, it is the cumulative effect that

importance. In very profitable times, when surplus accounts are being ilt up, such items pass unnoticed; but they accumulate year by year.

PROTECTION OF WORKING CAPITAL POSITION.—Surplus should be nsidered as free surplus available for payment of cash dividends only to the tent that funds realized out of such surplus earnings have not been otherwise id out in reduction of working capital. Surplus profits are first realized in e form of increased working capital. If cash dividends are paid out, both the rplus account and the working capital are reduced. If long-term liabilities e retired, the working capital position should be protected by reserving a like nount from the surplus account. Current expenditures from year to year for ditions and betterments reduce working capital in the same way, and should provided for by an ample surplus account, or **appropriations of surplus** gregated to protect working capital.

A concern might go along for years putting a few thousand dollars each year to additions and betterments, and find that this drain on working capital d accumulated to a sum representing a very large part of its surplus account. ithdrawing such sums from working capital means added borrowings, for if ese funds were not invested, they would remain as working capital. Neces- ry working capital is usually provided by current borrowings, bank loans, c. But there comes a time when added permanent financing is necessary to ver these fixed investments unless covered by earnings retained in the business. Expenditures for additions and betterments should be provided for by appro- iating a like amount from surplus, to assure that the working capital is main- ined. When such expenditures accumulate to a large sum and added per- anent financing is undertaken in the way of a bond or stock issue, the effect to replenish working capital for these withdrawals, and release the surplus propriated to cover. As the issue is floated the amount for the refinancing fixed investments originally paid for out of earnings, may be released from propriated surplus, and transferred back to free surplus account.

NEW CAPITAL TO BE FURNISHED BY STOCKHOLDERS WHEN ORKING CAPITAL IS NOT EXCESSIVE.—Let this question be asked garding every proposed capital expenditure in excess of a fixed minimum: ill the expenditure readily be financed out of surplus earnings? Usually the nswer is "No." It usually will be found that the necessary funds will be se- red from a diminution in net working capital or from fresh borrowing. Either ractice is a vicious one for an industrial concern. If undistributed earnings e insufficient to provide for new capital expenditures, it is obvious that the ncern is **underfinanced.** In such cases the apparent needs should be brought the attention of stockholders and the new money should be contributed by ockholders. Even though the suggestion is not adopted, the mere consider- ion of it may give pause to the business executive who may not have inquired here the capital funds are to come from, or who knows that the concern's edit is still good at the banks. It may be realized that a safe margin of orking capital is to be turned into an unsafe margin, and that the proposed tensions are not worth the risk and may be postponed.

Accounting for Fixed Capital Investments

GENERAL CLASSIFICATION.—Fixed or permanent assets in the broad nse comprise all assets which represent an investment of the concern's funds ot being offered for sale in the regular course of business, the ownership of hich is requisite to the continued operation of the business. They may be

broadly divided between **tangible assets** and **intangible assets** or **deferred charges.** If the fundamental relationships which exist between the tangible fixed property investments and sales volume and operating expenses are to be used by the executives for administrative purposes, it is essential that the classification between these divisions be carefully maintained at all times. The system of accounts should provide a comprehensive and carefully designed classification of fixed property investment, and transfers between departments should be promptly recorded so that the assets used by each department or unit of the business may be readily determined at all times.

TANGIBLE FIXED ASSETS.—Tangible fixed assets are frequently referred to as fixed property, permanent assets or capital assets. The terms are practically synonymous. Such assets represent items of property, either real or personal, which in themselves have a tangible value based on cost of reproduction in its present location and condition. The following types of assets are included in this classification:

Land and land improvements	Tools
Buildings	Delivery equipment
Leaseholds	Furniture and fixtures
Machinery and equipment	Patterns and drawings

LAND.—A careful distinction should be made between **land used in business** and **land held for investment** or for purposes of future growth of the concern and each should be carried separately in the accounts. These accounts should carry the **total investment** including the initial purchase price and all costs and expenses incurred in procuring titles. Subsequent improvements such as paving, grading, filling, materials, etc., should be charged to this account. When a number of different properties are owned, subsidiary records should be maintained showing the value of each parcel of property.

BUILDINGS.—Buildings should be carried on the books of the concern at **the purchase price** or at the cost of construction. Building accounts should be supported by subsidiary accounts showing the investment by buildings and operating units. From these subsidiary accounts, statistics may be readily prepared showing the amount of the investment in the various types of building using different rates of depreciation. In a large organization it may be desirable to establish a subsidiary record showing the building investment assigned to each department and to record changes and transfers between departments as they occur.

LEASEHOLDS.—Leaseholds involving the right to use properties comprising land or buildings or both should be charged into the accounts at cost. Subsidiary records should be maintained showing each leasehold separately. As the value of leaseholds for industrial purposes depends on the life of the lease and the location, trend in property values and development, the original cost of the lease, less any salvage value, should be **amortized over the estimated productive life** of the lease. The cost of all improvements should also be written off over the life of the lease, because they usually either become the property of the landlord at the expiration of the lease or possess little or no salvage value.

MACHINERY AND EQUIPMENT.—The investment in machinery and large units of fixed equipment should be supported by subsidiary records classified that information will be available to show:

1. The value of the machinery and equipment used by each individual department, process or unit of business.

2. The original cost of various classes of machinery and equipment which take different rates of depreciation.

The form of such records may be varied to suit the needs of the individual organization. In a large company, where a comprehensive classification is necessary, **a card record** showing separately the value, age, depreciation rate and other important data for each unit of machinery and equipment should be maintained. Such a card record affords a ready means of classifying the machinery and equipment on any basis that may seem desirable.

TOOLS.—The original cost of tools and movable equipment should be carried in a separate account from the machinery and equipment investments. The accounting to be accorded to such items will depend somewhat on the character of the business. In a business where such investment is composed chiefly of **small tools** of comparatively short life, the practical method is to capitalize the original purchases necessary to carry on plant operations and write off all subsequent purchases to expenses on the theory that such additional purchases will approximate the depreciation realized in such tools.

If the tools are composed of **large or valuable units,** it may be advisable to keep a record of such units and provide a depreciation reserve for ultimate retirement. Dies and gauges may be included as part of this account excepting in companies where such items represent a large investment which may be subject to a high degree of **obsolescence** due to changing styles, in which case provision should be made for a separate account so that proper executive supervision may be assured. The importance of annual inventories and adjustments of these investment accounts should not be overlooked.

DELIVERY EQUIPMENT.—Separate divisions of this account should be made as between **automotive equipment** and **horses and associated equipment.** Investment in such equipment should be carried at cost with ample provision for depreciation. Subsidiary card records should be maintained for each unit of this type of investment. All periodic repairs other than complete rebuilding should not be capitalized but should be charged to current expenses. As in the case of tools, periodic inventories are imperative for such investments.

FURNITURE AND FIXTURES.—In a **manufacturing business** the investment in furniture and fixtures is usually composed largely of office equipment, and as such may be carried at cost providing liberal depreciation is provided. In a **merchandising business,** where a considerable investment is made in fixtures which may be subject to comparatively short life due to changing styles, consideration should be given to the advisability of reducing the investment value by annual write-offs so that such equipment may ultimately be carried at a nominal value before the expiration of its useful life.

PATTERNS AND DRAWINGS.—While a manufacturing business may acquire a large supply of patterns and drawings over a period of years, their investment value is frequently little more than nominal. The conservative policy is to set up the original cost of such items in this account and charge them off to current operating expenses over a period of 3 to 5 years, leaving only a nominal amount in the account.

INTANGIBLE FIXED ASSETS.—Intangible fixed assets are usually composed of any or all of the following items:

Good-will
Franchise rights
Patents
Copyrights
Trade-marks and trade-names
Advertising costs capitalized
Organization expenses capitalized.

These items should on a conservative basis be carried at their actual cost. However, in the majority of cases, they are created at the inception of a business through purchase or reorganization, or during the formulative period when the business is becoming established, and the **capitalization** of them is ordinarily a matter of business expediency based on the financial structure of the new corporation. The directors and executives in charge of current operations of an established business are usually not called on to make any decision relative to these items other than to determine the amount of amortization, if any, which should be charged to current expenses. The financial policy of the corporation is the determining factor as to whether a conservative policy shall be adopted and such intangibles written off against the current operations over a period of years or whether they shall be carried indefinitely among the assets and part of the profits distributed in dividends to the stockholders instead of being used in amortizing the intangible items. Theoretically, good-will, trade-marks and perpetual franchises are not subject to depreciation. Nevertheless, in practice they are written down, especially if they have been carried at an excessive figure, if they are not eliminated entirely. Thus the F. W. Woolworth Co. has written down its good-will from the original $50,000,000 to $10,000,000.

In some companies, it is the policy not only to refrain from amortization of intangible assets established on the books at the time of incorporation but also to capitalize advertising expenses, patents, copyrights and trade-marks, from year to year. This policy results in the **conversion of working capital into intangible assets** and if continued over a period of years accompanied by a liberal distribution of the profits in dividends to stockholders, may easily result in such a diminution of the working capital as to seriously embarrass the company. However, such intangible assets are seldom of material value for financing purposes in time of necessity. Therefore, if it is not practicable to charge such expenditures in total to current expenses, it is more conservative to treat them in the nature of **deferred charges** and write them off as rapidly as possible.

DEFERRED CHARGES.—A distinction should be made between expenditures which may be capitalized as intangible assets and those which should be carried as deferred charges to be written off against operations of future years. Expenditures chargeable as deferred charges are divided between **current and non-current** as follows:

1. Those representing **current prepayments of operating expenses** and other costs of doing business which are usually chargeable to the expenses of the next succeeding business period.
2. Accounts in the nature of development costs, the character of which is such as to require charging to expenses over a period of years rather than capitalization.

The former prepayments are properly classifiable as current assets and may be included with working capital. They are composed of:

Prepaid interest	Prepaid taxes
Prepaid insurance	Prepaid rents

In the latter group composed of non-current deferred charges to be written off against subsequent operations, may appear:

Discount and expenses on bonds issued
Organization expenses
Advertising expenses

Sales development expenses
Exploration expenses, etc.

As noted under "Intangible Fixed assets" many such items may be capitalized at the time the corporation is established purely for purposes of financing or because such expenditures represent preliminary expenses which constitute a real value during the life of the corporation. After a corporation becomes established on an operating basis, conservatism would demand the charging off of such current expenditures to current operations, or if they are of extraordinary volume and applicable to several years' operations, they may be carried as non-current deferred charges. To capitalize such items may easily lead to excessive distributions of dividends and eventual financial difficulties. Expenditures of this character represent little, if any, value in the event of liquidation and should be clearly shown under a separate heading on the balance sheet and not confused with current assets.

Valuation of Fixed Capital Assets

ASSETS ACQUIRED BY PURCHASE.—The conservative basis of capitalizing fixed capital assets is at **cost less depreciation** in all cases, and in the case of land simply at cost, as land does not wear out or become obsolete. Where a company purchases property or machinery as a completed product, the cost is the purchase price plus any expenses incurred in acquiring or installing the property. The purchase price is the actual sum paid, that is, the invoice price less any discount taken. The discount is not an earning but rather a saving due to early payment. Assuming an adequate depreciation policy, which comprehends not only the physical life of the asset but its useful life as well, the **depreciated cost of the asset** will represent **its fair value to the company as a going concern** regardless of fluctuations in the market value subsequent to the date of purchase.

SELF-HANDLED CONSTRUCTION WORK.—Where a concern handles its own construction work, care should be exercised that such construction work is entered in capital accounts at its cost. If this cost is less than it would have to pay a contractor for the work, a saving has been accomplished, but it cannot be said that a profit has been made. The cost of such construction work should include all of the direct costs, together with a normal proportion of overhead. It is this cost which has been expended out of working capital funds by the company. To capitalize self-handled construction at values over the cost and take the difference as a profit, is simply writing up a fixed property investment. If surplus created in this manner is to be expended or appropriated for any purpose, an impairment of working capital would naturally result.

In the case of **home-made machinery and equipment,** the same principles should generally govern, although it is not always easy to apply them. Exceptions may occur where a concern operates on a commercial basis a subsidiary company or a plant which is largely engaged in making machinery or equipment for outside trade. Such a plant or company, being on its own commercial basis, should naturally be paid full value for all of the product it turns out.

OVERHEAD COSTS IN CONSTRUCTION WORK.—Where a concern maintains a staff to handle its construction work, care should be exercised in spreading the overhead costs to construction work. Every job should be charged with all of the supervision and overhead expenses incurred upon it, together with a reasonable proportion of the general overhead of the construction staff.

Items should be allocated to a job directly so far as possible, and should cover the time of engineers, draftsmen, foremen, traveling expenses, etc. General supervision and office expense will naturally have to be distributed on an arbitrary basis, usually the cost of the construction work done. The amount of overhead included in the final cost of construction work should be a conservative charge, not exceeding the amount that would be included if the work were handled by an outside contractor.

IDLE CONSTRUCTION STAFF EXPENSES.—It would be improper to consider all of the expense of a construction staff as a capital charge simply because such a staff was maintained for the purposes of handling construction work. If little work is being done within a period, the excess costs and expenses of carrying the construction staff should be considered as operating expenses. Only those amounts should be charged against construction which represent direct supervision and expenses incurred on jobs, together with a reasonable normal amount of overhead. The unabsorbed portion of the construction staff expenses should be charged off to operations.

APPRAISAL OF FIXED CAPITAL ASSETS.—The requirements of the federal income tax law and the tremendous rise in prices during and since the World War had led to a considerable amount of appraising of the fixed capital assets of industrial concerns by independent appraisers. There are three kinds of appraisals—the reproduction appraisal, the actual cost appraisal, and the retrospective appraisal. The first is made on the basis of **present cost to reproduce,** with or without a deduction for depreciation. If depreciation is deducted, the appraised value is known as the **sound value** of the property. The second type of appraisal, the **actual cost appraisal,** refers to the correct book value of the property or the amount of actual investment it represents, or should represent, less depreciation. The third type, known as the **retrospective appraisal,** is similar to the first except that it refers to some past date.

Among the uses of the reproduction appraisal are the following:

1. To determine the amount of insurance a company should carry on plants constructed or bought prior to the rise in construction costs. The bulk of reproduction appraisals is for this purpose.
2. To obtain loans.
3. To inspire confidence in stock and bond issues that are offered for public subscription.
4. As a basis for negotiating purchase or sale of the company's assets.
5. As a basis for valuations to be used in federal or state tax matters.

Naturally the appraisals for the second and third purposes usually are not undertaken unless the appraised values are expected to be higher than the book values.

Appraisals on the basis of actual cost or original investment, less depreciation, whether for income tax or other purposes, are undertaken simply to revise the fixed capital accounts, and may be made periodically. The company may have been charging too much to expense and not enough to capital, or vice versa, or may have been charging off too much or too little for depreciation and obsolescence. As a result of this type of appraisal a closer approximation is made to the value at which the fixed assets should be carried on the books of the company.

Retrospective appraisals are frequently made in connection with the federal income tax. The gain or loss on the sale of any assets purchased before March 1, 1913, is in most cases computed on the basis of the fair market value on that date, which was the date when the constitutional amendment empowering

Congress to levy an income tax became effective. The fair market value of fixed property as of that date can generally be ascertained only by an appraisal in accordance with comprehensive directions issued by the Commissioner of Internal Revenue.

ADJUSTMENT OF ASSET VALUES BY APPRAISAL.—Many concerns have made appraisals in recent years and written up their investments to **replacement cost.** The basis upon which such replacement costs are priced is very important. It would be very unwise to price replacement costs at war-time price levels. If appraisals are based upon replacement costs, they should always be at normal replacement costs, and not inflated or abnormal costs. There can be no justification for a concern writing up the values of properties which it has held for years to a war-time or abnormally high replacement cost valuation. Whether an appraisal adjustment is a reinstatement of values previously written off, or is simply a recognition of advanced replacement costs, is a question to be determined from circumstances surrounding any particular case.

If a concern has pursued for years an ultra-conservative policy in the handling of its depreciation, additions, betterments and replacements, and finds that the values at which it is carrying its properties are thereby understated, an appraisal adjustment of values of such properties is, in part at least, a reinstatement of values previously written off. For practical purposes the best basis on which to compute these values is the cost to replace at normal price levels less depreciation to date. An appraisal adjustment to reinstate such values cannot be considered as recognition of appreciation. This is not taking a book profit as ordinarily known, but is a correction of past mistakes. An appraisal adjustment that is not a reinstatement of values previously written off, but due to **advanced replacement costs,** is a recognition of appreciation and as such is a book and not an earned profit.

An attempt to distinguish what part of appraisals is **reinstatement of values** and what part a **recognition of appreciation,** often becomes very difficult, and may be more or less a matter of theory. From the practical point of view it makes little difference to the owners of a concern from which source the adjustment comes. The recognition of such enhanced values places burdens upon the business in the way of added costs, the effect of which should be very carefully considered before the adjustment is made. It increases depreciation charges in the measure the valuation is increased, and it may tend to increase taxes and insurance costs. If such an adjustment is capitalized, it brings added financial burdens, from the management's standpoint, in the form of **increased dividend requirements,** which is the most important factor to be considered.

The increase in costs due to heavier depreciation charges is of importance in the measure that costs have an **effect on the prices** and react on the volume of business done. The financial burden in the form of added dividend expenditures on stock issued against such appraisal values is a real money cost growing out of the appraisal. In the light of changes in business conditions in the past few years this is a factor well worth consideration.

Classification of Fixed Capital Expenditures

ADDITIONS, BETTERMENTS, REPLACEMENTS AND REPAIRS.—In a going concern the policy on fixed capital investments is largely determined by its policy relating to its differentiation between additions and betterments on the one hand and replacements and repairs on the other. Every organiza-

tion regardless of size should adopt a **definite policy for the classification of such expenditures** and the charging of items to fixed capital should be carefully supervised.

It is sometimes believed that so long as expenditure for capital outlay, as well as for current maintenance, is charged to income and not capitalized, no fault can be found with such a conservative course, but that the reverse of this practice cannot be justified under any circumstances. Theoretically this position is wrong, the proper rule being to ascertain the correct application of each payment and to charge the account to which the item belongs. Practically, much can be said in support of what is known as the conservative method.

The great difficulty in ascertaining the exact effect of alterations, betterments, and new construction, and the prevailing tendency of managers and others to emphasize the propriety of capitalizing the payments, inevitably educates accountants and business men who do not want to deceive themselves, to the determination to charge to maintenance every item about which there is the slightest doubt. A practice which is objectionable in theory becomes thus a virtue in practice, and a substantial reason therefor is that the business always gains thereby and never loses.

The dividing line between capital and revenue expenditures is frequently closely drawn. In most cases more or less arbitrary working rules must be followed. However, in formulating the policies and methods to be used in handling fixed capital expenditures, an essential element is a determination of what constitutes capital expenditures and current repairs.

A. L. Dickinson defines repairs and renewals as follows:

"Repairs should include all current expenditures recurring from day to day and from month to month on the general upkeep of the existing property without the renewal of any substantial part thereof, and generally all periodic repairs which are necessarily undertaken within, say, 1 year. (This caption will, of course, include certain renewals of small parts, etc., such as would be necessary to continue the useful life of any unit of building, plant, or machinery over the estimated period of its life.)

"Renewals should include all expenditures incurred in renewing, in whole or in part, any unit of building, plant, or machinery, which tends to extend its useful life beyond the average term. These expenditures would in general be those which would only occur at long intervals of 2 or 3 years, and whose effect would last for a number of years afterwards."

The following general definitions of additions, betterments and replacements have been **issued by the Interstate Commerce Commission** in the classification of accounts for telephone and telegraph companies and may be used as a basis of developing similar definitions applicable to any specific industry.

Additions.—Additions are structures, facilities and other properties added to those in service at the time of addition, and not taking the place of any of like purpose previously held by the company. The cost of such additions should be charged to the proper plant and equipment accounts.

Betterments.—Betterments are physical changes in structures, facilities, or equipment, which have as their primary end or result the making of the properties affected more useful or of greater capacity than they were at the time of their installation or acquisition. Of the changes incident to betterments the cost of such portion only as will, when added to the original cost of the property bettered, give the cost of reconstruction in present condition or property as bettered, should be charged as plant and equipment investment. The remainder

of the cost of the changes should be classed as a repair and be charged to the appropriate expense accounts.

Replacements.—Replacements are those installations of plant and equipment which have for their purpose the substitution of one building, structure, piece of equipment, or machine for another which it has become necessary to retire, the substitute having substantially no greater capacity than the plant or equipment replaced. The cost of the plant and equipment retired should be removed from the accounts in which it is carried, and the cost of the plant and equipment installed in place of that so retired should be charged to the appropriate fixed investment account.

FACTORS IN CONTROL OF CAPITAL EXPENDITURES.—In determining the policy of controlling fixed capital expenditures consideration must, therefore, be given to:

1. The character of expenditures to be considered as **repairs** and those to be classified as **replacements.**
2. The definition of what constitutes a **betterment** as distinguished from a **replacement.**
3. The adoption of methods to insure that any plant retired from service by abandonment or replacement, will be promptly removed from the fixed capital accounts.
4. The **amount of depreciation** to be charged off annually.
5. The **standard of efficiency in operating plant** required by the type of operations performed based on the competitive standard of the industry.

Budgetary Control of Fixed Capital Expenditures

IMPORTANCE OF BUDGETARY CONTROL.—The best means of acquiring control over construction expenditures is to require a definite budget based on a most comprehensive estimate of costs and complete analysis of the proposition. The only time to obtain a control over construction expenditures is before they are made. Too much care cannot be given to the working out of a proposition to make added fixed investment. It should be complete, accurate and final. The estimate should cover all expenditures required, both direct and indirect. Such appropriations should have the approval of the operating department and the accounting, financial and executive heads of the business.

Before authorizing fixed capital expenditures, the executives must satisfy themselves on the following points, as summarized by McKinsey and Meech in "Controlling the Finances of a Business":

1. Is the present plant and equipment being used as effectively as possible?
2. What will the new capacity cost and will the probable additional return justify the outlay?
3. For what purpose is the new plant needed, i.e., is the new one for manufacturing capacity, for storage space, or for office space?
4. Is the new capacity to be used for the production of more units of the product already manufactured, or for the manufacture of new products?
5. Is the new capacity to be used in furthering a policy of integration? Is the company reaching backward to control the sources of raw material, or forward to control the agencies of distribution? Is the

company pursuing a policy of horizontal expansion, i.e., buying our competitors?

6. Can the necessary capital be raised? Can it be raised economically?
7. Should the business raise more capital than it needs to construct and equip the new plant? How much more, if any?

Or stated more briefly, the executives must have sufficient information to determine:

1. Why the expenditures should be made now.
2. Why the expenditures should be made at all.
3. Why the expenditures should be made in the manner recommended.
4. What, if any, effects the expenditures will have on the revenues and expenses.
5. Whether it is practicable to finance the expenditures.

Need for an Established Procedure and Control.—In order to decide these questions intelligently, it is necessary for the company to have an established procedure for compiling the data from the departments and sources best able to furnish them, so that the various factors may be made available to the executives. A means must be provided of controlling the expenditures so that they may be kept **within the limits originally authorized** and the **financial requirements** anticipated and provided for.

Industrial Corporation vs. Public Utility.—In providing methods and forms for controlling fixed capital expenditures, a distinction must be recognized between the requirements of the ordinary industrial corporation and of a public utility, such as a telephone or electric light and power company. In the case of most industrial corporations the distribution of the products realized from the operation of the fixed capital is not confined to the immediate territory in which the fixed capital is located. On the other hand, the revenue-producing capacity of the fixed capital of a public utility is to a large degree, limited to the territory in which the plant is constructed. In other words, the location of the fixed assets of an industrial is not subject to the exact limitations of the available market for its products that obtains for a public utility.

Another important difference between an industrial and a public utility that must be considered in authorizing fixed capital expenditures is the element of **public regulation of the rates** that may be collected for service rendered by a public utility thereby limiting the revenue-producing capacity of the plant regardless of its cost or the demand.

These two factors must be taken into consideration by a public utility for fixed capital expenditures in each unit or division of its territory, whereas an industrial ordinarily has only to consider the total demand of its entire territory and the competitive market for its total product in determining the amount and type of equipment it requires.

SUPERVISION OF CAPITAL EXPENDITURES.—A system **suitable to the needs of an average industrial corporation** is described in the following taken from "Controlling the Finances of a Business," by McKinsey and Meech. It will serve to illustrate the principles involved and may be adapted, with minor changes, to the individual needs of any company, either industrial or public utility.

Plant and Equipment Control.—To exercise effective control over disbursements for plant and equipment, three things are necessary:

1. There must be available data which will show **results of past operations** and serve as the basis of future plans.

2. After all the available data have been considered, the plans which have been formulated must be expressed in workable form by means of a **budget on plant and equipment. Sometimes two budgets** are made, one on **maintenance costs** and one on the **cost of betterments and additions.** The requirements for each are sufficiently similar to discuss jointly.

3. After the budget is made, it is necessary to have records and reports prepared which will permit the **control of such expenditures** and the enforcement of the budget plans.

Data Required as Basis of Control.—The data required to serve as a basis for control and equipment expenditures may be classified as follows:

1. Those obtained from the **accounting and statistical records** with reference to past experience.
2. Those obtained by **a mathematical calculation** based on predetermined factors.
3. Those determined by a **consideration of future plans.**
4. Those obtained as a result of **investigation and study** by experts.

Accounting and Statistical Data.—To make plans which will control expenditures for plant and equipment, a proper classification of the plant and equipment must be made and proper records to reflect this classification must be maintained. This classification is needed in order to make an accurate estimate of plant and equipment expenditures.

To illustrate, in a manufacturing business the plant and equipment expenditures will vary with the production program. If production is to be increased it will be necessary to do one or both of two things: (1) secure additional equipment; (2) use present equipment more intensively. In either case, additional expenditures will be incurred, and to estimate accurately the amount of these expenditures the various kinds of equipment used in production must be carefully considered.

If **additional equipment** is to be secured, it will be necessary to determine the units of equipment used in the past and the amount of production obtained from this equipment. On this basis the additional equipment required to secure the increased production capacity can be estimated. A record of each unit of equipment is necessary in order that the past production capacity may be determined accurately.

If the **present equipment is to be used more intensively,** the maintenance cost will be increased. An estimate of this increase must be made. A change in the production program will not affect all the equipment of the business to the same extent. For example, it may be planned to increase the output of one department, while the output of the remaining departments is to remain unchanged. This increase in the output of one department is liable to increase the maintenance expense of this department, so that if the previous expense is shown separately from that of the other departments a more accurate estimate of the increase can be made. It will be necessary, however, to know more than the total maintenance cost of the department. The new program will probably affect some units of equipment in the department more than it will others. It is desirable, therefore, to have records which will show each unit of equipment in the department, and the maintenance expense incurred on it. This is accomplished by keeping a **plant ledger** containing an account with each unit of plant and equipment.

Data from Predetermined Factors.—All equipment wears out in time and its replacement must be provided for. This provision is accomplished by charging a certain amount to the expenses of each budget period, and crediting a

like amount to a **reserve for depreciation.** The amount of such depreciation is an important element of the expense of operation and must be included in the plant and equipment budget. In the calculation of the depreciation charge, three things are considered: the original cost of the asset, its anticipated life, and its estimated scrap value. By subtracting the scrap value of the asset from its original cost, it is possible to determine the cost of the use of the asset during its period of life. This cost must be distributed over the period of its life in such a way that each budget period will be charged with its equitable share.

Effect of the Budget Program.—The accounting and statistical records show the past expenditures for plant and equipment, but a change in the volume of production will affect both the maintenance charges and the charges for additions and betterments. It is necessary, therefore, to consider the effect of the budget program on each of these.

There are many plans which may affect **cost of maintenance.** If an increase in production is planned, the increased cost of maintenance arising therefrom must be estimated. If new methods of manufacture are to be employed, the consequent change in maintenance cost must be calculated. If new equipment is to take the place of old, the maintenance cost will be affected. If it is planned to inaugurate a policy of keeping the equipment in better repair so as to make it more efficient and to prolong its life, this change must be considered. These as well as other factors affect the cost of maintenance, and all must be considered.

In the same manner in which the general plans of the business, as reflected in the departmental estimates, affect the cost of maintenance, they determine the amount of new equipment to be purchased. In a manufacturing business the amount of equipment required is determined primarily by the volume of production. If records are available which show machine capacity it is not difficult to estimate the requirements of the increased production in terms of number of machines or units of equipment. If proper records are maintained, it is possible to estimate the total requirements of the production program and the total production capacity of the factory. By a comparison the excess of requirements over capacity can be determined, and from this the new equipment required can be calculated.

Investigation and Study by Experts.—A periodical check should be made on the accuracy of the valuation of the plant and equipment as shown by the records. If a plant ledger is maintained, it is possible to obtain the original cost, the **accrued depreciation,** and **the repairs** incurred on each unit of plant and equipment. The depreciation shown as accrued is only an estimate, however, and the expenses which have been incurred may have been more or less than those required to maintain the equipment in an efficient condition. Unless some steps are taken to determine the accuracy of the estimated depreciation and the sufficiency of the repairs which have been made, it may later be found that both the depreciation and the repairs have been inadequate, with a consequent unduly heavy charge against the earnings of future years.

To avoid this a **periodical inventory or appraisal** should be made of plant and equipment and used both as a means of checking the plant ledger and as a basis for budgetary plans. By this means inaccuracies in depreciation estimates and inadequate repairs can be discovered and corrected. It is also possible that too liberal depreciation may have been allowed or that too extensive repairs have been made. Such appraisals will serve to disclose this. They will also show when it is better to purchase a new machine than to repair an old one.

Although an appraisal of plant and equipment is valuable when used in this way, it must be employed with discretion, especially if made by professional appraisers. The viewpoint of the professional appraiser is not necessarily that of the financial executive. The appraiser tries to determine the present value of the article he is appraising. He is concerned with its original cost and past use, only as they assist him in determining present value. As a consequence, market fluctuations are apt to be reflected in his appraisal. The financial executive, on the other hand, is not interested in the market value of the equipment. He is interested only in apportioning the original cost and the cost of repairs over the periods which will benefit from its use, in as equitable a manner as possible. An increase or decrease in the market value of the asset does not increase or decrease its life or efficiency. For these reasons, although the appraiser's valuation may not agree with the book value, the book record may still be satisfactory. The main importance of the appraisal is not the valuation which it places on the asset, but rather the appraiser's estimate of the length of life and efficiency of the asset as reflected in the valuation.

Contents of the Plant and Equipment Budget.—The plant and equipment budget can be arranged to show any facts which the executives consider desirable for their use. It is usually thought desirable that it contain the following:

1. The **value of present equipment** at beginning of period.
2. The **estimated depreciation and repairs** on present equipment.
3. The **estimated cost of new equipment** which should show:
   (a) Cost of factory equipment, and
   (b) Cost of equipment for administrative and selling units of the business.
4. **Estimated depreciation and repairs** on new equipment.
5. **Total depreciation and total repairs** on both old and new equipment.
6. **Value of total equipment** at end of period.

Preparation of Plant and Equipment Budget.—The executive in charge of production is responsible for the preparation of the plant and equipment budget so far as it relates to the factory. This responsibility he will delegate to the **plant engineer,** who in turn will employ the assistance of the works maintenance department and the works engineering department. In calculating the depreciation charges he will avail himself of the services of the accounting department as well. The cost records will also be of service in estimating the cost of repairs and construction of new equipment. The purchasing department will assist in estimating the cost of new equipment which it is planned to purchase.

In estimating the amount of equipment required, it is necessary to make use of the estimate of production, since the quantity of production will affect the equipment requirements. If a plant engineer is not employed, the plant and equipment budget may be prepared by the staff of the production manager or by the planning department. The cost of repairs and depreciation will be estimated by the cost accounting department in the estimate of manufacturing expense, and this estimate may be used in preparing the estimate of plant and equipment, but it is preferable that a separate estimate be prepared by some unit of the production department.

The office manager is responsible for the preparation of the estimate of **equipment for the administrative and selling units.** In its preparation he will employ the assistance of the heads of the departments and executive units. Each of these will submit a request to the office manager for the equipment which he desires during the next budget period. The office manager will

consolidate these into one estimate and will transmit it with his recommendations to the executive in charge of the budgetary procedure.

The production manager will transmit the estimate of manufacturing plant and equipment to the executive in charge of the budgetary procedure, and the latter will transmit it, together with the estimate of the office manager, to the budget committee. After the committee has approved these estimates, they will be returned to the production manager and the office manager respectively.

Report on Appropriations.—To exercise effective control over the plant and equipment budget, it is necessary to have periodical reports which will permit a comparison between the amount appropriated for each class of expenditures and the amount actually expended. A report should be made monthly, giving this comparison. This report should provide the information shown in Fig. 1.

A report made in this form is of service not only to the executive exercising control over the purchases and construction of plant and equipment, but also to the financial executive. It shows the former the amount which he has available for future construction, and the latter the amount which he must plan to finance. The 10th column gives the treasurer information of especial value, since it states the **payments which must be made in the near future.** The 13th column shows the amount which may be diverted to some other purpose in case of financial stringency. If the budget committee receives this report each month, it can exercise an effective control over all disbursements for plant and equipment.

Reserve for Contingent Expenditures.—It is usually not possible to estimate exactly each item of plant and equipment cost which must be met during the budget period. There will be need for **expenditures which cannot be foreseen.** These additional costs should be anticipated and included in the plant and equipment budget of each period. Since these additional costs vary in amount from period to period, it is well to **credit a reserve account** for the amount provided for them in each budget. When the costs are incurred, they can be charged against the reserve. These additional costs may be due to rising costs of material and equipment, labor emergencies, accidents, increased production, and similar causes.

By employing the method outlined above, these costs can be taken care of when they arise. This reserve obviously has a limited use and must not be made a means of hiding excessive amounts paid for construction or repairs during certain periods. If it is too large, it interferes with the control for which the plant and equipment budget is intended.

Executive Organization for Control of Fixed Capital Expenditures

PROCEDURE FOR COMPILING DATA.—In order that the entire organization may be properly co-ordinated in the work of compiling data for fixed capital expenditures, as discussed in the foregoing sections, a corporation should provide definite rules of procedure to be followed in authorizing and controlling such expenditures:

1. To insure proper consideration and thought on the part of the various officials in authorizing the expenditure of funds for such purposes.
2. To insure a proper record of such expenditures to the end that at all times the true capital assets of the corporation will be correctly reflected on its books.

MONTHLY REPORT ON APPROPRIATIONS FOR PLANT AND EQUIPMENT

FIG. 1. Monthly Report on Appropriations for Plant and Equipment

COMMITTEE ON RULES OF CAPITAL EXPENDITURES.—In some corporations, the **executive committee,** and in others an **appropriations committee,** is designated by the board of directors to supervise the preparation and application of the rules governing fixed capital expenditures.

The **duties** of such a committee may be defined as follows:

1. General **charge of all appropriation matters** and consultant in all matters pertaining to the preparation, authorization and handling of appropriations, including the necessary organization incident thereto.
2. **Verify actual performances** as compared with forecasts in cases where appropriations are authorized on basis of estimated saving.
3. **Determine the full scope of all projects** and present a statement of the entire commitment to which company may be subjected by authorization of such projects.
4. **Advise finance and executive committees** as to status of uncompleted projects and present forecasts of the funds required to meet expenditures under authorized projects.

DEFINITION OF TERMS.—A **"project"** or **"estimate"** is a particular or definite piece of construction or development work and is so designated in order to:

1. Keep control of such construction work and expenditures incident thereto.
2. Insure proper authorizations on the part of supervising executives.

A **"program"** covers a summary of all related projects or estimates involved in the completion of a particular construction development and provides the appropriations committee with definite information as to the total amount of funds required. The program is of especial importance to the board of directors in preparing the budget for the year and arranging for adequate financing.

CLASSIFICATION OF PROJECTS.—Estimates or projects may be divided into two classes, **specific** and **routine,** depending on the nature of the work and the amount of the expenditure involved.

Specific projects are required for each job where—

1. The estimated aggregate gross expenditure for construction or renewal of fixed assets is in excess of a minimum amount specified by the appropriations or executive committee. Ordinarily the minimum amount should be $1,000, but the conditions peculiar to each business will indicate variations from this amount.
2. Fixed assets having a first cost in excess of such minimum amount are to be sold or otherwise retired.
3. Fixed assets are to be purchased for a gross consideration in excess of the minimum amount specified.
4. The estimated aggregate gross expenditure for unusual or extraordinary repairs or for improvements in the nature of deferred assets is in excess of the specified minimum.

Routine projects provide a means of formally authorizing and subsequently reviewing the total estimated expenditures for a given period involving additions or retirements of fixed assets, purchases and sales and transfers of machinery and equipment between departments, where the total expenditure on an individual job is less than the minimum fixed for specific projects. Routine projects may be prepared to cover expenditures for one year or for each quarter, although in unusual cases where the construction activities of the company are abnormal, it may be desirable to have routine estimates prepared monthly.

SCOPE OF SPECIFIC PROJECTS.—Ordinarily each specific project should embrace all expenditures that are required to accomplish some specific purpose in the department or division originating the expenditures. Similar expenditures in another department should be covered by a separate specific project. A general increase in the capacity of a plant as a whole might involve changes or additions in a number of departments or types of equipment, and in such a case a single specific project may be designated. If such a project requires a long time to complete, it may be desirable to designate more than one specific project to cover it, in which case each specific project affecting the improvement should include a reference to the other specific projects involved, and each should show the total estimated expenditures involved for all the specific projects included in the job.

COST OF SPECIFIC PROJECTS.—The estimated cost of specific projects should be checked with the actual expenditures during the period of construction. If it is found that the actual cost is liable to exceed the estimated cost by an established maximum of 10% to 15%, as may be determined by the appropriations committee, an explanation of the overrun should be prepared and a **supplementary appropriation** requested as soon as the overrun is discovered. Similarly, it may be desirable to have underruns explained so that the appropriations committee may avoid unnecessary financing expenses.

Estimated expenditures involved in connection with work included in a specific project which will be **chargeable to ordinary current expenses** should be shown on the specific project as a notation, but should not be included in the fixed capital expenditures to be authorized under this project.

CLASSIFICATION OF SPECIFIC PROJECTS.—Specific projects should be classified between "Cleared Monthly" and "Construction Work in Progress" on the following basis: **"Cleared monthly" projects** should cover expenditures for additions to fixed capital which can be completed and made ready for use as a whole, or in large parts, within two months of commencement. **"Construction work in progress"** estimates should be prepared for construction or improvement of fixed capital assets of major importance, unless the work is such that it can be completed and made ready for use as a whole or in large parts within two months from commencement. "Construction work in progress" projects should include an allowance for interest charged during construction.

A **number** should be assigned to each specific project and this number should be used at all times when referring to the project.

AUTHORIZATIONS FOR SPECIFIC PROJECTS.—**Responsibility for originating and preparing data** for specific projects depends somewhat on the size and policy of the corporation. Ordinarily specific projects involving only one department will be prepared by that department with the technical or engineering department acting in an advisory capacity. Specific projects involving more than one department or large units of property will normally be prepared under the supervision of one or more of the general executive officers, in order to insure the most comprehensive development possible for the corporation as a whole.

After a specific project has been fully prepared, it should normally pass through the lines of organization for approval of the proper supervisory officials before being submitted to the appropriations committee or the board of directors. A general **outline of the approvals** required and the scope of such approvals is as follows:

1. **Departmental or divisional executives** originate and approve projects up to $25,000 and involving only the division in which originated.

2. **Operating vice-president** approves specific projects originated by the division executives and originates and approves specific projects amounting to more than $25,000 or involving more than one division of the corporation.

3. **President or general manager** reviews and approves specific projects transmitted to him by the operating vice-president and turns them over to secretary of the appropriations committee for submittal to that committee for final approval.

REGISTER OF AUTHORIZED SPECIFIC PROJECTS.—A register of authorized specific projects should be maintained by the secretary of the appropriations committee to show the following information:

1. Estimate number
2. Location
3. Character of work
4. Estimated expenditures
5. Date of authorization by appropriations committee
6. Actual expenditures
7. Date of completion

The information for the last two items will be obtainable after completion of the estimate from the monthly progress report as discussed later.

FORM FOR SPECIFIC PROJECT.—A typical form in preparing a **specific project** is shown in Fig. 2. Each item on the form is numbered and is briefly explained as follows:

The name of the division or department, the location of the project and the project number are shown as item 1, 2 and 3 respectively.

The title of the project is shown as item 4. The title should be as short and comprehensive as possible, but once chosen should be adhered to as long as the particular project is under development.

Under item 5 should be shown whether the project is to be **cleared monthly or carried in Construction Work in Progress** with resulting charges for interest during construction.

The **estimated cost of the project** is provided under item 6, divided between gross expenditures for fixed capital, interest during construction, if any, cost of removal, extraordinary repairs, less salvage and net expenditures. The latter should be the amount authorized by the appropriations committee, and should agree with the total of the accounting classification of net expenditures as shown in item 13.

Items 7 and 8 call for a **justification of the project** from the commercial standpoint, or in other words, why the project is necessary or advisable, and a brief technical description of the project. The following points should be considered and specifically covered, if applicable:

If the project involves an **increase in general capacity,** state advisability as well as necessity for the increase.

If for making products now obtained elsewhere, state the reasons for the proposed change.

If for the extension of a department producing products for one or more other departments, state the departments to be supplied and the necessity of this development as compared with purchasing such products outside the company.

If the project is **of new production character,** state fully the necessities for it.

If the project is **of a hazardous or uncertain nature,** give details as to risks involved and the justification for incurring such risks.

A **record of the past and estimated future performance** of the division or department should be furnished under item 9. This information may not be available to the department but should be compiled by the executive best

qualified to do so, from accounting records and estimates of future business. This information will be of particular value to the executives and appropriations committee in determining the merits of the project.

Item 10, Return on Capital Employed on this Project, is co-ordinated with item 9 and should be prepared in connection therewith.

Item 11, Construction Progress Data, and item 12, Disbursement Data by Months, should show the **estimated progress of the construction and the cash disbursements** by months, and will enable the appropriations committee to make proper provision for the cash requirements without incurring unnecessary expense due to idle funds. This information will also afford a check on the actual progress of the work as shown on the monthly progress report (Fig. 3).

Item 13, Accounting Classification of Estimated Net Expenditures on Project, calls for a classification of the net expenditures in detail with account titles and numbers, the total of which should reconcile with item 6.

Item 14, Construction Data, should cover a summary record of any maps, layouts, drawings or descriptions of the technical development of the project. Where lists of machinery and detailed estimates are submitted, they should be prepared on letter size paper and incorporated as part of the specific project as additional exhibits.

Under item 15 include any general remarks that may be helpful in determining the requirements or needs which justify the project.

Item 16 requires the necessary authorizations and approvals of the project by the officials involved, such authorizations to be by personal signatures.

Items 17 and 18 provide for an **approval or rejection of the project** by the appropriations committee and a statement of their findings based on the information contained in the project or on independent investigations together with their reason for approving, modifying or rejecting the project.

COSTS AND RECORDS.—**Preliminary expense** incidental to the formation of plans and specifications in connection with projects before the necessary approvals have been secured should be **charged to a suspense account** and cleared to the specific project as soon as authorized. If authorization is not obtained, such preliminary expense should be charged off to current operating expense. All **expenditures on approved specific projects** should be charged against the particular specific project by number so that upon completion the total cost will have been accumulated and may be compared with the estimated cost as reflected by the specific project authorization. If the construction work is not done by the company's own organization, the **contractor doing the work** should be required to maintain his records in such form that necessary cost data may be secured from his records for completion of the company records.

RECORD OF EXPENDITURES BY SPECIFIC PROJECTS.—The accounting department of the company should maintain a separate record of each specific project, carrying details of the charges by months and by amounts, so that a complete record of each specific project may be available in the company files as supporting data to charges and credits in the plant accounts. A typical form for such a record is shown in Fig. 3. In large companies it may be necessary to summarize the actual charges by sources, such as vouchers, journal entries, material disbursements, etc., on a separate form and post only the totals to this record. In such cases, the detail sheets should be preserved as supporting data to the summary form.

At the close of each month, reports should be prepared as soon as practicable by the department in charge of the project, showing the status of the work of

each specific project which is uncompleted. This report should show such information as the following for each specific project.

1. If material has not been ordered, the date order will be placed.
2. If material has been ordered, the approximate date of delivery.
3. If material has been received, the approximate percentage installed.
4. Amount by which total costs will exceed appropriation, if any, and the reasons for the increase.
5. If estimated completion date will not be met, the approximate date of completion and reasons for delay.

All reports should be forwarded through the accounting department for the insertion of the following information:

1. Amount of appropriation
2. Amount of expenditures to date
3. Amount of appropriations unused
4. Estimated cost to complete
5. Estimated overrun or underrun

SUMMARY OF MONTHLY PROGRESS REPORT.—After the above data has been compiled, a form, known as the **monthly progress report summary,** should be prepared. This should show the monetary amounts noted above for each specific project. This summary, with the individual reports attached, should be forwarded through the general manager to the appropriations committee for consideration and such action as may seem desirable. Additional copies of the monthly progress report summary may be distributed to such executives as are interested. (See Fig. 3.)

CLOSING OF SPECIFIC PROJECTS.—After all work on a project is physically completed, any outstanding accounts should be settled as promptly as possible, the proper distribution of charges made and the project closed out. After a project has been closed, no further charges should be made against it. The monthly report covering the month during which a project is closed should show the final status of the project with a note indicating its closure during the month and thereafter it should not appear on the monthly report.

ROUTINE PROJECTS.—As defined on page 622, routine projects provide a means of authorizing the total estimated fixed capital expenditures for a given period to be fixed by the appropriations committee when the total expenditure on an individual job is less than the minimum fixed for specific projects. Such projects may be prepared for the company as a whole, but in large companies it will probably be desirable to prepare a **separate routine project for each division or department.** Routine projects should be prepared on January 1 to cover the quarterly (or other) period, and new routine projects prepared for each like period thereafter. Each routine project should be closed at the expiration of the period for which it is prepared whether or not there is an unexpended balance, and the subsequent new project should be prepared in time to continue the authorization.

Routine projects should in all cases be prepared by the division or departments to which they may apply and be forwarded for authorization and approval, in ample time, to be returned to the division or department before the effective date of the routine project. The data for preparing routine projects should be based on:

1. Records for previous periods.
2. Present plans for expansion and development.

FIG. 4. Typical Form of Report of Routine Project

3. Estimated cost of construction contemplated that will not be covered by specific projects.

FORM FOR ROUTINE PROJECT.—A typical form for use in preparing periodic routine projects is shown in Fig. 4. A brief description of the information required is as follows:

Items 1, 2 and 3 provide for the name of the division or department, location and project number.

Item 4 states the period covered.

Item 5 provides a comparison of estimated expenditures for the period with actual expenditures for the previous period and for the same period last year.

Any unusual variation between the estimated and the actual for the periods compared in item 5 should be explained in item 6.

Item 7 provides for the accounting classification of estimated net expenditures by main and sub-accounts and should agree in total with the total net expenditures under item 5.

Item 8 provides space for remarks and item 9 for the proper authorizations and approvals.

EXPENDITURES UNDER A ROUTINE PROJECT.—Expenditures under a routine project should be authorized by the department or division head on **a job order form** showing:

1. The number of the job order. Job orders should be numbered consecutively for each routine project.
2. The number of the routine project.
3. The character of the work to be done.
4. The estimated gross and net expenditure involved.
5. The location of the work.

All expenditures under job orders should be charged directly to fixed capital or other accounts involved, with a reference to the number of the routine project involved so that the total expenditures under a routine project may be summarized by the accounting department. Adequate supervision should be given to the use of job orders to insure that:

1. No job order is authorized for estimated net expenditures that exceed the minimum amount required for a specific project.
2. That two job orders are not issued for a particular piece of work in order to bring the estimated net expenditures on each job order below the required maximum for job orders.

ACCOUNTING RECORDS.—Forms may be provided for summarizing expenditures under routine projects similar to those for expenditures under specific projects. Such data when summarized should be posted to the general ledger by accounts and to such detail records of plant and equipment as may be required by the company involved.

PURCHASING

THE PURCHASING AGENT.—Since expenditures for materials and supplies may constitute from one-third to three-fourths of the disbursements of a manufacturing or trading concern, the **purchasing agent** has a very direct working relation to the financial manager. The results of the business operations may be affected to a marked degree, favorably or unfavorably, by the efficiency of the purchasing agent or by his failure to live up to his opportunities for good service.

The purchasing department should save enough to more than cover the expense of its maintenance. It should, in fact, by reducing costs, save even more than the total of its operating expenses. These possible savings are sometimes overlooked by managers who may consider this department merely as the office through which to place the purchase orders.

Through his contacts with manufacturers and producers and his knowledge of general market conditions, the purchasing agent often finds opportunities for procuring material **at lower prices** at one time than he would have to pay at another, or for purchasing the same kind of article more cheaply from one producer than from another. He may suggest to the engineering or operating departments the **substitution of materials** or **changes in specifications,** to permit the use of substitute materials which will answer the purpose and be less expensive, because of their being available in larger quantities or procurable at points nearer the consumer.

By reason of the wide field for saving in the purchasing department, the financial manager should be keenly interested in its organization, methods and routine, in order that he may determine whether or not it is operating to the best advantage.

Qualifications of the Purchasing Agent

KNOWLEDGE OF COMMODITY MARKETS.—The purchasing agent should know his market, have a true perspective of the relation between buyer and seller and have a general knowledge of commodities and their values. He must have a highly developed buying sense and be able to sift the wheat from the chaff when salesmen explain the merits of their respective products. He must be a keen student of market conditions and be able to judge market trends. This involves ability to read and understand daily newspaper reports, particularly respecting the commodities with which he is concerned, and to judge correctly the proper time to make purchases.

KNOWLEDGE OF TRANSPORTATION.—He should be familiar with general, as well as local, transportation conditions of the factories with which he is connected. This includes a knowledge of **freight rates** on commodities, and

seasonal demands on transportation systems. It does not mean that the purchasing agent must be a traffic manager or a specialist on transportation, but he must understand that problems exist and he must know to whom to go for help if he encounters a condition which he cannot control or of which he is not fully informed.

KNOWLEDGE OF BUSINESS ORGANIZATION.—The purchasing agent should understand the value of a well co-ordinated organization. He should mix in a friendly way with the shop and factory officials so that he may keep in touch with their day-to-day needs. Thus, when the requisitions from these men come before him, he is in a position to visualize the conditions that prompted them, and he can thereby carry out more intelligently whatever purchasing policy may have been established.

FOLLOWING UP DELIVERIES IN ACCORDANCE WITH PURCHASE ORDERS.—The purchasing agent must follow up the deliveries in accordance with production requirements. It is one thing to make contracts and specify deliveries, and another to see that deliveries are actually made as called for. Since many producers do not use to advantage, or are lacking, systems for planning their own production, they may not make deliveries in accordance with the contracts, unless they are followed up closely.

KNOWLEDGE OF CAPACITY OF VENDORS TO FILL ORDERS.—Knowledge of the vendor's factory and equipment is much to be desired. Purchasing agents who do their work in accordance with modern methods frequently **visit at least the larger suppliers** of their commodities. They make tours of the plants, talk with the managers of production departments in those plants, and visualize the conditions under which the commodities which they require are produced.

If the purchasing agent has knowledge of the shop operations of the vendors, he may be able to arrange to purchase needed commodities a little ahead of time and thus not only aid his own concern but assist industry in general by helping to keep the plant of the vendor busy. In a case of this kind, he may justly argue with the vendor that the price ought to be lower, because if the purchasing agent had not ordered at such a time the production of the plant would be curtailed and its profits decreased.

KNOWLEDGE OF COMMODITIES AND THEIR VALUES.—The more a purchasing agent knows about merchandise the better, because it enables him to discuss intelligently the contracts for his more important commodities, and if he is informed generally as to sources of products and cost of production, he is in a position to decide whether or not a price quoted should be accepted.

He should know something of the **standards used for various classes of products,** as, for example, bolts, nuts, screws, nails, boxes, and the like. These articles, in modern times, are put up in standard sizes and classes, and the purchasing agent should see to it that the engineering specifications are prepared with these standards in mind. If not, he will be obliged constantly to procure special sizes of goods, which in turn may mean higher prices and slow deliveries.

He should be familiar with the work going on in the governmental department of the **Bureau of Standards,** so that he may get first-hand information as to standards adopted. He should then endeavor to fit in the requirements of his own concern with the standards and recommendations from this governmental department.

It is this general knowledge of the commodity situation which will enable a

good purchasing agent to **substitute materials** when market conditions become abnormal and prices are increasing.

Duties of Purchasing Agent

PURCHASE REQUISITIONS.—A purchase requisition originates in the production department in the case of materials for production, and in the engineering department for machinery, tools or other equipment. Requisitions may be submitted by other departments if purchases for such departments must be made in accordance with their special requirements.

The purchase requisition, when it reaches the purchasing department, should have the approval of some major executive and the signature of the departmental buyer requiring the goods. It should contain all data in order that the purchasing agent may buy, such as identity of goods by name or description, quantity needed, or maximum and minimum quantity (allowing the purchasing department to use its own judgment as to the quantity to be purchased), and it should state the date the goods are needed.

The purchasing department should have **statistical data** available providing general information as to vendors from whom it is possible to purchase the commodity, the last price, delivery possibilities, transportation conditions, etc. He should also have other statistical data, such as daily market reports, special reports on particular commodities, information of production possibilities and plant capacities of some of the chief vendors with whom he does business and upon whom he is most dependent. Wherever possible, he should have **two or more firms quote** on the commodity to be purchased. This is generally conceded to be good practice, even though the purchasing agent may be limited at the outset to one particular vendor.

THE PURCHASE ORDER.—The purchase order must show the quantity desired, the proper specifications, describing the article so that it will be understood by the vendor, and give the terms of delivery, payment and discount. The purchasing agent must then supervise the routine follow-up work necessary in connection with all purchase contracts.

RECEIVING THE GOODS.—He should have general supervision over the receiving of all goods when they enter the plant. The **receiving department** is sometimes considered to be a part of the production department, because it is the production department which is concerned primarily with the receipt of goods. Other enterprises consider that the receiving department should function under the purchasing department. Whatever the internal organization of a particular enterprise may be, the purchasing agent should have general supervision of the receiving department.

APPROVAL OF INVOICES.—When the purchasing agent is satisfied that all the terms of the contract have been met, that goods have been received and billed properly, he should approve the invoice for payment and pass it on to the **accounting department.** He is responsible for any **corrections of the purchase invoice** that may be required, because of shortage in quantities, failure to meet contract requirements, imperfections in the merchandise or the like.

DEPARTMENTALIZING BUYING ACTIVITIES.—Where the operations are large enough to require it, the buying activities should be departmentalized; that is, buyers should be used who are **experts in the different commodities,** one buyer making all contracts for one class of merchandise and another taking

care of a certain other line. In merchandising concerns, because of the nature of the business, departmentalized buying is used very generally.

Policies of Purchasing Department

CO-ORDINATING PURCHASES WITH PRODUCTION REQUIREMENTS.—The purchasing department should keep in close touch with the other departments of the business, particularly the production department, so that hasty buying may be avoided. The great bulk of all purchase originates in the production department because that department handles the materials and supplies used in manufacture. It is this department that foresees and anticipates any additional equipment requirements, so that it is particularly important that it work in close harmony with the purchasing department.

Written instructions may be prepared in some cases covering the establishment of **maximum quantities,** how many months in advance the production department plans for, and how much time the purchasing department will be allowed in making purchases. The purchasing agent should have this policy in mind as he scans the market situation daily and notes that a certain commodity may be purchased at that time in a specific quantity for a definite price. He may thus anticipate the production department's needs, if that department has not ordered certain materials for some time, and he knows that two weeks' supply is the maximum carried and that more will probably be needed in a short time.

PURCHASING DEPARTMENT'S AUTHORITY FOR LARGE CONTRACTS.—In establishing the general purchasing policy the authority vested in the purchasing department in connection with large contracts for the major commodities of the concern should be defined. A foundry, for example, may make a contract for a year's time for its supply of coke, pig iron or sand. While the purchasing agent should always be consulted in arranging for these contracts, he may not have the final authority to place them in the case of major items. The policy laid down should clearly define where his authority begins and where it ends.

GOOD PURCHASING DEMANDS GOOD ORGANIZATION.—It should be remembered that good purchasing is largely a matter of **smooth running routine** and the purchasing agent should not allow himself to be engrossed with this routine. He should have it under his supervision, but to give the concern his best thought and experience he should not be burdened with too much detail. Successful purchasing demands a smooth running organization to do the routine work, and this, in turn, means proper personnel and organization within the purchasing department. The purchasing agent who insists that he see and sign every outgoing purchase order, regardless of the materials and size of the order, does not fit in modern organized industry.

ADVICE OF OTHER DEPARTMENTS.—The extent to which other department heads in the organization may interview salesmen should be determined. It may be very necessary where specific technical knowledge is required in the buying of particular commodities. For example, the purchasing agent should not buy a piece of machinery or equipment without bringing the salesman into contact with the chief engineer or master mechanic of the concern. The same policy should cover the various commodities required by each department.

It may be well to prepare a chart of some kind on which will appear the name

of those to be consulted in connection with each class of goods purchased. However, the purchasing agent should be the **final authority** when it comes to placing a purchase order or contract. Other executives called into conferences should act purely as advisers and should have no authority to make purchase contracts.

RELATION OF PURCHASING DEPARTMENT TO OTHER DEPARTMENTS.—The purchasing department is **essentially a service organization,** and as such has a direct relation to every major department of the concern. The purchasing agent in some cases is responsible to the general manager, in other instances to the works manager, and sometimes to the director of production. His authority should be equivalent to that of **one of the major executives** of the business. He should work in close co-operation with all the executives of the enterprise, both office and factory, and should familiarize himself with their needs and their problems. His worth to the business as a whole will be measured by his ability to co-ordinate and co-operate with the other department heads.

The purchasing department should be required to do only the buying and receiving of material and supplies and the checking of invoices. Deciding the quantities of various articles needed, providing properly for their storage, and maintaining records of materials and supplies on hand, are all matters outside its province. The function of purchasing in any concern is of sufficient importance to be handled separately.

Purchasing Department Organization

Modern organization demands that purchasing be **concentrated in one department** under a competent and responsible head, well qualified for his position both by training and experience.

ORGANIZATION WHERE BRANCH PLANTS EXIST.—Where branches exist at widely separated points, the local purchasing should be co-ordinated with the purchasing at the central division. Various plans are possible with this kind of an organization. In some cases copies of all branch orders are sent to the central division. All **large buying contracts** should be made only upon the authority of the central purchasing department.

The branch purchasing departments, except for minor differences due to local conditions, must conform to the general policy laid down by the central organization. The best plan is usually to make all branch purchasing agents subordinate in authority to the central purchasing authority. The central purchasing agent will thus be responsible for all buying, although he may authorize the various branch agents to purchase certain articles for their local needs.

PURCHASING PROCEDURE.—The logical procedure in connection with purchasing should be substantially as follows:

1. The discovery of the need of the material.
2. The writing of the purchase requisition.
3. The checking of these requisitions with standard specifications from the engineering department.
4. Getting quotations on the commodities involved.
5. The formal typing of the purchase order and placing of the order.
6. The follow-up routine necessary to effect the delivery in accordance with scheduled date.
7. The receipt, recording, and checking of the invoice from the vendor.

8. The record in connection with the receipt of the shipment and the checking of the shipment against invoices.
9. The approval of the invoice for payment and sending it to the accounting department.

Usually, the purchasing department begins its work with checking of requisition—item (3) above—since the actions involved in items (1) and (2) are prepared by the production division. Madison Cartmell in his book "Stores and Materials Control," sets forth the detailed activities in connection with a purchase order in relation to the personnel and purchase organization. This is pictured in the chart in Fig. 1. taken from his book.

PLANNING DIVISION.—Purchase requisitions originate at different sources, depending upon whether they represent materials for regular production, for equipment or miscellaneous departmental supplies. Regardless of that origin, **requisitions must be checked** by the planning division of the purchasing department with the material specifications on file. The planning division must determine whether the request represents **standard material,** which is available in the market, or **special material.** In this division should be statistical data regarding standard material, records of specifications, and blue-prints from the engineering department. The division may have charge of **scheduling deliveries** of the materials bought on contract.

The division should make a study of the standardization of materials, the possibility of making substitution of materials then standard against special parts used on current specifications. It should also study such matters as the possibility of replacing goods then manufactured by the concern, with goods bought outside, when the purchase price is lower than manufacturing cost.

It is the planning division of the purchasing department which should concern itself with specifications in general, with the goal in mind of continually **reducing the cost of manufacturing** whether by substitution of materials that are standard for special items, or by the procurement from outside vendors of articles now fabricated within the organization. This division acts as a sort of **staff division** to the entire purchasing department.

QUOTATIONS DIVISION.—The chief function of this division is the **preparation and execution of the formal purchase contract or purchase order** to be sent to the vendor. In doing so, it takes care of the preparatory work, such as securing quotations, maintaining catalog files of vendors, and establishment of statistical card records of each commodity previously purchased. It should have charge of **interviews with all salesmen,** except those who are negotiating the more important contracts direct with the purchasing agent or his assistant.

SCHEDULING DIVISION.—The scheduling division should advise the quotation division as to the proper **routing and scheduling of the shipments** before the order is placed. After the purchase order has been placed with the vendor, this department should be responsible for the **follow-up,** insuring that delivery is made as specified. It is probably the best one to handle the statistical data regarding vendors, such as plant capacities, production statistics, and general reliability records.

INVOICE DIVISION.—This division should retain the purchasing department's copy of all outgoing purchase orders, recording thereon the articles received, as stated on the material receiving reports issued by the receiving department. These reports should also be checked with copy of the purchase order. Claims against the vendors, except those for transportation, should be handled by this division. It should be responsible for the entire routine of check-

ing, comparing and recording from the receipt of the material to the final approval for payment of the vendor's invoice.

Prices, Quotations and Terms

DETERMINATION OF BEST PRICE.—In determining the best price available, the purchasing agent must consider all factors such as selling terms, cash discount and delivery terms.

SCRUTINIZING BIDS.—All incoming bids should be compared with previous prices from the same firm and with each other. Bids may vary widely and hence it is important to ascertain whether all bidders are bidding upon identical specifications and will be able to produce the exact article desired. A particularly low bid should always call for considerable scrutiny, not only to determine the basis at which it was made but to ascertain the standing of the firm and its ability to fulfil contracts.

IMPORTANCE OF GETTING BIDS.—Special conditions may govern prices to a considerable extent. A manufacturer may be specially equipped to do a certain kind of work. In his desire for business he may quote a price, leaving out profit entirely, in order to get established in that field. If no bids were asked for, this manufacturer's proposition may never be brought to the attention of the purchasing agent. It is always well to send for quotations from two or more vendors whenever time allows it. The purchasing agent should not get the reputation, however, of sending out requests for quotations and then never placing an order. Once a vendor gets the impression that he is being used merely as a price fixer for one of his competitors, he will refuse to pay any attention to the request for bids or, what is worse, he may give the purchasing agent misleading information.

PRICE FILE.—Whether or not quotations are asked for the purchase requisition should be compared with the price file maintained in the purchasing department showing the purchase prices over a period of time. When bids are solicited, the replies should be entered on **suitable records.** They should be tabulated in detail so that a comparison may be made of the vendors' prices, terms, shipping points, etc. Sometimes the prices will be the same except as to the cost of shipping, which may prove to be the determining factor.

REQUESTING BIDS.—Requests for bids should state clearly delivery date, quantity, specification of material desired, and any other conditions which the purchasing department may impose. (See Figs. 2 and 3.)

KINDS OF PRICE.—There are **four bases** on which prices may be fixed:

1. A definite price basis on a lot or unit.
2. Price based on performance.
3. Current price at time of delivery with or without definite limit.
4. Price composed of the cost, plus percentage for profit.

DEFINITE PRICE PER UNIT OR LOT.—The definite price is probably the most usual and generally the most satisfactory because of its simplicity. Each party knows exactly what it should deliver or receive under the contract, and there should be no room for disagreement. When the price is a **unit price,** the purchaser pays only for such units as he accepts after inspecting the material, provided the contract allows for this inspection. When the price is **for a stated lot,** the purchaser must pay a lump sum for the whole lot, regardless of the inspection of that lot.

FIG. 3. Purchasing Agent's Request for Quotation (copy 2)

PRICE ON PERFORMANCE.—Prices based on performance have caused many disputes and much trouble. Automobile tires guaranteed for mileage are but one example of difficulties in prices of this kind. Where the use of an article cannot be controlled, it is a bad policy to buy on the basis of performance, as it invariably leads to disagreements.

CURRENT PRICES.—This method of price establishment provides for the purchasing on the basis of the current price at the time of delivery of goods. In contracts of this kind the arrangement usually calls for agreement on the average daily price of the commodity quoted in trade papers. Unless the purchasing agent has a very good knowledge of market conditions and knows the extent of fluctuation which may be expected during the specified period, the policy of buying under a current price provision is not wise. Another disadvantage of this type of buying is the uncertainty it creates in the future financing of the business. The financial manager will not know just what to provide for in his finances unless he can gauge future markets.

THE COST-PLUS CONTRACTS.—During the World War the government secured a large part of the goods needed for war purposes on the "cost-plus contract" basis. Under such a contract, the seller agrees to do a certain piece of special work for the buyer in return for which he is to receive his actual cost plus a certain per cent as his commission or profit. There are many variations possible under this plan, such as the setting up of a maximum cost, latest delivery date, a premium for exceptional speed of delivery, etc.

Whenever there is an unsettled market or there exist unknown conditions of manufacture in which the seller is reluctant to carry the full risk because of the unusual nature of manufacture, this arrangement may be preferable to a fixed price contract.

EFFECT OF DELIVERY COSTS.—Wherever possible, the purchasing agent should stipulate that the shipment be made f. o. b. destination, (1) to decrease the cost of material; (2) in order that the vendor be made responsible for all negotiations with the transportation company, including claims for damage; and (3) that formal delivery may not be made until the day the material is received at destination, thus allowing ample opportunity for inspection before payment is due. The prevailing custom is to make all shipments f. o. b. shipping point, but where the purchasing agent can change this, it is to his advantage.

CASH DISCOUNTS.—Another important feature of establishing the net price is the consideration that must be given to discount for prompt cash payment. Cash discounts are treated from the accounting viewpoint as financial gains and are not deducted from material costs. They should, however, be given attention by the purchasing agent before arriving at the final price at which he will purchase the article. Contrary to general belief and practice, the credit period allowed for payment begins upon the day of delivery wherever and whenever that may be. If the material is quoted f. o. b. shipping point, 30 days net, the bill is due 30 days from the day of shipment. If quoted f. o. b. destination, the bill is due 30 days from arrival. While this is in accordance with the terms of the contract, the common practice is not to pay invoices until goods are actually received. It is a very unusual case where the goods are not received within the time limit.

TERMS IN ACCORDANCE WITH CREDIT RATINGS.—The purchasing agent must familiarize himself in general with trade conditions, and he may expect to be asked from time to time to furnish credit information. Where the purchase of an article is desired which is of importance to production and the article is only procurable at one source, the purchaser may be called upon

to furnish a **statement of his financial standing.** Wherever possible, he should anticipate such requests and furnish information in advance with his order so as not to delay delivery to the production department. Some concerns do not accept the ordinary trade ratings of Dun's or Bradstreet's and the purchasing agent should be sufficiently familiar with buying conditions to anticipate their wishes.

TRADE ACCEPTANCES IN PURCHASING.—The purchasing agent should familiarize himself with the method of payment for invoices known as the trade acceptance, which in the last few years has come into more general use in the American market. While it is usually not the purchasing agent's concern as to how bills are paid, the seller may specify his form of payment and the purchasing agent should familiarize himself with that method. Trade acceptances are discussed in the Section on Banking Relations.

The Contract

KINDS OF PURCHASE CONTRACTS.—The purchase contract **should be in writing** so as to avoid misunderstandings commonly arising out of oral arrangements. The **two generally recognized forms of purchase contracts** are (1) a **single purchase order contract** covering a particular purchase and originating from a purchase requisition, and (2) a **blanket contract** usually covering a large quantity of raw materials or supplies for which no definite delivery dates are scheduled, or if scheduled, extending over a long period of time and more or less subject to special conditions arising from time to time.

A blanket contract is placed with a vendor only after a careful survey of all the data available and final approval by the manager. The other form of contract, namely, the single purchase order, originates only from the purchasing agent and usually does not need the approval of the manager, except in so far as it is a part of the general policy of the company. In either form of contract, however, the same principles operate in the matter of price and the same general buying practice must be kept in mind.

THE BLANKET CONTRACT.—The blanket contract usually takes one of **two forms**—one stating a definite quantity of merchandise to be delivered in specified amounts, per week, per month, etc., or to be delivered at the discretion of the purchasing department. The other form of contract calls for delivery of definite amounts per week or per month without stating the total quantity that will be required. This latter form of contract may specify a **maximum requirement** as well as a **minimum,** with the actual requirements running somewhere between these two for the long period of time; or it may provide for a termination clause requiring sufficient advance notice on either side to terminate the contract. Sufficient notice may mean 3, 4 or 5 months, depending upon the commodity and conditions.

The terms of blanket contracts are practically always very definite as to price but seldom include more definite stipulations regarding shipment and delivery dates than the clause that shipments are to be "approximately so many units per month." These blanket contracts frequently cover a variety of materials, instead of one commodity.

THE INDIVIDUAL PURCHASE ORDER.—A single purchase contract growing out of a purchase requisition on which bids were obtained is the usual purchase order form with which most readers are familiar. This type of purchase order can also be used to give the delivery and shipping directions for the periodic shipments required on a blanket purchase contract.

PURCHASING AGENT

FIG. 8. Supplementary Purchase Order

Six copies. Five copies similar to first, except that recipient of copy is stated at top as in Fig. 4. Sixth copy is identical with first copy, but in addition contains numbers at top and data at bottom, as on Fig. 7.

Every purchase order should include the following:

1. Name of the vendor to whom the order is given.
2. A description of the goods desired.
3. The quantity and units of goods wanted.
4. The price to be paid, including terms of payment, etc.
5. When delivery is to be made.
6. Shipping directions.
7. Any special identification marks for packages, such as the purchase order number.
8. Any special conditions or references not written out in detail in the order.
9. The signature of the purchaser representing the company.

A **formal purchase order** is sent to the vendor for his acceptance. This is the purchase contract between buyer and seller. As many as six copies of this order (Figs. 4, 5, 6 and 7) may be made out to serve different purposes and functions, as follows:

Number	Destination
1	For vendor (this is the contract proper).
2	For purchasing department's file.
3	For receiving department to identify goods on arrival.
4	For accounting division.
5	For originator of requisition for checking purposes.
6	For purchasing department follow-up file.

CHANGES IN ORIGINAL ORDER.—If any changes, either in quantities, articles or terms, are desired by the purchaser, it is usual to furnish a **supplementary purchase order,** a form for which is shown in Fig. 8.

NECESSITY FOR LEGAL VIEWPOINT.—The every-day relation which the purchasing agent has with the vendors demands that he have a general knowledge of the law applicable to the activities in which he is engaged. He should familiarize himself with the **law of contracts,** being sure that any contract in which he engages contains the essential elements that must be present

DATE _____

_____

FIG. 9. Vendor's Acceptance of Order
Private post-card forms, self-addressed to Purchasing Department.

to make a contract valid. These essential elements are discussed in the "Law of Contracts" and "Law of Sales" in the section on Business Law.

ACCEPTANCE OF A CONTRACT.—The acceptance by the vendor of the purchase contract should be made by the same method of communication as was used in the making of the contract, unless the purchaser requests an answer by another method. The usual method is **the acceptance or acknowledgment card** sent with the purchase order itself, which is returned by the vendor. The acceptance is effective and the contract made as soon as the vendor has delivered a prepaid acceptance to the post office department or to any other agency suggested by the purchaser. The contract is complete even though the acceptance may never be received. At any time before acceptance the purchase order can be withdrawn by giving notice to the vendor. (Fig. 9.)

MEANING OF AGREEMENT IN RELATION TO PURCHASE CONTRACT.—Where the purchase order is the outcome of having secured bids, the vendor is in the position of having made an offer and the purchase order is in effect the acceptance of that offer. Certain features which have been described in the purchase contract may be omitted, as the law presumes them, namely, that when nothing is said of the terms, the law implies cash; when nothing is said about delivery, the law implies that the buyer will be entitled to delivery when he pays the price.

VALUE OF HAVING CONTRACTS IN WRITING.—It is always best to have all contracts in writing, to avoid the trouble caused by inability to prove "meeting of the minds." Probably a frequent source of trouble between buyer and seller is the neglect to insert definite dates of shipment or deliveries or prices. Whenever a purchasing agent finds it necessary to make **an oral agreement** involving a future transaction, he should make it a point to have it **confirmed in writing** as soon as possible.

SALE VERSUS CONTRACT TO SELL.—The purchasing agent should make it his business to know whether he is negotiating a sale or a contract to sell. The following definitions are given in the Uniform Sales Act: "A sale of goods is an agreement whereby the seller transfers the property to the buyer for a consideration called the price." "A contract to sell goods is a contract whereby the seller **agrees to transfer** the property and goods to the buyer for a consideration called the price."

In a sale, presumably the delivery takes place at once although the seller may still have possession of the goods and the purchase contract may even state delivery is "f. o. b. destination." This statement regards price rather than the time of delivery.

The Market

GENERAL KNOWLEDGE.—The purchasing agent must know where the article he wishes to buy may be procured. Much of the **market information** is of such a nature that it cannot be tabulated, but a good part of it can be put down in record form, and kept in the statistical files of the purchasing department. This data becomes the stock-in-trade of the purchasing agent.

The purchasing agent may know what he wants, but this alone is not sufficient. He must know what the market offers and how it is offered. Sometimes the sources of supply will be numerous and sometimes they will be few and it will be difficult to get proper delivery. Information of this nature is not accumulated in a short time, but represents years of painstaking effort. It is built up slowly and to be of value must be done carefully.

USE OF STATISTICS.—The purchasing agent must follow the **general trend of economic conditions.** He should use for this purpose the data submitted weekly by **various statistical agencies, financial and trade papers.** He may **compile his own data** on basic commodities which form the bulk of his purchases. A keen student of market conditions may make very substantial savings by timely purchases. If he does not have the authority to initiate these purchases, he will in any event have the opportunity to make suggestions bearing on the making of contracts of this kind. Some concerns are able to maintain their record of **earnings by means of timely purchasing.** A manufacturing enterprise may actually lose money on its manufacturing efforts, but the saving made by good buying may offset this loss and enable the concern to show a profit.

Statistical information is more easily visualized when presented in the form of **graphs.** The purchasing agent may, for example, keep a graph showing the relation existing between finished steel and iron, and the trend of the basic pig iron market. The one should follow the other very closely, and knowing the one, he will be able to anticipate the other. Data of this kind compiled over a long period of time will prove of great value for comparative purposes.

SUPPLY AND DEMAND.—Any marked fluctuation in price should call for an immediate investigation. Prices are an indication of general conditions. The purchasing agent may, for instance, have knowledge of excessive supplies of a certain commodity. With this information he should be able to judge the bids received in the light of his knowledge. If they are not in accord with his judgment, he should look for other causes. In an open competitive market, price changes will usually furnish a key to the conditions governing supply and demand. When the total quantity wanted by buyers is greater than the supply offered by producers, the buyers must raise their bids, until more producers enter the field and thereby increase the available supply. Producers will sometimes leave the market, stating that they cannot afford to produce at the prevailing prices but will return when prices are raised. This **adjustment of supply and demand** is going on continually and should be an object of continuous study by the wide-awake purchasing agent.

WHERE TO BUY.—Information as to possible sources of supply may be procured even when seeking materials in heretofore unknown fields. This information may be obtained from trade directories, lists of jobbers, and the trade papers. Salesmen are usually reservoirs of information as to possible vendors. The purchasing agent should make it his duty to assure himself that satisfactory competition exists with the vendor from whom he is buying so as to avoid putting his "eggs in one basket," and thereby subjecting himself to monopoly prices.

SECTION 10

INSURANCE PROTECTION

Insurance is a system or a plan which distributes the losses of individuals ratably over a large number of participants in the plan.

BASIS OF INSURANCE.—Insurance is based on the premise that losses do not occur simultaneously to all subscribers. Individual losses do not occur in any regular order, but there is some regularity of occurrence when taken collectively. This collective regularity is used as a basis for computing the deposit or premium required from each subscriber.

INSURANCE ORGANIZATIONS.—In order to put into operation effective plans of insurance it is essential that organizations be created for that purpose. Such organizations bring together those desirous of securing the protection afforded by insurance. These organizations are termed **"insurers"** and the individuals employing the protection they offer are the **"insured" or "assured."** Since insurance is recognized as a business necessity, various kinds of organizations have been created, which are discussed in detail.

RELIABILITY OF INSURER.—Investigation of the stability and character of the management of the insurance company is important. While financial executives will closely scrutinize the financial position and management of any individual partnership or corporation to whom credit is extended, there are few executives who even know with which companies they have placed their insurance. While most of the companies doing business are reliable, this fact is no excuse for neglecting ordinary business precautions to ascertain whether such companies with whom insurance is placed are properly conducted and able as well as willing to meet losses when they occur; also, whether settlements made in the past have been made upon an equitable and just basis by these companies.

PRACTICALLY EVERYTHING IS INSURABLE.—Insurance protection may now be obtained for almost every conceivable contingency which may arise in the course of everyday personal or business life.

INSURANCE CONTRACTS ARE FOR INDEMNITY—NOT WAGERING CONTRACTS.—Insurance contracts are fundamentally contracts of indemnity, in which the assured is indemnified in case of loss. Frequently such contracts are loosely referred to as gambling contracts. Although in a sense speculative in that the insurance affords a protection against a hazard which may prove to have been unnecessary, they are in no sense gambling contracts, when undertaken by those having interests to protect. It is simply paying for protection against an existing hazard. From this standpoint insurance is buying protection similar to the purchase of a safe for protection of valuables against loss from fire and theft, which may never occur even without such protection.

For the insurer, insurance contracts cannot be viewed as gambling contracts,

because the premiums on such insurance are worked out on a **system of probabilities and averages.** In true gambling agreements, losses occur only by reason of the existence of the wagering agreements. But where a real risk exists, regardless of whether there is insurance or not and a contract is made among many to bear the risk of one, this cannot be construed as a wagering or a gambling contract.

GROUPING OF INSURANCE PROTECTION.—For the purpose of this section the various kinds of protection procurable by insurance will be grouped into four main headings, viz., **Fire, Life, Marine,** with a general section under the title, **Miscellaneous Insurance.**

Fire Insurance

This section deals with insurance against loss caused directly by fire, as well as loss and damage caused in the course of combating it, and the accidental discharge or leakage of protective equipment where installed.

KINDS OF PROTECTION AVAILABLE.—The various kinds of insurance contracts considered under this section are as follows:

1. Fire insurance—buildings and contents
2. Sprinkler leakage insurance
3. Profits insurance
4. Use and occupancy insurance
5. Rent insurance
6. Leasehold insurance
7. Contingent liability insurance—fire, sprinkler leakage

FIRE INSURANCE ORGANIZATIONS.—Fire insurance organizations may be classified as follows:

1. Stock companies
2. Mutual companies
3. Reciprocals or inter-insurers
4. Lloyds
5. Self-insurance

1. STOCK COMPANIES.—Stock companies are corporations formed in accordance with the laws of the state in which they are incorporated. Such companies are subject to the insurance laws of the various states in which they operate. Fire insurance companies are prepared to insure individuals, corporations and associations against loss of, or damage to, property on land caused by or incident to fire. They are **organized for profit,** are entitled to gains from operations, and also must assume the responsibility for losses when they occur.

A Minimum Capital Required by Law.—The laws of most states require a certain minimum paid-in capital which must be kept unimpaired. Stock companies usually maintain **substantial surpluses** as a further protection for their policy holders.

New York State Insurance Laws Typical.—The New York State Insurance Laws are typical of and similar to those of most states. The requirements of these laws are used as a basis for discussion in this section.

Deposit Required by States.—Most states require a **cash or security deposit** before permitting insurance companies to do business within their jurisdiction. Frequently, however, one state will accept the deposit made in another state as being equivalent to a deposit in its own. The State of New York demands a deposit of $200,000—in bonds, stock or other acceptable securities representing that amount. Nearly all states require a minimum deposit of $200,000.

2. MUTUAL COMPANIES.—Mutual companies are composed of a number of owners combined for the purpose of insuring the risks of the various members. Such companies are usually membership corporations **without capital stock.** Profits, if any, are ascertained at stated periods, and distributed in the form of dividends to the policy holders after setting aside reserves for contingencies at the discretion of the directors.

Liability of Policy Holders of Mutual Companies.—The policy holders of mutual companies are **liable for all losses incurred while they are members.** The original premiums paid by policy holders may or may not be enough to pay the losses. A part of such premiums may be returned to them when the total premiums exceed the losses and reserve requirements, or the members may be called upon to pay additional premiums in case the losses exceed the total initial premiums.

Liability of Policy Holders Limited by Law.—State laws usually limit the additional premiums assessable on policy holders in mutual companies to an amount from **one to ten times the original premium.**

Necessity for Larger Original Premiums.—It has been found advisable for mutual companies to charge higher original premiums, and return the excess charges, if they prove to be more than the requirements of the company, in the form of dividends, rather than to collect lower premiums and then be compelled to call for additional premiums or assessments. In this way the newer members are substantially protected by the contingency reserves and surplus retained from prior excess collections from the older members. This is equitable because the losses are then averaged over a number of years.

Lower Costs in Mutual Companies.—Lower cost of insurance to policy holders of mutual fire insurance companies, in its final analysis is **effected by dividends** which in reality are refunds of premiums. These dividends or refunds may reduce the final cost of insurance to a point lower than is general in any other type of organization because of the following factors:

1. Selection of the highest class of risks.
2. Stringent requirements in regard to protective equipment.
3. Maintenance of internal organizations for prevention, combat and salvage within the individual risks.
4. Economies in management
5. The higher degree of co-operation from individual policy holders in making all of the above factors effective due to the direct interest which they hold.

Profits are not the purpose of mutual organizations.

3. RECIPROCALS OR INTER-INSURERS.—A reciprocal fire insurance organization is an **extension of the mutual form** of fire insurance. A number of firms, corporations and individuals termed subscribers enter into a contract, each agreeing to indemnify the others against losses within a limit agreed upon. For example, assume that 11 subscribers entered into reciprocal contracts with a limit of $1,000 each. Each of the subscribers would thereby acquire additional insurance to the extent of $10,000. The contracts would specify the amount to be deposited by each subscriber, the method of distributing the cost of conducting the business of insurance, the apportionment of the losses and other necessary stipulations. As the main object of this plan is to secure insurance at actual cost, its subscribers are usually composed of merchants or industrialists who have little time to devote to the business of insurance. They, therefore, select an attorney-in-fact, generally designated

the **attorney**, who effects the exchange of contracts, and conducts the business of insurance under the supervision of a committee selected by the subscribers.

Usually the **deposit made by each subscriber** is determined by the rate paid to stock companies for insurance of the same class of work. This deposit remains to the credit of each subscriber. Usually a fixed charge is made to each subscriber's account to pay the expenses of management.

Each account is charged with its pro rata share of losses as they occur, and at the close of the policy period, the amount to the credit of each subscriber is returned to him, except where, as previously agreed upon, a portion of such amount is retained as a reserve against future extraordinary losses.

In the event of the **retirement of one of the subscribers,** the retiring subscriber's policy is cancelled and the amount remaining in his account, after deduction of losses, expenses, etc., to date of his retirement, is returned to him, including any reserves for extraordinary future losses. In a mutual company, any amounts set aside for future contingencies remain with the company.

The success of a reciprocal plan depends largely upon the following:

The moral standard of the subscribers.
The efficiency and honesty of the management.
The selection of preferred risks over a broad area.
The constant and intelligent inspection of risks.
The improvement and maintenance of preventive measures and equipment.

4. LLOYDS ASSOCIATIONS.—Lloyds is an association of individual underwriters, each of whom assumes personal liability for the amount of insurance for which he subscribes. Insurance written by its members is, therefore, effected with individuals instead of with companies. This form of organization originated with the Lloyds of London, which association is one of the strongest of its type. They **accept risks of every class,** and sometimes enter into contracts which are practically gambles, insuring death of notables, the fall of kings, etc. In this country, organizations of this type limit their business to specific lines.

5. SELF-INSURANCE.—Self-insurance is the assumption of the risk by the owner of property who lays aside periodically sums estimated as adequate to provide in time a fund sufficient to reimburse him for any losses which may occur. Where plants are scattered over the country, isolated in most cases, and the class of business, together with the construction of the property, is such that fire hazards are greatly minimized, such insurance may be successfully undertaken by the owner. The chances for the success of a self-insurance plan would be greatly enhanced if during the period of accumulation of the fund, insurance in other organizations be used to supplement the plan, this **supplemental insurance** being gradually reduced as the fund is increased.

Non-Insurance is Not Self-Insurance.—Self-insurance should not be confused with the assumption of risks without any provision for losses when they do occur. Every man who does not insure his property carries this latter so-called "self-insurance," but if he is in business, the interest of his bankers, creditors, customers, and employees must be considered. The **essence of insurance** is the provision for prompt indemnification of losses, and where this principle is not observed insurance cannot be said to exist. Even where reserves are set aside but no actual segregation of promptly convertible assets is made, the principle of insurance is not properly observed. A sound business would require, not merely a bookkeeping entry but also the accumulation of a **fund invested in quickly convertible securities,** kept virtually in trust. Reserve for self-insurance is not an allowable deduction under the present income tax laws.

QUALIFICATIONS NECESSARY IN THE INSURED.—An individual, partnership or corporation desiring to secure insurance protection must have an **insurable interest** in the property at risk. An insurable interest is a direct interest in property which, if destroyed or damaged, will result in a pecuniary loss to the holder of that interest. Neither ownership nor possession is necessary.

The following is a list of instances of insurable interest which occur most frequently:

The interest of an actual owner.
The interest of a representative or agent of the actual owner, such as a custodian, bailee or warehouseman.
The interest of a tenant or lessee.
The interest resulting from a legal liability, such as common carriers or bailees for hire.
The interest of holders of property as security for indebtedness, such as a mortgage.

Insurable Interest in Property Not Confined to One Party.—Each party, having a direct interest in property, has an insurable interest to the extent of the pecuniary loss which he will suffer if the property is destroyed or damaged.

Freedom from Suspicion an Important Factor.—An applicant for insurance should be free from suspicion of ever having been involved in a fire loss in which there was a suspicion of the assistance of human agency in the cause of the fire. Insurance companies frequently refuse to grant insurance when the insured was suspiciously involved. This is referred to by the companies as the **moral hazard.**

METHODS OF OBTAINING INSURANCE PROTECTION.—The method in general use for securing insurance protection from fire is that of requesting an **insurance broker** to cover the risk. Application, however, may be made through one of the company's authorized agents.

INSURANCE BROKERS.—The broker is the **agent of the insured** and not usually of the insurance company. Therefore, the insured is generally responsible for the acts of his broker. Many brokers employ a staff of men to protect the interest of their clients in the following ways:

Securing an adequate amount of insurance.
Securing suitable policies.
Adapting the policies to the need of the insured.
Inspecting property and advising of improvements which would result in lower insurance cost.
Seeing that lower rates are effective promptly where justified.
Seeing that adequate protection is carried at all times.
Seeing that endorsements properly protect the interests of their clients.
Advising the insured in the event of a loss and negotiating a settlement of such loss advantageously for their clients.
Eliminating overlapping coverages.

Important Considerations Regarding Brokers.—Insurance is **not effective** if the broker, as agent of the insured, omits to place the insurance required with an authorized agent of the insurance company or directly with the company. Neither is the insurance company responsible for losses where through neglect of the broker, the contract has not been fulfilled by the payment of the necessary consideration stated in the policy. In other words, if the broker fails to pass the premium on to the company or its agent the contract will not be effective.

Insurance companies allow the broker 30 days to turn in the premium. If he

fails to do so at the end of that period, the company notifies the insured directly that the policy is void.

Qualifications of an Insurance Broker.—In view of the responsibility which the insured places upon the broker and which the broker presumably recognizes, also the scope afforded for economies and the procurement of complete and effective coverage at a minimum cost, it is essential that the broker should have at least the following qualifications, or should employ those possessing them:

Financial soundness.
A knowledge of the insurance laws of the state, or states in which he operates.
A knowledge of the "Law of Contracts."
A technical knowledge of insurance requirements covering the various elements which influence the rates.
An intimate knowledge of the various kinds of coverage available and the scope as well as the limitations of each kind.
An efficient method of recording the various transactions entered into for his clients so that none may be neglected.

Licensing of Insurance Brokers.—While in most states brokers are licensed and are required to pass an examination for the purpose of ascertaining their fitness to act as such, the possibilities of incompetent or irresponsible brokers securing licenses, are many. This control by the state and the co-ordination secured through the various associations of underwriters, all work toward the elimination of incompetent or undesirable brokers, but it will be some time before this aim is fully realized.

THE FIRE INSURANCE CONTRACT OR POLICY.—Most states have adopted by statute a **standard form of fire insurance contract,** similar to the present New York standard form which is used as the basis of discussion hereinafter.

Main Provisions of New York Standard Fire Policy.—For the purpose of this section, only the main provisions of the New York standard form of fire insurance contract will be considered. These are arranged for convenience as follows:

The parties to the contract.
The maximum of liability.
The rate, premium and consideration.
The protection afforded.
The provisions affecting the commencement and termination of the contract.
The provisions for interruption or temporary suspension of the contract.
The provisions for voidance of the contract.
The provisions for settlement of losses.

THE PARTIES TO THE CONTRACT.—The **name of the insurer** (any one of the various types of organizations already described) constitutes a part of the printed section of the contract. The **name of the insured** is inserted in the space provided for it. It is highly essential that the name of the insured be definitely and correctly stated in the policy, on which the expression, "and legal representatives" is printed immediately following the name of the insured. This expression is intended to cover a trustee or administrator legally appointed to manage the affairs of an incompetent person. In the case of a mortgage the policy provides on lines No. 124 and No. 125 as follows: "Other

provisions relating to the interest and obligations of such mortgage may be added hereto by agreement in writing." A mortgage clause is usually added to cover such a case.

THE MAXIMUM AMOUNT OF LIABILITY.—The amount stated on the face of the policy is the maximum liability assumed by the company and does not necessarily fix its actual liability in the event of any particular loss. A more complete discussion of the measure of loss will be found under the provisions for settlement of losses.

RATE, PREMIUM AND CONSIDERATION.—Contracts without seal, under which classification insurance contracts come, require a consideration to make them effective and enforceable. The **consideration** for a fire insurance contract is made up of two elements, viz.:

1. The stipulations specified in the policy.
2. The premium.

The assurances of the insurance company are conditional upon the stipulations in the policy, and wherever the form of policy is prescribed by the laws of the state, the presumption in law is that the insured is acquainted with these stipulations.

The premium is the result of the rate per $100 multiplied by the amount of maximum liability stipulated in the policy. The rate will be considered under a separate heading.

PROTECTION AFFORDED.—To quote the wording used in the policy, the protection is "against all DIRECT LOSS AND DAMAGE BY FIRE, and by removal from premises endangered by fire except as herein provided."

Loss and damage by fire, mentioned above, means all loss or damage directly and naturally resulting from a hostile fire, not deliberately started for the purpose of destroying the property insured. **A hostile fire** is one which accidentally leaves the place of confinement designated for it, as distinguished from a **friendly fire,** which never leaves such a place, as the fire in a stove or lamp. Any damage caused by a friendly fire, such as smoke from a stove or lamp, remaining friendly, is not a liability assumed by the insurer.

FIRE MUST BE THE DIRECT CAUSE OF LOSS.—The fire need not necessarily reach the property. Loss and damage may be caused by smoke from the fire, chemicals or forces released by the fire, provided their presence was not specifically forbidden or excluded and agents such as water used in combating the fire. There must, however, be continuous connection between the event of the fire and the loss or damage, without the interference or introduction of any new or unrelated cause.

REMOVAL OF PROPERTY ENDANGERED BY FIRE.—The policy also provides protection against loss and damage which may be caused by the removal to other locations of property endangered by fire; and further extends the protection to such property in the new locations for a period of 5 days, for the proportionate part of the insurance coverage remaining after deduction of the loss.

Example:

	Value	Insurance Carried
Property at original location before loss	$25,000	$20,000
Less, loss and damage suffered	5,000	5,000
Remaining property value and coverage	$20,000	$15,000

	Value	Insurance Coverage five days
Property removed to location X	$ 5,000	$ 3,750
Property removed to location Y	5,000	3,750
Property remaining at original location	10,000	7,500
	$20,000	$15,000

Both of the above arrangements were intended as incentives to the insured to save and preserve property. If, however, the insured fails to cover the merchandise in its new location, or to have it removed to its original location within the period of five days, should a fire occur, the insurers would not be liable.

PROPERTY NOT ACCEPTED.—The company will not accept liability for loss to the following:

Uninsurable property
Accounts or bills
Currency or money
Notes
Evidences of debts
Securities
Deeds

Exception is taken to these classes of property on account of difficulty in establishing their intrinsic value or the actual amount destroyed by fire.

EXCEPTIONS IN STANDARD FIRE INSURANCE POLICIES.—All of the losses described hereinbefore are subject to exceptions covered by the expression "except as herein provided." The policy definitely provides that certain classes of property, unless specifically mentioned in writing, and certain events, are not covered, and that the existence of certain conditions either voids the policy or modifies the liability of the insurer.

These exceptions include the following:

Bullion
Manuscripts
Drawings
Dies or patterns

HAZARDS NOT COVERED.—Loss or damage resulting from:

Invasion
Insurrection, riot, civil war or commotion
Military or usurped power
An order of any civil authority
Theft
Neglect of insured to save and preserve property endangered by fire in neighboring premises

Losses from any of the above hazards **may be covered separately,** and all except the last one occur under circumstances not contemplated at the time the policy is issued. In some of them right of redress against state or municipality exists.

LIABILITY IN CASE OF EXPLOSION OR LIGHTNING.—The policy provides for liability by the company only in the event of loss by **fire following an explosion or lightning.** No liability is assumed for loss or damage caused by an explosion or lightning which is not followed by fire. However, if a hostile fire should cause an explosion, the fire and explosion occurring in the same premises, the insurer or company is liable for loss to the extent of the risk assured.

COMMENCEMENT AND TERMINATION OF THE CONTRACT.—The policy, in accordance with the terms expressed therein, "does insure.....

for the term of.....from the.....day of.....19....at noon to the .....day of.....19....at noon."

The **term of the policy** is usually a period of 1, 3 or 5 years, beginning and terminating at noon as indicated above. Noon is defined to mean: "noon of standard time at the place of loss or damage." The date of termination may be left blank by agreement, although this is not usual, but in a few states perpetual policies are issued on certain kinds of risks.

Moment Policy Becomes Effective Vital.—From the standpoint of the insured it is vital that the moment at which the policy is to become effective be clearly and definitely known and established. It is obvious that unless the risk is accepted by the company and the policy becomes effective before a fire occurs no reimbursement for losses can be collected.

Delivery of Policy Not Essential.—The delivery of the policy to the insured is not essential, but the acceptance of the insurance contract by the insurer is.
